FURLIANAPOLI or FORMICOROLA (ana. *Forum Populi*) a tn. Papal States, legs. off. and 5 m. S. E. Forli. It is small but neat, and contains an ancient castle, a cathedral, two parish churches, and several convents. April 21 1815, Murat here defeated the Allies. Pop. 4191.

FORMENTERA, an isl. in Mediterranean the most S. of the Balears. lat. (N. point) 39° 58' N lon. 1° 56' E. (a.) It is of a somewhat triangular form, but very irregular; length,

12 m. E. to W. breadth, 8 m. N. to S. It produces wheat, wine, oil, and fruits abundantly and the coast is frequented by innumerable aquatic birds. Fishing is carried on, building stone quarried and salt, grain, oil, and fruits exported. Pop. 1600.

FORMENTON a cape forming the most N. point of the island of Majorca lat. 39° 57' N and lon. 5° 16' E. It projects a considerable way into the sea at the N. entrance of the Bay of Pollensa, and being lofty is seen about 20 m. off at sea, when it presents the appearance of several islands. There are no shoals near it.

FORMICHE.—1 Two low barren islets, off W. coast, S. of E. of Levanzo. The larger island, almost a perfect square is covered with large stones but hilly, consisting of storehouses a strong tower with bastions, a chapel and a fishing village. The small harbour on the S. E. of the island is perfectly sheltered. The same name is given to a ledge of rocks off the N. coast of Sicily between the Bisturi and Lero rock, S. E. of Panarea.—2 Some islets near the coast of Tuscany prov. Grosseto, a few miles W. the mouth of the Ombrone. They are mere rocks, serving at times as a refuge for fishers.

FORMICOLA, a vil. and com. Naples, prov. Terra di Lavoro 11 m. N. W. Caserta. Pop. 2680.

FORMIGA, a tn. Brazil, prov. Minas-Geraes, 140 m. E. Villa Rica, near the source of a small river of same name, comarca Rio Grande. It contains a parish, and two auxiliary churches. Its inhabitants are chiefly engaged in cultivating the soil or dealing in cattle. Pop. 2000.

FORMIGANA a vil. and com. Italy Lombardy prov. Cremona, dist. off. and 6 m. S. W. Sorsena. It stands near Mount Placenza, in a district of great fertility but exposed to the inundations of the Adige from which it has often suffered severely and contains a parish church. Pop. 1186.

FORMIC A.S. a tn. Brazil prov. Minas-Geraes, a seaport situated about 100 m. W. N. W. Minas-Nova. It consists of about 200 houses covered with tiles, but mostly built of earth, and of a spacious square at the top of which stands the parish church. The inhabitants deal in cattle, hides, and furs, which they sell to Bahia, and saltpeper, which they carry to Ouro Preto and sometimes as far as Rio-de-Janeiro.

FORMIGINE, a tn. Italy duchy Modena on a canal 6 m. S. W. Modena. It has an annual fair which lasts eight days. Pop. 1800.

FORMIGNY a tn. France, dep. Calvados, 12 m. from Bayeux famous for a battle between the French and English in 1450, in which the latter were defeated, and in consequence of which they were compelled to abandon Normandy. A monument, to commemorate the event, was set up in 1684 near the highway between Paris and Cherbourg, at the spot where the closing struggle is recorded to have taken place. Pop. 537.

FORMOSA a tn. Brazil, prov. off. and about 60 m. S. W. Pernambuco, cap. comarca, Rio Formoso, 1 m. bank Serebren, near the sea. It contains a parish church situated on the top of a hill and in 1849 was the residence both of a prefect and a justice of peace. The inhabitants are almost all labourers.

FORMOSA (Chinese, *Tao-wan*, or *Tai-wan* French *Formose* Portuguese, *Ilha Formosa*) an isl. China Sea, between 22° and 25° 30' N and 120° 30' and 122° E length, N to S. 245 m. breadth, at the broadest part, which is at the centre about 100 m. Distance from the Chinese coast, province of Fokien 90 m. area, 15,000 sq. m. The whole coast of the island belongs to the mainland, and for a considerable distance inland belongs to China, and is included in the government of the province of Fokien. The remainder or F. side of the island is occupied by aborigines. Formosa is intersected throughout its whole length by a ridge of mountains called the *Yeh Kien Shan*, some of whose summits are supposed to reach an elevation of 12,000 ft. and are covered with snow during the whole year. Their declivities are clothed with fine trees and pasture-grounds, giving the island a very attractive appearance from the sea. These mountains present many evidences of former volcanic action. Rivers are numerous on the W. side, but most of them, descending from elevated regions have all the violence of mountain torrents. Some of these streams, however are navigable for short distances inland. The others serve to irrigate the land, though their sudden inundations are sometimes destructive to the crops. The soil of the lower tracts and the more gentle

slopes of the mountains is extremely fertile, well cultivated, and the climate salubrious. The rice trade alone, between the island and the maritime provinces of the mainland, employs about 800 vessels. There is, besides, an extensive trade in safflower, salt, sulphur, malacca, cinchona, and other products. The rice grown in the island is of superior quality. Wheat, millet, maize, several kinds of vegetables, sugarcane, oranges, pine-apples, guavas, coconuts, areca nuts, peaches, apricots, figs, grapes, pomelo-granates, chestnuts and melons, are also raised in large quantities. The commerce of Formosa is confined chiefly to Fokien and to a few of the other E. provinces of China, from which it imports tea—green tea only and that of a peculiar kind being cultivated in the island—raw silk, woolen, and cotton stuffs, and other manufactures. The domestic animals are cattle, buffaloes, horses, asses, goats, sheep and hogs. The E. part of the island is said to be infested with tigers, leopards and wolves but none are met with in the cultivated districts on the W. side. In 1848, coal of excellent quality and extending over a large area, was discovered at the N. E. part of the island, in the vicinity of the village of Kelung-tow or Killoon. The aborigines are of a slender shape, olive complexion, wear long hair and blacken their teeth. They are supposed by some to be of Malayan or Polynesian origin, by others to be allied to the inhabitants of the Loo-choo islands. Many of them have been driven or have retreated to the E. side of the island, but many also have become partly incorporated with the Chinese settlers or live in villages of their own, under the general supervision of Chinese officers. The greater portion, however, still live in a state of independence. They are divided into numerous clans or tribes, have no written language, are honest, and just in their dealings, but revengeful when provoked. The Chinese portion of the island is divided into four districts the capital of which is Tai-wan fu. The Chinese had no knowledge of Formosa till the year 1408, and their sway was not established over it till 1683, since then it has greatly flourished through their industry, perseverance and agricultural skill. An extensive sugar-cane is still going on from the main and lands are taken up by capitalists, who not only encourage the people to go over but purchase large numbers of poor persons to occupy them. In 1824, the Dutch obtained a footing in the island, by consent of the Governor of Fokien, but were expelled by the Chinese, after returning possession of it for 28 years, having endeavoured but in little success to extend their influence over it. The colonists are wealthy and industrious and are a source of great annoyance, from the frequency of their revolts, to the Chinese government. In no part of China are executions so frequent or so unavailing as here. Literature is in such a flourishing state in Formosa, that the people of Fokien sometimes send their sons there to obtain literary degrees. A miserable tragedy was enacted in this island by the Chinese authorities in 1840. One hundred and ninety-seven men, chiefly Hindus forming parts of the crews of two British ships the *Nerbudda*, and *Ann* from India, who were wrecked on the coast, and had been made prisoners, were marched out to a plain near the city of Tai-wan-fu, and beheaded. Formosa has few available harbours, owing to the shallowness of their entrances. The channel, S. from the island, is remarkable for the violence of its N. winds and for the heavy seas. Pop. estimated at 2,500,000.

FORMOSA —1 A river W. Africa, Right of Benue lat. 5° 40' N lon. 5° 3' E. It is 18 m broad, and is crossed by a bar on which there is but 12 ft. at low water. This is quite exposed and therefore, during bad weather it is very dangerous, on account of the heavy surf that rolls in upon it. The country for some distance up is entirely intersected with its branches, rendering it difficult for a vessel to find its way without a pilot. Navigation is also sometimes impeded by the floating islands covered with reeds which come down the stream. The banks are fertile and beautiful and thickly clothed with fine trees but the air extremely unwholesome. During the time of the slave-trade this river was much resorted to, but has now little commerce. —2 A cape W. Africa lat. 4° 15' N lon. 6° 10' E separating the Bights of Benue and Biafra. It is very low and is no distinct cape, being merely the most prominent part of that projecting land which is intersected by the numerous streams forming the delta of the Quorra or Niger. —3 An isl. W. Africa, the most

N of the Bamangos group lat. 11° 30' N lon. 18° 10' W. It is about 80 m long and 18 m broad. It is fertile and covered with trees but is destitute of water. —4 A bay on the E. coast Africa, S. point, Ras Gonomy in lat. 3° 0' S lon. 40° 19' E. It is 37 m in breadth, and 9 to 18 m in length inland.

FORMOSA (Mount and River) near S. E. extremity of Malay Peninsula, Malacca Strait. The mountain is in lat. 1° 49' N lon. 103° 55' E. 40 m E. Malacca. It is the highest summit of a group of undulating mountains near the sea. The W. and forms the dividing point of land called Point Siam, on the E. side of the entrance of Formosa River which extends a considerable way into the country and falls into the Strait of Malacca at lat. 2° N lon. 102° 50' E.

FORNACETT two pars. Eng. Norfolk —1 (St. Mary) 728 ac. Pop. 316 —2 (St. Peter) 128 ac. Pop. 712

FORNELLE, a small export to, N. coast of Minorca on a bay of same name 16 m N. N. W. Mahon. It is merely a fishing village, but contains a parish church, and has a deep and spacious roadstead completely sheltered from every wind, but not free from danger in consequence of the narrowness of the entrance, and some hidden shoals. It is defended by a castle, a tower and two batteries one of them on a small island in the middle of the haven but the works are greatly dilapidated.

FORNHAM three pars. Eng. Suffolk —1 (St. Andrew) 1698 ac. Pop. 508 —2 (St. George) 730 ac. Pop. 57 —3 (St. Martin) 1280 ac. Pop. 523

FORNO DI RIVARA (Latin, *Fornus ad Ripariam*), a vil. com. Sardinnia States, Piedmont div. of and 26 m. N. W. Turin on the Vienna here crossed by a stone bridge. It can take a parish church and a communal school, and has some trade in cattle. Pop. 361

FORNOS a *ALQUENTRA* s. and par. Portugal, prov. Beira-Alta, 16 m S. E. Viseu. Pop. 1213.

FORNOVO or **FORNUOVO** a vil. and com. duchy of and 14 m. S. W. Parma, at the foot of the Apennines, near a bank. Rare from whose inundations it is imperfectly protected. It contains a public school and has a weekly market, and three annual fairs, chiefly for cattle. Many of the inhabitants emigrate in search of employment. Pop. 2940

FORREAHURY par. Eng. Cornwall 509 ac. Pop. 373

FORRES, a royal and par. bur. in par. Scotland. Morayshire. The town 25 m. N. E. Inverness, and about 2 m. from the sea, is beautifully situated on a dry sandy knoll, consists of one principal street, about ½ m. long E. to W. and several minor streets and lanes all kept clean well paved and lighted with gas. It has an elegant gothic townhouse, with a square tower and containing a spacious court and other public offices and likewise possesses a large plain Elizabethan church, a Free and a U. Presbyterian church a small Episcopal and an Independent chapel and Anderson's small seminary and St. Lawrence mason lodge both handsome edifices. There are also a mechanics institution, library dispensary and several charitable societies. In the immediate vicinity are grain-mills, a distillery a saw mill a brewery and a woollen manufactory. W. and N. of the town are extensive nurseries, celebrated for the raising of forest plants, particularly of the native Scotch pine. Grain markets on Tuesday and several fairs annually. Forres figures prominently in the tragedy of Macbeth and the bank with which it is surrounded is as dreary and desolate as it is represented by the poet. On an eminence, at the W. extremity of the town stood the ancient castle of Forres. Hard by likewise is a remarkable obelisk, 38 ft. high, by 8 ft. 10 inches broad, and 1 ft. 3 inches thick, called *Strom's stone*, rudely sculptured, and supposed to commemorate a victory obtained over the Danes. Forres unites with Inverness, Fortrose, and Nairn, in sending a member to the House of Commons. Area of par. 6900 ac. Pop. 4099. Pop. of bur. 6383. —*Local Correspondent*

FORRO two places Austria —1 (or *Furro*) a market in Hungary Hither Themas, co. Abaujvar dist. of and 10 m. N. E. Baucko, on the Hernad. It contains a parish church, and has some trade. —2 (or *Brendorf*) a vil. Transylvania, co. Nieder Walsenburg about 15 m. from Nagy-Rugad. It contains a Greek united, and a non-united church. All the inhabitants are Wallachians. Pop. 1018

FORRU a vil. sd. Sardinnia, div. Cagliari prov. of, and 22 m. S. E. Oristano. It stands in a basin surrounded by hills,

which makes the summer heat almost intolerable, and the climate unhealthy; consists of about 500 houses, built in the form of a triangle, with the apex facing the N. contains two churches, and a primary school, and has an annual fair. Pop. 960.

FORSCOTT, par. Esp. Somerset 580 ac. Pop. 54.

FORSTA a *tu* Franks, par. Hamborough, gov. of and 41 m. S.E. of. Frankfort-on-the-Oder on an all formed by the *Wass*. It consists of the town proper and two suburbs, is both substantially and regularly built, contains a castle and two Protestant churches, and has a trade in flax horses, and cattle and *ax* annual fairs. Tobacco is extensively cultivated in the district. Pop. 3300.

FORT ANN a vil and township, U. States, New York. The village, on the Champlain Canal 56 m. N by E. Albany contains three churches, leather manufactures, and *carves*. Fort Ann, erected here in 1758, was celebrated in the French and revolutionary wars. Pop. of township, 3509.

FORT AUBURN, a fortress, Scotland, on of and 30 m. S.W. Inverness, at the S.W. extremity of Loch Ness. It stands on the edge of the lake, and was built, in 1780 for the purpose of overawing some of the Highland clans. It is of a square form with four bastions at the corners, defended by a ditch, covert way and glacis. The barracks are constructed for one field officer four captains, 12 subalterns, and 380 rank and file. It was taken by the Highlanders in 1745. It is now occupied by a few old soldiers only the guns having been removed to Fort George.—The village of same name, close upon the banks of the Caledonian Canal outside the fortress is straggling and insignificant, but has a respectable church and two fairs.

FORT GEORGE, a fortress, Scotland, on of and 10 m. N. E. Inverness, at the extremity of a low point of land projecting into the Moray Firth. It is an irregular polygon with six bastions and has accommodations for 2090 men, 1600 officers. It was built, after the rebellion of 1745 for the purpose of keeping the Highlanders in subjection. It occupies 16 ac. but though skilfully constructed is secure from attacks by sea only being commanded by some adjoining heights.

FORT LIBERTY a mart on to W. Indies, N. coast, May 27 m. S.E. Cape Francois. It is well built with a draw street, a fine square, an elegant fountain, and a good harbour at the head of a bay and extending in the form of a crescent, from one extremity of the town to the other. It communicates with the sea by a narrow channel and is defended by two forts.

FORT ROYAL, a tn. and seaport French W. Indies, 1st Martinique, of which it is cap. lat. 14 36' N. lon. 61 4 15' W (n.) situated on the N. end of a deep and well sheltered bay protected by a fort, which covers the whole surface of a peninsula, and commands the town and harbour. The streets are straight and spacious houses in general well built. The principal buildings are the parish church governor's office, the barracks, arsenal, prison, and hospital. At the E. extremity near the crowning place is a fine parade, called the Savannah, forming the place of Fort St. Louis. From its situation on the W. side of the island, the bay is protected from the prevalent winds, and in one part or another will be found suitable for all circumstances. In 1829 Fort-Royal was almost wholly destroyed by an earthquake. Upwards of 500 persons were killed by the falling of the buildings, including nearly all the inmates of the principal hospital. Fort-Royal is the residence of the French governor. Pop. 11,300.

FORT ST. DAVID a fortress, Hindoostan, Coromandel coast, 13 m. S.W. Pondicherry. A fortress was established here in 1691 and after the capture of Madras by the French, in 1746, it became the head of the British settlements in this quarter till 1758, when after a short siege, it was taken by M. Lally and the fortifications demolished.

FORT WILLIAM—1 A fortress, Scotland, on of and 38 m. S.W. Inverness, at a bend of Loch Eil, W. end of the Caledonian Canal. The fortress is an irregular work, defended by a ditch, glacis and redoubt, contains a bomb proof magazine and the barracks are calculated for about 1000 men. Like the other forts above spoken of it was built to keep the Highland clans in check. It was unsuccessfully assailed by the Highlanders in 1711, and again in 1748.—2, A tn. for-

merly called Maryburgh 1½ m. S.W. the fort. It consists of a long straight street, close to the edge of the water with several short intersecting lanes. It contains four places of worship—Established, Free, an Episcopal, and a R. Catholic chapel. One of the sheriff substitutes of the county resides and holds his courts here. The lofty mountain Ben Nevis, 4370 ft. high is within a short distance of the town. The inhabitants are chiefly engaged in agriculture and in fishing. Pop. (1841) 1025 (1851) 1383.

FORTALEZA VILLA DO-FORTE, of Ceara, a tn. Brazil cap. prov. Ceara, and near the mouth of the Ceara, in lat. 3° 42' S. lon. 38° 30' W. It consists of an old and a new town. The former stands close to the mouth of the river which discharges itself into a creek formed by *est* Mosquitoe the latter is situated along the N. side of the same promontory. Both of them are very indifferently built; the houses are of earth, and the streets are irregular. The public buildings are not much superior to those of private individuals. Those only deserving of notice are the governor's palace, two churches, an hospital, a military prison, a Latin and a primary school. There is deep water and a good bottom in the bay but no shelter. The depth of water in the harbour varies, at high water from 1 to 2 fathoms. The access to it is by two openings in the rock which overhang it. It is used by coasting vessels only. The trade is chiefly in cotton, hides and excellent dates. Pop. 3000.

FORTANER, a tn. Spain Aragon prov. of 33 m. F.N.E. Teruel, on the side of a hill. It is tolerably well built, though some of the houses are in a dilapidated state, in consequence of the damage they received in the last Spanish war. It contains a parish church, courthouse, a boys and a girls school, and a prison and has some manufactures of cloth several mills, and an annual fair. Pop. 1253.

FORTEAU BAY an inlet, S.E. coast, Labrador near the N.E. extremity of a strait of Berchmans. It receives a considerable river and possesses valuable fisheries.

FORTESQUE BAY a beautiful bay Van Diemen's Land E. coast, Tannian's Peninsula, about 56 m. N Cape Pillar. It is about 4 m. in length, inland, and about 1½ m. wide at the entrance.

FORTEVIOT par. Scot. Perth 6 m. by 2 m. P 638. **FORTH** a large river Scotland reckoned the third in point of magnitude, is formed by the junction of two head streams, called respectively the Duchray and the Dhu—the one rising in Strathgibbie, the other in Perthshire, at the distance of a few miles from each other and both on the N.E. side of the mountain Ben Lomond. The junction of these streams takes place at Aberfoyle, from which the river flows S.E., and discharges itself into the German Ocean having previously expanded into a broad estuary called the Firth of Forth, and forms for a considerable part of its course, the boundary between the counties of Stirling and Perth. Its length, in a straight line, to Kinross, where it begins to widen into an estuary is upwards of 80 m. but, following its numerous windings, may be probably double that length. Its depth is from 8 to 27 fathoms or more the bottom in most places, is covered with mud the tide flows a mile above Stirling Bridge, or about 70 m. from the sea. It drains 645 sq. m. For the greater part of its course it flows through a rich flat country and is navigable for vessels of 800 tons as far as Alloa, and for those of 70 tons to Stirling. Its most remarkable windings, called the Links of Forth occur between the latter places, the distance between Stirling bridge and Alloa being but 6 m. by land while by water is 12. These windings form a great number of beautiful peninsulas. For several miles above and below Kinross, the sides of the Forth exhibit a singular phenomenon, called by seamen leaky tides. When the water has flowed for three hours, it runs back for about an hour and a half nearly as far as when it began to flow. It returns immediately and flows during another hour and a half to the same height it was before and this change takes place both in the flood and ebb tides. There thus actually double the number of tides in this river that are to be found anywhere else. Large tracts of land on both sides of the river above Stirling, but especially in the parish of Kinross, Perthshire, have been cleared of moss, and brought into a state of cultivation, the soil being generally a rich clay of great depth, and exceedingly productive. The Firth of Forth contains great

variety and considerable abundance of fish, particularly herring, which frequent it in immense shoals. Oysters also abound in the estuary. The principal tributary rivers of the Forth are the Teith, and Allan above Stirling Bridge and, below it, the Devon, Carrow, Avon, Almond, Leith, Eke, and Leven, these chiefly flow into it on the S. shore. There are several islands in the river the largest of which are Inchgarvie, Inchcolm, Inchkeith, the Bass and the Isle of May. The latter are situated on the latter and on Inchcolm, and the ruins of castles or religious houses appear on all the different islands. There are a number of harbours along both its coasts, some of which have been formed at a great expense amongst these is the recently erected pier and harbour of Grangemouth belonging to the Duke of Buccleuch. The other principal ports, besides those of Stirling and Alloa, already mentioned, are on the N shore Torryburn Inverkeithing Burntisland Kinnegor, Kirkcaldy Dysart, Elly and Anstruther. On the S shore, Borrowstoness, Queensferry Leith, and Prestounkirk.

FORTH MOUNTAINS, a range of quartz hills Ireland co. of and 4 m W Wexford. In 1796, a large body of insurgents camped here previous to the capture of Wexford.

FORTHAMPTON, par Eng Gloucester 2440 ac. Pop. 468

FORTIFIED ISLAND or **BASWARANG** Indian Ocean, coast of Canara, India lat 14° 18' 30" N lon. 74° 23' 15" E. [a.] It is level and has fortifications on it hence its name.

FORTHGALL, par Scot Perth 46 m. by 35 m. Pop. 2486

FORTON, par Eng Stafford 3718 ac. Pop. 741

FORTORKE [Latin *Frederic*] a river Naples, which rises in the E. slope of the Apennines, in the S.E. corner of grove Mammo, and during the greater part of its course, forms the boundary between that prov. and that of Capitanata. It flows first N N W, then N E, and falls into the Adriatic by two mouths. Its whole course is about 70 m.

FORTHORSE, a seaport, royal and part. bor Scotland co. Ross, occupying a remarkable situation, N shore Moray Firth, 8 m. N.E. Inverness, namely opposite Fort George, with which there is communication by a ferry. It was formerly called Chanonry from being the chanonry of Ross, where the bishop had his residence. It was united to the burgh of Rosemarie, which is about 1 m. N.E. from it, by a charter granted by King James II. anno 1444, under the common name of Fortrose and Rosemarie. The town is spoken of as having been then a seat of the arts and sciences. Of its ancient cathedral, which stood in a spacious square only a few columns and arches now remain. These, however from their tasteful execution, afford evidence of its having been a splendid edifice. It has a Free church an Established and an Episcopal chapel the last a handsome gothic structure a grammar-school, a female school and an academy a friendly and a dancing society. Though possessed of a good harbour and other advantages, the town has no trade. It unites with Inverness, Nairn, and Forres, in returning a member to the House of Commons. Pop. 1148.

FORTUNA, a tn. Spain, prov. of, and 11 m. N by E Murcia. Most of the streets are regular the houses tolerably well constructed, and of its three squares, the principal contains a large and substantial parish church and there are besides, a chapel of ease, townhouse prison cemetery and three public schools. At the foot of a hill, about 1 m. N of the town, are the thermal and ferruginous baths, for which the place was much noted. Esparto, linen and saltpetre, are manufactured and exported. Pop. 5556.

FORTUNE ISLAND,—1, [Little] Indian Ocean, W coast, Sumatra lat 6° 54' S. lon. 104° 50' E. [a.] 4 m. from the main it is low and woody and about 1 m. in diameter.—2 Indian Archipelago, Malacca Passage lat. 0° 55' S. lon. 124° 8' E. [a.]—3 Indian Archipelago, Banda Sea lat. 5° 15' S. lon. 128° 11' E. [a.]—4, Bonloe Sea lat. 14° 4' N lon. 120° 32' E.

FOSCALDO, a tn. Naples, prov. Calabria Citra, cap. circondario of same name, at the foot of the Apennines, near the Tyrrhenian Sea 4 m N N W Paola. It contains two parish churches, a convent, and an almshouse. The inhabitants rear great numbers of silk worms. Pop. circondario, 2518.

FOSDINOVO [Latin, *Fosdinovo*] a vit Italy study Modena, 7 m. N.W. Carrara, 1814 ft. above the sea. It has a court of first resort, and is the seat of a military commandant. Pop. 1448.

FOSDYKE, par Eng. Lincoln 2751 ac. Pop. 532

FOSRANO [anc. *Fossano*] a city kingdom of Italy Piedmont, prov. of, and 18 m N.E. Coun. L. bank Stura, in an agreeable and elevated plain, and the seat of a bishop. It is surrounded by old walls and has a castle. The streets are wide and regular and the houses are built upon arches under which are the footpaths. These arches are in many parts so low that passengers can scarcely walk upright; giving to the city rather a gloomy appearance. There are several squares some of them very remarkable a fine cathedral containing a few good paintings and some other churches and conventual buildings, several palaces, a theatre, hospital, *monte-de-pieta*, orphan asylum, cemetery a royal scientific academy several educational establishments, and some mineral basins. Its manufactures are silk, leather iron woollen goods, and paper Trade—agricultural produce. Two well-attended annual fairs. Pop. 16,041.—(Casale).

FOSSEBEGA, several places Naples:—1 A vill and com. prov. Salerno, dist. and 9 m. N.W. Campobasso. It contains six churches. Pop. 2818.—2 A tn. prov. Abruzzo Citra dist. and 5 m. E Lanciano, not far from the Adriatic. It contains three churches. Pop. 2477.—3 A vill and com. prov. Terra di Lavoro, dist. and 18 m. N.W. Piedimonte. Pop. 849.

FOSSE a small tn. Belgium prov. of and 8 m. E W Namur situated in a ravine. In the commune are marble quarries, coal mines glassworks breweries, mills &c. There is a busy trade in groceries and plank. Fosse was in early times of some importance, and its possession was lately contested. Its defences were razed by the French in 1876.

Pop. 2844

FOSSEBEGA a vill and par Norway bud. of and 93 m. S.W. E. Trondheim, an Isl. Gheen, in the Mamsenficord. It has a harbour and carries on a considerable trade in timber. Pop. 2522

FOSCOMBRONE [anc. *Foscombron*] a tn. kingdom of Italy leg. Urbino 85 m. W N W A. town. The modern town is intersected by the river Metauro, over which is a remarkable bridge of a single arch equaling in boldness of design any similar erection of recent times. The cathedral dedicated to San Aldobrandino Vescovo is a fine structure, and contains some interred stones from the ruins of the ancient city whose site is about 2 m. distant and where are the remains of a theatre, and of several other edifices. There are three churches besides the cathedral, and several convents. Foscombrone is celebrated throughout Italy for its silk and woollen manufactures. Near this town was fought 194 n.c. the battle between the Carthaginians and Romans, which decided the supremacy of the latter the Carthaginians having been totally defeated, and their general Asdrubal killed. Pop. 6421.

FOSSEWAY and **TUMBERIDGE** par Scot. Perth 11 m. by 10 m. Pop. 1621

FOSSUM a vill Norway prov. Agderhus, 66 m. S.W. Christiansand. In the vicinity are mines of cobalt and iron and extensive iron works at which both cast and malleable iron are made.

FOSBY or **TIMARON**, par Irel. Queens co. 10 654 ac. Pop. 1507

FOSTER, a township, U States Rhode Island 19 m. W by S. Providence. It has cotton leather and other manufactures. Pop. 2181

FOSTON four parts. Eng.—1 Leicester 840 ac. Pop. 34.—2 Lincoln 2180 ac. Pop. 512.—3 York (N. Riding) 2090 ac. Pop. 577.—4 (upon the Wolds) York (E. Riding) 4394 ac. Pop. 786

FOTHERBY par Eng. Lincoln 1400 ac. Pop. 250.

FOTHERINGAY a par and vill England, co. Northampton. The village pleasantly situated on the Nave 27½ m. N.E. Northampton contains a handsome church in which several illustrious members of the Plantagenet family are interred and a free grammar school endowed by Queen Elizabeth. Fotheringay castle, the birthplace of Richard III. and the scene of the imprisonment, trial and execution of Mary Queen of Scots, was demolished by order of James I. on his

acceding to the English throne Area of par 2110 ac Pop. 261.

FOU a tn and dist. China, prov. Shen-see, the former situated on bank Lo-ho 45 m. S. Yen-nan.

FOU-CROT, China. See FOU-CROU.

FOU-FU a tn China, prov. Shensi, on an affluent of the Hsueh-ho, 37 m. N. by E. S. N. N.

FOU-KUANG a large city China, prov. Quang-tung 21 m. E. N. E. Canton, on the island Hsueh-ho. It is 6 m. in circumference, has manufactures of silk stuffs, cottons, porcelain, and ironmongery with sugar refineries, and an active commerce. A portion of its population, as is common in many other towns in China, live in boats. Pop. estimated at 900,000.

FOUHAN, a tn Lower Egypt, r bank of W or Rosetta branch of the Nile, prov. of 30 m. S. E. Rosetta. It is large, and being beautifully situated, has a picturesque appearance from a distance. It has manufactures of linen, morocco leather, and culinary utensils. In the 16th century it was a place of considerable importance, having an extensive trade, which has since been transferred to Rosetta.

FOUG [anc. *Fugus* *Leucorae*] a vil and com France dep. Meurthe about 5 m. from Toul. It is agreeably situated on a vine slope, and has a weekly market, and two annual fairs. A hall in the vicinity is crowded with the remains of a castle and palace, which belonged to the early kings of France. Pop. 1484.

FOUGERES [Latin *Fiducius Rhodanus*] a tn France, dep. Meurthe-et-Moselle, 38 m. N. E. Metz. It is agreeably situated on a hillside, and has broad well-made streets, well built houses, and a parish church, behind which, on a terrace is an agreeable promenade. It has important manufactures of silk-cloth, seeking tape, coarse hannels, lace, and hats with dyeworks famed for their scarlet hannels, tanneries, paper-mills, starch-works, and in the environs, glass-works and a trade in agricultural produce. Wines, and manufactures. It was formerly a fortress, and one of the keys of Brittany and in its vicinity November 13, 1793 a memorable engagement took place between the Vendéens and the republicans. Pop. 9106.

FOUGEROLLE a tn France dep. Haute-Saône, 20 m. N. E. Vesoul. It is an old place, long dependent on a feudal castle. It has numerous distilleries of cherry brandy with some river boat factories and a trade in brimley planks, linen, &c. Pop. 1139.

FOUGEN, a tn Asiatic Turkey. See FOUCEA.

FOULLOUBE (L'A) a vil. France, dep. Loire, 6 m. N. W. St. Etienne on the Foreud with a ribbon and paper manufactory. Pop. 873.

FULL or FOLLA an Isl N. Sea, the most W. of the Shetlands, about 20 m. distant from the nearest land lat. 60° 5' N. lon. 2° 6' W. (a). It is about 3 m. long by 1½ broad, affords excellent sheep pasture, and is resorted to as a fishing station. Pop. 215.

FOUL ISLAND bay of Bengal off W. coast, Burmah lat. 18° 4' N. lon. 93° 57' E. It is of a conical form with a gradual declivity from the centre towards the sea, the N. and terminating in a low point. It is covered with trees.

FOULHES See FELLATHES.

FOULDEN par Eng. Norfolk; 1895 ac. Pop. 491.

FOULDEN par Scot. Berwick 3 m. by 2 m. Pop. 490.

FOULE POINT a report to Madagascar N. E. coast, lat. 17° 40' E. lon. 49° 27' E. It is advantageously situated for trade of which it has a considerable share. There is a fort here of considerable strength, but inefficient in position as troops can land out of its range. Bullocks and refreshments are to be obtained and anchorage is formed by a large reef, which begins on the shore about 1½ m. S. from the town, and extends nearly a mile N. by E.

FOULIS-WERRIN, par Scot. Perth 10 m. by 7 m. Pop. 1468.

FOULMIRE, par Eng. Cambridge 2210 ac. Pop. 507.

FOULNESS, Isl and par Eng. Essex 28,006 ac. forming part of the felds of Crouch river. Pop. 640.

FOULSHAM par Eng. Norfolk 2276 ac. Pop. 1077.

FOULTA, or FULTA a large vil. Hindostan prov. Bengal 22 m. S. W. Calcutta, 1 bank Hooghly. It possesses a safe anchorage.

FOULWEATHER (Cape) a promontory on the W. coast of N. America, U. States Oregon lat. 44° 48' N. lon. 124° 18' W. (a).

FOUNAI a manufacturing and trading tn. Japan, lat. 34° 45' N. lon. 135° m. N. N. S. Nagasaki.

FOUNING a city China, prov. Chihli, 12 m. from the Gulf of Pechilie, and 180 m. S. Peking.

FOURCEAUBAULT a vil. France, dep. Nievre, 5 m. from Nevers, a bank Loire here crossed by a suspension bridge. There are extensive iron-smelting furnaces and forges, employing about 8000 workmen and a church and school have also been erected.

FOURMIES, a vil. France, dep. Nord, 9 m. S. E. E. Avesnes, on the Petite-Heule. It has manufactures of lace thread, lace, cotton, and woollen-spinneries, carding-mills, a bleachfield glass-house, and iron-forgs. Pop. 1833.

FOURNI ISLANDS, a group of islands, Greek Archipelago, E. coast, Aegean Turkey pass. Anasolia, between the islands Naxos and Samos lat. (S. extremity of the large) 37° 58' 24" N. lon. 26° 51' 15" E. (a). St. Minas, or the grand Fourni, the principal one, is about 5 m. in circumference. The group comprises besides, the little Fourni or Finaia, and about 18 or 20 others, most of them long and narrow and traversed by a ridge of mountains. The Fourni have obtained their name from their presenting at a distance the appearance of ovens.

FOUSYAMA, a mountain, Japan, lat. Niphon, prov. Bourguin, 65 m. S. W. Yedo, near the bay of Tokio. It is reckoned the highest mountain in Japan, and its summit is covered with perpetual snow which is sometimes plowed by a thick smoke of disgusting odor.

FOUTEA, a tn. Japan, lat. Niphon, prov. Bingo, 108 m. N. E. Mouchi.

FOUVENT LE-RAS, a vil. France, dep. Haute-Saône, 16 m. from Gray. In its vicinity are three large grottoes, in one of which M. Cuvier discovered in 1800, the fossil bones of a great number of quadrupeds, and in 1827 on a second search, M. Thivras found relics of the rhinoceros, elephant, hyena, bear, horse, ox, and lion.

FOVANT par Eng. Wilt 2160 ac. Pop. 321.

FOVEAUX, a strait New Zealand, between the islands New Leicester and New Munster. Its E. entrance is about 25 m. wide its N. W. about 18 m. Both entrances are crowded with small islands.

FOVERAN par Scot. Aberdeen 4 m. by 9 m. P. 1638.

FOW or FAX, an Isl Indian Archipelago, Giliak passage, about lat. 0° 5' S. lon. 132° 20' E. separated from the W. shore of Gili by a narrow channel about 2 m. wide, which forms a safe harbour with depths from 10 to 15 fathoms. It abounds with turtle and fish of various kinds. The natives have been found hospitable they speak the Malay and Tidore languages.

FOWEY an anc. seaport, bor. market tn and par Eng. land co. Cornwall. The town 23 m. E. by 5 Plymouth lat. (castle) 50° 19' 43" N. lon. 4° 38' 45" W. (c) on r bank and at the mouth of the Fowey has exceedingly narrow and irregular streets—the principal one extending nearly 1 m. along the banks of the river. It has a lofty spacious church with an ornamental tower. Wesleyan and Independent chapels, several schools, and an almshouse. The workhouses, over which is the townhall is a spacious building. The harbour is commodious, and well secured by the high land on each side, though extremely narrow being not more than a cable's length across. On the W. side stands St. Catherine's castle, and on the E. side are the ruins of St. Saviour an old church. The former which stands on a magnificent pile of rocks, was built in the reign of Henry VIII. In the channel, and opposite the town there are three saltpetre at low water. The principal exports are copper ore, of which many thousand tons are shipped annually, phellaria, china clay and stone. The salted fishery and mining business are the principal supports of the population. Fowey was a place of great importance in the 13th and 14th centuries, having numerous ships, and a formidable name in the naval annals of the time. During the siege of Calais, under Edward III. It sent 47 vessels to that monarch's aid being a greater number than was contributed by any other town in England. Market day Saturday, three annual fairs for cattle. Area of par 1945 ac. Pop. 1603.

FOWEY a river England, co. Cornwall rising about 4 m. S. E. Camelford, and, after a course of about 30 m. S., then W. and lastly E. falling into the English Channel near Fowey. It is navigable to near Looe Island, 5 m. above Fowey.

FOWLES (Hawson) par Scot. See LUTON.

FOUNTHAM, par. Eng. Hereford 4723 ac. Pop. 1069.

FOX, a river U States, Wisconsin and Illinois, rising in the former passes through a number of small lakes near the confines of the latter and entering the Illinois at Ottawa.

FOX (Gazay and Lertze) two rivers Lower Canada, within 3 m. of each other and both falling into the Gulf of St. Lawrence between Griffith's Cove and Little Vallee, on the N.E. side of the dist. of Gaspé.

FOXCOOT two pars. Eng. —1 Bucks 714 ac. Pop. 99 —2 Hants 630 ac. Pop. 78.

FOXES CHANVELL, a strait, British N America stretching N from the N.W. extremity of Hudson's Strait having W Melville Peninsula and Southampton Island, and P an unexplored country.

FOXEARIE par. Eng. Essex 1640 ac. Pop. 453.

FOXFORD a market in Ireland co Mayo on the Moy 13 m N.W. Castlebar. It contains the parish church a St. Catholic chapel and two public schools and has some trade in corn. Market day Thursday and several annual fairs, chiefly for cattle. It is noted for the longevity of its inhabitants. Pop. 631.

FOXHALL par. Eng. Suffolk 1879 ac. Pop. 176.

FOXHOLES, par. Eng. York (E Riding) 4200 ac. P. 406.

FOXTON two pars. Eng. —1 Cambridgeshire 1727 ac. Pop. 459 —2 Leicester 8020 ac. Pop. 413.

FOY par. Eng. Hereford 2323 ac. Pop. 268.

FOY several places France, of which the principal are —1 (de Grande St.) (Latin *Fossus Sanctus Fidei*) a tn. dep. Gironde, 40 m. E. Bordeaux. 1 bank, Dordogne with manufactures of woollen and cotton houses and hampers cloth tanneries and dye-works, and a trade in excellent white wines, brandy and agricultural produce. 1 op. 2883. —2 (de Lyon, St.) a large vil and com dep Rhone 2 m N.E. Lyons near 1 bank Rhone. It is composed of several hamlets, has an elevated situation and two annual fairs. 1 op. 2805 —3, (L'Archevêque, St.) a vil dep Rhone, about 18 m W Lyons. It gives its name to a small coal field which is wrought in the vicinity and has several annual fairs. Pop. 689.

FOYER, a small river Scotland in Inverness, which, after a course chiefly N falls into Loch Ness on the E. side, about half way between Fort-Augustus and its N.E. extremity. It forms two romantic falls, the upper about 30 ft., and the lower about 60 ft. high.

FOYLE, a river Ireland formed by various streams, which unite near Strabane, in co. Tyrone. Hence it flows N past St. Johnston and Londonderry below which at the distance of about 4 m. it falls into the inlet or arm of the sea, called Lough Foyle. It is navigable for vessels of 800 tons, up to the city of Londonderry but smaller vessels can now ascend to Strabane, 12 m further up.

FOYRAN par. Irel. Westmeath 5877 ac. Pop. 1216.

FRAGA (anc. *Gulga Frenca*) a city Spain, Aragon, prov. of and 48 m. S.E. by S. Huesca, 14 m W S.W. Lerida. 1 bank, Girona crossed here by a wooden bridge of 20 arches. The principal streets are paved, but generally steep and narrow. Of its many squares those of San Pedro and Obispo are only of many of remark either for size or appearance. It has two parish churches — San Pedro and San Miguel the former a spacious substantial and ancient edifice, was formerly a mosque three convents two chapels and a cemetery; a handsome modern townhouse a prison, storehouse, Latin and several primary schools. On an adjacent hill stand the remains of a Roman fortress. Loden and woollen fabrics, hampers, canyery wine, and oil are manufactured and a small trade is done in cattle, grain, hemp, silk, fruits, &c. It was an important place under the Moors and the kings of Aragon. Pop. 8646.

FRAGNITO two places, Naples —1 (L'Albano) A vil and com. prov. Principato Ultra, 19 m W N.W. Aviano. It contains three churches, and two annual fairs. Pop. 2075 —2 (Montorio, or Aragnito) A little N.E. of the former near r. bank, Tevere. Pop. 2400.

FRAGUA, a river New Granada, dep. Cundinamarca, prov. Melva, which rises on the S.E. slope of the mts. de Páramo, flows S.E. to the confines of Ecuador and after a

course of about 180 m. joins the Japura at Notao, lat. 0° 50' N. lon. 74° 10' W.

FRAILLES, a vil. Spain, Andalucia, prov. of, and 25 m. S.W. Jerez, 1 bank, Linares. It has a church, townhouse, prison, two schools a storehouse, and cemetery, with chapel attached. Manufactures —wool, linen, and hampers fabrics, brandy &c. Trade —grain, cattle, brandy wine oil, fruits, and hardware. In the vicinity are some mineral springs. Pop. 2174.

FRAIN or **FRATY** (Moravia, Prussia) a market in Austria, Moravia, circle of, and 10 m. W N.W. Zselitz, in the valley of the Thaya, picturesquely situated on a kind of peninsula formed by that river. It contains two churches, and a chapel and has manufactures of woollenware and other storeware, two mills, a trade in cattle, and five annual fairs. On the right or opposite side of the river on a lofty height, stands a magnificent castle, with three towers, and a good library. Pop. 840.

FRAPPOINT a vil and com. Belgium, prov. of and 9 m. S.E. Liège. It has manufactures of gun barrels numerous forges and some rolling-mills, and establishments for preparing timber from a falling-mill and two tanneries, some quarries, and those for preparing lime for agricultural purposes. Pop. 1058.

FRATHORSE E par. Eng. York (E. Riding) 2153 ac. 1 op. 104.

FRAMFIELD par. Eng. Sussex 6700 ac. Pop. 1385.

FRAMILLES, a vil and com. Belgium prov. Hainaut about 8 m. S.W. Mons with manufactures of cordage and several distilleries corn and oil mills, lime-burning, and coal mining. Pop. 907.

FRAMINGHAM two pars. E. g. Norfolk —1 (East) 660 ac. Pop. 111 —2 (West) 608 ac. Pop. 845.

FRAMLINGHAM a m. and prov. England co. Suffolk. The town 14 m. N.N.E. Ipswich, agreeably situated on an eminence, near the source of the Ore, contains many respectable and well built houses with a spacious market-place in the centre. It has a stately parish church, built entirely of black flint, with a square tower 90 ft. high a Presbyterian church, a Wesleyan Methodist, and places of worship for Independents and Unitarians, a free, and other schools, with sets of almshouses. Here was the scene of a magnificent old castle, supposed to have been erected by Rodwald King of the E. Angles. The walls are 44 ft. high and 8 ft. thick, flanked with 18 square towers, 14 ft. higher than the ramparts. Area of par. 460 ac. Pop. 2400.

FRAMINGHAM a vil and township U States, Massachusetts. The vil pleasantly situated 21 m W S.W. Boston, has several mills, and manufactures of woollen stuffs and leather. Pop. (township) 5099.

FRAMMERBRACHI a in Bavaria, Lower Franconia, at the confluence of the Lohr here crossed by a bridge and the Labachbach. It contains a church, and chapel and iron, and several other mills, and a trade in paper and wool. Many of the inhabitants are carters. Pop. 2188.

FRAMITON four pars. Eng. —1 Dorset 3808 ac. Pop. 892 —2 Lincoln 7800 ac. Pop. 801 —Two in Gloucestershire (1) (Cottrell) 2100 ac. Pop. 1637 —(2) (Upper Stow) 4190 ac. Pop. 994.

FRAMURA a vil and com. Italy Piedmont, division Genoa prov. of, and 5 m N.W. Levante on a hill near the sea. It contains a very ancient church, of the composite order, three minor churches, and an old tower used as a belfry. The district is fertile in corn wine, olives, chestnuts, and figs. Pop. 1113.

FRANC-ALZU a country of France, in the ancient prov. of Auvergne. Its capital was Clermont.

FRANCAISSE (La) a m. and com. France, dep. Tern et Garonne, around of and 10 m. from Montauban. It has manufactures of earthenware and five annual fairs one of which lasts three days. Pop. 8913.

FRANCASTEL, a vil France, dep. Oise, around of and 25 m. from Clermont. It stands on a commanding height, and was formerly surrounded by walls and ditches, of which only some vestiges remain. It has a wall of extraordinary depth. Pop. 528.

FRANCA or **VILLA FRANCA** co. INVERARONA, a m. Brazil prov. of, and 570 m N.W. S. S. Paulo, 7 bank, Mogi. It contains a parish church, and has manufactures of woollen

hats, and woollen and cotton cloth. It is the residence of a Justice of peace.

FRANCAVILLA, six places, Naples.—1. A tn. prov. *Otranto*, 14 m. W. R. *Island*, on a hill. It is well built, with straight and spacious streets, has a parish church, elaborately ornamented a college, having handsome halls and galleries, three hospitals, a charitable asylum, a *mont-de-piété*, and several convents. It manufactures woollen stuffs, cotton stockings, earthenware and smelt, with a considerable trade in wine oil and cotton. A great part of the town was destroyed by an earthquake in 1734. Pop. 11,108.—2. A tn. prov. *Abruzzo Citra*, dist. and 6 m. N. E. *Chieti*, near the Adriatic. It contains a collegiate, and three other churches, two convents, and an almshouse, and has two annual fairs. Pop. 2373.—3. A vil. and com., prov. *Basilicata*, dist. and 26 m. E. *Lagonegro*. It contains two parish churches. Pop. 2403.—4. A vil. and com., prov. *Calabria Citra*, dist. and 10 m. E. *Crotavillari*. Pop. 1406.—5. A vil. prov. *Calabria Ultra*, dist. and 18 m. S. W. *Nicotro*. Pop. 1601.—6. A tn. to Sicily, dist. *Crotavillari*, near I. *Isola*, *Alcantara*, 34 m. S. W. *Nicotro*. It has manufactures of silk and linen and an establishment for bleaching wax. In the vicinity are mines of silver, copper, lead and antimony. Pop. 4000.

FRANCE [Latin, *Gallia* or *Francia* Italian and Spanish, *Francia* Portuguese *Francia* German *Frankreich* Dutch, *Frankryk* Danish *Frankrike* Swedish *Frankrike* a maritime country in the W. of Europe, forming one of its most extensive, most populous, and most industrial States, including under its sovereignty, in addition to France, properly so called and a few islands along its coast the island of Corsica, in the Mediterranean, the colony of Algeria in the N. and several small settlements and fortresses on the W. coast of Africa the island of Bourbon, St. Paul Amsterdam, St. Marie de Madagascar Nosse-Bé &c. in the Indian Ocean Pondicherry and a few other settlements on the coast of Hindostan and in the W. hemisphere the West Indian islands of Martinique, Guadeloupe, St. Marie Galana, Petite Terre, Dominica, and the N. part of St. Martin the small islands of St. Pierre and Miquelon, off the coast of Newfoundland and the large but not well defined territory of French Guiana, in the N. E. of America. In addition to the above, some French geographers, founding on recent attempted seizures, include among the colonial possessions of France the groups of the Marquesas, and of Tahiti in the Pacific Ocean. The following table presents an approximate estimate of the area, in sq. m., and of the population of the whole French possessions—

	Area in sq. m.	Population.
France, with Corsica.	271,452	37,472,728
Algeria.	245,285	2,899,124
Africa.		78,415
Islands, Indian Ocean: Coadia China, &c.		1,128,070
W. India.	1,114	57,618
Guiana, &c.	1,832	30,897
St. Pierre, &c. N. America.	91	2,497
The Marquesas, Society I. lands, &c.	5,185	65,000
Total.		42, 60,159

As the colonies and dependencies are separately described under their own heads, only France proper including Corsica, which has been completely incorporated with it, is here considered.

France is situated between lat. 42° 20' N. and 51° 5' N. and lon. 4° 50' W. and 8° 25' E., and is bounded N. by the German Ocean, and the Straits of Dover N. W. the English Channel [French, *La Manche*], W. the Atlantic, more especially that part of it called the Bay of Biscay [French, *Golf de Gascogne*], S. Spain and the Mediterranean Sea, E. the German States, Switzerland and Baden, and N. E. Rhineland, Hanover, Prussia, Luxembourg and Belgium. In tracing the contour of the space thus bounded, the projections and indentations which occur are so numerous, that it necessarily assumes the shape of a polygon composed of many unequal sides. The most marked and salient points, however, are only a few, namely the N. W. the E. W. the S. W. and the S. E. extremities. By connecting these five points by straight lines, a pentagon is formed, which includes the whole of the French territory and gives a good general idea of its shape, except on the E. side, where the line, joining the E. and S. E. extremities, includes the whole of Savoy belonging to the Em-

peror, and also a considerable portion of Switzerland. The W. side also, to avoid including a large expanse of sea, must be made to assume much more the form of a curve than of a straight line. The longest lines which can be drawn across France are two diagonals which intersect each other—the one, from the S. E. to the N. W. extremities, 470 m., and the other from the S. W. to the N. E. extremities, 325 m. Measured on the meridian of Dunkirk the greatest length is 600 m., and measured on the parallel of 48° 30' the greatest breadth is 363 m. The breadth near the centre is 400 m. and between the mouth of the Gironde and the frontiers of Savoy where it is narrowest, does not exceed 330 m. The length of the coast line without allowing for minor indentations, is, along the German Ocean and English Channel, 560 m.; along the Atlantic, 500 m. and along the Mediterranean, 361 m. giving an aggregate of 1330 m. It is difficult to say what addition would be made by minutely tracing the bays and headlands, but the whole length may be safely estimated at not less than 1500 m. The continental boundary is formed on the S. W. by the Pyrenees, 350 m. on the E. by the Alps 155 m. the Jura, 167 m. and the Rhine, 100 m. and on the N. E. by an arbitrary line of about 390 m. in all, 923 m. thus giving in coast and mainland, a general perimeter of about 2463 m. The area is 505,671 sq. m. On taking a survey of this great country it is impossible not to be struck with the advantages which it derives from its position. It not only forms a continuous and compact whole, but though united to the continent by a line of above 900 m., is so much isolated from it by great natural boundaries that the only direction in which it can be considered open to hostile attack is on the N. & where a line of strong fortresses has made a barrier almost as impenetrable as those which in other directions, have been provided by nature. Again on the N. and W., a long line of coast gives it immediate access to the great ocean thoroughfares, while on the S. its harbours in the Mediterranean give it a commanding influence both in Africa and the East, and secure to it a large share in the traffic of that most important of all inland seas.

Geographical Divisions.—France was originally possessed by a number of independent tribes, whose mutual enmities and jealousies precluding the possibility of a general union for the common safety made them a comparatively easy conquest to the disciplined armies of Rome. Long before the arrival of Julius Caesar a considerable portion of the S. E. of France formed a Roman province, under the name of *Gallia Transalpinis*. The remainder of the country is described by Caesar under three principal divisions—one in the N. occupied by the Belgæ, a second in the S. W. occupied by the Aquitani and the remainder occupied by Gelli proper or Celts. After the completion of the Roman conquest, these names in a great measure disappeared, and a division into four provinces took place. At a still later period the names of the provinces were again changed, and their number was increased to 12. Without particularizing the whole, we may mention as of most frequent occurrence in history—*Arvernensis* France, and *Secundia*, in the E. *Lugdunensis* France, *Secundia*, *Tertia*, and *Quarta*, in the E. and the centre, and *Aquitania* France and *Secundia*, in the S. and S. W. During the decline of the Roman empire a number of German tribes had gained a footing in the country and appeared to have formed a confederation under the designation of *Franks* or *Freemen*, but when the empire fell, the victorious barbarians who had subdued it, Vandals, Huns, Suevians, Burgundians, &c. appeared on the frontiers of Gaul defeated the Franks, who attempted to oppose them, and finally formed permanent settlements. The Franks, though weakened, had not been subdued. Not contented with retaining their ground, they made new conquests, and at last succeeded both in giving their name to the country and founding the French monarchy in the person of their King, Clovis, towards the end of the fifth century. Were it probable, it would scarcely be worth while to attempt to trace the various subdivisions which the monarchy subsequently underwent. Suffice it to say that not without numerous changes and interruptions of property it continued to advance, till, under Louis XIV., its extent had nearly the same as at present. The subdivision of the country into provinces had long been adopted, and was now completed—the number of provinces amounting to 33. In 1789 when the *levée* of change became paramount, the provinces were not permitted to escape;

has its highest peak in *Spain*, but the adjacent peak, *Nethon*, which nearly equals it, having a height of 11 165 ft., is in *France*. Several other summits on the French side of the *Pyrenees* exceed 10,000 ft. Both of these ranges throw out numerous branches; but they all subside rapidly as they recede from their central axis, and fall far short of the heights which have been already mentioned. The range next in importance is the *Cevennes*, the S. extremity of which has been placed somewhat arbitrarily in a depression where a lateral branch of the *Pyrenees* seems to terminate, and the *Canal du Midi*, connecting the *Atlantic* with the *Mediterranean*, has its summit level. From this point, called the *Col de Narbonne*, the *Cevennes* proceed first in a N.E. direction as far as *Mont Pilat*, in the S.E. of *dep. Lozere*, and then N to the *Canal du Centre*. Their whole length is about 850 m.

The average height of the central ridge does not exceed 3000 ft. but the loftiest summits are found not in it, but in its *W* branches, where the culminating points occur in the *Plomb de Cantal*, 5200 ft. and the *Puy de Sancy* 6224 ft. Though the *Cevennes* are considered as terminating at the *Canal du Centre*, they only change their name at this point, and are continued N.E. under the name of *Cote d'Or* to an elevated plain stretching longitudinally E. and W. and known by the name of the *Plateau de Langres*. At its E. extremity the chain of the *Vosges* commences in a ramifications, called *Monts Faucilles*. The principal chain lies considerably E., commencing in the *Ballon d'Alsace*, in the N.E. of *dep. Haute Saone*, and stretching almost due N. along the *W* of *dep. Haut-Rhin* and *Bas-Rhin* into *Germany*. The whole length of this principal chain with *France* is about 95 m. but if to this we add the *Faucilles*, the *Plateau de Langres*, and the *Cote d'Or* by which it is brought into connection with the *Cevennes*, we shall have a total length of about 370 m. The average height does not exceed 3000 ft. and the most remarkable summits—the *Ballon de Guebwiller*, *Haut de Rhone*, and the *Ballon d'Alsace*—are, respectively, 4655 ft., 4591 ft., and 4174 ft. A chain of heights stretching E. connects the chain of the *Vosges* with that of the *Jura*, which has an average height of about 3000 ft., but subsiding rapidly as it recedes from the *Alps*, has none of its culminating points in *France*. Another low chain, continued from the *Plateau de Langres*, proceeds N.W., and forms two other ranges or plateaux, known by the names of *Argonne* and *Ardennes*. Their average elevation under 1200 ft. scarcely entitles them to a place among mountain ranges.

Hydrography.—The great watershed by which the whole of *Europe* is divided into two vast basins, the one of which sends its waters S. to the *Mediterranean*, the *Black Sea*, and the *Caspian*, and the other W. and N. to the *Atlantic*, *North Sea*, and the *Baltic*, passes in a wavy line across *France* from S.W. to N.E., and divides it into two very unequal portions. In *France*, this watershed commences at the *W* extremity of the *Pyrenees*, and proceeds E. in the line of its central axis till it reaches the S.E. extremity of *Arvergne*. Here it meets a branch thrown off at right angles from the principal chain, and proceeds with it N. to the *Col de Narbonne*, already referred to as the summit level of the *Canal du Midi*. It occurs in now determined by the *Cevennes*, with which it proceeds first, almost tortuously N.E. and then almost due N., crossing the *Canal du Nord*, and thereafter continuing with the *Cote d'Or* to the *Plateau de Langres*. Having crossed this plateau the *Monts Faucilles* give it an E. direction as far as the *Ballon d'Alsace*, where, as if retracing its steps, it proceeds S.W. along the great wall of the *Jura*, and quits the French territory on reaching the slopes of the *Jorat*. The portion of *France* to the S. and E. of this great watershed is not equal to a fourth of its whole surface, and is almost wholly drained by the *Rhone* and its tributaries. The only secondary basins deserving of notice are those of the *Tooth*, *Lot*, *Or*, and *Aude*, which have their sources in the *Pyrenees* and the *Hernault*, which descends from the *Cevennes*. The far larger part of *France*, situated N. and W. of the great European watershed, contains, in addition to a number of secondary four principal river basins—the *Rhone*, belonging to the N. Sea; *Garonne*, *Ouse*, the *Seine*, belonging to the English Channel and the *Loire* and *Gironde*, both belonging to the Bay of *Biscay*. The first of these basins, though the largest of all, is developed to a very limited extent within the French territory. All the others are wholly French.

The more important secondary basins on this side of the great watershed, are those of the *Somme* and the *Orne*, belonging to the English Channel and the *Vilaine*, *Saône*, *Meuse*, *Charente*, and *Adour* belonging to the Bay of *Biscay*. The lengths of the principal rivers, and the area of their basins are exhibited in the following Tables:—

LENGTHS OF THE PRINCIPAL RIVERS.—

River.	Length, Miles.	River.	Length, Miles.
Adour	354	Meuse (French part)	161
Algar	222	Mura	288
Aude	130	Muselle (French part)	197
Charente	248	Marna	291
Loire	601	Oise	148
Orne	179	Ouse (French part)	148
Dordogne	310	Orn	86
Doubs	283	Rhin	268
Durance	321	Rhone (French part)	138
Eure	222	Rhone, with lake	134
Escaut (Scheldt)	11	Rhone (French part)	258
Garonne, as far as Carcassonne	448	Rhone, as far as Lyons	528
Garonne, as far as Bay of Amberg	584	Saone	316
Hernault	58	Seine	497
Loire	601	Somme	115
Loire (French part)	301	Tarn	280
Loire	644	Vienne	280
Loire	644	Vilaine	252
Meuse	454	Yonne	164

AREA OF THE PRINCIPAL RIVER BASINS.—

River Basin.	Area, Sq. Miles.	River Basin.	Area, Sq. Miles.
Adour	345	Seine, as far as Paris	1071
Algar	318	Tarn	601
Garonne, as far as Bay d'Amber	5141	Tourne	458
Escaut	608	Meuse (French part)	268
Dordogne, as far as Bay d'Amber	608	Rhin	219
Doubs	278	Rhone (French part)	644
Loire	4480	Rhone	974
Loire	617	Rhone (French part)	2165
Loire	644	Saone	115
Loire	644	Durance	317

The lakes are so few in number and individually so limited in extent, as to be unimportant of separate notice. The largest, *Grand-Lieu*, in *dep. Loire Inferieure*, covers an area of only 29 sq. m. and is altogether devoid of interest. The next largest, *St. Point*, in the *Jura*, does not cover 2 sq. m. Others, of still less dimensions, become more interesting from their localities in the lofty regions of the *Pyrenees*, or in the deep hollows of ancient craters in *Arvergne*.

Geology.—As might be anticipated, from the extent of space which it occupies, *France* possesses all the geological formations, in a greater or less degree of development. The mountains generally have a nucleus of granite, which accordingly forms a prevailing rock in the *Alps*, on the E. frontier and their branches S. to the shores of the *Mediterranean* in the *Pyrenees*, the *Cevennes*, and the elevated plateau of *Langres*. In the *Vosges* it is more sparingly developed, its place being often occupied by porphyry and in the *Jura*, where limestone occurs in such enormous masses as to have given its name to a peculiar formation, it does not appear at all in situ. But, on the other hand, almost the whole of the extensive peninsula, including the old provinces of *Brittany* and part of those of *Normandy* and *Poitou*, is covered by it. The other crystalline rocks consisting chiefly of trachyte and diorite, have received a magnificent development in *Arvergne*, where whole mountains are composed of them, and where the effects of recent volcanic agency are still presented to the eye in extinct craters and lava streams. The granite is overlain by primitive stratified rocks of gneiss, and of muscovite and argillaceous slates, succeeded, particularly in the *Pyrenees* by mountain limestone, which there assumes a form worthy of the name, and is found on *Mont Parn*, full of its characteristic fossil shells, at the height of 10 230 ft. above the level of the sea. The secondary formation, commencing with this limestone, and continued in ascending series up to the chalk, always possesses peculiar interest, because, within its valuable mines of lead and iron and all the workable seams of coal, are included. It is largely developed in many parts of *France*, and furnishes a considerable number of coal and mineral beds, to which more particular reference will afterwards be made. The tertiary formation including all the *limestone*, *marls*, and *clays*, above the chalk, occurs continuously in two great divisions, and partially in a number of isolated spots, and covers a vast extent of surface. The larger continuous division is in the S.W., where it commences at the foot of the *Pyrenees*, and

occupies a very large portion of the basins of the Garonne and of the Adour. The latter but better known division, takes the name of the Paris basin and has been made familiar to the scientific world by the labours of Cuvier and other distinguished naturalists. It occupies a large extent of space around Paris, and stretches S. into the valley of the Loire. A considerable stretch of the same formation is found in the basin of the Rhone, particularly along the E. bank both of that river and its tributary Saône. Of more recent alluvial formations the only one particularly deserving of notice is the delta of the Rhone.

Climate.—France extends a π more than 6° of latitude presents a coast of many hundred miles, partly to the ocean, and partly to an inland sea and is composed, in its interior of lofty mountain ranges, elevated plateaux, undulating slopes, and low level plains. All these circumstances make it obvious, that its climate must be greatly diversified, and cannot be described accurately without dividing it into different regions. But, before mentioning these, it may be proper to observe, in general, that no country in Europe can boast of a climate superior to that of France. With a very limited exception, it lies wholly within the more moderate portion of the temperate zone, between the isothermal lines of 50° and 60°, and, consequently with a mean annual temperature the difference of which, at its N. and S. extremities, does not exceed 10°. The climatorial regions to which reference has been made, could not be determined with accuracy without a long series of observations, continued simultaneously for years over the whole country for the purpose of ascertaining the extremes and fluctuations of temperature, the direction force and prevalence of winds and the quantity and frequency of rain. But a method of far more easy attainment, and sufficiently accurate for ordinary purposes, is furnished by the peculiar vegetable products which different districts are able to mature. Four distinct regions are thus obtained. Within the first, and warmest, the olive is successfully cultivated. It forms the S.E. part of France and is chiefly confined to the departments which border on the Mediterranean. The second region is characterized by the general cultivation of maize or Indian corn. Its N. limit is determined by a line drawn diagonally in a E.N.E. direction, from dep. Gironde, to dep. Bas-Rhin. The third region reaches N. to the extreme limit of the profitable culture of the vine and may be considered as determined by a line stretching between the mouth of the Loire and the town of Meudon in dep. Ardennes. All the country beyond this line is included in the fourth region. All of these regions, notwithstanding their diversities of temperature, are generally healthy. In the N.W. the prevalence of winds from that direction often produces a superfluity of moisture, which manifests itself in mists or in frequent and heavy showers of rain. At the opposite extremity the S.E., a contrary effect is produced, and a sultry stifling wind wrinkles up the skin, and not unfrequently spreads fever in its most malignant form. But it is only to a few exceptional districts that these remarks apply. After allowing for them more than four-fifths of the surface remains under a moderate and agreeable temperature, especially in its central districts for salubrious serenity and brightness.

Vegetation and Agriculture.—In the variety of its vegetable products France surpasses all the other countries of Europe. The number of its plants, either indigenous or completely naturalized, has been estimated at rather more than 1000. One-half of these belong to the cryptogamous class, composed chiefly of ferns, lichens, and funguses, and for the most part devoid of economical value. But the phanerogamous class, including all flowering plants, and among them all which furnish products essential to the existence and comfort of man, contains 5540 species, while Germany has only 3280 (England 1870) and Prussia, 1019. Of course, the far greater part of these are interesting only to the botanist and many others, though possessed of a value which makes the preservation and propagation of them an object of national importance, are by their very nature excluded from a course of regular culture. Existing in natural forests, they perpetuate themselves by sowing off shoots from the parent stems or by shedding their seed, and when turned into regular plantations, they grow up with little care and continue in vigour for centuries. In these natural and artificial forests France is well supplied, and finds an important source of wealth. They extend over

about one-seventh of the whole surface, and are the more valuable from usually occupying ground which could not be in any other way have been turned to good account. Their principal localities are the Ardennes, Vosges, and Flanders de Langres in the N.E. the Jura in the E. and the Cevennes, particularly the mountains of Auvergne, in the centre. The two loftiest of the French mountain-ranges, the Alps and the Pyrenees, are comparatively poor in wood. Isolated forests exist in various other quarters as at Compiègne, Villers-Cotterêts, Halluin, Chantilly, Fontainebleau, the mouth of the Seine, and in the Landes along the Bay of Biscay. In the last locality a forest of sea pine, about 100 m. long by 7 m. broad has been formed and not only furnishes good timber and large quantities of resin and other vegetable products, but serves the important purpose of protecting a large tract of territory from clouds and whirlwinds of sand which must soon have converted it into a desert. The other localities in which the pine prevails are the Vosges and the Jura, where the principal species is the common fir (*Pinus Abies*) and the latter Alps, where it is the larch (*Pinus Larix*). In the other forests the prevailing trees are the oak and the elm. Where artificial plantations have been formed, one tree to which a just precedence has been given is the chestnut, equally valuable for the food and the timber which it furnishes. Another tree, perhaps of more importance than any other but chiefly confined by the degree of warmth which it requires to the S. of France, is the mulberry on which the most celebrated branch of national industry is founded. From the constant attention given to it, its management might be considered as forming part of the general agriculture of the country. It is cultivated on the most extensive scale in departments Gard, Vaucluse, and Hautes-Alpes and more partially in departments Var, Bouches-du-Rhône, Drôme, Ardeche, and Lozère. The number of mulberry trees in France has been estimated at 5,760,000. Another tree of great economical importance, and once so extensively cultivated as to define one of the climatorial regions into which the country has been divided, is the olive. A severe winter in 1789 having destroyed or seriously damaged a vast number of the trees the cultivation has lost much of the favour with which it was previously regarded. In some districts, particularly along the shores of the Mediterranean, it maintains its ground but in general both the quantity and quality of the produce are defective. The best oil comes from the plain of Salon in the neighbourhood of Aix, department Bouches-du-Rhône. Among the other trees and shrubs which form objects of culture in the olive region may be mentioned the orange, lemon, pistachio, and cedar. To the N. of it, the more important orchard fruit is the plum, which, in the middle districts produces fruit of the finest quality and when dried forms an important article of export. Still further N. where the vine begins to fail, its place is supplied, on an extensive scale, by the apple and pear particularly in Normandy where their fermented juice furnishes the general beverage. Besides the large portion of France occupied by forest timber and trees valuable for their leaves and fruits, another portion, nearly of equal extent, once estimated also at about one-seventh, is either absolutely waste or so rugged, moorish, sandy and nearly as to be properly classed with waste. The remainder subject to some minor deductions of which the most important is the space occupied by buildings and roads, is the cultivable land. Of this a quantity equal to one-half of the whole French territory is under the plough, $\frac{1}{4}$ in permanent meadow and $\frac{1}{4}$ in vineyards. To secure the productiveness of the land thus employed, it has been seen that nothing is wanting to the climator. The soil presents all imaginable varieties—rich alluvium, vegetable loam, and carious earth tenuous clay hungry gravel, and sand. Taken as a whole, however it is of at least moderate fertility and in many districts possesses a fertility which cannot easily be surpassed. In regard to the management of arable land, the French cannot claim much praise. While everything else has been undergoing rapid change, the system of agriculture has remained almost stationary. Owing to many causes the quantity of land taken into cultivation has been enlarged, and the annual produce has increased but it is very doubtful if this increase has been obtained by improved modes of agriculture. On the contrary the most antiquated rule continues to be followed the implements used are generally of an inferior description and the large farming

establishments for which our own country is distinguished, and in which all the improvements which science and art can furnish to maintain the fertility of the soil increase the quantity and improve the quality of its produce, are here even of much more occurrence than on many other parts of the continent. One great cause of this state of matters is the almost endless subdivision of property which necessarily results from the French law of succession by which all children inherit equally. In consequence of this, the death of every father operates like a new subdivision of whatever land he may have died possessed of, and the whole country is in a course of being broken down into innumerable patches, too small to deserve the name of farms, or to require either the expenses of skill or the expenditure of capital in the management of them. According to Halé, France is possessed by nearly 11 millions of proprietors, liable to direct taxation. This gives to each an average holding of only 5 acres of arable land. But to show that the limit of subdivision is not yet attained, Halé adds, that as a very great proportion of these proprietors are fathers, whose children are not yet in possession of the shares which must fall to them, and as they all have heirs more immediate or more remote, we must necessarily expect to see property partitioned still more and more. By the merits of this arrangement, morally and politically what they may it is evidently incompatible not only with an enlightened, but with anything that can properly be called a general system of agriculture. Still the aggregate amount of produce raised in such circumstances must be very great. The conditions who depend entirely on the land for their subsistence, are in a manner necessitated to tax its power to the utmost, and, accordingly the result of their labours, when drawn up in a tabular form, presents, at least to the eye a most imposing appearance. As in all countries situated within the milder portion of the temperate zone, the ordinary cereals form the great bulk of the cultivated crops. In France these in the order of their importance are wheat, oats, rye, and barley; the average annual value of each of which is estimated respectively at £44,030,722 £12,000,456 £11,851,709 and £5,104,596, giving an annual aggregate of gross produce, amounting in value to £73,987,385. The crops next in importance to these are roots or mixed corn (wheat), potatoes, hemp, rape, maize, buckwheat, flax and beet. The most valuable crops of which the cultivation on a great scale is not general, but confined to particular districts, are mulberry, tobacco, saffron and hops. In France, the grass is on a much more limited scale than the arable husbandry; the land is permanent meadow being in extent only one-sixth of that under the plough. This contrasts strikingly with England, where the grass land exceeds the arable. The obvious inference from this is that the consumption of animal food and dairy produce, owing partly it may be, to a want of inclination for them, but much more probably to a want of ability to purchase them, is very much restricted. Of course, it is not to be expected that where the demand is deficient, the means of supplying it are very perfect. Hence the breeding of stock, notwithstanding the stimulus afforded by the establishment of numerous societies, general and local, for its encouragement, as if not imperfectly understood, very indifferently practiced. The most of oxen, instead of being confined to a few of the more perfect types, are almost as various as the different districts into which the country is divided and include a few good breeds, particularly in the rich plains of Lower Normandy with many more of the most inferior description. The rearing of sheep is more successful and though the improvement of the carcasses, by imparting to it the best feeding properties, continues to be too much overlooked, the fleece has in many districts been carefully and skillfully improved, and much wool severely inferior to that of the merino, is raised. The general employment of cattle for agricultural purposes, gives little encouragement to the rearing of draught horses, but the warlike propensities of the nation has always created an extensive demand for horses of a description adapted both for heavy and light cavalry. Considerable pains have been taken to improve stock breeds by the establishment of government studs, and the rearing of them is extensively and successfully carried on. Asses and mules, generally of a superior description, are much used in France, and also reared in considerable numbers for exportation. One of the most important branches of French agriculture still remains to be noticed. As already

mentioned, the quantity of land in vineyards is about $\frac{1}{4}$ of the whole surface; but, as there are extensive and mountainous districts where there are no vineyards, the proportion which vine land, on the district properly adapted to it, bears to the whole land under cultivation, attains a much higher ratio. In everything relating to this branch of culture the French are unsurpassed. The various first class wines which they produce, under the names of Champagne, Burgundy, Bordeaux, &c. are in high repute, and general demand all over Europe. The vineyard produce annually about 7,705,961 pipes wine, valued at £10,761,165, and 226,193 pipes brandy valued at £2,883,508 giving an aggregate value of £13,122,581. The comparative value of land under the vine, and of land under the ordinary cereals, is thus placed in a clear light. It has been seen above, that the annual produce of the four most important cereals occupying at least one-fourth of the whole surface is 73 millions sterling; that of the vine, occupying only $\frac{1}{4}$ of the surface, is 13 millions. According to the proportion of land occupied, the vine produce should only be about 11½ millions. In other words, the produce of land under the vine is nearly one-eighth more than its produce in grain. It ought to be added, that much of the land from which this superior produce is obtained consists of rocky steep and terraced, on which corn could not be grown.

Mines.—The coal fields of France are so numerous that coal pits exist in no fewer than 83 departments; but most of these are so limited in extent that, while the proportion of the whole surface occupied by workable seams is in Great Britain $\frac{1}{10}$ and in Belgium $\frac{1}{10}$ in France it does not exceed $\frac{1}{100}$. Several of the smaller basins occur in the N. W., and also in the S. where, besides common coal both subterranean and lignite are also found, but the fields whose importance entitles them to particular notice are the only two—that of Valenciennes, in the N. E., forming the W. extremity of the great Belgian coal field and that of St. Etienne, to which the main features of that town Lyons, and the surrounding districts, are indebted for much of their prosperity. The annual output is about 4,150,000 tons but falls so far short of the annual consumption, that a large import takes place from England and Belgium, particularly the latter and wood continues to be the common fuel throughout France, at least for domestic purposes. The coal fields on the east coast of France, which are extensively worked and furnish ore to a great number of blast furnaces but the chief supply to these works appears to be derived, not from them but partly from alluvial beds, in which the ore occurs in the form of balls, especially in the Ardennes, Moselle Haute Marne, Haute Saône, Nièvre Cher &c. partly from seams occurring in profusion among the strata of the Jura limestone particularly on the W. slope of that mountain chain, and partly from veins of iron diffused among the crystalline and primitive rocks, chiefly of the Alps, Pyrenees, and Vosges. The number of mines actually worked is about 2000 and the quantity of furnace pig annually produced exceeds a million of tons. Few countries are understood to be so rich in lead as France. It occurs in greater or less quantity in a great number of districts and is generally argentiferous. It would seem, however, that the richness of the seams is not in proportion to their number as the workings of it is confined to three particular spots—Revel lacques and Hainque des Flandres Villedup. dep. Lozère and Pontglaud. dep. Puy de Dôme. The produce of silver is about 5000 lbs., in lead 26,280 tons, and in litharge 23,870 tons. Manganese is very widely diffused, and is worked only by 12 mines, of which the most important is that of Rouenfeld, dep. Seine-et-Loire. The average annual produce is about 2800 tons. Gold exists both in the sands of rivers and as veins in thin streaks embedded in quartz. Attempts have been made to work it, but not with success. A vein of quicksilver was opened about the middle of the last century, and was worked successfully for twelve years, and then abandoned. Zinc, copper, arsenic, nickel, and cobalt exist, but not in such quantities as to be workable to profit. The principal saline substances are alum and common salt. The former occurs extensively in bituminous shales abounding with pyrites, and is worked in seven departments; the latter occurs in the form of rock salt, both in the N. E. departments and in the Pyrenees, and is worked to the average extent annually of about 45,000 tons. But the great wastes from which salt is derived are the lagoons and salt marshes, which

line many parts of the coast; of these the produce is about 800,000 tons. A large revenue is also derived from quarries. They are classified under the heads of polished or worked stones, including the granites of Fribourg, the marbles of the Pyrenees, Mayenne, and the Ardennes, the lithographic stones of Chateaufort, the millstones of Fécamp-Jouarre and Bergeron, and the once valuable, but now almost forgotten granites of Loire-et-Cher building stones including the granites of the N.W. peninsula, the lavas of Pay de Dôme, the calcareous rocks of the Jura formations, and the sandstones of the Paris basin; a plaster or gypsum, also abundant in the same basin; limestone, diffused over many districts and roofing slates, extensively quarried at many points, and more especially in the Ardennes and at Angers. To quarries may be added valuable beds of common clay fine potter's earth, and kaolin. The number of quarries and beds from which all these materials are extracted exceeds 20,000, and the value of their gross annual produce has been estimated at \$1,600,000.

Manufactures.—Owing to the remarkable sub-division of property to which reference has already been made, the agricultural occupiers the manufacturing population of France, in the proportion of 5 to 1 and hence the value of the produce of manufactures on which only one-fifth of the population are employed cannot be expected to be comparatively so great as that of such a country as England where the relative proportions of the two great classes of population are nearly reversed. In these circumstances, the important position which France holds in regard to all the great branches of manufacturing industry and the decided lead which it takes at least, in one of them, is extremely creditable, and bears strong testimony both to the industry and ingenuity of its inhabitants. The most important branch is silk which in a great variety of forms plain and figured has its principal

locality at Lyons, and the towns of the surrounding districts particularly St. Etienne, and is also successfully manufactured though to an inferior extent, at Paris, Nîmes, Avignon, Annecy and Tours. After it, though at a considerable distance follow cotton stuffs, pure and mixed, at Rouen St. Quentin Troyes Lille, &c. woollens, including broad-cloths, at Louviers, Elbeuf Sedan, Carcassonne, Abbeville, &c. lighter woollen stuffs at Rheims, Amiens, and Beauvais carpets at Paris, Aubusson, Felletin, and Abbeville; and tapestry at Paris and Beauvais linens, including fine muslin, gauze, and lace, at Valenciennes, Combray St. Quentin, Alençon, Caen, &c. porcelain at Sèvres, Paris, Limoges, and Bayeux stoneware at Nîmes, Montargis, &c. and common pottery at Sarreguemines and Meillonnas best-root sugar chiefly in the Nord leather and the various articles made of it, including gloves paper plain and stained hats, hosiery stool iron brass and steel ware, plates and flint glass &c. Besides these, a great number of articles in which skill taste and ingenuity are more especially required, have their common seat in the capital. Among others may be mentioned all articles of watch, jewellery clocks and watches surgical and mathematical instruments, carriages, works in ivory types books, and engravings.

Trade and Commerce.—This is usually divided into internal and external. The former is unquestionably the larger of the two, but its amount cannot be ascertained with any degree of exactness. The principal towns of the interior constituting the centres from which it emanates, are Paris, Lyons, Rouen Lille Strasbourg, Fontenay, Nîmes Nancy and Perpignan. The external trade in so far at least as it is legitimate is exactly ascertained as it stood prior to the recent revolution by the customhouse entries, and is exhibited at single view in the following table of imports and exports in 1846. The amounts given are official values—

STATEMENT OF THE NATURE AND VALUE OF MERCHANDISE IMPORTED INTO, ESTIMATED FOR HOME CONSUMPTION IN, AND EXPORTED FROM, FRANCE, IN THE YEAR 1846.

Kind of Merchandise	Imports—Value	Estimated for Home Consumption	Export Value	French Navigation
ANIMAL PRODUCTIONS—				
Livestock	80,848	895,530	461,848	427,295

The following table of the gross exports and imports, the year of the abdication of Louis Philippe, and the two years thereafter forms an excellent practical commentary on the commercial value of a revolution. The column of official values, which will compare with the preceding table, is stated in round numbers.—

TOTAL EXPORTS AND IMPORTS, 1840-1848.

	Imports		Exports	
Year	Real value.	Official value.	Real value.	Official value.
1840	\$18,970,280	\$54,440,000	\$29,579,758	\$64,130,000
1848	\$18,970,280	\$54,440,000	\$29,579,758	\$64,130,000
1842	\$18,970,280	\$54,440,000	\$29,579,758	\$64,130,000

The mercantile ports at which this important trade is carried on line the Channel and Atlantic sea-bords, and the Mediterranean shores. On the Channel the principal ports are Dunkirk, Calais, Boulogne, Dieppe, Le Havre, St. Malo, and Cherbourg on the Atlantic, or on the rivers flowing into it Brest, Nantes La Rochelle, and Bordeaux and on the Mediterranean, Cette Marseilles, and Toulon. Nearly double the number of vessels enter at, and clear from Marseilles, that do from any of the other ports. Still the balance of trade is greatly in favour of the Atlantic and Channel ports, the former having rather over one-third, the latter rather under two-thirds of the whole trade. The total amount of merchandise arriving and shipping arriving

At, and departing from, the ports of France is given below showing how this department of commerce stood prior to the revolution, and for nearly two years after it:—

THE PORTS AND TONNAGE OF SAILING AND STEAM VESSELS, French and Foreign, which ENTERED AND CARRIED OF FRANCE A FRANCE, with Coasting and in Ballast in the years 1800-1808.

	Entered		Carried	
	Vessels	Tons	Vessels	Tons
1803	18,404	5,120,988	18,646	5,180,919
1804	18,404	5,120,988	18,646	5,180,919
1805	20,195	5,929,291	20,394	5,935,408

1808	18,633	5,777,023	18,728	5,871,545
1809	18,252	5,800,980	18,257	5,853,919

As intimately connected with all the industrial interests of the country it will here be proper to allude to its *Means of Internal Communication*.—These include rivers, canals, roads, and railways. The status of the principal rivers, and the length of their course, having been already mentioned it seems necessary only to add that though they are well situated as to the interior traversing it in opposite directions, and furnishing direct means of transit N. S. and W. they are not in general easily navigated. Their currents are often so rapid that artificial means must be employed to make head against the stream, their channels in many places so shallow that vessels of large burden cannot float upon them and their mouths frequently encumbered with shifting sand banks, which make their entrance narrow and unsafe. Much has been done to lessen these evils, but they have not by any means been completely overcome. The canals are numerous and both in the directions which have been given to them and in their general construction, furnish signal displays of engineering skill. The object has been to connect all the great rivers, and give a continuous communication throughout the interior and from sea to sea. Thus the canal Du Midi, or as it is sometimes called the canal of Languedoc, starting from a point in the Garonne a little below Toulouse, is contained in a S. E. direction, into the lagoon of Thau, and thereby gives a continuous navigable communication between the Atlantic and the Mediterranean in the line of the important towns of Bordeaux, Agen, Toulouse, Carcassonne, and Narbonne. In like manner three separate canals cut across the basin of the Rhone, the canal Du Centre, or of Chalon, which commences at Chalon-sur-Saône and proceeds to Lyons, on the Loire, the Rhone and Rhine canal so called from uniting these two rivers partly by the intervention of the Doubs and the canal of Burgundy, which proceeding also from the Saône, communicates with the Yonne, and through it with the Seine. The effect of these three canals is to break down the barriers which isolate the basins of the Rhone, Loire, Seine and Rhine, and give navigable access from any one of them into the other three. The longest of all the canals, but only partially executed is that which is to unite Nantes with Paris. Its commercial importance is not very apparent, as the natural mode of proceeding from one port to another must be to sail over the ocean which flows between, only between them. The chief use contemplated is probably to keep open an important channel of communication in time of war when it might otherwise be effectually closed by British cruisers. It is unnecessary to particularize the other canals. The whole which France possesses, either completed or in course of completion, are 86 in number and have a united length of 2560 m. The roads of France are usually classified under the heads of *Grand Roads* (*Routes royales*) and *Department Roads*. The former 26 in number have a length of 24,940 m. the latter 97 in number a length of 22,500 m. Besides these, there are a great number of country or bye-roads (*chemins vicinaux*) the length of which is unknown. But the roads which now constitute the only true thoroughfares, and to which, in describing a country it is of particular importance to allude because they furnish one of the best tests for determining its comparative wealth and prosperity are railways.

In regard to these, France has hitherto been much greater in promise than in fulfilment, if the comparison be made with England, or with Belgium and the N. German states. Taking Paris as the centre, a main trunk proceeds N. to Amiens, where it forks off into two branches, one of which proceeds N. to the coast, at Boulogne, and the other N. E. past Lille, into Belgium. A branch from Lille, turning W. ultimately throws off two branches, one of which proceeds to Calais, and another to Dunkirk. Starting again from Paris, a line proceeds W. N. W. keeping close to the banks of the Seine, till it reaches Rouen, when it forks, sending one branch N. to Dieppe, and the other W. to Havre. Thus the traveller from England to France has the choice of five different terminals on the coast—Dunkirk, Calais, Boulogne, Dieppe, and Havre. The next great trunk from Paris proceeds, with very little deviation E. to Strasbourg and then, almost due S. through the left valley of the Rhine, to Basel. Another great trunk, proceeding S. forks soon after quitting Paris one branch takes a S. E. course, first to Dijon, and thence to Chalon, where for the present, it terminates the other branch commences S. to Orleans. Here it again forks, and sends off two important lines, one, S. S. E. to Bourges and Nevers, and the other S. W. to Tours. From Tours a branch goes W. S. W. to Nantes and another S. for Bordeaux though, as yet, not completed beyond Poitiers. From Bordeaux, it is intended to carry it along the Garonne, and, nearly in the line of the canal Du Midi to the Mediterranean. The only line not connected with Paris is at the S. E. extremity of the country it commences at Marseilles, and proceeds circuitously N. E. to Avignon, from which it is to be carried almost due N. to meet the Paris trunk line, which has been completed to Chalon, and is proceeding S. A branch of the Marseilles line leaves it at Beaune, and is carried W. to Nîmes, where it forks, sending a small branch N. to Alais, while the main line proceeds S. W. past Montpellier to the port of Cette. These lines include all the railways yet completed in France with exception of a few very secondary branches. The aggregate length of the completed lines is (1851) 2067 m. besides which numerous additional lines are in progress and projected.

Weights, Measures and Monies.—These are arranged by the French in a strictly decimal system which as at present in use, was established in 1795. It is founded on the measure of the quadrant of the meridian, the metre, or the ten-millionth part of which, was assumed as the unit of length all other linear measures being multiples or sub-multiples of it, in decimal proportion. In order to express the decimal proportion, the following prefixes to the units of weights and measures have been adopted, in which the terms for multiplying are Greek and those for dividing are Latin.

For multipliers, the word *deka*, prefixed to the unit means 10 times as decimetre = 10 metres; *hecto*, prefixed, means 100 times as hectometre = 100 metres. *Kilo* means 1000 times, as kilometre = 1000 metres, and *myria*, 10,000 times, as myriametre = 10,000 metres. On the contrary for divisors, the word *deci*, prefixed means a 10th part as decimetre = the 10th of a metre, *centi* = the 100th of a metre, *milli* means 1000th, as centimetre = the 100th of a metre, *milli* means 1000th part, as millimetre = the 1000th of a metre.

The units of the various weights, measures, &c. are here subjoined with their equivalents in the weights and measures of the country. A few others of these most commonly used with in general literature have been added:—

	Unit	English.
Linear Measure	= 109.721 inches.	Kilometre = 1093.638 yards.
Square Measure	= 159.046 sq. yards, being square decimetre.	Hectometre = 159.046 sq. yards, being square decimetre.
Capacity Measure	= 61.023 cubic inches.	Hectolitre = 59.009 gallons.
Weight Measure	= 35.274 cubic feet, being a cubic metre.	
Weight Measure	= 16.433 Troy grains.	Kilogramme = 259.847 grains.
Money	= 1/24 sterling and a fraction.	Franc = 4s. 8d.
	Franc = 1/24 sterling and a fraction.	Franc = 4s. 8d.

Other measures, frequently met with are the Paris foot (*pied du roi*) = 12.7893 in. the toise, = 6.365 English ft. and the toise variable, = two metres = 78.74 in. The metric quintal = 100 kilogrammes, = 220.4 lbs. the aver.

Government.—The sudden and extraordinary change which has recently startled Europe, makes it impossible at present to show France under any more the heads to which it has hitherto been supposed that all governments might be reduced. It still

(Jan. 1809) purports to be a Republic, with a President as the head, though little of the real freedom of a Republic remains. On Jan. 14, 1802, a draught of a Constitution was promulgated, in which it is stated: "The Constitution returns, confirms, and guarantees the great principles proclaimed in 1789 and which are the basis of the public right of the French. The Government of the French Republic is confided for ten years to Prince Louis Napoleon Bonaparte, the present President of the Republic. The President of the Republic governs by means of Ministers, the Council of State, the Senate, and the Legislative Body. The legislative power is exercised collectively by the President of the Republic, the Senate, and the Legislative Body. The Senate is appointed by the President, and for life its total number is not to exceed 150 of which number it is proposed to appoint 80 at the outset, leaving the others to be added as occasion may demand. Their services are gratuitous but the President may grant any of them 80 000 francs (\$1200) a year. The legislative body is elected by the people, by universal suffrage, in the proportion of a representative to every 85,000 electors. The legislative body discusses and votes proposed laws and imposes which have been previously sanctioned by the Senate, but has no power to make amendments. Though professing a representative form of government, based on universal suffrage, it is perfectly evident that the President virtually retains the whole power in his own hands. What may be the success of the practical working of the new constitution time alone can determine but as only the members of the House of Representatives, and not its discussions, are to be made public, and as the liberty of the press has been completely suppressed, the people generally will only be able to judge of it by its effects on themselves. Meanwhile we may notice those great departments of government which are not immediately affected by changes in its form. These may be included under the heads of the Administration of Justice, General and Religious Instruction, the Army, the Navy and Finance.

Administration of Justice.—In accordance with the general arrangement, which divides the whole country into departments, each department into arrondissements and each arrondissement into cantons, and each canton into communes—a series of courts and judges, commencing with the lowest of these divisions, rise above and above to regulate order. First, each commune has a justice of peace (*juste de paix*) who judges in petty cases, but whose more appropriate function is understood to be to act as a kind of umpire between parties at variance, and induce them to settle their differences without proceeding to formal litigation. If the attempt at conciliation fails the complainant brings his action before a court which from being that in which the action must originate, receives the name of court of primary or first jurisdiction, or resort (*tribunal de première instance*). Every arrondissement has such a court, and has moreover if any more important trading towns is situated within it a tribunal *de commerce*, to which mercantile and commercial cases are appropriated. It has also, occasionally a court called *cours de paix*, in which persons of skill and character not vested with ordinary legal functions, settle disputes on principles of equity and apparently in the character of arbitrators. From these courts of primary resort, an appeal lies to a number of courts, which used to be called *cours royales*. They are in all 17, have each jurisdiction over several departments, and are ranged into three classes; namely, two courts, composed of five judges each, composed of four and 16 courts composed of three chambers. These courts generally hold their sittings in the most important towns situated within their jurisdiction. Above all these courts and properly the only supreme court of the state, is the *cours de cassation*, so called from its power of reviewing and annulling the decrees of inferior courts. It sits in the capital. A general idea of the quantity of business which comes before these courts and of the extent of litigation throughout the country may be obtained from the following summary upon an average of five years, ending with 1848. The annual average of cases which came before justices of peace, was 714,863, and of these 521,487 were settled amicably out of court before courts of first resort, 196,081, of which 151,819 were decided before the royal courts, 18 192 of which 11,587 were decided and before the *cours de cassation*, 729 of which the decisions in 878 cases dismissed, and 251 sustained the appeal.

Instruction.—In France, education in all its branches has long been taken under the special cognizance of the state, and the superintendence of it is expressly committed to a high functionary who takes the name of minister of public instruction and religious worship (*des Cultes*). The principal educational establishments are classed under three heads—ecclesiastical or superior secondary and primary. At the head and as centre of the whole, stands the university. The minister of public instruction is considered its grand master; and, with a council, composed of 80 members, exercises a universal educational jurisdiction over all France. For this purpose, the jurisdiction of the university is divided into 27 *circoscriptions* each of which has the name of *académie universitaire*, the chief place within its district. Thus, for instance, the one which includes the three departments of Charente, Dordogne, and Gironde, is called the *académie universitaire de Bordeaux*. At these establishments the education given is of the highest professional description and need not be particularized. Secondary instruction comprehends moral and religious instruction, ancient and modern languages, philosophy, history, geography, mathematics and physical science. The education is given chiefly in colleges. The number of students receiving instruction in 1841-42 was 89 771. Primary instruction is intended for the whole population, with a few unimportant exceptions. It comprehends moral and religious instruction, reading, writing, the elements of the French language, and of arithmetic. Were this education actually received by all for whom it is intended the proportion of pupils at school ought to be about 1 in 5 of the whole population. By careful inquiry made in 1848 it was ascertained that the proportion was only 1 in 10-10. Religion, in like manner is taken under the cognizance of the state, and falls within the province of the high functionary already mentioned, who adds to his designation of minister of public instruction, that of minister *des Cultes*. Here however his power of interference is much circumscribed. For while the charter which was granted by Louis XVIII and till formally abrogated must still be considered the fundamental law of the state, declares that the R. Catholic is the religion of the majority it does not establish it, but on the contrary places all forms of religion on an equal footing and professes to deal impartially with all by paying salaries to their ministers. With the quality of religious worship, therefore, the state concerns itself no further than simply to know that it is not obviously unwholesome of social order or good morals. Satisfied as to this, it is seen dealing out its payments with equal indifference to R. Catholics, Lutherans, Calvinists, Romanists, and Jews. The possibility of acting on such a system goes far to justify it a assertion, that under whatever religious names it dissent sections of the nation may be classed the most formidable, if not the most numerous, section consists of those by whom religion itself and all its sanctities are held in scorn. By assuming an very insignificant grounds that all persons who do not openly avow themselves to be Protestants or Jews are R. Catholics, these are represented as constituting $\frac{1}{4}$ of the whole population. They have 80 dioceses of which 15 are archiepiscopal. The archbishop of Paris has an annual stipend from the state of £1600 the other archbishops, £800 and the bishops £400. There is, besides, an aggregate annual allowance of about £5000 for diocesan visits, and other similar purposes. The Protestants are considered as either Calvinists, belonging to the Reformed church, or Lutherans, adhering to the confession of Augsburg. Their number is estimated at 1 000 000. The Calvinists, diffused over 56 departments, but most numerous in the W. S., S.E. and N.E. constitute about two-thirds of the whole. The Lutherans, constituting the remaining third are most numerous in the N and E.

Army, Navy and Finance.—The army of France is one of those overgrown establishments, the maintenance of which has lately been shown to be as incompatible with the freedom of France itself as it has always been with the tranquillity of Europe. Its active force, as estimated by the Minister of War in 1860 is 865,468 men. This force is kept up partly by voluntary enlistment, but to a much greater extent by what is called *Conscription*. In virtue of which, all Frenchmen between the ages of 20 and 36, are liable to be forced into military service; and even in time of peace, the annual contingent is fixed at 80,000 men. The budget of 1862 estimates the expenditures on the army (war), at £12,565 163. The navy is a much less

formidable establishment. During the last war with England it was almost annihilated, but it has since made considerable progress. It consists of 238 sailing vessels, and 108 steamers. The sailing vessels include 40 ships of the line, and 56 frigates, but only 31 of the former and 31 of the latter are ready for service. As for the steamers there are not one ship of the line and not more than 10 frigates, varying from 450 to 600 horse power. The fleet actually afloat amounts to 96 sailing vessels, of which 10 are ships of the line, and 8 frigates, and 61 steamers. The naval force, including officers and sailors amounts to 28,872. The annual expenditure on this branch of the service is estimated at about four millions sterling. The state debt of France amounts to 2,233,439,265. The financial arrangements, according to the budget of 1852, are exhibited in the following table.—

Budget for 1853, as brought forward July 1851.

Resources.	£	Revenues.	£

Sunk of Funded Debt	8,164,116		
Taxes and Rents			
Total Civil Expenditure	44,919,140		
E. Transferred Works	2,964,190		

Population.—This, as calculated in a previous table, amounts to 35,401,181 giving an average of 172 1/2 persons per sq. m. The heaviest stock lies where the population springs in Colne, but Colne extremely modified by long and extensive intercourse with the Romans, and the migration of numerous hordes from the N who must ultimately have formed no small proportion of the inhabitants. The different races have become completely amalgamated over the greater part of the country and in the French properly so called but a distinct section of race is still marked in several districts, as in the extreme of the N.E., the Basques of the S.W., and the Bretons of the N.W. The base of the language is Latin of which French may even be considered as a dialect. The original words of different origin are chiefly Celtic and German. Of the latter about 1000 roots have been counted, exclusive of derivatives and compounds. According to the French themselves, their language is superior to all modern, and scarcely if at all inferior to the most celebrated of ancient tongues. More impartial judges form a different estimate and, while admitting its possession of a flexibility and variety of diction, which admirably adapts it not only for conversational and all the branches of lighter literature, but also for the severe sciences, find it deficient both in force and dignity. The people, intellectually considered take a first place. In ingenuity they are unsurpassed and in the higher walks of literature, with the exception of the highest kind of poetry they have written of distinguished names. Their moral qualities are less respectable. They are courteous in the extreme, and not naturally avaricious or cruel but they are deficient both in vitality of character and strength of principle, and hence are abject slaves of baseness, poverty and idleness in private life, more especially in large cities, dissolute and perverts. In Paris, of 50,141 children born in 1849, 9941 were illegitimate in other words, in Paris, every third mother is unmarried and every third child has a stain on its birth. Thus, however exhibits French society in its worst aspect and it therefore ought to be added, that over the whole country the proportion of illegitimate to legitimate births does not exceed 1 to 14.4, the illegitimate having been, in 1846, 6.711 and the legitimate, 869,957 and that while

crimes against the person are more, those against property are less numerous than in England.

History.—Of this one should scarcely allow us to attempt even a brief summary. In tracing the early geographical divisions of the country we were brought down to Clovis, the true founder of the monarchy. With him, the Merovingian race of kings commenced. It ceased with Childeric III in 753 when Pepin le Bref obtained the crown. The Carolingian dynasty commenced with him, or more properly with his distinguished son Charlemagne, surnamed the Great, who established his sovereignty not only over France, but also Italy except its S. part, and the far larger part of Germany. This empire fell to pieces shortly after his death in 771. His successors kept the throne of France till the death of Louis V. when the Capetian dynasty which had virtually commenced in the person of Hugh Capet the Great, was formally established by the coronation of his son at Rheims, in 987. This dynasty was continued in a direct line till the death of Charles IV. The most distinguished name in the direct line of Capetian kings is that of St. Louis, whose reign lasted 44 years, from 1226 to 1270 in which the most illustrious in France, Charles IV was succeeded in 1285, by Philip VI. grandson of Philip the Bold, by his third son Charles of Valois. He was thus one of the direct line of the Capetian kings, and hence the dynasty which he established is known as that of the collateral branch of Valois. It was continued directly till 1498 and then successively in the collateral branches Valois Orleans, Valois Angoulême, and Valois Bourbon. The last commenced in 1563, with Henry IV. surnamed the Great. During the three previous reigns, Protestantism had made wonderful progress in France, and laid fair for the ascendancy when two dreadful blows were struck at it—the one by an atrocity among the footmen on record the Massacre of St. Bartholomew in honour of which the pope ordered a medal to be struck and To Drown to be sung and the other by the act of Henry himself who rewarded the fidelity with which the Protestants had clung to him and fought his battles, by publicly abjuring their religion. To his honour however he not only refused to persecute it but gave it complete tolerance by issuing the Edict of Nantes in which was more than Roman could endure and die there was such him his reward in the dagger of a Jesuit assassin. He was succeeded, first, by his son Louis XIII. surnamed the Just, though it is difficult to know why and then by his grandson, Louis XIV. with still less reason surnamed the Great. During his reign it is true, many great literary names appear but the monarch himself when stripped of the trappings of royalty which he certainly knew well how to set off to the best advantage, stands forth in no more honourable light than that of a sensualist and a bigot. In the former character he made his court a haven and in the latter recalled the Edict of Nantes, and by the revocation, cruelly drove unnumbered of his best subjects from their homes and gave the national prosperity a shock from which it has not recovered. The bloom of his reign was confined in a more disgusting form during that of his successor Louis XV. and when, in the person of Louis XVI. the crown passed into the hands of a sovereign who, though not distinguished for talents was of unblemished morals, and loved his country the day of retribution had arrived, and all remedies were too late. The whole framework of society was broken up, and the most fearful atrocities were openly perpetrated and on a scale of magnitude, to which the previous history of the world has no parallel. Atheism and the wildest democracy then walked hand in hand and left no doubt as to what must at all times be expected when they gain the ascendancy. The reign of terror was followed according to what may now be considered an invariable sequence, by a military despotism headed by a man whose wonderful talents might have made him a hero, but whose overreaching ambition doomed him to spend the last years of his life and die a prisoner on a rugged and solitary side of the ocean. The Bourbons regained their throne, but soon showed that the lessons of adversity had been lost upon them. They were again expelled (1830), and Louis Philippe, the head of the collateral branch of Orleans, gained the crown, and kept it for 18 years, without a stain of blood upon his hands. During his reign the material interests of France were greatly advanced, and its resources successfully developed, and the people enjoyed a larger measure of real freedom than they

had done at any former period. Still, on February 24, 1848, in consequence of a rising in Paris originating in causes too numerous to be here specified, Louis Philippe saw fit to abdicate the throne. A Republic succeeded, which, after dragging out a perfunctory existence of two years and little more than eight months, was brought to an end by its own President, Louis Napoleon Bonaparte. On December 2, 1851, supported by the army he dissolved the house of representatives, imprisoned a large number of its members, including some of the most eminent men in the country many of whom he subsequently banished to Cayenne and otherwise expelled from France. He subjected the citizens of Paris to the fire of his troops, destroying indiscriminately the few who attempted to resist his usurped authority and those who were peaceably sitting in their own houses. The number then slain can never be accurately ascertained, but it has been estimated as high as 8000, and a like number are alleged to have since been deported to Cayenne without having undergone a public trial. Europe now anxiously waits what the next turn of affairs may present. FRANCE (Lima or) *See* MATURER.

FRANCES —1 A bay in Santiago the principal of the Cape de Verde Islands, about 3 or 4 m. W. of the S.E. point of the island. It has a brown sandy beach with several date trees and houses at the head of it. This bay has been frequently mistaken for Porto Praya, which is 4 or 5 m. further S.W. —2 A bay S. Africa, S.W. point, Cape St. Francis lat. 34 10' S. lon. 24 58' E. Bullocks and other refreshments may be procured here. Fish also, abound in the bay but it is much exposed to S. and E. winds, and should be resorted to in case of necessity only.

FRANCEZA, a small island, Brazil prov. Rio-de-Janeiro a little S.W. Cape Frio. In early times, after the discovery of Brazil, the French had an establishment here for trading with the Indians and found good shelter in its haven, which is both commodious and secure.

FRANCHE-COMTE, an ancient prov. France, now comprised of depts. Jura, Doubs, and Haute-Saône. Its capital was Besançon. In 1846 it was merged with the prov. of Burgundy, in Cédex Gaul. Afterwards it changed masters several times, and passed under the Burgundian domination; on the extinction of which it bore the sway of Austria, till Louis XIV. having twice overrun the province in 1668, and 1704 it was secured to France by the treaty of Nimègue, in 1678.

FRANCHIMONT a hamlet, Belgium, prov. of and about 10 m. S.E. Liège. It was one of some consideration giving title to a marquess, the capital of which was Thionville and was noted for the enterprise of its inhabitants. The castle now in ruins, and growing a neighboring height is alluded to in Scott's poem of Marmion. It was a noted stronghold as early as the 13th century. When Liège was besieged, in 1467 by Charles the Bold and Louis XI. 600 of the people of Franchimont cut their way into the camp of the besiegers, and nearly succeeded in killing or carrying off the king and the duke, but they were intercepted and all killed. Pop. 394.

FRANCIS (Rr) a river U. States Missouri and Arkansas rising 30 m. W. St. Genevieve, flowing tortuously S. and entering the Mississippi, 46 m. S.W. Memphis. It is navigable, in high water for about 200 m. and its waters, which are remarkably clear abound with fish. —Also the name of various places in the U. States.

FRANCIS (Sv) —1 A headland, S. Africa, Cape Colony W. St. Francis Bay lat. 34 10' S. lon. 24 32 45' E. (p.). —2 A cape, Newfoundland, forming the N. extremity on the E. side of Conception Bay lat. 47 48' N. lon. 52 61' W. (p.). —3, (Landed) a group of islands off the S. coast of Australia, *Myos's Archipelago* lat. (S. extremity) 33° 33' S. lon. 138 37' E. (p.). —4 A lake, Upper and Lower Canada, formed by the St. Lawrence 35 m. S.W. Montreal; length 26 m., breadth, 2 m. It encloses several small islands.

FRANCISCO a town, Mexico, state, Valladolid 1 bank, Rio Grande de Lerma, 65 m. S. by E. Morelia. It was formerly a considerable place, but suffered severely during the revolutionary wars.

Vol. I.

FRANCISCO (San) a bay, port, and bay W. coast, U. States, Upper California. The town stands near the N. extremity of the narrow strip of land which forms the S.W. side of the bay lat. (Fort, S. side entrance) 37° 48' 30" N.; lon. 123 28' 30" W. (p.). It consists of several streets parallel with the bay and a number of cross streets the former

straight and wide, the latter extremely steep and comprises two spacious squares. There are now some handsome and substantial brick buildings in the town but the greater number are of wood or frame-work, of peculiar and full construction covered with cotton cloth and having the appearance of houses and tent combined. These structures are used for all sorts of purposes. Some are large wholesale establishments, more retailing stores, but the greatest number are spirit and gambling-houses. Many of the latter are fitted up inside in the most splendid manner and comprise large and elegant saloons and refreshment rooms. The streets were formerly nearly impassable in winter with mud, but the principal ones are now overlaid with plank, and have commodious side-walks. Spacious and convenient wharves, resting on piles and at which the largest ships can lie, have also been constructed. The harbour is crowded with sailing vessels from various parts of the world that have brought cargoes of passengers and goods. Also numerous steamers of which there are 10 plying to Stockton, on the San Joaquin, in connection with the S. mines, and as many more to Sacramento city on Sacramento river in connection with the N. mines, besides those larger steamers which ply to Oregon, to sunny coast towns in the S. and to the mouths of Puget. The water here is extremely bad, and the climate wretched. The town has been at various times devastated by fire. The last and severest calamity of this kind with which it was visited, occurred on May 3, 1851 when a portion of the city about 1 m. in length, and $\frac{1}{2}$ m. in breadth, was wholly consumed, and a loss of property estimated at \$2,254,000. Very disastrous but estimated at 60,000. —The bay of San Francisco is one of the finest in the world. It is completely land-locked and its entrance is striking bold and rocky shores confine the rush of the tide through the narrow passage which leads to it. Within the bay are several islands and rocks. Some of the former are clothed with vegetation to their very tops others are barren and covered with grass, having an immense number of sea fowls hovering over them, and alighting upon them. The distant shores of the bay extend, N and E. far beyond the visible horizon. To the E.

ries a lofty inland range known by the name of La Sierra, brilliant with the most beautiful trees. At the N end of the bay are two indentations, called respectively the bay of San Pablo, and the bay of Guisano; the latter the recipient of the united streams of the Sacramento and Joaquin, is nearly of a circular form, and 10 m. in diameter; the former is of less dimensions. The whole length of the bay from the N extremity of San Pablo, is about 55 m. average breadth, about 7 m. From the W side of the bay of San Pablo, to the extreme E. point of Salinas Bay is about 80 m.

FRANCISCO (Rio) an ml. Brazil, off the coast of prov Santa Catarina, from which it is separated by a channel, but properly called the river of São Francisco, and containing the town of that name. It is of an irregular shape narrowing towards the N., and is not much elevated above the sea, the greatest length 24 m., greatest breadth 12 m. It is surrounded by various lakes, and watered by numerous streams, which add to its fertility. The inhabitants raise a large quantity of mandioc, rice, millet tobacco, and coffee, which, besides suffering for their consumption, leaves a considerable surplus which is exported sometimes to Rio Janeiro but more frequently to Santos.—The river is about 9 m. from the sea, and 50 m. N. Desterro. The two principal streets are paved the houses are of earth, but the church which rises conspicuously above them, is of stone. Besides the church, there is a hospital with a small chapel, and an endowment of some amount. The harbour at a short distance from the town, has a depth of water never less than 2, and sometimes from 12 to 13 fathoms. The trade carried on by coasting vessels is considerable. The inhabitants build some small vessels, and make coverage of wine is called *cade* but their chief employment is the culture of mandioc, rice, millet, French beans, tobacco and coffee. Pop. of dist. 6000

FRANCISCO (Isol) a tn Brazil prov of, and 45 m N W Bahia, at the N. extremity of the bay at the mouth of the Berço. Its houses are for the most part of stone, and it contains a parish church a Franciscan convent, and a primary school. There are a great number of sugar factories in the district, and large quantities of spirits are made, and exported to Bahia. P. p., including slaves, 2000

FRANCISCO (Isol) a river Brazil which rises in the Serra da Canastra, in the S W of prov Minas-Geraes flows N. E. through that prov and prov Bahia then turning E., forms the boundary between prov Pernambuco and Alagoas, on the N and Bahia and Sergipe-de-Rey on the E, and falls into the Atlantic 50 m N W E. the town of Sergipe-de-Rey by two mouths one to the N., called Anauá, so shallow as to be scarcely navigable even by canoes and the other to the S hence called Francisco-de-Sal much larger and deeper but unfortunately encumbered at its mouth by a large bar about 6 m broad covered with a heavy surf and with seldom more than 4 ft of water at low. It is a large and majestic river with a course which has been estimated at 1600 m but in addition to the bar at its mouth has numerous rapids and cascades which make its continuous navigation impossible those at Paulo Afonso about 190 m inland are about 60 m in length. Its principal affluents are on the right, the Parapeta, Guanhú or Velhas Joaquina, and Verde and on the left, the Andara, Borrachão, Abará, Paraíba, Urucica, Carmanha, Correntes, and Grande.—*Diocese do Espírito Santo. Gardiner's Fronteira do Brasil.*

FRANCISVILLE (St) a vil U States, Louisiana, 1, 1/2 m. N. Mississippi, on a bluff 160 m N W New Orleans. It is about 1 m. from the river but communicates with it by the Bayou Sarah, and is a favorite stopping-place for boats descending the river. Great quantities of corn are shipped from this village. It has a courthouse and a number of stores. Pop. 614.

FRANÇOIS (St) a tn French W Indies, Isl Guadalupe, on the E.E. coast of Grande-Terre, 7 1/2 m. E. St. Ann. It has extensive sugar and cotton works. Pop. about 5000

FRANÇOIS a small river Spain Catalonia. It rises at 3 m. S 1/2 m. prov Lerida, enters prov Tarragona, flows easterly S. E., and after a course of about 80 m. falls into the Mediterranean about 1 m. S W Tarragona.

FRANCONIA (German Prussia) an ancient circle of Germany which had Nürnberg for its capital, and in 1806, was partitioned among Württemberg, Baden Hesse Cassel, the Saxon duchies, and Bavaria. The last received the largest

share, and still retains the name in the three circles of Upper Middle, and Lower Franconia. The first, nearly corresponding to the former circle of Upper Main, has area 3226 sq. m. and pop. 498,943; the second, including the greater part of the former circle of Hesse, has area 2708 sq. m., and pop. 337,490; and the third including with the addition of Aschaffenburg, the whole of the former circle of Lower Main has area 3604 sq. m. and pop. 567,403. The name of Franconia has been rendered familiar to the traveller and the geologist by its picturesque scenery which has procured for part of it the name of Franconian Switzerland, and by its caverns, filled with fossil bones, among the most remarkable of which is König Ludwig's Hohl (King Louis cave) between Baireuth and Muggendorf.

FRANKER, a tn Holland, prov Friesland, 10 m. W S W Leeuwarden, on the canal thence to the coast at Harlingen. It is of an oval shape, lies in a fertile district, and has some remains of old works, possesses an astronomical observatory local repute as a superior academy having a library of 12,000 vols. and a small museum attached an old townhouse, a weigh-house, and a district courthouse. It has also a Calvinistic, a Baptist and a R. Catholic church, and numerous benevolent and charitable institutions and an excellent Latin and several common schools. It is an old place, having a br. at town rights in 1191. Pop. 3688

FRANKENAU a tn Hesse Cassel prov Oberhessen cap. hall of same name, on a bleak elevated plain 30 m. N. E. Marburg. It is a poor place, consisting of a number of detached houses. Pop. 1043

FRANKENBURG a tn Hesse Cassel prov Oberhessen cap. circle, of same name r. bank, Edla, 37 m. W S W Cassel. It is entered by four gates, consists of an old and a new town, is the seat of several courts and public offices, contains two churches, one of them a Gothic structure, and an old monastery now converted into a school one, and public hall, and has manufactures of woollen cloth and woollen hosiery and white leather paper and tobacco an oil a spinning and several other mills, numerous distilleries a trade in swine, and 12 annual fairs. Pop. 3,205 The circus, area 128 gae sq m. is in by thorough, and all adapted for the growth of corn. Pop. 31,410

FRANKENBERG a tn Saxony circle, and 40 m S R Leipzig on the Muldahl and near r. bank, Zschopau. It is regularly built, contains a church nine schools a town-house, and hospital and is one of the most industrial places of the kingdom, having manufactures of woollen, cotton and silk goods, cordovan Morocco and ordinary leather dyeworks, printfields, bleachfields, and spinning-mills a trade in cattle, and three annual fairs. Some coal is worked in the neighbourhood. Pop. (1849) 5968

FRANKENBURG a market to Austria, above the Ens circle Hainburg, 25 m. W S W Wols, contains a church with good paintings, and several monuments a handsome chateau and two schools and has manufactures of shawls and cotton cloth, and glass-works. Pop. 1017

FRANKENHAUSEN a tn Germany principality Schwarzburg-Rudolstadt cap. hall, of same name on the Schleichbach above the little Wipps 31 m. N E. Gotha. It is entered by eight gates, and consists of an old and a new town. A great part of it having been burned down in 1838 it has been rebuilt in an improved form, with tolerably spacious streets contains two principal and three other churches an elegant castle with gardens, a townhouse and town, and has a mill spring, with a banking establishment, manufacture of musical instruments, the works several mills, a trade in cattle and five annual fairs. In the vicinity lignite and alabaster are worked. Pop. of town, 4873 of hall, (area 40 gae sq m.) 12,000.

FRANKENHEIM or FRANKENAU a tn Bavaria, circle, Middle Franconia, near the source of the Wertach, 15 m W Ansbach. It contains a church, and on a height overlooking the town stands the castle of Schillingensturm the residence of the prince of that name. Pop. 1410

FRANKENMARKT a market to Austria, circle, Hainburg, on a height above the Wölz, 41 m. W S W Wels. It stands on a considerable height, consists of picturesque looking houses, with lofty spires, and wooden balconies; has a school handsome hospital, and church an iron, a saw and a flour mill. Pop. 687

FRANKENSTEIN, a tn Prussia, prov Rhine, gov of, and 86 m. S.S.W. Bremen, cap. circle of same name, on a height about 840 ft above the sea. It consists of the town proper surrounded by walls, with four gates, and of four suburbs to the east of several courts and public offices. It contains a castle, a Protestant, and two R. Catholic churches, a courthouse, a bridge and savings-bank, and has manufactures of cloth, silk-works spinning powder and other mills. Pop. 6292. —The census area 186 sq. m., is partly covered by the Eulengebirge but is for the most part flat and very fertile. Pop. 47,336.

FRANKENTHAL, a tn Bavaria Palatinate, cap. dist. of same name on a canal near the Rhine, 88 m. S.S.E. Mainz. It is well built, is the seat of a court of law and several public offices contains five churches, a townhouse, museum, Latin school, infirmary, hospital, poorhouse, and houses of correction, and has manufactures of silk, cloth, silk gold and silver wire, needles, files, musical instruments, and beet-root sugar a bell foundry and a trade in wood. Pop. town 4556 dist. 41,367.

FRANKFORT a small market in Ireland, King's co. on the Silver river 58 m. W by R. Dublin. It contains a R. Catholic chapel, a dispensary, and an asylum for aged widows, a distillery, a flour and two corn mills. Market-day Saturday several fairs annually. Pop. 956.

FRANKFORT a tn U. States, cap. Kentucky on the Kentucky river 68 m. S.W. Cincinnati lat. 38 11 N; lon. 84 50' W. It is divided by the river which is here crossed by a bridge into N. and S. Frankfort. The houses are in general remarkably neat, many of them, as well as some of the public edifices, being built of the beautiful marble obtained in the vicinity the others are mostly of stone. The public buildings are the state-house a handsome structure of marble the penitentiary three churches, an academy and county courthouse. It contains three manufactures of cotton-bagging a cotton factory and a rope-walk. Pop. 8500.

FRANKFURT [English] Frankfurt French, *Frankfort* lies in Germany seat of the German Diet, and cap. territory of same name on the Main, in a beautiful but narrow valley bounded on the N. by the gentle heights of the Rodenberg terminated at some distance by the lofty summits of the Taunus and on the S. by the Mühlberg Saechenhausen and Lerchenberg, 54 m. N. E. Mainz. It consists of the town proper situated on the E. bank and the suburb of Saechenhausen on the W. bank of the river here crossed by a stone bridge of 14 arches, and from whatever side it is approached but more especially when viewed from the Mühlberg or Saechenhausen berg has a beautiful appearance. The environs are covered with handsome villas, and the old walls, ramparts, and stagnant ditches, having been removed, the space occupied by them and the place has been planted and formed into parks. It is still however entered by large gates some in number—seven belonging to the town and two to Saechenhausen. Two of these gates retain their original form—the Gallus Thor and the Eschenheimer Thor. The latter, situated on the N., consists of a lofty tower crowned by five turrets, and affords a good specimen of the architecture of the 14th century. The other old gates have been removed and their places supplied by handsome modern structures, formed on ancient models. Among them the Ober Main, or S. E. gate, an imitation of the porch of the Campus Martius at Pompeii and the Bockheim or Mainz gate, with a guard and toll-house all modelled after the temple of Wingless Victory on the Acropolis at Athens are particularly deserving of notice. The N. or S. bank of the river here curves gently towards the land, and is flanked by a spacious quay along which the town stretches E. to W. from the Ober Main to the Unter Main gates, for about 2000 yards. The breadth measured nearly due N. from the river is about 1400 yards. The district is 7243 yards, or rather more than 4 m. The suburb of Saechenhausen has a length along the river of 980 yards, and a breadth

of 280 yards. Fronting the quay already mentioned is a range of magnificent houses, well deserving the name of palaces and occupied chiefly by diplomatists bankers and rich merchants but immediately behind it is the Old Town, consisting generally of modest houses, buddled together without any regularity in narrow streets and lanes, and often built of wood, with overhanging gables, which exclude both air and light though they derive considerable interest from the antiquity and the quaintness of their structure. But to this general description of the Old Town, there is a remarkable exception in the Zeil a fine spacious street, which stratches in a long curve from E. to W. and forms the principal thoroughfare. It contains a great number of splendid mansions, having originally been the chosen residence of the Frankfurt aristocracy but the necessity of providing for the increasing demands of trade and commerce has gradually dislodged them, and filled the whole street with shops, extending along it like a continuous and magnificent bazaar. Within the town no fewer than 29 squares are counted but the far greater part of them are very paltry. The most deserving of notice are the Rosemarkt, the largest of all with a fine fountain in its centre the Paradeplatz, the Liebigstrasse, the Philippstrasse, and the Bismarckstrasse. The last is perhaps the richest in historical recollections and possesses, in the Ritters or town-house, a venerable structure with which a description of the public edifices may properly commence. It is of very early

THE TOWNHALL (RATHAUS) AND CHURCH OF ST. NICHOLAS, FRANKFURT.
From a painting by G. H. von

date and is supposed to have derived its name from the Italian, commonly called Ritters (Rouman) who at the great fair of the town, lodged their goods in it. It was first purchased by the magistrates in 1500, and continuing to undergo successive alterations and additions was not completed in its present form till 1740. In the course of the changes made upon it, all uniformity of design has been lost, and it has become a large irregular pile of not much architectural merit. Its chief interest lies in its interior. In one of its halls, the Wahlmann the electors of the empire met and made their arrangements for the election of the emperor and the Senate of Frankfurt now holds its sittings. In another the Kaiserstuhl, the emperor was banqueted after his election, and waited on at table by kings and princes. The ceiling of this hall has been richly decorated by modern artists with strict adherence to the original style, and its walls contain niches filled with 55 portraits, being those of the whole German Emperors, in regular succession, from Conrad I. to Francis II. The number of churches is 18. Of these are six Lutheran, two Calvinistic, and four R. Catholic. The Jews have a synagogue. The most remarkable of the churches are the Dom or Cathedral, belonging to the R. Catholics, an ancient structure, not distinguished for beauty or symmetry, but surmounted by a fine tower begun in 1416, and carried on for a century though still unfinished, and interesting both as the scene of

the emperor's coronation and containing the chapel in which he was formerly elected. St. Paul's, the principal Protestant church, a modern edifice of an oval form, with a pulpit spire, and an excellent organ. St. Catherine's church, also Lutheran, surmounted by a spire 200 ft high, possessed of a fine altar of black marble, and numerous paintings and monuments and of some interest as the church in which Protestantism was first preached in Frankfurt; the German Reformed church, having very much the appearance of a large private mansion; the French Reformed church, a very handsome edifice; St. Leonard's church, close upon the river on the spot once occupied by the palace of Charles V., of which not a vestige now remains and a church in Rothenbäumen, originally belonging to the Teutonic knights, adjoining their old castle, of which the Emperor of Austria is now proprietor. Other buildings deserving notice are the courts of justice, of modern construction, the Reichhof, a gloomy-looking building on the site of a palace of Louis the Pious; Charlemagne's son and all modern except the chapel which is of ancient gothic; the Braunfels, the court yard of which was formerly used for the exchange, built in a kind of modern Byzantine of a brown stone, and covered slopes of red stone; the new exchange, the large palace of the Prince of Hesse; the mint, post-office, of which not a vestige now remains and a church in Rothenbäumen, originally belonging to the Teutonic knights, adjoining their old castle, of which the Emperor of Austria is now proprietor. Other buildings deserving notice are the courts of justice, of modern construction, the Reichhof, a gloomy-looking building on the site of a palace of Louis the Pious; Charlemagne's son and all modern except the chapel which is of ancient gothic; the Braunfels, the court yard of which was formerly used for the exchange,

built in a kind of modern Byzantine of a brown stone, and covered slopes of red stone; the new exchange, the large palace of the Prince of Hesse; the mint, post-office, of which not a vestige now remains and a church in Rothenbäumen, originally belonging to the Teutonic knights, adjoining their old castle, of which the Emperor of Austria is now proprietor.

Frankfurt is rich in collections connected with literature and art, and in establishments intended to promote them. The chief of these are the Riedel Institute, so named after its founder a Frankfurt banker who bequeathed about £80,000 to establish a public gallery and school of art, and whose name have already been carried out to a considerable extent, by the formation of a good picture gallery and other collections; the Senckenberg Museum of Natural History containing many rare specimens brought from Egypt, Nubia, and Abyssinia by the traveller Rüppell; the town library possessed of 60,000 volumes, and several valuable MSS. and other rarities, besides a picture gallery. In the garden of the banker Bethmann is to be seen the beautiful and well-known statue of Aradne, by Danneberg. The literary and other scientific associations include a medical institute, physical, geographical, and polytechnic, and several musical societies. The educational establishments are the gymnasium the Musar, the Middle, several other public, and numerous private schools. Among the benevolent institutions are the Senckenberg hospital; the hospital of the Holy Ghost, the orphan hospital, the house of refuge, the insane, and the deaf and dumb asylum, and a number of almshouses. About a mile outside the walls is the New Cemetery at the gate of which is a house where bodies are deposited for a time previous to interment, and watched till decomposition commences. Here every convenience of warm beds and other appliances useful to cases of suspended animation are kept in readiness.

The manufactures of Frankfurt are not important. Those of woollens and laces, which were once carried on to a great extent, have almost ceased to exist. Those which still maintain their ground, are chiefly articles of vertu in bronze and metal gilt chemical products, chocolate, ironmongery, cutlery, gold and silver thread, paper and brass ware, machines, types, playing cards, snuff and tobacco, straw hats, tapestry carpets, wax cloth and black for copperplate and lithographic printers. The central situation of the town has long secured it an extensive trade, both transit and general. The former however threatens to be seriously affected by the railway system which has raised up a number of formidable com-

petitors in towns which, formerly excluded have now been brought within reach of the great thoroughfares, and hence classes of goods for which Frankfurt had to be the entrepot, either take different directions, or pass on without being de-

THE VIEHL GATE, FRANKFURT looking up the Main.—From Harding's "Sketches at Home and Abroad"

posed. Still, however even for railways, Frankfurt forms a central station, and continues to share largely in transit. The general trade is chiefly in wine, silk, raw and manufactured wool, and amber. The trade in English wares, formerly extensive has greatly fallen off since Frankfurt joined the Zollverein. But by far the most important trade of Frankfurt is in money and banking. Its capitalists, among whom Rothschild and Bethmann take the lead are so powerful, as to exert an inconsiderable influence in the money markets of Europe. In connection with the trade, should be mentioned the two fairs of Frankfurt not nearly so important as they once were when 400,000 strangers were known to frequent them, but still large enough to fill the town during their continuance with gaiety and animation, and add considerably to the gains of its citizens.

As capital of a territory which though small is a member of the Germanic confederation, Frankfurt is the seat of its own governing body the senate of civil and criminal courts, and other public offices. Its history too is possessed of considerable interest. It appears to have been originally a Roman station, but did not attract much attention till the time of Charlemagne who had a palace and held a council in it. Subsequent emperors made it the seat of their court, and conferred on it important privileges. 'In particular a charter known by the name of the Golden Bull granted in 1356, by Charles IV. and still preserved among the archives of the town, made it the place where the emperor should in future be elected and in 1555 Charles V. conferred upon it the privilege of coining money. The peace of Westphalia confirmed it in the possession of all its rights. It had long enjoyed an almost uninterupted course of prosperity when the French revolution brought upon it a series of disasters. Its treasures were carried off by extortion, and on one occasion it was actually taken by storm. Under Napoleon it became the capital first of a principality and then of a grand duchy with an area of nearly 2000 sq. m. His downfall restored its independence and the congress of Vienna finally determined its position by making it a member of the Germanic confederation, and giving it precedence among the four free towns of the empire. The beauty of the environs of Frankfurt has already been referred to. Immediately beyond the walls, several places are deserving of a visit. In the N.E. outside the Friedberg gate, a group of colossal granite rocks marks the spot where the prince of Hesse Philippeil, and many of his gallant followers, fell, in 1792, in the successful storming of

the town; and in the gardens around are many beautiful statues and other works of distinguished artists. At still greater distances are many spots to which pleasant excursions may be made, and with little expenditure, either of time or

abseep which are generally either pure meadows, or breads improved from them by growing and producing large quantities of fine wool. The minerals suitable from which is found in several localities, and worked to considerable extent; copperas, gypsum alum, and lignite. Manufactures have

money in consequence of the numerous easy and cheap means of conveyance which are here enjoyed. Steamers on the Main sail daily to Würzburg and railroad branch off in all directions—to Mainz and Wiesbaden to Darmstadt and Heidelberg, to Camell, Hanau, and Offenbach. Pop. exclusive of military 54,898 of whom 6718 are in Sachsenhausen.

The **treasury** of Frankfort has an area of about 90 sq. m. and lies immediately around the walls on both sides of the Main, forming for the most part a productive flat the soil of which is composed of a mixture of sand and decomposed volcanic rocks. The government is vested in a senate, composed of 48 members chosen in the first instance by all Christian citizens, not under legal incapacity. As a member of the confederation, Frankfort unites with the other three free towns in holding the 17th place in the Diet, and has only one vote in common with them in the lesser council but has 3 full vote to itself in the plenum. Its contingent of men to the confederation is 1024 among whom are included 132 riflemen. Its revenue (1851) is 4124,919, expenditure 2184,487 and debt 2276,921, of which 2500 000 are lent upon railways. Pop. 70 844.

FRANKFORT a free Prussia, forming the S E portion of prov Brandenburg bounded N by gov Statin E Markenswerder Bromberg and Posen; S Liegnitz, and kingdom of Saxony W Merseburg and N W Potsdam area, 5614 sq. m. The surface forms an extensive plain, occasionally broken by low hills, particularly in the neighborhood of the larger streams, and consists of some tracts of fertile, and more numerous tracts of light and sandy soil, generally well wooded and diversified by numerous small lakes. The principal stream is the Oder which enters the government in the S. separates it partially from that of Liegnitz, and then traverses it diagonally in a W N W direction. The other streams of importance are the Neisse, Warthe, Neisse and Bober. The water communication is greatly improved, and extended by the Frederick Wilhelm canal, or Müllers canal, which connects the Spree with the Oder and the new Oder canal by which a communication has been established between the Oder and Vistula. Numerous saline springs occur throughout the government. The principal crops are wheat, generally confined to the more fertile districts; barley and oats, tobacco, hops, and flax. Fruits is abundant, and some tolerable wine is grown. The pastures rear great numbers of cattle, and are particularly adapted for

and the trade, general and transit, is extensive both by land and water, particularly the latter about 2000 vessels annually passing the town. There are also three important annual fairs much frequented by dealers from Poland. The university which Frankfort possessed from an early period was transferred to Breslau in 1816. At the extremity of the bridge on the r bank, a monument has been erected to Prince Leopold of Brunswick, who perished in endeavouring to rescue a family during an inundation of the Oder and in the neighborhood, near Kunsdorf, a great, though not decisive battle, was fought between the Prussians, under Frederick the Great, and the united army of Austrians and Russians conspired to the advantage of the latter. The poet Kleist, a native of the town lost his life in this battle. A monument has been erected to him. Frankfort possesses a bathing establishment, with chalybeate springs, and vapour and sulphur baths. Pop. (1846) 80 432.

FRANKLAND ISLANDS, a group of four islands R. Pacific Ocean, on the N E coast, Australia, S Cape Graham lat. 17° 18' S. lon. 146° 8' E. (n.) Two of these islands are very small the other two are each

French Creek, at its junction with the Alleghany. It has a south-west, a fall three churches, two academies, two schools, a printing-office, a grist-mill, a pottery and two tanneries. Pop. 598.

FRANKLIN ISLAND, an Isl. Antarctic ocean, dis covered by Sir J. C. Ross lat. 76° 8' S; lon. 168° 11' E. It is about 12 m. long by 6 broad; wholly composed of igneous rocks, completely destitute of vegetation and the resort of sea-fowl and seals.

FRANK'S ISLAND an Isl. at the entrance of the N. E. pass of the Mississippi with a lighthouse 78 ft. high lat. 29° 5' 30" N. lon. 90° 1' 30" W. (N.)

FRANKSTADT or **FRANKSTADT** two places Moravia.—1 A m. circle of and 30 m. E. E. Fressu in a hilly dis trict, 1 bank, Lohina, near its confluence with the Bauritis. It contains two churches, an hospital, and has extensive manufactures of linen, several brandy and rum distilleries, several mills, a trade in cattle, and four annual fairs. Pop. 4483.—2 A m. circle of, and 23 m. N. W. Olmutz. It contains a church, a school, and four mills. The inhabitants are Germans. Pop. 1569.

FRANKTON par Eng Warwick 1870 ac. Pop. 208

FRANSHAM two par Eng Norfolk.—1 (Great) 1901 ac. Pop. 518.—2 (Little) 1899 ac. Pop. 26.

FRANT or **FRAY** par Eng Essex 8872 ac. 1 2147

FRANZBURG a t. Prussia, gov. of and 14 m. S. W. Stralsund, ac. circle of same name, on a lake at the source of the Little Trebel. It is the seat of a law court and several public offices, contains an old castle, built on the site of a ruined monastery and has manufactures of linen and cotton a trade in cattle, and three annual fairs. Pop. 1144.—The circle area 372 sq. ac. m. in flat and marshy, but, notwithstanding tolerably fertile. It has partly along the Baltic, where some herrings are taken. Pop. 58 006.

FRANZENBURG or **FRANZENBURG** a celebrated watering-place, Bohemia circle of and 18 m. W. S. W. Ebnshagen, and about 3 m. E. Eger with which it is connected by a fine avenue. It stands in a hollow among low and rather bare-looking hills, and consists of four streets, which cross each other at right angles, and one of which, the Kaiserstrasse, is both well-built, and lined with a row of trees. The bathing establishment consists of an irregular temple erected over the springs with a long colonnade, extending to the Kurhaus where the visitors assemble, and halls and concert are given. The springs, five in number are alkaline, saline, chalybeate, one of them differing from the others in respect of the enormous quantity of carbonic acid gas which it throws out, and are very efficacious, particularly in scrofulous and cutaneous affections. About 500 000 bottles are annually exported.

FRANZTHAL, a vil. Bohemia, circle, Leitmeritz, on the Prutina. It contains the ruins of an old castle, picturesque and strongly situated. Pop. 1484.

FRASCAROLO (Latin, *Frascariolum*) a vil and com. kingdom of Italy Piedmont, div. of and 130 m. S. Novara, bank, 10 nearly opposite Valenza. It contains a parish church three castles, and an almshouse. The principal products of the district are corn millet rice and grapes. Pop. 1872.

FRASCATI (anc. *Frascati*) a t. in Papal States, Campagna di Roma, 11 m. S. E. Rome, beautifully situated on one of the lower summits of the Alban Hills. In the town itself there is nothing remarkable, the great attraction of the place being its numerous and magnificent villas, built mostly in the 16th century and the ancient remains in its vicinity. The principal of these is the *Villa Aldobrandini*, belonging to the Borghese family famed for its splendid water works, and for the picturesque beauty of its grounds. The next in importance are the villas *Moderne*, *Taverna*, and *Esti* villa. On the summit of the hill on which Frascati is built, and at the distance of 2 m. from it, stood the ancient city of Tusculum a town of Latium, built long before Rome existed, and of which numerous interesting remains are to be seen including an amphitheatre, some ancient pavement, formed of polygonal masses of lava, a theatre and numerous remains of walls and fountains. Tusculum was destroyed by the Romans, some 1191. Pop. 4275.

FRASER, or **FRASERVILLE TOWN**, a river British N. America rising in the Rocky Mountains, in lat. 53° 43' N. lon. 114° W. It flows S. W. for about 270 m., then turns

S. and, after a total course of about 600 m. falls into the Gulf of Georgia, in lat. 49° N. Its principal affluents are the Salmon and the Bulkina. Its upper banks are inhabited by the Carrier Indians, who subsist chiefly on salmon, which they catch in immense numbers.

FRASERBURGH a seaport, bor. of rapidity and par Scotland, co. Aberdeen. The town S. side of Kinnaird's Head, on an acclivity sloping towards the sea, 19 m. E. Banff is of a square form, streets crossing each other at right angles; houses substantially built of stone, lighted with gas, and generally of late, greatly improved. The parish church, which stands about the centre of the town is a plain substantial structure, with a spire. There are also a Free church, and chapels for Episcopalian, Independents, and Moravianism. The market cross which stands in the public square in the centre of the town, is a remarkable structure of a hexagonal form area of the base, 500 ft. contracted at the top to 33 ft. and the harbour commissioner's hall is an elegant and commodious edifice. There are two week day schools, and eight Sunday schools; a mechanics institution a savings bank, and two societies for the diffusion of religious knowledge. The harbour of Fraserburgh is about 3 ac. in area, and depth about 6 ft. at the pier head at low water and 20 ft. at high water of spring tides. Shipbuilding to a limited extent and herring fishing to a great extent, are carried on the latter employing between 3000 and 8000 people. In 1845, 46,169 barrels of herrings were cured, and 66 260 cod, ling &c. taken. The principal articles of export are wheat, barley oats, pease, beans, potatoes, fish, dried and pickled cod and herrings. The chief imports are timber, coals, lime, glass, brick, salt, groceries, and general merchandise. Pop. 8063. Area of par 8 m. by 3¼ m. pop. 4447.—(Local Correspondent.)

FRANSES LES **BUMERALS**, a small to Belgium prov Namur, 12 m. N. E. Tournai. It has manufactures of wool and linen three breweries, two salt-works, and a trade in agricultural produce, horses, and cattle. Pop. 4301.

FRASSINE, a river Austrian Italy which rises in the W. of prov Verona, about 2 m. W. Bassano, and first under the name of *Nuvola*, flows S. E. to Codogno. It bears the name of *Frassine*, and makes a long curve in a N. E. direction till near Este when its waters are employed to ford two cauals—the one S. Callarina which proceeds S. and the other *Mosca*, which is continued N. to Padua, and joins the *Buechiglione*. The whole course of the *Nuvola* and *Frassine* to Este is about 75 m. From below Codogno, it is navigable by barges. Its only affluent deserving of notice is the *Elavio*, which it receives on the l. bank, a little above Este.

FRASSINETO two places Italy Piedmont.—1 (vic. Iv) (Latin *Frassinetum* or *Frassinetum*) A m. div. of and 16 m. S. W. Alexandria, r. bank. Po. It has a modern palace, with some good paintings and reliefs a botanical garden a parochial and two other churches some trade in corn millet hemp flax, and timber and an annual fair. Pop. 2087.—2 (vic. Iv) (Latin *Frassinetum* or *Frassinetum*) a vil and com. div. Iv. It has a modern parish church and a monastery of the Brothers of Charity, and some trade in agricultural and dairy products. Pop. 2143.

FRASSINO a vil and com. kingdom of Italy Piedmont div. Com. prov. of and 12 m. W. S. W. Balocco at the extremity of the valley of Ivrea, on a stream of that name, here crossed by a wooden bridge. It has an old parish ch. arch, hockline, and a trade in corn and butter. Pop. 1808.

FRASSO a vil and com. Naples, prov. Terra-di Lavoro 12 m. E. E. Caserta. It contains two churches. Pop. 4279.

FRASTANZ, a vil. Austria, Tyrol Vorarlberg on the l. about 4 m. from Feldkirch. It contains a parish church, chapel and school and has manufactures of linen a dye-works, parchment, iron foundry and spinning-mill. Pop. 1551.

FRATTI par Eng Essex 1287 ac. Pop. 347.

FRATTA a vil Austrian Italy prov Veneto, prov. Polesina on the canal of Sordice and not far from the Adige. It is an old place, supposed to have been founded by the ancient Tuscanes contains a parish church is surrounded by numerous villas, and has an annual fair. Pop. 3760.

FPATTA (anc. *Phatissa*) a t. kingdom of Italy deleg. of and 14 m. N. W. Perugia, l. bank Tiber. It is an ancient place, and being considered during the Middle Ages, as a stronghold of some importance, was repeatedly the theatre or

the subject of severe contest. It generally aided with the Pope, and received from them the titles of *Solida Fungus* and *Fidellissima*. Its iron-works and earthenware were at one time celebrated. Pop. 4600

F. RATTI, a vil and com. Naples, prov. of, and 6 m. N. Naples. It contains a handsome parish, and five other churches, and has extensive paperworks. The inhabitants rear great numbers of silk worms. Pop. 9780

REATTE, a vil and com. Naples, prov. Terra-di-Lavoro, 18 m. N. E. Naples. Pop. 3110

REAUEREN, a vil, Switzerland, can. of, and 10 m. N. E. Bern. It contains an old Cistercian monastery now converted into a handsome and spacious courthouse and is famous as the scene of a battle, in 1575 when the peasantry defeated the English mercenary called Ingelram de Courcy and put an end to what is known in Swiss history as the English war

REAUERBURG a tn Prussia, gov. of and 40 m. W. S. W. Königsberg on the Frische Haff at the foot of the Dönhofsburg. It consists of the town proper and two suburbs. It is the see of the bishop of Ermland contains a cathedral a handsome gothic structure finely situated on a height, and interesting as containing the tomb of Copernicus, who died here in 1543 a tower in which were water works to supply the town with water by machinery of his contrivance a parish church and an infirmary and has manufactures of woollen cloth leather and earthenware a fishery a port in the Haff, and some shipping and general trade. Pop. 2965

REAUERFELD a tn, Switzerland, cap. can. Thurgau or Thurgau, 14 m. S. W. Constantine, in the middle of a rich and diversified country watered by the Murg here crossed by a covered bridge. It is well built with clean and straight streets and has three small suburbs above one of which on a lofty rock, stands an old castle built in the 11th century. The townhouse two churches, N. Catholic and Protestant and the arsenal are respectable buildings; and near the town is a Capuchin convent, founded in 1695. Fraunfeld is an industrious place; has several mills a manufactory of cotton and thread, with calico-printing, woollen-weaving &c. Pop. 2859

REAUERFELD or **REAUERFELD** a market in Hungary co. Wisackburg, 9 m. S. E. of Buda. It contains a church, to which numerous pilgrimages are made a synagogue, and an old Franciscan convent. About a fourth of the inhabitants are Jews. Pop. 2100

REAUERMARK a market in Hungary co. Month 56 m. N. W. Pesth. Pop. 2866

REAUERSTEIN a tn Saxony circle, and 18 m. S. W. Dresden, cap. hall of same name, on a rugged height between the Gemlich and Hebratsch. It contains a handsome old parish church with a fine organ two castles, one of them an old fortress with three towers a large turretted townhouse, an orphan hospital and house of refuge and has a saw and other mills a trade in cattle and three annual fairs. Pop. 1107 of hall (area, 86 sq. ac. m.) 11707

REAUERSTEIN or **REAUERSTEIN** a vil Germany principality of Rhenish-Grafschaft, 18 m. N. W. of Cologne a parish church and has an endowment for orphans and widows, and other benevolent institutions and five annual fairs. Pop. 1300

REAUERSTADT, or **REAUERSTADT** a tn Prussia, gov. of and 60 m. S. S. W. Posen, cap. circle of same name. It is a regular fortress with nine bastions, and three ravelins on the land side and two bastions towards the sea. It is entered by four gates contains a Danish Lutheran, a German Lutheran a Calvinistic, and a R. Catholic church a synagogue, an hospital and a countenance, at which all ships passing through the Little Belt pay toll and has a harbour of 11 fourth class with 13 ft. of water some shipping and considerable manufactures of tobacco which is grown in the vicinity. Pop. 4600

RECHENFELD a tn U. States Maryland 75 m. N. W. Annapolis. It has wide streets, a handsome courthouse a jail and county offices 13 churches two academies, and 10 schools two lumber yards, a woollen factory two ropewalks, several mills a brewery pottery several tanneries, and four printing offices. It is intersected by the great road from Baltimore to Wheeling and is connected with the Baltimore and Ohio railway by a branch 3 m. long. It is surrounded by a fertile country and has an extensive trade, being next to Baltimore, the most important town in the state. Pop. 5182

RECHENFELD a tn U. States Pacific Ocean off 8 W. coast, Payson lat. 8 28' N. lon. 137 40' E. (n.) about 100 m. long E. to W. and 58 m. broad. Thus island, which terminates W. in Cape Valence or False Cape was supposed to be part of the mainland of 1 year 1311 1865, when Leant Kail, of the Dutch navy passed through the strait which separates it. The land is everywhere low apparently marshy and covered with a dense forest. (Hornburgh. Raper)

RECHENFELD or **RECHENFELD** a tn Denmark, ad. Zealand cap. hall of same name, in a beautiful district, 22 m. N. W. Copenhagen. The great attraction of the place is the royal palace a fine gothic structure, built upon an island in a lake, and containing the splendid and richly decorated chapel in which the Danish kings are crowned. The building, of red brick so completely covers the lake, that they need to row out of the lake, where sleeping banks are laid out in gardens and pleasant walks. The whole, including the village, which covers three sides of the lake, forms a beautiful and romantic picture.

RECHENFELD a tn U. States, Virginia, r. bank Rappahannock 60 m. N. by E. Richmond. It is regularly laid out and has a courthouse, jail, county offices market five churches five academies, and seven schools, two tanneries two printing offices and a flourishing trade in exporting grain, fur tobacco, Indian corn and other articles. Pop. 3974

RECHENFELD or **RECHENFELD** a report in Norway prov. Agderhus, cap. hall. Smalsholmen, 68 m. S. S. E. Christiana, at the influx of the Tistedals-elv into the Idelfjord lat. 59° 2' 30' N. lon. 11° 28' E. (n.) It is beautifully situated, well built and possesses a church a Latin, a burgher and two common schools; a poorhouse, workhouse, bank, and local judicial courts. Its manufactures comprise a brandy distillery an extensive pottery a tobacco spinery and an iron forge. It has a good and safe haven, and two chief exports are deals and planks, in which it carries on an active trade with Sweden. Close to the S. end of the town on a rock about 400 ft. high, stands the fortress of Fredrikshald.

stone, in the beading of which, November 30, 1718 Charles XII. of Sweden was killed. An obelisk marks the spot where he fell. Pop. (1845) 5503. — (*Kraft's Handb. over Kongeriget Norge.*)

FREDERIKSHAL, in Norway. See **FREDERIKSHALD**.

FREDERIKSHAVN or **FLADSTAD**, a seaport in Denmark Jutland, lat. 56° 11' N. lon. 11° 11' E. It is the N. E. end with a harbour of the third class, having 14 ft. water well sheltered and most convenient for vessels waiting for a favourable wind to carry them round the N. point of Jutland. In the immediate vicinity is the citadel of Fladstrand, commanding the harbour. It is an irregular work, surrounded by 12-ft. ditch, and consisting partly of a tower built upon a steep rock. Pop. 1400.

FREDERIKSBAD (Latin, *Fredersvaderum* German, *Fredersvæder*) a fortified maritime town in Norway prov. Agderhus, built 1646, lat. 56° 11' N. lon. 11° 11' E. It is a thriving place and is composed of the town proper and two suburbs. It has a pretty church built since 1784, and a chapel a commercial a salubrious, a free, and a grammar school, and two schools of industry for poor female children an hospital and a bank. The manufactures consist of hard ware, including nails, buckles, fishing-hooks &c. pottery, brandy and tins. The trade is chiefly in hardware, wood and the fish necessaries. There is a good and roomy haven. Pop. (1845) 3074. — (*Kraft's Handb. over Kongeriget Norge.*)

FREDERIKSBUND a seaport in Denmark, at Seeland, E. end of the Riekslede ford, 24 m. N. W. Copenhagen. It is a very magnificent place, but S. of the town are a haven, and good anchorage for small vessels. In the immediate neighbourhood are some of the most interesting ruins, from which the museums of the capital have derived many of their treasures. Pop. 400.

FREDERIKSVÄR a maritime and strongly fortified town in Norway lat. 59° 11' N. lon. 10° 11' E. It has a church and chapel and three other schools, a naval hospital, and a post-house. Its harbour is good and roomy and has two entrances. Since 1814, Frederiksvær has been the chief station of the Norwegian fleet. It has a royal building-yard, but no trade of any kind. Steamers touch here from Christiansand, Arendal, Christiansand, &c. Pop. 938. — (*Kraft's Handb. over Kongeriget Norge.*)

FREDERIKSVÄRK or **FREDERIKSHAVN** a seaport in Denmark lat. 56° 11' N. lon. 11° 11' E. It has a church and chapel and the largest royal manufactures in Denmark. The chief articles manufactured are gunpowder, projectiles, muskets, cutlery and all kinds of agricultural implements. The harbour admits only small vessels. Pop. 500.

FREDERICKTON formerly **St. Ann** a town in British N. America, the cap. of New Brunswick, on the St. John's river 54 m. N. W. St. John's. The streets are regularly laid out, some of them being 1 m. long and, for the most part, continuously built with wooden houses. The public buildings comprise the province hall, where the provincial assembly and the courts of justice assemble, the Government house, the Episcopal and the Presbyterian church and chapel. The river is here 2 m. wide and navigable for ships of 50 tons for 3 m. above the town. Frederickton has become the chief entrepôt of commerce with the interior receiving large quantities of British merchandise for distribution in the province whilst the timber and lumber from the upper districts are collected here before they are floated down for exportation to St. John's, with which place there is regular communication by steamer. Pop. (1847) about 500.

FREDONIA, U. States, New York 290 m. W. by Albany and 3 m. E. Lake Erie. It has five churches, an academy and several mills. Here is an inflammable spring, the gas of which is used for lighting the streets and houses. Pop. about 1800.

FREDFOLK MARSH, par. Eng. Hants 800 ac. Pop. 78. **FREEMANTLE**, a town in Australia, co. Perth, at the mouth of the Swan river and about 8 m. S. W. from the town of that name. lat. 31° 54' S. lon. 115° 40' E.

FREPEOT a town in Upper Pennsylvania, 155 m. W. W. Harrisburg at the confluence of Buffalo Creek with

the Allegheny. It has five churches, two schools, a variety of mills, and other manufacturing establishments. The Pennsylvania canal passes through the place. Pop. 727.

FREETHORPE, par. Eng. Norfolk 860 ac. Pop. 495.

FREETOWN a maritime town in Africa, Sierra Leone, of which colony it is the capital or principal settlement, at the extremity of the cape of the same name, which forms the S. side of the estuary of the river Sierra Leone; lat. 8° 25' 54" N., lon. 15° 14' 00" W. (a). It is sufficiently elevated above the sea to secure it in some degree from the evils of swamps and stagnant water in its immediate neighbourhood but the long low flat land of the opposite hillian shore, frequently sends over its noxious exhalations, while a no less dangerous malaria is wafted from some stagnant pools on the S. W. of the town. The town is clean and well laid out, the principal streets being very broad and straight, especially that part inhabited by Europeans and the more important of the native traders, whose houses are generally detached, and surrounded by trees. The cottages of the liberated Africans, and numerous Kroonmen, are cleaner and with less pretensions to regularity although their location has been carefully selected with a view to secure a free circulation of air. A beautiful green sward overgrows the streets, giving them an air of delightful freshness. The public buildings comprise a church seven chapels, a church missionary grammar and several other schools, Governor's house and barracks, the latter two occupying an airy and commanding situation. The market is held in square, in a central position, and is well supplied with tropical fruits, including pine apples which are abundant. Fish of various kinds are also plentiful. Nearly all the different articles exposed for sale are procured by Negro women all liberated Africans or their descendants, whose volubility of tongue and noisy mirth, add not a little to the liveliness of the scene. There is good anchorage off the town, about a quarter of a mile from the shore, in 12 or 14 fathoms, muddy bottom. Pop. (1847) 18 000. — (*Allen's Niger, Colonial Rep. &c.*)

FREGEWILL ISLAND, Dr. See **DAVIN (St.) ISLANDS**. **FREGENAL-SANTA-SIBERIA** [anc. *Nerópolis*] in Spain, Extremadura prov. and of 62 m. S. by Badajoz, in a valley on the confines of Andalucía, r. bank, Matagorda. The houses in general are well built, and in many cases decorated with balconies the streets are wide, regular and paved, and the town comprises four squares. It has three churches, several convents, three chapels and a Jesuit college, a large and convenient townhouse containing the municipal offices, prison, and the residence of the Alcaide a commodious hospital storehouse, and an ancient but well preserved crotty by the Templars wherein is the bell-ring, capable of accommodating 4000 persons. In the environs are three fine cemeteries, and an agreeable promenade. Manufactures — linen and woollen fabrics, leather hats, soap earthenware, bricks, tiles, wine, and oil. Trade — grain cattle, wax, wool &c. An annual fair is held in September. Pop. 6976.

FREHFI, a cape, France, par. Côte-d'Or, 13 m. W. by N. 84 m. with a revolving light at N 246 ft. above the sea. lat. 48° 41' 0" N.; lon. 3° 19' 0" W. (a).

FREHMANT a town in Baden, du. Upper Rhine lat. 48° 41' 0" N.; lon. 3° 19' 0" W. (a).

FREIBURG It contains a parish church. Pop. 2179.

FREIBERG (Latin, *Freiberg*) a town, Saxony, and 20 m. W. S. W. Dresden, on the Müritsch, near the Mulde. It consists of an inner town entered by five gates, and still partly surrounded by old walls flanked with numerous towers and of four suburbs, and is generally well built of granite, with spacious streets, regularly formed and paved with granite. The ditches and ramparts have, for the most part, been filled up and levelled, and are now covered with planted alleys, ponds and gardens. The principal buildings and establishments are the cathedral (Dome) or Marienkirche, originally founded in 1480, and renewed in 1826, a large and handsome gothic structure, devoid of towers but containing a number of interesting objects; among others the tomb of Maries of Saxony a lofty and richly sculptured sarcophagus with a kneeling statue of the prince, and the tomb of the celebrated geologist Werner two grottoes pulpit, curiously carved in stone, a lady chapel enriched with Saxon marble and serpentine, and a pavement laid with brass plates. The cathedral, with three towers, one of them very lofty the Nicolaitirche, with two towers and three other churches of little architectural

merit the townhouse an old building, which gives a good specimen of N German gothic the mining academy came, under Werner the head of the Neptunian school, the most renowned in Europe, with a museum attached, particularly rich in the minerals of Saxony and mining models the royal silver refinery the gymnasium normal, burgher and several elementary schools the orphan and military hospitals, blind asylum, workhouse, theatre, &c. The manufactures consist of paper articles in gold, silver and pinbeck woolen cloth articles in wood, lace, soda, white lead, and gunshot and there are two weekly markets, and two annual fairs. Freiburg is the centre of a most important mining district. The minerals consist of silver copper lead and cobalt and the number of mines is said to be about 130 They are situated in rocks of primary formation in which granite is the most prevalent, and have been wrought from a very early period. When in their most productive state, they diffused great wealth throughout the district and the town contained at least 40 000 inhabitants but the depths to which the workings have been carried, has both increased the expense and diminished the produce, and the town, in consequence, was long undergoing a gradual decline from which, however it would appear in more recent times, to be partially recovering To clear many rich lodes from the water with which they are covered a granite high-water level has been commenced. It will be about 84 m. long and lead the water through the mountains to the Elbe at Magdeburg. Pop. (1843) 11 054 (1846 12 194 (1847) 14 101

FREIBURG or **FREIBURG** or **FREIBURG** in **BRUNSWICK** (Latin *Freiburgum Brunsvicensis* French *Freibourg-en-Breisgau*) a town, Baden, circle, Upper Rhine on the Treisau, and on the railway from Carlsruhe, in one of the most beautiful and fertile districts of S. Germany at the W foot of the Black Forest, 42 m. S E of Strassburg. It consists of the town proper, still possessing some remains of fortification, and surrounded by four gates and of two suburbs and is the seat of a superior civil and criminal court, and of several public offices. The houses in general are substantially built and fruit-trees yielding copious streams of the purest water are found in every quarter There are also two large and tolerably handsome squares but

built of red sandstone in the form of a cross, and equally admired for its delicate symmetry and tasteful decorations, with a magnificent portal richly sculptured, and surmounted by a beautiful tower partly of exquisite open work, 380 ft. high the *Landwirthschafts* a handsome modern structure in the Byzantine style finely situated on an elevation in the N part of the town, adorned with a statue of the great Duke Ludwig and surmounted by a square tower the church of St. Martin, built in the 18th century and originally belonging to a Franciscan monastery the university founded in 1456, a complete establishment but not prospering the number of students having declined from 608 in 1825 to 228 in 1844; the E. Catholic seminary a very convenient and elegant edifice; the merchant house, now the chief tax office a quaint gothic structure, resting on pointed arches and decorated externally with fresco portraits of the Emperors Maximilian his son Philip I. Charles V and Ferdinand I the grand ducal palace and government buildings the museum, library, gymnasium, theatre, concert hall, new barracks several monasteries and hospitals. The manufactures are numerous, but not individually of great extent. The most important are beer oil, church cutlery surgical instruments, musical instruments, and red leather. The trade is chiefly in wine and timber and there are both a weekly market numerous attended by the inhabitants of the Black Forest, and two large annual fairs, at which the principal articles sold are corn, mules, hemp, and wood Freiburg is the seat of an archbishop, and the seat of the courts and offices for the circle of the Upper Rhine, and possesses several societies agricultural, literary and scientific, good anatomical and physical collections, and a botanical garden. It is a place of considerable antiquity but its history has no particular interest. Pop. 11 468

Pop. n. 2100 dist. 18 382

FRIAUL, Italy. See **FRIULI**

FRIBOURG or **FRIBURG** a. in Switzerland consisting of three small detached portions, wholly enclosed by cant. Vaud and of Fribourg proper bounded N. and E. by Bern, S. and W. by Vaud and N. W. by the lake of Neuchâtel greatest length from N. to S. 89 m. greatest breadth 35 m. area, 450 sq. m. The surface is finely diversified, and presents almost all varieties of scenery consisting of grassy or woody hills, lofty mountains, and beautiful Alpine valleys. It attains its greatest height in the S. and S. E. where the mountains belong partly to the Jura, and partly to the Bernese Alps. The culminating points are the Moleson, 6000 ft. and the Dent de Brandeleir, 7000 ft. The whole canton, excepting a very small portion of the S. W. the waters of which are carried into the Lake of Geneva, belongs to the basin of the Aar being drained partly by the Broye, but to a much larger extent by the Saane which flows through it centrally from S. to N. The principal lake is Morat. The climate varies with the surface. In the N. and flatter districts spring is some weeks earlier than the more mountainous regions, but even in them the loftiest summits are far below the line of perpetual snow and there are no glaciers. The prevailing winds are the N. and N. E. Both bring cold but dry weather; the W. wind is generally accompanied with rain and snow, and hail-frosts are frequent in spring and often do great damage. In regard to vegetable produce, the canton may be divided into three parts. From the S. from tiers northwards, as far as the district of Gruyère all the surface not absolutely barren or covered by wood is occupied by meadows and pastures. A second portion included between the districts of Gruyère and Broye, and comprehending that in which the town of Fribourg stands, has no barren summits, and in addition to woods and meadows has a proportion of arable land. The third or most N. tract, including the space between the Broye and the Lake of Neuchâtel is both fertile and well cultivated yielding heavy crops of grain and grapes producing tolerable wine. Here, too, tobacco is cultivated, and much excellent fruit is grown. The minerals are of little importance. The great mass of the loftier mountains is composed of limestone, in the strata of which beds of gypsum of a reddish colour and containing sulphur occasionally occur. Almost all the lower hills are composed of sandstone often abounding with fossil plants. The most important produce of the canton is that of the dairy. The Gruyère cheese has long been famous and is exported to a large amount. A considerable revenue is also obtained from timber. Manufactures in the ordinary sense of the term, are insignificant. Fribourg ranks ninth in the Swiss confederation, to which it was admitted in 1481. About seven-eighths of the inhabitants are C. Catholics. The language of the mountainous districts is generally Romanic, of the towns and villages German and French, with a considerable admixture of patois. The government was strongly aristocratic up to 1830 when the democratic principle prevailed, and the suffrage, by which the legislative council and

all the principal offices are virtually appointed, was extended, with a few unimportant exceptions, to all males of 25 years of age. The administrative division is into 18 districts, of which Friedburg is the capital. Pop. 91,145.

FRIEDBURG or **FRIEDBURG** in **UNTERLAND** (Latin, *Friedburg Aemmonum*), a town in Switzerland, cap. of same name, most picturesquely situated on both sides of the Rhine here crossed by a magnificent suspension bridge, 180 ft high, 941 ft. long, and 22 ft. 11 in. broad. The town stands on ground which is very much broken, and so steep that the roofs of a lower tier of houses sometimes form the pavement of a higher and is surrounded by lofty walls, flanked with antique towers. It is on the whole well built. All the houses are of stone, several of the squares are handsome, and though from the nature of the ground almost all the streets are uneven, some of them are both long and spacious. The most remarkable

24 broad fertile and well cultivated producing much corn and wine. It comprehends 25 parishes. Pop. 30,000.

FRICKENHAUSEN a town in Bavaria, Lower Franconia, on the Main, R.R. Würzburg. It contains a church, chapel and hospital and has dye-works, a trade in wine and fruit, sandstone quarries and two annual fairs. Pop. 1062.

It is finely situated, contains a castle church and Latin school and has a harbor on the lake, which is visited by steam-boats and enables it to carry on a considerable trade. Pop. 1077.

FRIEDRICHSHAMN a tn. Russia, Finland cap. circle same name on a peninsula of the Gulf of Finland 110 m. W.N.W. St. Petersburg. It consists of the town proper surrounded by fortifications, which were once strong but have become dilapidated, and of three suburbs and is built with considerable regularity being chiefly composed of straight streets converging to the market-place, which is of a circular form, and is situated near the centre. It contains a

Swedish Lutheran a Finnish Lutheran, and two Greek churches a public school townhouse, barracks, and arsenal and has two annual fairs. At its harbour which is annually visited by about 80 vessels the exports are deals, pitch tar and hemp the imports—salt, tobacco, and various articles of manufacture. Pop. 2251.—The circle, area, 686 geo sq m. is for the most part, flat, though occasionally broken by low hills, and has a soil somewhat sandy but under good culture, not unproductive. Pop. 95 029.

FRIEDRICHSSTADT a tn. Denmark duchy of and 23 m. W.S.W. Schleswig at the confluence of the Treene with the Elbe here only 800 yards broad and crossed by a ferry. It is a handsome town regularly built in the Dutch style, with a market place in the centre surrounded by a planted walk but lies so low as to require a high dyke for protection from the inundations of the Elbe. It contains a Lutheran, and a Ramestrang reformed church in the latter of which the services is performed in Dutch. Monastic and R. Catholic chapels, a meeting of Friends, and a synagogue and has manufactures of woollen stuffs, starch and varnish dye-works oil mills building-docks, and a summer house of the fourth class at which the trade carried on is in transport. Great numbers of cattle cross the ferry for Hamburg. Pop. 6600.

FRIEDRICHSSTHAL, a tn. Prussia, prov. Silesia, gov. of and 15 m. N. Oppeln. It contains a Protestant church and has blast furnaces and steel and iron works. Pop. 1089.

FRIEDVLY or TONGA ISLANDS, S. Pacific Ocean, between lat. 18 and 23° S. and for 173° and 176° W. They consist of the island of Tonga, the cluster called the Hapai, the largest of which is named Laofong, and the island of Vavau. The climate is remarkable for its mildness and the soil for fertility hence the great variety and luxuriance of their vegetable productions, which include coconuts, nutmegs, bread fruit, bananas, yams, sugar cane, &c. &c. The people are of the Malayan race and industrious cultivators of the soil they love and respect their parents are cleanly but revengeful and treacherous. These islands were called the Friendly Islands by Cook. They are of small size, and for their extent tolerably well peopled but possess not oil is almost the only article of export of consideration to Europeans. There is some traffic, however between them and the Fijians in human articles, and numbers of Tongans go thence to build their large double canoes, as they have themselves no timber fit for the purpose. The population of these islands is estimated at 13,650 of which about 4500 are Christians.

FRIEDRICH or FRIEDRICH WAREN (anc. Frituvall) a tn. Austria, Illyria, circle of and 23 m. N.N.E. Klagenfurt r bank, Metnitz, in a fertile district. It is surrounded by old walls and a wet ditch has a number of good houses, and a square, with a curious octagon for a town two churches, a Dominican monastery, a commandery of the Teutonic order and manufactures of iron, and several blast furnaces supplied from mines in the vicinity. Pop. 1372.

FRIEDRICH, a tn. Prussia, prov. Brandenburg gov. of and 80 m. N.W. Potsdam at the confluence of the Havel and the river Rhine. It is the seat of a law court, contains a church, and has four annual fairs. Pop. 2571.

FRIEDRICHSDAM several places, Germany garden lady —1 A vil. Baden, circle, Middle Rhine, 8 m. S.W. Oldenburg. It has a parish church and some trade in cattle, and also in tobacco and wine which are extensively grown in the district. Pop. 2034.—2 A vil. Bavaria, 1 district, 1 bank, Rhine about 18 m. S.W. Mannheim, with three churches. The allied armies crossed the Rhine here in 1814. Pop. 1200.

FRIESTAD or VAISSLAND (Latin. Friesa Friesch, Fries) a N.W. prov. Holland, bounded N. and W. by the N. Sea S. by the Zuider Zee and prov. Overijssel and E. by prov. Groningen and Drenthe. Extensive length, N to S. 45 m. E. to W. 40 m. area 948 geo sq m. It is generally flat and parts of it are below the level of the sea, from the inroads of which it is protected by dykes. Even the few rising grounds met with are alleged to be artificial heaves, formed as places of refuge during floods to which the province was often subjected before the dykes were built, as well as since from the year 833 to 1825 it is calculated that 83 inundations have taken place. It is well watered, has numerous small lakes, and is intersected by numerous streams and canals the latter affording a very complete system of water

commencement. The W part of the province yields excellent hay and pasture and the N W and N E is the richest agricultural land, while the E and S E is alternately black earth, sand, turf heath, meadow land, and coppice. Four fifths of the province are under cultivation and the remaining fifth is composed of roads, rivers, lakes, turf land heath, &c. The usual cereals are cultivated on the suitable soil and are excellent here, the best in Holland, cattle and sheep are reared on the meadows towards the W coast and both cattle and other agricultural produce are sent to England through Harlequin. The manufactures are not important still tanning, felt, weaving, spinning, boat-building, soap-making, salt refining, brewing, distilling, and sundry other branches are carried on to a limited extent, chiefly in the towns. The people are mostly Protestants. There are 365 Reformed, 88 Baptist, and 22 R. Catholic churches. 838 common and 11 Latin schools. The Frisians are well made, active, brave, and honest and in their manners, features, and language greatly resemble the English. Their dress is peculiar of antique origin, and quite distinct from that used in other parts of Holland. For administrative purposes, Friesland is divided into three arrondissements, Leeuwarden the capital, and Heerenveen and 14 cantons. Pop. (1850) 246,967.

FRIENLAND (Ost) [English, East Friesland] an ancient district forming the N W extremity of the kingdom of Hanover and nearly equivalent to the present landroost or government of Aurich. It was originally governed by its own counts. On the extinction of the family in 144, it was claimed by George II of England, as Elector of Hanover and by Frederick of Prussia. The latter prevailed. In 1806 Napoleon included it in his new kingdom of Holland and in 1814 Prussia obtained the restoration of it but the following year ceded it to Hanover.

FRIESOTHE, a in grand duchy Oldenburg cap. land of same name, on the R. 18 m. S W Oldenburg. It contains a R. Catholic church, and a parsonage and has a trade in cattle and four annual fairs. Pop. 1036.

FRIITZLAR, *an* House-Canal prov. Niederhessen cap. circle of same name. L. bank, Elder 16 m. S W Cassel. It is partly surrounded by walls and ditches and entered by three gates, but has narrow and winding streets contains two churches, one of them a very ancient edifice, partly byzantine and partly gothic the other formerly belonging to a Franciscan monastery and now used by the Protestants. An English monastery with an educational establishment has a trade in corn and wine, and eight annual fairs. Around the town is a chain of watch-towers, seven in number. Pop. 2049.—The climate partly level and partly hilly is poorly wooded but well watered and contains much excellent arable land. Pop. 29,445.

FRIUGI [German *Friess*] a deleg Austria, Italy bounded N by the Tyrol N E and E by the Dnyra S by the Adria, and S by Venice, R. W. Treviso, and V. Belluno are 1223 geo. m. It is mountainous towards the N but gradually slopes down into an extensive plain which, as it approaches the sea, becomes so flat as to form extensive marshes. The soil of the plain is in some parts remarkably fertile but in others so light and sandy as to be almost sterile. Considerable quantities of corn are raised but the chief wealth of the deleg. is in cattle, which are here reared in greater numbers than in any other part of Lombardy. The minerals include iron and copper which are worked to some extent, fine marble, of which there are six quarries, and fine pottery clay which is extensively manufactured. The capital is Udine. Pop. 24 000.

FROBISHER'S STRAIT a channel British N America, leading from the ocean W. between Hudson's Strait and Northumberland inlet, and separating the districts of Melbourn and Vira. Length, 240 m. medium breadth, 30 m. Its shores on both sides, are rugged and mountainous. It was discovered, in 1578, by Sir Martin Frobisher.

FRODEBURY par. Eng. Kelcey 1835 ac. P. 290.

FRODINGHAM two par. Eng. —1 Lincoln 5770 ac. Pop. 789.—2, (North) York (W. Riding), 2880 ac. Pop. 846.

FRODSHAM a market town par. Eng. Lancashire, co. Chester with a station on the Birkenhead, Lancashire, and Cheshire Junction Railway. The town 11 m. N E Chester on the Weaver near its confluence with the Mersey has a fine old church, and an endowed school. The inhabitants are principally employed in saltworks and in cotton manufactures. Market on Thursday and two fairs annually. Area of par. 14 288 ac. Pop. 6582.

FROEBURG a town Saxony circle of, and 22 m. S S F Leipzig. L. bank, Weisera, here crossed by two bridges. It contains a church with a lofty tower and, in the vicinity a little S. of the town, a large castle, with an extensive and well wooded park; and has manufactures of woollen cloth and

northern ware, a spinning, and other mills, a general trade, and trade in cattle, and four annual fairs.

FROHSE, a vil. Prussia, Saxony gov. and 6 m. S.S.E. Magdeburg on the Elbe with an old parish church, tile-works, some shipping and trade and three annual fairs. P. 982

FROME, several rivers England.—1 Co. Dorset, rising near Bournemouth flowing S.E. to Dorchester whence it flows E into Poole Bay after a course of about 35 m.—2 Co. Somerset, rising near Bruton flowing past the town of Frome and after a course, chiefly N. of about 20 m. joining the Avon between Bradford and Bath.—3 Co. Gloucester flowing N. and falling into the harbour of Bristol.—4, Co. Hereford, an affluent of the Lugg.

FROME, or Frome-Sumwood a par. bor. tp. and par. England, Co. Somerset. The town 19 m. S.E. Bristol is pleasantly situated on the E. and N.E. declivity of a hill at the base of which flows the river Frome. It consists of a number of streets, the modern of a convoluted breadth, but the older narrow and irregular. Formerly the town consisted of a series of mere lanes, so narrow that two carriages could not pass each other without encroaching on the footways. Of late years, however, great improvements have taken place both as regards the widening of the streets and the construction of the houses. The town is now lighted with gas, and there is no scarcity of water but great inefficiency in the means of conveying it to the inhabitants.

There are three churches in Frome, the old parish church and two new structures. The former is a handsome ancient gothic building with a tower surmounted by a spire, together about 150 ft. high. The latter two are specimens of architectural pretensions, although one of them, Christ Church, in the later English style, is sufficiently common. There are places of worship besides, for Baptists, Independents, Wesleyans, Primitive Methodists, Presbyterians, and the Society of Friends. The schools and charities are one British, one National four Dissenter schools, and one attached to each of the three churches, besides a number of respectable private schools. There are also a blue coat school in which 25 boys are clothed and educated, and a charity school for 40 girls, who are maintained and educated. The charities amount to £1800 annually of which expended in the maintenance of old men and women, and young persons of both sexes. There are several hospitals and dispensaries in the parish, but there is a flourishing savings bank in the town in which the balances in favour of depositors, in 1851 amounted to £28,975. A literary association was formed in 1844, which met with immediate success, and continues to prosper. Frome has been long celebrated for the manufacture of woollen cloths particularly broad-cloths and kerseymeres. Silk, livery cloths carriage linings, and hats are also manufactured to a considerable extent. The river Frome is crossed at the town by a neat stone bridge of five arches. The environs are beautiful and are adorned by numerous handsome mansions and villas. Frome returns a member to the House of Commons; registered electors (1851) 401. Area of par. 7092 ac. Pop. of bor. 10,148 par. 11,916.—(Leeds Correspondent).

FROMISTA a vil. Spain prov. and 16 m. N. Palencia, in a beautiful plain of the canal of Castile. It is tolerably well built but in ill pav. has three parish churches, two hospitals, a Latin and a primary school and manufactures of cloth, soap, and oil, and several oil mills. Pop. 1483.

FRONT (Latin *Frone*) a vil. and com. Italy Lombardy division of and about 18 m. S. Turin on the Amaleno here crossed by a wooden bridge. It has a parish church, two chapels, an old palace in ruins and some trade in fat cattle. There is a stream of ligate in the vicinity. Pop. 1804.

FRONTIERA a vil. Portugal, prov. Alentejo, 85 m. N.E. Evora, on a hill, L. bank, Tejo. It has two churches and an annual fair. In the vicinity there is a convent. In 1668 the Portuguese here defeated the Spaniards. Pop. 3018.

FRONTENAY a vil. France, dep. Deux-Sèvres, arrond. Niort. It was once a fortified town, but was taken and dismantled by Louis VIII. in the 13th century. It has a trade in wool and cattle. Pop. 1482.

FRONTENHAUSEN a market in Lower Bavaria, r. bank, Vils, 53 m. N.E. Munich. It is surrounded by a wall contains two churches and a chapel, and has manufactures of woollens, and a trade in cattle. Pop. 1007.

FRONTIGNAN [anc. *Frontinensis*] an enc. but small

and decayed in and com. France, dep. Hérault 13 m. S.W. Montpellier and station of the railway from Montpellier to Olette. It is known best by its white wine grown here esteemed among the best in France. During the Middle Ages it was a fortified town of some consideration. In 1629 Louis XIII. established an armistice here, it being at that time the chief place for the maritime trade of Languedoc. Pop. 1668.

FRUOME, three par. Eng.—1 (*Subep.*) Hereford 4550 ac. Pop. 1070.—2 (*St. Quintin*) Dorset 1025 ac. Pop. 184.—3, (*Vesuhurok*) Dorset 614 ac. Pop. 171.

FROBIAON, a delegation Italy composed of a small isolated portion called *Frone Corvo* enclosed within the Neapolitan prov. Terra di Lavoro, and of *Frusitane* Proper bounded N. and N.W. by comarca Roma, S.W. and S. by the *Mediterrenean* and S.E. and E. by Naples greatest length N. to S. 50 m. greatest breadth 43 m. area, 1800 sq. m. The surface in the N.E. is covered by the Roman sub-Apennines or some of their ramifications, has an agreeable and salubrious climate, is watered by the *Sacco* and several affluents, and though very indifferently cultivated yields abundant crops, and produces almost all the fruits of Italy. The S.W. portion of the delegation is occupied by the *Frusitane* Marshes, an extensive tract whose numerous swamps and pestiferous exhalations almost unfit it for the habitation of human beings. Much had been done for its improvement in Roman times, but under the Papal Government the benefits of former improvements have been lost through neglect. Pop. 164,000.

FROSINONE [anc. *Frusina*] a vil. com. Italy cap. above deleg. 50 m. E.S.E. Rome, at the foot of a hill near L. bank. Coast. It is ill built but has several churches and convents at the seat of a bishopric, and the residence of a cardinal delegate; and has two annual fairs one of 28 days continuance, and another of 6 days. Good wine is produced in the vicinity. Pop. 6500.

FROBOLONE, a vil. and com. Naples, prov. Salerno, 12 m. E. Ischia. It contains six churches two convents, a seminary and hospital and has manufactures of calico. A novel estemmed wine is produced in the district. Pop. 4443.

FROSASSO (Latin *Frassacum*) a vil. and com. Italy Piedmont, prov. of and 4 m. N. Flimerio, on the *Po*; it was anciently surrounded by walls and ditches and is still entered by four gates. It has two churches, an ancient strong castle in ruins, and a trade in wine. Pop. 1598.

FROSTENDEN par. Eng. Suffolk 1810 ac. Pop. 456.

FROWARD (Cape) S. extremity of S. America, Strait of Magellan lat. 53° 53' 42" S. lon. 71° 18' 30" W. (N.) a bold promontory composed of dark-coloured slaty rock its outer base is nearly perpendicular.

FROWLESWORTH par. Eng. Leicester 1496 ac. Pop. 296.

FROYFIELD two par. Eng.—1 Harz 6480 ac. Pop. 658.—2 Wilt. 1160 ac. Pop. 620.

FROYEN an isl. W. coast Norway bail. of and 53 m. W. N.W. Tromsøen. It is nearly of a triangular shape greatest length 20 m. central breadth 12 m. and is separated from the larger island Hittern by the Froyfjord which at its mouth between the two islands is 15 m. wide but at the shortest distance between them only 5 m.

FROYLE par. Eng. Harz 3618 ac. Pop. 826.

FRUGES, a vil. France, dep. Pas-de-Calais 17 m. S.N.E. Montreuil. It is built on a steep ascent and has several streets, all ending in an open area. Manufactures—honny coarse cloths, and tobacco-pipes and has some salt-works and tanneries and a mineral spring. Pop. 2224.

FRUTIGEN a vil. and par. Switzerland com. of and 25 m. S.S.W. Bern near the confluence of the *Kander* and *Engelggen*, cap. bail. of same name. The houses are mostly new having been rebuilt after a great fire in 1827. Its antique church was founded in 938. It has cloth-works, kirch-water distilleries, &c. and in the environs much cattle are reared a mile S. are the baths of Frutiggen. Pop. vil. about 1000 par. 4500.

FRYERNING par. Eng. Essex 1870 ac. Pop. 748.

FRYKEN a lake, or rather chain of lakes, Sweden, lin. of, and 13 m. N. by W. Carlsk. It stretches S. to S. about 40 m. and seldom exceeding a mile in width has the appearance of a broad river. It is divided into three distinct parts connected by two narrow channels, and is very deep. It

discharges itself into Lake Wenner by the North. Frykadal, the name of the valley in which it lies, contains some of the finest scenery of Sweden, and is sometimes called Swedish Switzerland.

FRYKSTOVN two parts. Eng. York (W. Riding) —1 (Rydy) 3040 ac. Pop. 903 —2. (Midd) 4013 ac. Pop. 1054.

FR (N) a vil and com. Italy Piedmont div and 10 m W N W Al mandria finely situated on a height above the (trans) It consists chiefly of one principal street, terminating in a square contains five churches, one of them an ancient gothic structure surmounted by a tower and has a considerable trade in corn wine, and wool. Pop. 2134.

FLCA (Strait of San Juan de) a channel N American Oregon territory leading from the Pacific into the Gulf of Georgia, S. and W Vancouver Island, which it separates from the mainland, and forming part of the boundary between Great Britain and the U States lat (entrance), 48 25' N lon 124 12' W It extends S.E. about 80 m. is 11 m. broad at its W. end, and is free from shoals.

FUCECCHIO a tn Tuscan prov of, and 23 m E. by N Pisa, near r bank Arno, and the S. extremity of the Lago Fucecchio It is well built, surrounded by a wall flanked with towers commanded by a strong old castle, and possessing wide and well kept streets a handsome collegiate church adorned with paintings and stately an almshouse, and seminary and manufactures of all kinds fabrics, vinegar and vermilion. Pop. 5232. —The lake is about 7 m long by about 3 m average breadth. It sends its waters S.W. to the Arno.

FUCINO or **CELANO** (Latin *Fucinus Lacus*) a lake Naples, prov Abruzzo Ultra Iul about 11 m. long from N.E. to S.W. 5 m. broad, and 35 m in circuit. It has 181 ft. above sea level, enclosed N.E. E. and S.E. by the Apennines, S. by Mount S. al. and W. by the Roman and Apennines, and is open only on the S.W. leaving the country in that direction exposed to its inundations. A remedy was attempted by the Emperor Claudius, who caused an aqueduct to be constructed across Salernum, for the purpose of discharging the surplus waters of the lake into the (Tigullian) Of this vast work, on which 80 000 slaves are said to have laboured 11 years, there are only a few remains. Fucino is generally believed to be the crater of an extinct volcano. Its banks are densely peopled, and well cultivated.

FUEGO (TIERRA DEL) See TIERRA DEL FUEGO.

FUEGO or **Fuoco** —1 One of the Cape Verde Islands, N point lat. 15° 13' N lon. 24° 21' 30' W (m.) about 10 m. in length, and nearly circular very high forming a volcanic peak and generally covered. Though deficient in water it is fertile, and produces a great quantity of Indian corn, beans, &c. Excellent cloths are made here for the trade of Guinea, and for the other islands. The climate, although warm, is healthy. There are several beaches for boats, but the only anchorage for vessels of burthen is on the W side of the island, in the bay called Lax, and off the town of that name. Water scarce, and indifferent. —2 A small ill. E. coast Africa, Mozambique Channel one of the Fremere group lat. 17° 14' S. lon. 38° 55' E. —3, An ill. N American off N. coast, Newfoundland lat. 49° 30' N lon. 46° 40' W.

FUEGO (VOLCAN DE, [de soleros]) a volcano Central America, Guatemala, 25 to 30 m. W by S. the new city of that name lat. 14° 19' N lon. 90° 45' W It is one of three volcanoes which stand close together the other two being the Volcan de Agua, or Water Volcano, a perfect cone and the other the Volcan de Pacaya. These volcanoes rise from 7000 to 10 000 ft. above the plain that of Fuego generally emits smoke from one of its peaks.

FUEN with affixes, numerous ssa. and villa. Spain, of which the following are the principal: —1 (Cataluna) a tn. New Castle, prov of, and 40 m S.W. Ciudad-real at the foot of a rugged rock, on the borders of Andalusia. It has a large square, a parish church, townhouse, storehouse, and cemetery. In the vicinity are much frequented medicinal baths, esteemed efficacious in rheumatism and gout. Pop. 2196 —2 (Majorca) a tn. Old Castle, prov of, and 6 m. W.W. Logroño, r bank, Elbro has a parish church, chapel, hospital, and two schools. Manufactures: leather and brandy Pop. 2029 —3 (Salida) a tn. New Castle prov of, and 13 m. N.W. Toledo, containing a church, chapel townhall prison, hospital, Latin, and two other schools, a handsome palace, convent and several foun-

tains. Manufactures: —linen and woollen fabrics, earthenware, and soap. Pop. 1789 —4, (Cuenca), a tn. New Castle, prov of, and 64 m. S. Ciudad, 24 m. N.W. Alamosa, r bank Jucar, having a church, townhouse, prison two schools and a fountain. Manufactures: —serape fabrics The wine made here is much esteemed. Pop. 1831 —5, (Lebrada-de-las-Monjas) a tn. Extremadura, prov of, and 100 m. E. Badajoz, near r bank, Guadiana, well built, with a square and clean, wide, and paved streets a church tower and season-house, prison hospital, storehouse, and public fountain. Manufactures: —linen fabric a tn. Pop. 1078 —6 (Lebrada) a vil. New Castle, prov of, and 9 m. S. Madrid, having a square, parish church townhouse prison two schools, and a cemetery Manufactures: —cloth and blankets. Pop. 2077.

FUEN Cmo, or **FUEN** Cmo Pco, a considerable tn. China, prov Shantung, r bank Fuen Ho, 50 m S.W. Tai yuen.

FUEN Ho a large river China, prov Shantung, an affluent of the Hoang-Ho, rises in the N part of the province, about lat. 39° N whence it flows S. with one considerable deflection E. till it reaches Kiang lat. 35° 40' N when it suddenly bends W. and falls into the Hoang Ho at lat. 35° 30' N lon 111° 25' E. Its whole course is about 100 m.

FUELAGIROLA a tn. Spain, Andalusia, prov of, and 20 m. S.W. Malaga, on the Mediterranean It has a parish church two primary schools, an active and a productive fishery Pop. 1182.

FUENTE-ARBUJA, or **FUENTE-ORBUJA** a tn. Andalusia, prov of, and 44 m. N.W. by W Cordova, on the slope of a hill near l. bank, Guadalupe. It is well built has a square steep, wide, and clean streets a large parish church five chapels, two convents, a townhouse prison, storehouse hospital, three fountains, and a spacious cemetery. Manufactures: —linen and woollen fabrics and leather. Trade: —wine, oil, brandy honey and pigs. Pop. 4660.

FUENTE ALBILLO a vil. and par. Spain, Valencia prov of, and 24 m. from Albacete, in a valley. It has a parish church a court-house, prison, two primary schools, and a beautiful fountain manufactures of woollen and hempen cloth and a trade in corn cheese, and saffron Pop. 1117.

FUENTE DE GARCIA, a tn. Extremadura, prov of, and 40 m. S.E. Badajoz. It is tolerably well built, has wide streets and small squares, and a parish church with convents, several chapels, a townhouse prison hospital, storehouse, three schools and some public fountains. Manufactures: —cloth linen soap wine, and oil. Many of the people are engaged as molesters. Pop. 4500.

FUENTE DE PEDRO-VARRO a tn. Spain, New Castle, prov of, and 50 m. W S.W. Cuenca, in a plain between the Belvira and Ranzaraz. It contains a parish church, court-house prison a boys and girls school and has a trade in corn, cattle, and wine. Pop. 1269.

FUENTE DEL ARCO, a tn. Spain, Extremadura, prov of, and about 80 m. from Badajoz on the N slope of the Sierra Morona. It contains a handsome parish church, court-house prison, primary school and a fine old fountain in the form of an arch which gives its name to the town; and has numerous corn and oil mills and a trade in corn, wool and cattle. Pop. 1100.

FUENTE DEL FUEGO, a tn. Spain, La Mancha, prov of, and 30 m. N.E. Ciudad-Rodrigo. It is well built, and well situated contains a parish church, townhouse, prison and primary school and has a corn and oil mill and a considerable trade in charcoal. Pop. 3315.

FUENTE DEL MANZANA, a tn. Extremadura, prov of, and 82 m. S.E. by S. Badajoz, in a valley near r bank, Guadiana. It is, for the most part, well built, and has three large, and several smaller squares, and wide, level, paved, though irregular streets, a Cornish parish church four chapels, two convents, a Jesuit college, Latin and primary schools, a townhouse, prison, hospital two public fountains, a cemetery and some vestiges of the ancient walls and fence by which it was formerly surrounded. Manufactures: —linen cloth, brandy hardware, earthenware, &c. Trade in grain oil, brandy wool, wine, fruits, vegetables, &c. Some corn, sheep, and pigs are reared. Pop. 6580.

FUENTE EL SAUCO, a tn. Leon, prov of, and 23 m. S.S.E. Zamora. It is tolerably well built, has clean streets, several squares, two parish churches, a chapel, townhouse,

prison, hospital, and storeroom. Manufactures—linen, cloth, wine, and brandy which are exported. Pop. 2837

FUENTE-LA HIGUERA a tn. prov. of and 50 m. S W by S. Valencia. It has three squares, steep streets a parish church, two chapels, a townhouse, and prison. Manufactures—woolens and woollens, wine and brandy. Pop. 2659

FUENTE-LA PALA, a tn. Leon, prov. of and 37 m. S.W. by S. Zamora, 6 m. E. Fuente de Sanco, near L. bank, Guara. It is well built, has a handsome church, two chapels three schools a townhouse prison, and convent. Pop. 1676

FUENTE-REQUENSA, a tn. Spain Valencia, prov. of, and 56 m. from Alicante, at the foot of some lofty hills. It is poorly built, but clean contains a gothic parish church a courthouse, prison and primary school and has manufactures of woollens, thread, and earthenware, several mills and a trade in corn, wine oil and silk. Pop. 1475

FUENIE GUISALDO, a tn. Spain Old Castile, prov. Salamanca, 17 m. S.W. Ciudad Rodrigo. It has a large and handsome parish church, in the public square a courthouse, prison primary school manufactures of linen linens, and animal hair. Several undisturbed contests took place here during the peninsular war. Pop. 1393

FUENTE-HAMONCA, a tn. Spain Andalusia, prov. of, and 64 m. N.W. Seville, in a mountainous district. It is well built, paved and clean has two public squares, a parish church, townhouse, prison two primary schools several saw and flour mills and a trade in potatoes and chestnuts. P. 1299

FUENTE PALMERA a tn. Spain Andalusia, prov. of and 25 m. S.W. Cordova, in a plain. It is indifferently built contains a parish church prison and two primary schools and has manufactures of white soap an oil-mill, and a trade small corn and cattle. Pop. 1556

FUENTERRABIA or **FORTERRABIA**, a city and port, Spain prov. Guipuzcoa, 10 m. E. by N San Sebastian at the mouth of the Bidassoa, on the French frontier. It was formerly a place of considerable strength and importance, sur-

three schools, three fountains, and a convent. Its harbor is shallow and admits only small vessels. Manufactures—hempen shoes linen cloth, earthenware, and various others. The people are chiefly occupied in tillage and fishing. The salmon of the Bidassoa are much esteemed. The town itself has been frequently besieged, and its vicinity has been the scene of numerous military operations. In 1837 some severe fighting took place here between General Krays and the Carlistes, the former eventually taking the town. The Fontarrabias exhibited a singular degree of ingratitude, and want of feeling in their treatment of the sick and disabled of the English army in 1813 refusing or but grudgingly giving them quarters, and the accommodation of hard boards to repose upon. Pop. 2085

FUENTES several places, Spain particularly—1 (*de Andalusia*) a tn. Andalusia, prov. of and 33 m. E.N.E. Seville. It is well built has two squares, a parish church three chapels a townhouse, prison hospital convents, several schools, and a cemetery. Manufactures—linen and coarse cloth. Pop. 5915—2 (*de Leon*) a tn. Zamora, prov. of and 50 m. S. Badajoz, on the borders of Seville. It has a square wide and clean streets, a church two chapels a townhouse, prison, hospital school, three fountains, and a cemetery. Manufactures—linen fabrics wine, and oil. Pop. 2920—3 (*de Don-Bernardo*) a tn. Old Castile, prov. of and 12 m. W.N.W. Palencia, on a slightly elevated plain on the N.W. bank of Lake Nava with a manufactory of black bombazines. Pop. 8065

FUENTES-DE-BANCO a tn. Spain Aragon prov. of and 30 m. S.S.W. Saragossa, on the slope of a hill above bank Ebro, near the confluence of the Gual. It contains a petite parish church a magnificent palace much injured, but during the peninsular and the civil wars a courthouse, prison hospital convent, and two primary schools and has manufactures of serge, a flour and an oil mill. Pop. 1446

FUENTALENTURA one of the Canary isle the nearest to the coast of Africa, from which it is about 60 m. distant; lat. (N.W. point) 28° 42' N lon. 14° 1' W (P.) It is about 55 m. in length and about 15 in breadth extending at its S.W. extremity where, for an extent of about 15 m. it is not more than 4 or 5 m. broad, being altogether shaped like a bottle. It is less mountainous than the other islands though its N and S ends rise to 2600 ft. It possesses two ports—Calras on the E and Trujales, on the S.W. The anchorage is bad, and the landing difficult. The island has a barren appearance generally with some fertile tracts here and there the most extensive of which is the valley of Oliva, towards the N. 15 m. long by 2½ wide. There are only two streams of pure water in the island. On the N and N.E. are some extinct volcanoes, one of which attains an elevation of 3160 ft. The only trees are the date, palm, and fig. The principal exports are vanilla, orchilla, corn, honey goat-skins and camels. See map in article CANARIAS. Pop. about 17,000

FUERTH a tn. Caribbean Sea, Gulf of Darien E side lat. 0° 25' N lon. 78° 12' W (A.) It is about 1½ m. long N to S. and ¾ m. E to W. It is high in the middle, and covered with trees. It can be seen from a distance of 20 m.

FUERTE (P.) a city Mexico cap. of the State of Oaxaca or of Chimala and Sonora united on the Rio del Fuerte lat. 27° N lon. 108° W 290 m. N.W. Durango, and 60 m. from the Gulf of California. It is the seat of the supreme tribunal of justice and the depot for goods passing to and from the port of Guaymas, distant 155 m. N.W. Pop. 5000.

FUERTE par and to Iref. Koscomou 18 476 ac Pop. 4817

FUFU in Arina. See FIF

FUGA one of the Bahayan isle N Pacific Ocean off the N end of Luzon lat. 19° 1' N lon. 121° 30' E (P.) It is about 8 m. long E to W and 3 m. broad. There are irregular soundings along its S.W. side where a ship may anchor occasionally.

FUGEN a vil. Austria, Tyrol in a beautiful and fertile plain, on the Zillerbach, at the foot of the Hartberg 35 m. E. Innsbruck. It contains an ancient church with fine carvings, a castle, school, and posthouse, and has manufactures of needles and ironware and a powder-mill. Pop. 814.

FULHUR par. Eng. Cambridge 6221 ac. P. 1552.

FULBROOK, two parts. Eng.—1 Oxford 1670 ac. Pop. 408.—2 Warwick 650 ac. Pop. 92.

FULDA a town in Hesse-Cassel, cap. prov. and a bank river of same name, here crossed by three bridges, 54 m. S.E. Cassel. It consists of the town proper surrounded by walls, and of several suburbs, and is throughout, a municipality. It is the see of a bishop, and the seat of several courts of law and public office contains a cathedral a handsome modern edifice, with a sacrophagus of St. Boniface who is said to have been buried here 10 other churches, of which the round church of St. Michael's, founded in 1822 the parish church and that of St. Severus are the most deserving of notice a castle, once occupied by the prince bishop, and now belonging to the elector with fine gardens a gymnasium Benedictine monastery conventual secondary school, industrial and other schools a library of 60 000 volumes, a savings bank military barracks, orphan and other hospitals and benevolent endowments. It has important manufactures of cotton wools and linen goods, wax, candles, sealing-wax, white and ordinary leather paper, unadorned straw chairs, musical instruments, &c. and an important trade both in the above articles and in corn and cattle. Pop. 2570.—The province called also the grand duchy of Fulda, consists chiefly of the old bishopric of the same name, and is divided into the four circles of Fulda, Hildesheim, Hildesheim, and Schmalkalden, 500 sq. m. Pop. 140 845.

FULDA a river Germany which rises in the N. slope of the Hohe Rhin-gebirge, in the N.W. of Bavaria, about 3 m. N.E. Geroldsdorf flows generally N.W. through Hesse-Cassel and Hesse-Darmstadt enters Hanover and unites with the Weser in forming the Weser after passing Fulda, Hildesheim—where it becomes navigable—and Cassel. Its chief affluents are, on the r. the Hain and Löss, and, on the l. the Thier, Löss and Eder. whole course, about 100 m. It is well supplied with fish chiefly salmon pike, and carp.

FULLE-NARY a vil. Hungary. Thence Danube, co. Stahl weissenburg, near Veszprém on an elevated site, and containing a Protestant and a R. Catholic church. Pop. 1900.

FULFK, or FULIAKOW, a market in Hungary. Thence Danube, co. Hegyvid, a beautiful dist. 61 m. N.E. Pesth. It was once surrounded with walls, contains a R. Catholic church and a Franciscan monastery and has an academy among a stone quarry, and an arsenal here. The old castle, strongly situated on a steep height, is now in ruins, but figures much in the early history of Hungary. Pop. 1760.

FULFORD ABER, a vil. and par. Eng. Lanc. co. York (E. Riding). THE VILLAGE, 2 m. S. York of which it is a suburb, is of considerable extent well kept, and contains many respectable houses. Within its limits are, also, the York public cemetery opened in 1837; the York military barracks, and the Retreat an admirably conducted lunatic asylum belonging to the society of Friends. There are also a church, and Methodist chapel, a free school, for the education of 20 poor children, and two other day-schools. The inhabitants are chiefly employed in agriculture. Area of par. 2962 ac. Pop. 1961.—(Local Correspondent.)

FULHAM a par. and vil. Eng. Lanc. co. Middlesex, 58 m. N.W. St. Paul's, a bank Thames, and connected with Putney by a ferry by a wooden bridge. It is irregularly built, but contains many elegant houses, and is well lighted with gas. The palace of Fulham has been the summer residence of the Bishop of London on the site of Henry VII. It occupies a low site on the banks of the river a little W. of the village,

and is built of brick, of a quadrangular form but is neither elegant nor convenient. The grounds occupy about 87 ac. the whole surrounded by a moat, over which are two bridges. The parish church of All Saints stands near the river side. It is an ancient stone building with a handsome Gothic tower at the W. end 96 ft. high. There are, besides, places of worship for various religious classes. A school has been erected here, in which the children are educated on the system of Dr. Bell, 80 of them being also clothed. There are also an infants school 12 almshouses for poor widows and a union workhouse. Most of the ground in the neighborhood is laid out, and cultivated as market gardens nurseries, &c. for the supply of the London markets. Area of par. 1834 ac. Pop. 11,886.

FULIGNO tn. Papal States. See FORZANO.

FULL BURTON par. Eng. York (E. Riding) 850 ac. P. 165.

FULLETRY par. Eng. Lincoln 1040 ac. Pop. 272.

FULLSTON a vil. Austria, Silesia, circle Troppan, in a valley on a stream of same name, about 15 m. from Troppan. It contains a church, school and old feudal castle, and has 4000 souls. Pop. 766.

FULMEL, par. Eng. Bucks 1866 ac. Pop. 879.

FULMORSTON par. Eng. Norfolk 2335 ac. P. 888.

FULNKE a tn. Moravia, Silesia, Przemysl. dist. of same name, near the Gmünd 17 m. S. Troppan. It is a finely situated cheerful-looking, and well-built place, with flat-roofed houses contains a parish church chapel two castles Capuchin monastery and hospital and has extensive manufactures of woollen cloth dye-works, and five annual fairs. The inhabitants early distinguished themselves in the cause of the Reformation. The Moravian brethren once held their principal meetings here and their followers in England have an establishment between Leeds and Bradford to which they have given the name of Fulnek. Pop. 2618 dist. 8807.

FULSTOW par. Eng. Lincoln 2840 ac. Pop. 530.

FULVA and Hindonston prov. Bengal 1 bank Hooghly 20 m. S.W. Calcutta lat. 22° 19' N. lon. 88° 20' E. Its populous and clean and is surrounded by a grove of coco-nut trees that almost conceal it from view. It is much frequented by the captain of the numerous ship passing up and down the river, that take advantage of its safe anchorage, which is protected from the swell of the sea.

FULTON several places U. States, including—1 A vil. New York 190 m. W.N.W. Albany containing four churches, and several mills. Pop. 1600.—2, A vil. and township Ohio. THE VILLAGE on the Ohio above and adjacent to Cincinnati 100 m. S.W. by W. Columbus, has four ship-yards, where numerous steamers are built. Pop. 1506.

FUMAY a tn. France, dep. Ardennes, 17 m. N. Metz, on the Moselle. It is beautifully situated, the rocks near it rising steeply from the river which runs through a narrow valley. The heights around are crowned with woods. It has a manufactory of glass and white paint and a trade in excellent slates, which are quarried in the vicinity. P. 8300.

FUMEL, a tn. France, dep. Lot-et-Garonne, 27 m. N.E. Agen, on the Lot. It is an ancient place, and was the scene of several contests during the Middle Ages. It has some paper-mills. Pop. 1849.

FUMONE, a tn. Italy, delegation, and 7 m. N.W. Frosinone. It contains a castle, situated on a height, and famous as the place in which Pope Celestine was imprisoned after having been forced to resign the papacy to Boniface VIII. Pop. 1000.

FUNCHAL, the cap. of Isl. Madeira, on a bay S. coast Isl. (British consulate) 32° 37' 45" N.; lon. 16° 54' 42" W. (n.). It stretches for nearly a mile along the shore, a number of the smaller streets or lanes extending up the steep slope of the hill behind. The streets are narrow and crooked and were formerly very dirty being foul gutters running down the centre, into which all sorts of filth and garbage were thrown. These however have now been nearly all carried underground, and the streets thus rendered very clean. They are also well paved. The houses of the poorer classes are in general low seldom exceeding one story in height. They are well kept as regards the exterior being nearly whitewashed but are very uncomfortable within. The floors are paved with round stones, and the walls are rough the furniture scanty and of the coarsest kind. The residences of the wealthy again, are large, handsome buildings, and the style of living amongst

their occupants luxurious. There are several churches and convents, and in the centre of the town is an open square, planted with acacia trees. Wheel carriages are unknown, the only kind of vehicle in use being a sort of sledges for trans-

FUNCHAL.—From March by Dr. Lloyd

porting pipes of wine from one place to another. Travelling is performed in sedan-chairs. The town is defended by four forts. It is much resorted to by invalids from Britain affected with pulmonary complaints. For climate, see MADAGASCAR.

Pop. 20,000

FUNDÃO a. in and par Portugal prov Beira-Raixa, 55 m. S Guarda pleasantly situated, near a bank, Mondego, an affluent of the Zézere. It has a hospital and a convent, with some woollen manufactures. Wine and fruit are produced in abundance in the vicinity. Pop. 2,110.

FUNDENHALL, par Eng Norfolk 1347 m. Pop. 869

FUNDY (Bay of) a large inlet of the Atlantic, E coast N America, separating the B. part of the peninsula of Nova Scotia from New Brunswick, extending 100 m. S W to N E, and about 30 m. average breadth. At its upper extremity it is separated by a peninsula into two arms—Chignecto bay on the N and Muskeg channel on the S, leading into Minas basin. The bay is deep, but its navigation is dangerous. At its entrance are Grand Menards, and numerous other islands, and along its N shore are Passamaquoddy and several other bays. It receives the river St. John's, at the mouth of which is the city of same name.

FUNE (Danish, Fyns German Fünen Latin, Fionia French Fionie) an isl Denmark the largest of the Danish islands, except Zealand, from which it is 16 m. W. Its shores are washed, N by the Kattegat, W by the Little Belt, and S, and E by the Great Belt, and the Bismarck of the Funder group; greatest length 50 m. greatest breadth, 40 m. circuit, about 186 m. area, 862 sq. m. The coast, though in general not very elevated, is in many parts rugged and steep, and is much indented by bays and arms of the sea, of which that of the Odense-fjord is the most extensive. The interior towards the W, is covered by a range of low hills, stretching from N W to S E, but, with this exception is composed of large and fertile plains which have generally under good cultivation produce large quantities of corn, much of which is exported. The largest stream is the Odense-Axe, which has a course of about 96 m. It rises in the S. part of the island, traverses it centrally in a N direction and divides into two nearly equal parts. The largest lake is the Arreskov which is about 2 m. long by 3 m. broad is tolerably deep, and teems with fish. A canal navigable by vessels drawing 8 ft. extends from the N part of the town of Odense to the Odense-fjord. Fünen is divided into two bailiwicks—Odense, the capital, and Svendborg, and has annexed to it a number of small islands, of which the most important are Fide, Brande, Waagø, Hjørde, Aarskøde, Thorsø, Skarø, &c. Pop. (1861) 170,450

FUNDIALS, **FUNDIATASI**, or **HANOKHEDENLONER** a vil. Lower Austria about 2 m. from Vienna. It has manufactures of cotton goods and red leather. Pop. 2400.

FUNKIRCHEN Papp, or Papp (Latin, *Quingus Ecclesie*) a. in Hungary, prov. of Burgen on the slope of a hill in a wide and beautiful valley, 108 m. S S W Pesth. It is well built and well paved, and consists chiefly of four principal

streets, which proceed in the direction of the cardinal points, from its four gates, and terminate in a spacious central square, from whose palace, situated on a slight eminence above the town, is one of the most conspicuous edifices, and has a good library with a cabinet of coins. The other principal buildings are seven churches, of which the cathedral, a handsome gothic structure, on the site of a Roman castle and one of the oldest ecclesiastical edifices in Hungary the Jesuit church, in the form of a beautiful rotunda, and the Greek non-mixed church, are the most deserving of notice. The bishop's palace, with a library of 30,000 volumes and a Uranium and a Franciscan convent, an ecclesiastical seminary, gymnasium, townhouse and two hospitals. The chief manufactures are leather and tobacco, the two great staples of the town. Woollen cloth flannel paper starch and vinegar and the trade includes,

in addition to these articles, gill nets, wine, milk and all-seeds the last two in particular being extensively raised in the district. Some cotton also is grown. Fünfkirchen once had a flourishing university, attended by 2000 students. It has thermal springs and in the neighbourhood near Monk Meseck, which commands a magnificent view over the town, and there are quarries of black marble. Pop. 14,500

FUNTINGTON par Eng Sussex 3535 m. P 1079

FUREAU a vil. France dep. Boulogne-in Rhone, 7 m. S E Aix. It has manufactures of potash and soda. Coal is worked in the neighbourhood. Pop. 1897

FURED several places Hungary particularly a watering place called the Hungarian Fyrmont, on Szabolc, on the N shore of Lake Balaton 30 m. E Topolcsa. It stands in a beautiful district, has a Protestant church and a bathing establishment. Waters of an alkaline and sulphurous nature, only recently come into notice, but much frequented by the Hungarian nobility. Pop. 1040.

FURFADABAD a small tl Hindoostan, prov. of, and 15 m. S Delhi with a large tank, having a ruined banqueting house on its margin

FURISHIMOR, a tl Hindoostan prov Malwa, 17 m. from Alishah. Pop. 1820 estimated at 800

FURLOG FURAN or **FELKUNG**, a vil Hungary Thutber Thesie, in a mountainous district near the Fugana and about 8 m. from Lajos. It contains a parish church. Pop. 3695

FURNEAUX ISLANDS, in Pacific Ocean, S E, part Bass Strait they form a great chain extending about N W and S S E. The principal islands are Great Island, Cape Barron Island Clark and Preservation Islands. Great Island the largest and most N. of the chain, is 40 m. long and about 10 m. broad. It is high on the W side and is formed of barren peaked hills of various shapes. Clarke's Island is the most S., forming the S. boundary of Denik's Strait. Its S. extremity is in lat. 40° 52' S. lon. 148° 18' E. (a.) The W sides of these islands generally present a steep rocky shore to the prevailing winds and sea, but their E. sides usually slope down gradually into a sandy beach, and contain numerous swamps and pools. All are overrun with brushwood and a few stunted trees, which latter never exceed 12 ft. in height. Vegetation is scanty. Two species of seals are found here as also the kangaroo, wombat, and duck billed ant-eater. Venomous snakes occur on the confines of the brushwood.

FURNIZ (Dutch, *Furnis*) a. in Belgium, prov. W Flanders, 15 m. S W Ostend and 4 m. from the French frontier at the junction of the Dunkirk, Nieuport, Bergues, and Loo Canals. It is small but neat, is the seat of a court of first resort and has two churches, a chapel a college, a superior primary and several other schools, a theatre, an hospital two sunnaries a prison &c. The townships is a remarkable gothic pile and the church of St. Walburga, built in 870, is interesting. The inhabitants are partly supplied with water from a large cistern, constructed for the use of a former garrison. There is a good trade in horses, cattle, grain, coal, wax, hops, cheese, &c. In the environs are

numerous brick and tile fields. In early times, Furness was an important stronghold. The sea then washed its walls, though now it is a distant. Pop. 4742.

FURNES, a dist. England, co. Lancaster forming a large promontory in the Irish Sea, between Morecambe Bay and the mouth of the Duddon. The greater part of it is rugged and covered with underwood. Iron ore also abounds and the inhabitants are extensively employed in iron works, and in charcoal burning. The ruins of the celebrated abbey of Furness stand in a sequestered valley $\frac{1}{2}$ m. S.W. Ulverston, and in the neighborhood is a station on the Broughton and Fleetwood Railway.

FURRAGONE, an Isl. Red Sea, W. side, about lat. 18° 16' N. lon. 38° 30' E. It is nearly 8 m. long, and is situated with several others, on a reef connected with a coast reef off Ras (cape) Furragone on the coast of Abyssinia.

FURRAH a tn. Afghanistan on the Furrah-Road, 117 m. S. by W. Herat. In 1810 it was a large, populous, and thriving place, but by 1839 when visited by Conolly it had been so much reduced in the course of hostilities between the chieftains of Herat and Kandahar that no part was inhabited but the fort.

FURRAH Roon a river of W. Afghanistan rising in the mountains, N.E. Torki Gaseeran flowing S.W. and falling into Lake Zerakh lat. 32° 4' N. lon. 60° 45' E.

FURRUKHABAD (Farukhabad, happy residence) an inland city Hindoostan presid. Bengal prov. Agra cap. dist. of same name, and one of the principal towns of Upper India, at a short distance from the W. bank of the Ganges 90 m. E.N.E. Agra lat. 27° 25' N. lon. 78° 33' E. It is surrounded by a wall. Some of the streets are wide and in the best parts of the town there are many good houses. There, as well as some of the open spaces, are pleasantly shaded with trees. The greater number of the houses, however, are miserable mud hovels. This city is considered the chief commercial centre in the provinces of Agra and Oudh. Lord Lake surprised and defeated Holkar's army here, in 1803. Pop. about 66,000.—The territory area, 1662 sq. m. or 1,225,306 ac. of which 682,075 ac. are cultivated and 305,930 ac. more are cultivable has wholly in the south between the Jumna and the Ganges and partakes of the general characteristics of the province of Agra in which it is included. Pop. 71,089 being 4975 on each sq. m.

FURSTENAU a tn. Hanover prov. of, and 21 m. N.W. Osnabrück cap. lat. of same name. It contains a castle and a Protestant, and a R.C. church and has manufactures of linen and a trade in cattle. Pop. of tn. 1285 of lat. (area, 117 sq. m.) 14,488.

FURSTENBERG several places, Germany.—1. A tn. Mecklenburg Stritz in a wild wooded district, between two lakes, on the Havel, 15 m. S. New Stritz. It is entered by three gates contains a castle, a handsome structure, a church, and a synagogue and has manufactures of cloth and tobacco several mills, a small building dock some shipping, and a considerable trade particularly in butter, corn, wood, glass, and fish. Pop. 242.—2. A tn. Prussia, prov. Brandenburg, cap. of, and 24 m. S.E. Frankfurt, 1 bank. Over wood which there is here a ferry. It contains a manor house at which a considerable revenue is drawn. Pop. 1560.—3. A vil. Prussia, prov. Westphalia, gov. Minden on the Aa, 9 m. S.E. Bielefeld. It contains a R. Catholic parish church and has glass-works tile-works, and an oil mill. Pop. 1545.

FURSTENFELD a tn. Austria, Styria, 29 m. E. Gratz, on a height above the Festina, near the frontiers of Hungary. It is the seat of a law court and several public offices. It is surrounded with old walls, has a parish church ancient castle Augustinian monastery hospital, and poorhouse; and an extensive imperial tobacco factory at which about 800 tons of Hungarian tobacco are annually manufactured. Pop. 2000.

FURSTENFELDE a tn. Prussia, prov. Brandenburg, gov. of, and 36 m. N. Frankfurt with a church a trade in horses and cattle and three annual fairs. Pop. 1606.

FURSTENWALDF a tn. Prussia, prov. Brandenburg gov. of, and 21 m. W. Frankfurt, r. bank, Spree. It consists of the town proper surrounded by walls, with two gates, and of a suburb is defended by a fort. In the east of a civil and criminal court has a church, hospital, and several other good public buildings manufactures of woollen and linen cloth, hosiery and leather and five annual fairs. Pop. 4994.

FURSTENWERDER, a tn. Prussia, prov. Brandenburg gov. Potsdam, circle of, and 18 m. W.N.W. Prenzlau at the foot of a height, between two lakes. It is surrounded by a wall and contains a parish church. Pop. 1600.

FURTA, a vil. Hungary Thither Thelen co. Bihar, about 18 m. from Grosswarden. It contains a Protestant and a R. Catholic church. Pop. 1871.

FURTEI or Fovars a vil. Isl. Sicily, prov. of, and about 20 m. N.W. Cagari in a beautiful valley at the confluence of the Maun and Caralita. It consists of about 210 houses, built of stone, embosomed among trees; has a parish church, a normal school and an annual fair. Pop. 950.

FURTH a tn. Bavaria, circle Upper Palatinate r. bank, Cham, 87 m. N.N.W. Pilsen. It contains two churches, a castle, townhouse, and infirmary and has glass-works, oil paper saw, and other mills. Pop. 2234.

FURTH, two places, Germany.—1. A tn. Bavaria, circle, Middle Franconia, at the confluence of the Pegnitz with the Main, here crossed by a bridge, and on the railway to Nürnberg from which it is 6 m. W.N.W. It stands in a beautiful and fertile district, and has recently made rapid progress, chiefly owing to it is said, to an influx of Jews who, prohibited from living or even sleeping in Nürnberg have chosen it as their residence, and brought it into formidable competition with the town which so lately expelled them. It is the seat of courts and offices for the circle contains three churches, a large synagogue, townhouse, Latin agricultural, industrial Jewish and other schools a theatre, workhouse, a Jews orphan, and other hospitals and has two Hebrew printing presses, and important manufactures of Nürnberg wares, articles in gold and silver wire, bronzes, and paper maché, clocks, watches, hosiery mirrors picture-frames, jewellery, false brilliants, metal buttons, gold leaf, paper &c. The trade in these articles is extensive, and there is an important annual fair which lasts 11 days. Furth is famous for the battle fought in its neighbourhood in 1527 when Gustavus Adolphus attempted in vain to storm the entrenched camp of Wallenstein. Pop. 14,987.—2. A market tn. Hesse-Darmstadt, on the Weschritz, in a fertile valley in the midst of the Odenwald, 16 m. S.E. Darmstadt. It contains a church and a district prison and has saw and other mills and three annual fairs. Pop. 1367.

FURTHO par. Linc. Northampton 480 ac. Pop. 16.

FURTHWAGEN a vil. Baden, circle, Upper Rhine, 81 m. S.E. Offenburg. It contains a parish church and has manufactures of wooden clocks a nail foundry two breweries and a trade in corn and cattle. Pop. 965.

FURUDPOOR, another name for Dacca (see above)

FURY and **FECLA-SMART** a narrow channel British N. America, between Cockburn Island and Melville Peninsula, communicating with the Gulf of Boothia, on the W. and Fox's Channel on the E. Its length between these two seas is about 100 m. average breadth about 15 to 30 m. E. entrance about lat. 69° N., lon. 90° 30' W. It contains a number of islands.

FURY POINT British N. America, Prince Regent's Inlet W. side N. Somerset lat. 72° 40' 30" N. lon. 61° 53' W. (a. Here, H.M.S. Fury was abandoned in August, 1825 and here Sir J. Ross wintered in 1892-28.

FLBAGABUGA a river Nov. Grinnell, S. wing W. and falling into the Magdalen 52 m. W.N.W. Santa Is-de-Migota. It abounds with alligators of great size.

FCBAH (anc. Achero) a lake, Naples, prov. of, and 9 m. W. Naples about 1 m. in extent, separated from the sea by an artificial embankment and famous for its oysters. In ancient times it was the subject of numerous fables. Its banks are now covered with vines, but, from the number of ancient tombs are supposed to have been used as places of sepulture by the neighbouring towns.

FLBE, a river Germany which rises in Hanover about 4 m. N. E. Liebenberg prov. Hildesheim; flows N.N.W., passes Peine, and at Calbe joins L. bank. After a course of 60 m. its affluents are the Erbe and Aue.

FURTH an Isl. Red Sea, E. side; lat. 10° 11' N. lon. 45° 25' E.; it is 2 m. long, and 1 m. broad at the E. end, and is of considerable height. There is a small fishing village, with a mosque in the centre of it, and near the village are some walls of brickwork water but on the S. part of the island good water may be obtained through difficult access, the landing-place being rocky.

PUBIGNANO a kingdom of Italy, 200 sq. mi. S.E. Ferrara, 1 bank, Reno. It is a small place, but possesses some interest from having given birth to the celebrated composer Corelli, and the poet Vincenzo Monti. Pop. 2450.

PUSINA, a vil. Austrian Italy gov. of, and 4 m. W. S.W. Venice, at the entrance of the lagoons, 1 bank, Brenta, which here receives the canal of Brenzola, and continues to Venice under the name of the Canal of Pusina. There are a great number of fine villas in the vicinity. Pop. 1200.

PUSSEN a tn. Bavaria, circle Swabia, cap. dist. of same name, 67 m. S. by W Augsburg near the frontiers of Tyrol, r bank, Lech, which here forms a fine cascade and is crossed by a bridge. It is an old place of Roman origin contains two churches, a castle, Franciscan monastery and hospital and has manufactures of linen, woollen articles, and musical instruments, several mills, marble and other quarries, and a brisk trade. P to 1815 dist. 15 000.

PUTI PAMJAL, a mountain, Cashmere upwards of 12 000 ft. high lat. 33° 20' N lon. 74° 50' E.

PUTIAK, two contiguous places Hungary 31th District, on Dacs, 1 bank, Danube, 8 m. S. Peterwaradin.—1 (O or Old Putiak) a market town and lordship contains a Greek church, and has an important annual fair frequented by Armenians, Greeks, and Turks. Pop. 4700.—2 (U or New Putiak) a tn. which contains a R. Catholic parish church, and has a ferry over the Danube towards Cserovina. It is ruled by a military by German. Pop. 4800.

PUTEHSHAD (the abode of victory)—1 A tn. Hindoostan prov. Ameer 15 m. N.W. Hissar.—2 A tn. Hindoostan, prov. Malwa, 28 m. S.W. Oojein. It was so named, by Aurangzeb, after a great battle gained here.—3, A tn. Afghanistan, in the plain of Jalalabad, 5098 ft. above sea level. lat. 34° 21' N lon. 70° 13' E. It was occupied by the British troops, under Sir Robert Sale, during the advance on Cabool in 1842.

PUTEHSHUR (FATAHSHUR, the fort of victory) an island in Hindoostan prov. Agra r bank Ganges 90 m. N.W. Lucknow and 8 m. from Ferozshah lat. 27° 31' N lon. 79° 50' E. The houses are mostly built of mud and a mud fort protects the arsenal. The appearance of the town is extremely desolate, many of the military buildings having fallen into decay in consequence of the withdrawal of nearly all the troops, who were removed on the extension of the British frontier to the N.W. A few European merchants reside and carry on business here. During the dry season the Ganges is here reduced to two or three narrow channels, and the town is rendered nearly uninhabitable by dust. The manufacture of tents is carried on to a considerable extent. The workmanship is superior, and the material of which they are made excellent.

PUTEHSHUR, or FATAHSHUR a village in Hindoostan, prov. Oude, 8 m. W. S.W. Lucknow. It was formerly the residence of Raja Nizamat Khan and contains a fine tank surrounded with ruined buildings.

PUTEHSHUR—1 A large island in Hindoostan, prov. Allahabad, 85 m. S. Lucknow lat. 25° 56' N lon. 80° 48' E. It is surrounded with tombs, and contains several good houses, and an elegant mosque. There is here a large famous caravanerai.—2 A vil. Beloochistan prov. Cutch Gundava, 5 m. S. Gundava lat. 23° 26' N lon. 69° 55' E.—3, A tn. Scinde at the N. extremity of an extensive plain, 40 m. S.W. Bakur lat. 26° 20' N lon. 68° 10' E. It is considered one of the healthiest places in Scinde.—4 A vil. Punjab, 1 bank Indus, 38 m. above the confluence of the Punjab lat. 32° 34' N lon. 70° 49' E.

PUTHIPOOR, a tn. Punjab, in a fertile and well-cultivated country 1 bank Ravee 83 m. S.W. Lahore, on the route between Multan.—2, A large vil. Scinde, on the coast of the Indus, 70 m. N. Sewan lat. 27° 15' N lon. 68° 15' E.

PUTHIPOOR SIKRA, an island in Hindoostan prov. of 19 m. W. S.W. Agra lat. 26° 21' N lon. 77° 54' E. It was enclosed and fortified by the Emperor Akbar whose favourite place of residence it was but the space within does not seem to have ever been filled up with buildings. The remains of a palace, formerly inhabited by the emperor are still in existence. The portion of this deserted palace, containing the apartments of Abu Fasil, the celebrated prime minister of Akbar is in a better state of preservation than most of the

1. ST. OF THE PALACE OF AKBAR, PUTHIPOOR SIKRA.
From an original Drawing by Capt. R. Smith, 4th Regt.

other buildings. In some measure to be accounted for from its timber having been used in its construction. The walls are of great strength and solidity all the apartments being arched, and it appears, from what remains, were also richly decorated with stucco. The exterior is all of a sombre red freestone, in a fine style of oriental Gothic the most remarkable features of which are very projecting eaves over the lower and upper stories, supported by massive and elaborately sculptured brackets springing from pilasters. The frieze is also ornamented with rich tracery besides many other parts of the front, which gives the whole a very beautiful appearance. As Mahometan privacy did not permit the architect to make many windows, the spaces between the pilasters are only recessed, but the tympanums and spandrels are so ornamented with mouldings and carving as greatly to add to the richness of the whole. There is also a tomb of elaborate workmanship, in which several members of the royal family were buried; it stands in the centre of an arched square, and is approached through a gate of noble proportions.

PUTHIOLAH KILLA, or PUTHIOLAH KILLA, a vil. and fort Afghanistan, 50 m. S.E. Kandahar 1918 ft. above sea level. Its supply of water brought by a canal from hills about 60 m. N. can be easily intercepted. The British army suffered severely from this cause when encamped here in April, 1839.

PUTWA a tn. Hindoostan prov. Bengal, prov. Behar at the confluence of the Pompan with the Ganges, 12 m. S. by K. Patna. The Pompan is here passed by a substantial bridge. **PUTUR**, or FULHAR, an isl. Denmark, in the Limfjord in the N. of Jutland area, about 6 sq. m. It is separated from the mainland by a narrow but deep channel of same name. The S. and smaller portion of the island only is cultivated. The N. part consists of precipitous heights separated by narrow rocky valleys. There are some mineral springs and also traces of ancient volcanic activity. **PUTUR** forms a parish, and has a church of red sandstone, quarried in its neighborhood. Pop. 1000.

FUZER, a vil. Hungary co. Abony 16 m. S.E. Kaschau. It stands at the foot of a lofty hill crowned by an old castle, contains a Protestant and a R. Catholic church and has glass-works and a trade in cattle. Pop. 965.

FUZES, several places Hungary particularly—1 (or Fuszcs) (Latin, Fuscus) a vil. co. Krassova, on the slopes of two hills, surrounded by woods, 15 m. from Somlyo. It is

inhabited by Wallachians and contains a Greek parish church. Pop. 2414.—2. (*Gernats*) a market in Thibet. Thibet, on. Baku, on the Hsienyue, equally distant from Guala and Omba. It contains a handsome Protestant church and has a considerable trade in cattle, but suffers much from a deficiency of good drinking water. Pop. 4500.

FYEN an isl. Denmark. See FOWEN

FYELID three parv. England.—1. Berks 1820 ac. Pop. 478.—2. (or *Fyvelon*) Essex 2450 ac. Pop. 598.—3. Hants 310 ac. Pop. 324.

FY LINGDALE, par Eng. York (N Riding) 18 438 ac. Pop. 1264

FYNE, or FINE (*Lochn*) an arm of the sea, Scotland, W coast, co. Argyll, opening into the Firth of Clyde, N by W of the Island of Arran. The entrance is marked by the Point of Ardnamont, in Corral, on the E. and the point of Skipness in Kintyre, on the W where it is 4 m. wide. From these points it stretches N N W maintaining nearly the same breadth namely 4 m., for about 16 m., when it runs N N E. to its termination, 24 m. further making its whole length 40 m. and having a breadth, during the latter part of its length, of not more than 2 m., and at end near its termination of considerably less. Its depth, so far as known varies from 12 to 50 fathoms. The currents of flood and ebb set

strongly up and down this loch, on the W shore. Loch Fyne abounds in fish—salmon, haddocks, whiting, and codlings, but its fishery of herrings, celebrated for their superior quality is by far the most valuable. In the fishing season many hundreds of boats send the surface of the loch at various points, particularly opposite the town of Inverary which is situated near its head, on the W shore of a fine bay. The considerable country town, Lochgilphead, stands at the head of another inlet, called Loch Gilp, and near it is Ardrishag at the entrance to the Crinan Canal. Along the upper part of the loch the hills rise steeply from the water and around Inverary the scenery is very beautiful, but as no other point do its shores present any features of particular interest.

FYVIE par Scot. Aberdeen, 18 m. by 3 m. Pop. 2927
FYZAHAD (beautiful residence).—1. An island in Hindoostan, prov. Oude, 65 m. E. Lucknow; lat. 26° 56' N lon 83° 50' E. It was formerly the capital of Oude, but was abandoned in 1775 for Lucknow. It is still of considerable extent, and contains a numerous population, chiefly of the lower classes.—2. A vil. Hindoostan prov. Delhi, near the E. bank of the Jamuna, where that river issues from the hills. In the vicinity are the remains of a burning seat, erected by the Mogul emperor Shah Jahan.—3. A vil. in Independent Territory. See BUDTHERAL.

G

[G soft is often used interchangeably for J—G hard is often written GA]

GAAD a vil. Hungary Thibet Thelus, co. Tarental on the Teme, about 12 m. from Delta. It is inhabited by Wallachians and contains a Greek non united church. Pop. 1106.

GABARDAN or GAVARDAN an ancient vicomte, France belonging to Comdomois, and partly in Gironde, partly in Gascogne. It is now included in the E. of the dep. Landes, and the S. W. of Lot-et-Garonne. Gabaret was its capital.

GABRIANO a vil and com. Italy Lombardy prov. of and 18 m. S. W. Brescia, in a beautiful and fertile plain. It has a parish and three auxiliary churches and an annual fair. Pop. 3212.

GABEL, two places, Bohemia.—1. GABEL, GABLOV or GABLOV a tn. circle, Chrudim l. bank, Adler 27 m. E. R. E. K. M. K. M. K. It has a parish church, townhouse, school, a weekly market, and an annual fair. Pop. 605.—2. GABEL, GABLOV or GABLOV, a tn. circle, Buzanov, in a mountainous but beautiful district, in a deep valley on the Jungfernsbach, nearly 800 ft above the sea, 60 m. N. N. E. Prague. It is surrounded with walls, has a handsome church, townhouse, and hospital, and manufactures of woollen and linen cloth, a saw, three cottons, and several other mills, a trade in corn and cattle, and several much-frequented annual fairs. In the neighbourhood is the castle of Falken Berg. Pop. 2135.

GABELLA a small tn. European Turkey prov. Buzia W part on the Buzia, 29 m. S. by W Mostar.

GABIAN (anc. *Gabianus*) a tn. and com. France, dep. Hérault, in an agreeable and fertile district, on the Tanguis 23 m. S. E. W. Montpellier. It possesses both a mineral and a petroleum spring, and the remains of a Roman town and aqueduct, by which water was conveyed to Béziers and has difficulties, lime-stones, and two annual fairs. Fine rock crystals and some coal are found in the vicinity. Pop. 1023

GABIANO [Latin, *Gabianus*] a tn. kingdom of Italy Piedmont, dir. of and 28 m. N. W. Alghero, l. bank, l. It has a parish church, three schools, a court of justice and a trade in wine. Pop. 2258

GABLOV, or GABLOV, a market tn. Bohemia, circle Boudan on a small stream of same name, at the confluence with the Teme, 19 m. S. E. Prague. The houses are mostly of wood, but it has a regular market-place with well built houses, of wooden construction contains a church and large handsome school and has manufactures of woollen cloth, and particularly of glass beads, and similar articles which, in

town and district, employ about 6000 persons and form an important trade. It has also three worked mills and two annual fairs. Pop. 3209

GABOON a river W Africa which enters the Atlantic by a broad estuary near the Equator

GABRIEL (HAM).—1. A small isl. S. America, estuary of the Plata, nearly opposite to Buenos Ayres lat. 34° 50' S. lon 57° 55' W.—2. One of the Admiralty islands, S. Pacific Ocean; lat. 2° 11' S. lon. 147° 28' E. (N.)—3. A cape, Gulf of California lat. 28° 5' N. lon. 112° 46' W.

GABRIEL CHANNEL, a remarkable channel Tierra del Fuero islands lat. 54° 20' S. lon. 70° 40' W. between Dawson Island and a range of hills on the E. side of Mendeley Channel having Cape Froward directly opposite its N. W. extremity. The apparently artificial formation of this channel is very striking says Captain Flaxway. It seems to have been formerly a valley between two ridges of the range, in the direction of the strait, and that, at some remote period the sea had forced its way through effecting a communication between the strait and the waters behind Dawson Island. The width of the channel at both extremities, is from 2 to 3 m. but the shores gradually approach each other midway and the coast on each side rises steeply to the height of 1500 ft. The hills on either side are thickly wooded, and present a very picturesque appearance. The whirlwinds, hurricanes, squalls, called by sailing vessels wildwinds, so frequent in Tierra del Fuero, operate here with great violence bursting over the mountainous ridge which forms the S. side of the channel, they descend and, striking against the base of the opposite shore, rise up the steep, and carry all before them. (See *Admiralty and English*)

GAC (anc. *Wagwan*) a tn. and com. France, dep. Orne, r. bank Tigris, 27 m. N. N. E. Alençon. It was once a place of some importance, and possessed a strong castle, of which the ruins still remain. It has manufactures of muslin, blackfields, and tanneries, a trade in thread, horses, and cattle, and five annual fairs. Pop. 1588.

GAC, GAC-VARALLA, or HALON, a market in Hungary Habsburg co. Neograd, 27 m. S. Buzan-Banya. It is commanded by a castle, on a height immediately above it has a E. Catholic church, manufactures of woollen and linen cloth, paper and diverse extensive potteries liquor works, and a trade in salt. Pop. 4500.

GADAMIS, a tn. Africa. See GUADAMIS.

GADATCH or **GADATCH** a to. Russia, gov. of and 60 m. N N W Poltava, cap. circle of same name, at the confluence of the Khoral with the Priol. It contains seven churches and a monastery and has a trade in corn, tobacco, wax, and wool weekly markets, and four annual fairs. P of ca. (1861) 4809. —The climate is fertile and well cultivated.

GADDESBY par Eng Leicester 1867 ac. Pop 330

GADDESDEN a to. par. England. Hertford. —

(Grove), 4074 ac. Pop. 1161. — *See* **LEWIS** 974 ac. — Pop. 874.

GADIE, a river, England, co. Hert, which falls into the Colne near Rickmansworth.

GADEBUSECH a to. Mecklenburg-Schwerin cap. bail. of same name, on the Havelger and a small lake, 11 m. W N W Schwerin. It is walled and is, for the most part, poorly built has an old gothic church, with a chapel, where King Albrecht of Sweden is buried, a townhouse, and castle used as a court-house; manufactures of woollen and linen cloth, tobacco, leather and hats; numerous breweries and distilleries, several mills, and three annual fairs. Kicker the post fall here, in the war of liberation a monument marks the spot. Pop. to 2284. Area of bail. 460 sq m. pop. 4300.

GADMEIN a vil. and par Switzerland can. Bern dist Ober-Haali, in a narrow valley of same name, hemmed in by lofty mountains, some of them 9000 ft high 13 m S E E. It contains a parish church and two schools. Pop 897. —The valley of Gadmeins about 16 m long opens on the E. into the green and lovely valley of Upper Haali and is traversed by a mountain torrent.

GADON, a vil. in Barbadoe, div. of and 49 m N Cap. Barb. It stands on a hill slope, is an insignificant place with steep and narrow streets and very indifferent houses and contains four churches and a school. Pop. 630.

GADOO a native state Senegambia, S. of Fouladoud and Brooks. It is mountainous and well watered by streams of the Senegal, and contains mines of gold, iron and sulphur.

GADOR, a to. Spain, Andalusia, prov. of and 10 m. N N W Almeria, in a kind of basin formed by three hills, r. bank. Almeria. It is irregularly built, has all the streets narrow excepting one, which stretches across the town. It has a parish church, townhouse, prison, and primary school several oil and flour mills, and a trade in corn. Two old Moorish castles crown heights in the vicinity. Pop. 1709.

GADON (SERRA DE) a range of mountains, Spain. An. deusa, forming part of a chain which is nearly parallel to the Sierra Nevada, and takes the name of Alpujarras. The culminating point has a height of 7755 ft. It is principally composed of micaceous schist, above which are black calcareous rocks, rich in the sulphates of lead. The mines have been extensively worked since 1820 and yield annually about 8696 tons.

GADSHILL, an emannoe England co. Kent, on the London road 2½ m N W Rochester celebrated by Shakespeare as the scene of Falstaff's victorious exploits.

GAB, a large vil W Africa, Fouta-Toro, i bank Senegal lat. 16° 28' N lon. 15° 28' W. The inhabitants are skilful fishermen and the women prepare and sell the products of the fishery. Millet is cultivated in the environs of the village.

GAESTRIK AND an anc. dist Sweden, situated in the S. E. of the Giesoberg, and now included in it.

GAETA (Cape of the Romans; French, Gaëte), a strongly fortified seaport in Naples, prov Terra di Lavoro, 76 m S E. Rome lat. (Orlando Tower) 41 13 24 N lon 12° 34' 48" E. (n). The fortress is situated on a lofty promontory, which projects into the Mediterranean and forms one side of the Gulf of Gaeta. Between the fortress and the mainland stands the tomb of Manlius Plancus, a friend of Augustus. It is called Torre di Orlando, and is of a circular form. The town, which stretches along the shore, is rather irregularly but neatly built, the streets are narrow and steep, but are well paved, the whole place presenting a lively and picturesque appearance. The cathedral is a handsome building, well proportioned and well lighted with a fine tower. Popular tradition asserts that, in a grove hard by Oliver was put to death by order of Antony. The bay of Gaeta, with its surrounding scenery is exceedingly beautiful, rivaling that of Naples. Gaeta is a place of great antiquity having been a favorite resort of the wealthy families of Rome. It is the head town of a district, and is

the seat of a bishopric. Pope Pio IX. camped in Gaeta from Rome to Gaeta, November 24 1848, when the Eternal City had passed under the sway of Mazzini and his coadjutors. Pop. about 14,000.

GAFA, or **GAMA** (anc. Ogas) a to N Africa, regency of and 170 m. S. by W Tunis. It is surrounded by a dilapidated earthen wall and consists chiefly of earthen houses, of one story. The public buildings are in a great measure constructed of the materials of the ancient town, which was a place of considerable importance under the Romans. It has a citadel, hazaar, mosque, abundant springs of warm water gardens, and plantations of date, fig, and olive trees. P 2000

GAGGENAU a vil Baden, circle, Middle Rhine, 1 bank, Murg 14 m S. S. W. Karlsruhe. It has a church, manufactures of glass, two breweries, and an iron, oil, and other mills. Pop. 1150.

GAGLIANO three places, Naples —1 A to prov Terra d'Otranto, 28 m. E. E. Gaglioli in a beautiful plain not far from the Ionian Sea. Pop. 1894 —2 A vil prov Calabria Cirra II dist of and 8 m N W Catanzaro, in a mountainous district. Pop. 1461. —3 A vil and town Sicily prov. of and 36 m N N W Catania. Asphaltic is found in the vicinity. Pop. 2886.

GAGLIAVOLA (Latin *Halsosola*) a vil and com kingdom of Italy Piedmont, div. of and 28 m S E E. Navarra, r. bank Agogna. It consists two churches and a chapel produces much silk, honey and wax, and has a trade in horses, wine and fruit. Pop. 785.

GAGY GAG, or **GAGA** an Indian Archbishop, Gilele Passage; lat. (° point) 0° 20' S. lon. 129° 58' E. (n). It is of small extent, and moderately elevated has a good haven on its S. side, and yields plentifully sugar and timber.

GAIA (VILLA NOVA DE) a to and par Portugal prov Douro, i bank, Douro, immediately opposite Oporto. It is an important entrepot for the wine of the surrounding district. Pop. 5890.

GAIDRONISI (anc. *Petrocolli*) a small in European Turkey in the Mediterranean, 8 m. S. of Candia lat. 34° 38' N lon. 25° 45' E. It is quite barren the cliffs being tenanted by wild pigeons, and nothing growing on it but a small quantity of thyme.

GAILE, a river Austria, which rises on the frontiers of the Tyrol, on the N. side of the Carnic Alps, flows S. E. across the N. of Ulten, and, after a course of about 80 m joins r. bank, Drave a little below Villach. Its principal affluents, which it receives on the right, is the Gailitz.

GAILDORT a to Wittenberg circle, next cap bail. of same name, r. bank Koether 17 m W N W Riwangen. It has two castles an old tower church a cold water bathing establishment, and vitrol and pitch works. Pop. to, 1510. Area of bail. 136 geo sq m i pop 34 569.

GAILLE, par Ireland 1 tippary 2430 ac. Pop. 438.

GAILLARD, a to. France, dep. Tarn 18 m W by id Alby in a fertile plain, r. bank Tarn. It is irregularly built has several suburbs, and a communal college, with nearly 200 students some cooperages, hat factories, tanneries, dyeworks boatbuilding yards &c. Good red table wine is exported the district abounding in vineyards. Pop. 5507.

GAILLAN a vil France, dep. Gironda 40 m N N W Bordeaux with a trade in cattle, wax, and wine and an annual fair. Pop. 1768.

GAILLON a to. France dep. Eure, 13 m N E Evreux near the railway from Paris to Rouen. It contains a large prison for the convicts of Eure, and several adjoining departments, built on the site of an antique castrum first erected by the Duke of Normandy but rebuilt by Cardinal Georges d'Amboise. A portion of this second edifice, which in 1615, still remains. In the town is a manufactory of silk and plush. Pop. 1282.

GAINFAHREN GUTVANS or CONTAKH a vil Lower Austria, about 4 m. from Baden. It is the seat of a rural court, has three mills, and produces good wine. Pop. 1300.

GAINFORD a vil and par England co. Durham. The village, pleasantly situated in the valley of the Tone, 7 m W N W Darlington is in the form of an irregular square, with a green in the centre. It contains a handsome church and a Wesleyan chapel. —The parish (area, 24,154 ac.) is divided into several chapelrys, and contains a number of townships. Pop. 7249.

GAINSBOROUGH, a market in river-port, and par. England, co. Lincoln. The town, 15 m. N W Lincoln, r bank, Trent, here crossed by a handsome stone bridge, of three elliptical arches, and at the junction of the Great Northern with the Manchester, Sheffield and Lincolnshire Railway extends along the river about 1½ m. and is about ½ m. in breadth at the broadest part. It is closely built, the streets are well paved and lighted, and supplied with water from the Trent raised by a powerful engine. Occupying a low situation it is liable to sudden and as they frequently prove, destructive inundations. The parish church, rebuilt on the site of the old one, which, with the exception of the tower a fine specimen of the architecture of the 14th century was taken down, in 1786 is a neat structure. There are, besides, a handsome new district church and places of worship for Methodists, Unitarians, R. Catholics, and Friends. Other public buildings are the townhall in the market-place the custom-house, and of the old half or manor-house, a large quaint building, part of which is supposed to have been built by John de Gaunt, and having a brick tower 80 ft high at its N. E. end it contains the stately extensive assembly rooms, and the mechanics institute. There are a grammar a national, and several other schools. Several almshouses a number of minor charities, and a workhouse. The Trent is navigable to Gainsborough by vessels of from 100 to 200 tons enabling the port to carry on a considerable import and export trade, and to participate with Hull in the Baltic trade. Its consequence as a river port is further increased by its connection with the extensive canal navigation established through the interior to Manchester Liverpool Gloucester Bristol London, &c. There are shipbuilding yards here several ropewalks, numerous oil-mills tanneries breweries, and brass and iron foundries, malteries, cooperages, salt works, &c. The madding business is also carried on to a considerable extent. Steamers run between Gainsborough and Hull. Markets on Tuesday Pop. 761. Area of par. 7210 ac. Pop. 8793

GAIRDOCH a picturesque arm of the Firth of Clyde, Scotland, co. Dumfriesshire opposite Greenock, and between the parishes of Row and Rosneath. It is 7 m. long by about 1 m. broad at its upper end is the watering village of Gairlochhead, and along its shores are many beautiful villas.

GAIRDOCH par. Scotl. Rom. 40 m by 30 m Pop 5182

GAIRDOCH a vil. Dumfriesshire, par. Gairloch par. of and 7 m. from Larbert. It stands on a river facing the S. has a larger and three minor churches, a primary school, manufactures of coarse woollens, a trade in wine, and an annual fair Pop. 1100

GAIRDOCH or **GAIRDOCH** a small isl. Scotland, (Orkney), about 1 m. off N. E. coast of Pomona or mainland Pop. 41

GAIRDOCH a vil. par. Switzerland can. of, and 4 m. N. E. Appenzel in a bare bleak country without a tree or shrub, watered by the Reiche about 2900 ft. above sea level. The houses are almost all of wood but it is tolerably well built, contains a large parish church and annually attracts hundreds of navvies from all parts of Europe for its pure and bracing air and its goats which immediately N. is Mount Gairdoch it is easily ascended, and presents a magnificent view P. 5809.

GAJAK or **GAJAK** a market in Hungary Hither Danube, co. of and 34 m. N N W Pressburg on the Endau. It contains a parish church and has large cattle markets and a considerable general trade. Pop. 3000

GAJDEL, a vil. Hungary Hither Danube, co. Neutra, dist. of, and 10 m. from, Beljeonca, is a mountainous district. It has a parish church, manufactures of various articles in wood and a trade in dried fruit. Pop. 1800

GAJOVA a vil. Hungary Hither Danube, co. Bacs on the high road between Gura and Zombor. It contains a parish church Pop. 3000

GAJ-SANCA or **Sanca** a market in Hungary co. Szabolcs, about 4 m. from Vaca. It contains a Protestant, and a R. Catholic church and a fine castle with four towers, and has two annual fairs Pop. 1800

GALA WATER, a river, Scotland, which rises in the Murfoot Hills, co. Edinburgh, flows mostly S. W. through a beautiful and romantic country fertile for some distance the boundary between counties Roxburgh and Selkirk, and falls into the Tweed near Abbotford.

GALACZ, in Moldavia. See GALATZ.

GALAM or **KAZAARA**, a country W. Africa, Senegambia, intersected by the parallel of 14° 48' N. and by the meridian of 18° 10' W. It occupies a narrow space along the Senegal being N. of Bandon and Bambock and W. of Fouta-Djallon. It is divided by the Falam into two parts, of which the W. is called Goya or Lower Galam and the E. Kama or Upper Galam. It is fertile and rich in vegetable products the rivers abound with fish their banks with crocodiles and hippopotami and the forests with lions, elephants wild boars, and apes. The inhabitants are an industrious, agricultural and commercial people, almost exclusively employed as carriers. They are peaceful, gentle, and respected by the inhabitants of the different countries traversed by their caravans, or with whom they carry on commercial relations. The supreme power is conferred according to the principle of collateral succession but the authority of the Amde or chief, is restricted by a national or representative council — (Raffetel Voy. dans l'Afrique Occid.)

GALANTIA a market in Hungary Hither Danube, co. of and 80 m. E. N. E. Pressburg. It contains a R. Catholic, and a Greek united church, and has a handsome castle belonging to Prince Szabarsky. Pop. 2870

GALAPAGOS ISLANDS (Garcera, *Schölkern's* French, *Isles des Tortues*) a group of isls. in the Pacific Ocean Isl. Albemarle Isl. W. port 0° 0' lon 91° 35' W., about 600 m. W. the coast of Ecuador to which state they belong. There are 13 islands altogether seven small, and six of considerable size lying between lat. 1° 30' S. and 1° 4' N. and lon 89° 30' and 92° 11' W. The largest, Albemarle Island is 60 m. in length and about 15 m. broad its highest summit 4700 ft. above the sea. These islands are all of volcanic origin and of comparatively recent formation. Their appearance is exceedingly terrifying but on penetrating into the interior of Charles Island, the south of the group, in point of view an extensive plain fertile and highly cultivated, is met with, bearing luxuriant crops of bananas sugar-cane, Indian corn, and sweet potatoes. *Plantains*, pumpkins, 2 new Quito oranges, melons, and the castor-oil plant are also cultivated. Orbs, iguanas, a large kind of lizard, and great elephant tortoises abound, the two latter being peculiar to the Galapagos, the Spanish name for land tortoises. These animals grow here to an immense size, weighing frequently several hundred pounds weight, and are altogether extremely ugly when large their feet are like those of a small elephant, whence their name. There are goats and hogs on Charles Island, but they are scarce and wild small birds are numerous and so remarkably tame, that they may be knocked down with a stick. Lizards also abound and there are a few small snakes. In 1839 the republic of the Ecuador decided to use these islands as a place of banishment, and sent a small colony to Charles Island. At the time of Capt. Fitzroy's visit, in 1853 there were 80 small houses, and nearly 300 souls upon the island, most of them convicts. Besides the two already named, the other larger islands are Narborough, on which is an active volcano 8720 ft. high James Island, indefatigable Island, and Chatham Island — (Voy. de the Beagle London Geo. Journal)

GALABOZA a tn. Spain, Andalusia, prov. of, and 58 m. N by E Huelva, 1 bank Maritima, tolerably well built, with wide and clean streets a handsome modern church townhall prison school, storehouse, and cemetery Pop. 1568.

GALASHIELS, a manufacturing town in burgh, and par. Scotland, partly in the co. of Roxburgh and partly in that of Selkirk, in a valley on both banks of the Gala, which is here crossed by two stone and two wooden bridges, and about a mile from its confluence with the Tweed 27 m. S. S. E. Edinburgh. It consists of six principal streets, and several smaller most of them tolerably straight, and now well kept; houses well built of a beautiful blue granite, obtained in the vicinity town well lighted with gas, but indifferently supplied with water. There are in all 10 churches and chapels here—one Established church, one chapel of ease, two U. Freeburian, two Free churches, one Baptist, one Glasgow, one Independent, and one Episcopalian. All these are substantial structures, and none of them remarkable for architectural beauty. There are but few schools; the most important in the parish school; there are also one or two boarding schools, a mechanics institute, with library attached a public library

and a reading room. Galabials is celebrated for the manufacture of woollen goods, having taken four prize medals at the Great Exhibition for the excellence of its manufactures in this department. The chief articles made here are shawls, plaid Indian dresses, and tweeds, to the extent, probably of about \$250,000 annually. The other works in the town are a large yarn work, a skinery, an iron foundry, a steam-mill and two gunpowder shops. Area of par 9500 ac. P (1841) 2140 of which the town contained 1695 of par (1851) 3014 of par 6918

GALATA an sea city Turkey in Europe, now a suburb of Constantinople on the opposite or N side of the Golden Horn, occupying the extreme point or lower part of the peninsula of Pera. It is surrounded with an old wall 4 m in circuit, with ramparts and towers, the gates of which are carefully closed at night. A long narrow dark, and dirty street, nearly a mile in length, crosses it from one extremity to the other. The other streets are equally narrow dark and dirty. The dwelling-houses are of wood, and the warehouses, of which the number is great, Galata being the commercial quarter of the city are solidly constructed of stone and provided with iron doors and shutters, as a precaution against fire, which has been here frequent and destructive. It contains but one mosque, situated in the S.E. part of the town, but has several churches and convents. It is crowded with merchants of all countries. Here also are the Government wet and dry docks and workshops of various kinds. The wet docks are inclosed within high stone walls whence a pair of noble gulls opens upon the water one of them being nearly \$15 ft. in length. The admiralty stands upon a point of land projecting into the harbour and commands from its different casements a view of the whole extent of the Golden Horn. Here, likewise, is the custom-house

GALATONE, a town and sea, Naples, prov Terra d'Otranto, 9 m. N.E. Gallipoli. It contains a castle, and has several convents. Pop 4701

GALATRO a town and com Naples prov Calabria Ultra I., 18 m. N.E. Palmi. Pop 1780

GALATZ, or **GALICZ** [anc *Amulopolis*] a town Moldavia, cap. dist. Kovel, 100 m. bank Danube, between the confluence of the Sereth and Pruth in that river lat. (church of Ursulini) 45° 26' 12" N. lon 28° 28' E. [r.] The older parts of the town consist of numerous wooden houses, rather huts, confusedly indistinct together and forming a series of narrow filthy and irregular streets. In the newer quarters there are numerous houses of stone, and better built than in most other towns in Moldavia. There are here several Greek churches, a convent, an hospital, and a large bazaar always well filled with merchandise. The lower part of Galatz consists almost entirely of warehouses, and has from time immemorial possessed the right of a free port, a privilege which was extended to the whole city in 1824. Galatz is the principal port in the proximity and the chief medium of the commerce carried on between Germany and Constantinople, vessels of 300 tons being able to ascend the Danube thus far. Its trade was formerly entirely in the hands of the Greeks, but now many English and other foreign houses have established themselves there. The principal exports are grain, wine, plank, and deals wool, tallow and preserved meat, the amount of which with some other trifling articles, exported in 1845, was \$278,797. The imports are chiefly British manufactures, sugar, tin, plates, iron, tar, pitch, and oil salives, dried fruits, lemons, and oranges carobs tobacco, various salted fish, glass-ware, lamb skins, leather and silks or coarse cloth. The whole imports, in 1845, amounted to \$223,978. At present (1851) about 400 vessels, of which 100 are Austrian, arrive at and depart from Galatz annually the whole trade and commerce of the port amounting to \$1,800,000. Pop 85,000

GALIDAN, a town Gran Canaria, the largest of the Canary isles, finely situated in a plain in the N. of the island W. of the wooded mountain of Doramas. It consists of a great number of houses, scattered over a considerable extent of surface, contains a parish church, old convent, the remains of an ancient palace, and a primary school; and has some extent of culture of woollen, linen, and cotton stuffs. The principal

productions of the district are maize, corn, flax, wine, oil, and numerous varieties of fruit. Pop 4032

GALEATA a town and com Tuscany in the valley of the Valdelsa. A bank river of that name, about 2 m. from Livorno, in the Papal States. It is an ancient place, surrounded by walls is the seat of a court of justice, and several public offices. It has a handsome parish church, a trade in maize, wine, silk, chestnuts and other fruit and a weekly market, chiefly for cattle. Pop in 1836 com 8006

GALENA, a town, U. States, Illinois, agreeably situated on Peve or Bean river 180 m. N by W Springfield. It contains five churches, an academy and various mechanic establishments and is the depot of a lead region, which exports annually about 18,000 tons of lead. It also has three furnaces for smelting copper. Galena has communication by steamers with New Orleans, St. Louis, Louisville, Cincinnati and other places on the Mississippi and Ohio. Pop 1500

GALENSTOCK, a mountain Switzerland on the confines of cantons Valais and Uri, between the Stelberg, on the N. and the Furka, on the S. and forming by its N.E. side, one of the barriers of the magnificent glacier in which the Rhone has its source. Its loftiest summit exceeds 11,000 ft.

GALEOTA (FOUR) the S.E. point of the Isl. Trinidad W. Indies lat. 10° 2' N. lon. 60° 53' W. (r.)

GALEOTA two places Spain — 1. A villa and par Cádiz, prov. Taragona, in a plain near the Sierra de Godall 6 m. S.W. Tortosa. It contains a parish church, courthouse, primary school and ancient tower apparently Roman; and has several distilleries and oil-mills. Pop. 1674 — 2. A villa and par Andalusia prov. of about 70 m. N.E. Granada, near the Huescar. It is pleasantly situated among gardens, is regularly built, though of houses having only one story contains a parish church, townhouse, and primary school and has manufactures of salt-petre a trade in hemp and potatoes, and several sulphurous springs. On a hill above it stood the former town of Galera, which was completely razed, every inhabitant being destroyed, by the Infant Don Juan de Austria, during the wars against the Moors. Pop. 1781

GALLY par Ireland Kerry 12,602 ac. (r.) 5393

GALLATZ a river Hungary which rises in Mount

Comana, so Melegard near the town of Galis, flows first S., and then S.E. and joins the bank Zagyva, and then runs 80 m. N.E. Pest, after a course of nearly 40 m.

GALICIA (KINGDOM OF) [Polish, *Halicz* German *Galizien*] a prov Austria composed of the kingdom of Lodomeria, the duchies of Anachwitz and Zator and the grand duchy of Cracow and formerly including the duchy of Bukovina. It lies between lat. 47° 40' and 50° 30' N., and lon. 18° 50' and 24° 20' E. bounded N. by Poland N.E. and S. by Russia, S.E. by Bukovina S. Hungary and W. Moravia, and a small portion of Prussian Silesia. Its greatest length E. to W. 235 m. breadth towards the E. where widest, a little W. of meridian 25° 190 m. and thence gradually diminishing westwards till near meridian 18° 30' it is reduced to its minimum of 27 m. Area and population as follows:—

	Area sq. m.	Population
Kingdom of Lodomeria	21,880	4,386,143
Duchies of Anachwitz and Zator	288	319,484
Grand Duchy of Cracow	420	145,737
Total	22,588	4,851,364

In 1867 the population had risen to 4,989,114.

Its contour is generally well defined by natural boundaries on the S. in particular by the Carpathians, which form a long and irregular curve, stretching W. to E. along its frontiers N.W. by the Vistula S.E. by the Haly Caracorum, a tributary of the Pruth and for a short distance by the Danister and E. by the Podhorze a tributary of the Danister. Part of the N. bordering on Poland, and all the N.E. are without natural boundaries. The great physical features of the country are, in a manner determined by the Carpathians, and their ramifications. The principal chain, comprising the far greater part of the W. Carpathians commencing in the S.E. of Galatz, near the sources of the Theiss and Pruth, forms a curve, as already mentioned and never quite the frontiers till it reaches its W. extremity having its culminating point in the mountains of Teitra. This loftiest summit, the *Elshenberg* is within the Hungarian frontier but on that of Galatz the Great River has a height of 5129 ft. The N. side of the chain is more abrupt than the S. and the branches

which proceed from it stretch for a considerable distance into Gallicia. In the principal chain granite, gneiss, mica schist, volcanic trachytes and basalt predominate but the N. branches are generally composed of sandstone, much of it belonging to a soft green rock of the tertiary formation, known by the name of *sedoso*, conglomerates of the same formation, and sometimes called *agregado*, are also abundant. Farther to the N. the hills subside rapidly, and finally merge into vast plains. Galicia is partly traversed by the great watershed which divides the whole continent of Europe into two great basins. The chief river on the N. and W. of this watershed, is the Vistula, which, before quitting the frontier ranges as the Bóla, Níla, and the Poprad and Donajec, Wysocka and Rana, and also drains a large portion of the E. by its tributary Bug. The chief rivers on the other side of the watershed are the Danube, which rises near the centre of the kingdom, and flows across it in an E.S.E. direction, receiving, on both banks numerous tributaries, none of them of much importance. The only part of the surface belonging to the basin of the Danube is in the S.E. It is drained by the Pruth, and is of very limited extent. A still smaller basin, the N.E., drained by the Byrr, belongs to the basin of the Danube. The climate is severe, particularly in the S. where, more than one of the Carpathian summits are beyond the limit of perpetual snow. The Great Káwa, mentioned above as 9150 ft. exceeds this limit, while in Galicia is about 250 ft. lower than in the Swiss Alps. The effect of these heights in increasing the rigour of the climate is very marked. The isothermal line of Lemberg nearly in the same lat. as Paris, is only 50° the very same as that which passes nearly through the centre of England. The extremes of temperature are great. The winters are long and severe and the summers very warm, but comparatively short. Deep snow is not uncommon in the middle of April and the grape never ripens.

The soil is much diversified. In the more mountainous districts it often forms a thin crust over a mass of granite, basaltic rocks, where scanty pasture only is obtained. In other parts of the same district, both quality and depth of the soil improves the pastures become excellent, and many magnificent forests occur. In parts of the N. and W. the soil is of a sandy texture, and the crops are very indifferent but in general where the elevation is small, the ground, more especially where resting on a substratum of limestone, is of great fertility and yields abundant crops of corn and maize. Hemp, flax, and tobacco are also extensively grown, and in the district around Lemberg charcoal is cultivated on a large scale. The domestic animals include great numbers of horned cattle, generally of a superior description, and a fine hardy breed of horses, well adapted for cavalry. Sheep are in general very much neglected but goats, swine, and poultry abound. The rearing of bees is much attended to, and produces great quantities of wax and honey. Bees and wolves are frequently found in the forests and all the lower kinds of game are in abundance. The beaver is said to have been occasionally met with on the banks of the Bug. The minerals include marble, alabaster, copper, columbite, and iron and rock salt. Only the last two are of much importance. Iron occurs in numerous parts of the central Carpathian chain and bog-iron ore is frequently met with in extensive seams on the plains. They are both worked to a considerable extent. The rock-salt is particularly abundant, stretching in continuous beds for nearly 200 m. along the base of the Carpathians, and, of course, beyond the limits of Galicia, into Bukowina and Transylvania. The most important mines have their central locality at Wladyslaw. Manufactures have not made much progress. The spinning and weaving of flax and hemp yarn, to a considerable extent, on the confines of Silesia. Distilleries exist in every quarter. The principal exports are salt, wool, coal, sedoso linen, and brandy. The population is generally of Melancholic origin and consists of two principal branches—Jews in the W. and Rumanian in the E. The number of Jews is considerable. The E. Catholics is the established religion but a majority of the inhabitants belong to the Greek church. Protestantism is chiefly in the vicinity of Lemberg. Educational establishments, both for superior and ordinary instruction, are numerous. At the head of the former stands the university of Lemberg, and the lycæum, at Przemyśl. The latter are spread over the whole country, and appear to be tolerably well attended, as the number of persons at school

has been estimated at one in eight of the whole population. For administrative purposes it is divided into the three government of Lemberg, Cracow, and Stanislaw. The principal towns are Lemberg, the capital, Brody, Cracow, Stanislaw, Tarnopol, Przemyśl, Sambor, &c. Galicia was originally called, and is only a corruption of Italian, a name derived from an old castle, on the banks of the Podester, but now included, in addition to the old duchy of Halicz, an independent duchy called first Wolodimer or Vladimir and thereafter Lodomeria. From the 13th to the 14th centuries these duchies belonged to Hungary but passed by marriage to Poland. In 1772 on the first partition of that unhappy kingdom, the Empress Maria Theresa obtained restitution of these duchies, and formed them into the kingdom of Galicia and Lodomeria, a name still sometimes used though that of Lodomeria is more frequently dropped, and the name Galicia applied to both GALICIA, a territory in the N.W. of Spain, forming one of the ancient kingdoms into which the Peninsula was divided, bounded N. and W. by the Atlantic, S. by Portugal, and E. by the ancient kingdoms of the Asturias and Leon. It is now divided into the provinces of Coruña, Lugo, Orense, and Pontevedra and is of a compact and nearly peninsular form. Greatest length, N. to S. 125 m.; greatest breadth 115 m. area, about 17,000 sq. m. Its coast, which has a length of about 340 m. lies open to the Atlantic and is much more broken and indented than that of any other part of Spain almost every strait however small, emptying itself into a considerable estuary. In this way a number of fine natural harbours have been formed one of them, Ferrol, in which nature has been greatly aided by art forms one of the finest naval ports in Europe. The surface is very mountainous. The Cantabrian chain, forming a continuation of the Pyrenees, stretches, almost due W. across the N. of Spain till it reaches the E. frontier of Galicia, where it divides into a number of branches, and spreads itself over the far greater part of that kingdom. None of these mountains are higher than 5,000 ft. but on many of these snow remains for the greater part of the year. The great number of ridges traversing the kingdom in all directions, divide it into no fewer than thirteen distinct river basins but the only one large enough to deserve special mention is that of the M. Níla which is situated near the centre, receives the greater part of its water directly and most of the remainder by the R. A very small portion of the S. belongs to the basin of the Duero. The climate, owing both to the elevation of the surface and the extent of sea coast, differs considerably from the general average of Spain, and is marked by greater cold and more frequent rain. The proportion of good arable land is very limited. In the more elevated districts the soil is generally thin, and of little natural fertility. In the lower grounds it is often of a calcareous texture, and yields good crops. The grain raised, however falls considerably short of the consumption. Besides corn considerable quantities of maize, hemp, flax, and potatoes are grown. Fruit, particularly apples and pears, and nutmegs, and cherries are very abundant. Oranges and citrus grow well only in the S. and more sheltered spots. There, too, the best wine is produced, though the culture of the vine is common in all the lower districts of the kingdom. The higher mountain slopes are generally covered with forests, which grow excellent timber feed large herds of swine, of which excellent hams and bacon are made, and afford haunts to hares and wolves, as well as shelter to many varieties of smaller game. The minerals include silver, lead, copper, iron, marble, and Jasper but they are almost entirely neglected. Both manufactures and trade are highly flaccid. The inhabitants, though tall robust and well made, and not very deficient either in honesty or sobriety are in general very ignorant, and fail to turn the natural advantages which have been bestowed upon them to good account. Disregarding the many sources of comfort, and even wealth, which lie within their reach at home, great numbers of the male inhabitants emigrate for employment, and are found in all the principal towns of the Peninsula engaged as porters, or in other menial offices, in which bodily strength is the most important requisite. Meanwhile, all the dexterity of hand and field is left to be performed by the women, who toil on, cheered by the belief, in which they are seldom disappointed, that the abundance, on gaining a kind of competency, will not lose a day in returning to their homes. The

Galicians take the name of Gallegos, and speak an uncouth patois, which other Spaniards scarcely understand. Pop. 1780,998.

GALINARA [anc. *Gallinaria*] a small isl. Sardinia, in the Gulf and 40 m. S W town of Genoa; with a fort on it. GALION an isl. N E coast of Isl. Java, and E coast of Isl. Madura lat. 7° S. lon. 114° 18' E. n.) It is well cultivated, and has an agreeable appearance.

GALISTELLA a town in Spain, Biscaglia, prov. of Vizcaya, 43 m. N N W coast of a height above 1 km. It is here crossed by a fine stone bridge. It is surrounded by a strong wall, in good preservation, and entered by three gates. On the walls of houses which are generally low but substantial and commodious contains a parish church, a ruinous palace, a townhouse, prison, and primary school; oil and flour mills a trade in corn and cattle and has a large annual fair. P 1206.

GALITA, a small isl. Mediterranean between Sardinia and the N coast of Tunis lat. 37° 51' 12" S. lon. 8° 55' 30" E. It is 8 m. long with a bold and rocky shore.

GALITCHEA in Russia, gov. of, and 90 m. N E Kozlovsk; lat. 56° 20' N lon. 43° 28' E. It is a marshy plain on the banks of a lake of the same name. It is defended by two old forts, and contains thirteen churches, one convent and some linen manufactories. Several large fairs are held here yearly. Pop. (1851) 5680.

GALIKOT a small isl. and territory Nepal. The town which stands on a hill consists of about 500 huts, surrounded by the houses of the chief. Lat. 28° 17' N lon. 84° 14' E. 76 m. W N W Gurkha.—The territory is very small but is well cultivated, and has copper and iron mines.

GALL (German, *St. Gallen*) a canton in the N F of Switzerland, bounded N. by the Rhine, separating it from the Tyrol and the principality of Liechtenstein. B. by can. Grisons and Glarus and W. by Schwyz and Zurich between lat. 46° 53' and 47° 30' N. lon. 8° 47' and 9° 22' E. It is completely enclosed can. Appenzell. Greatest length, N to S. 45 m. greatest breadth 36 m. area 660 sq. m. In the S. it forms part of one of the loftiest Alpine districts of Switzerland the Seelache, whose summits are covered with perpetual snow being common to it and can. Glarus and Grisons, and whose ramifications cover the S. part of the canton. Several other ridges are scattered over the canton and the loftiest summits are the Grase Horn and Spierberg. The whole surface belongs to the basin of the Rhine, but is divided into three distinct minor basins one on the E. drained by the Rhine, directly another on the N and N W drained by the Thur and its tributary Sitter and a third on the S W drained by the Reuss. A considerable part of the N basin sends its waters to the lake of Constance and of the S W basin to the Walensee. The greater part of the latter lake is included in the canton but only a small portion of the former bounds it, on the N E. The only other lake of importance in the lake of Zurich the E. extremity of which penetrates into the canton for some distance but there are many small lakes remarkable for their elevation and the ungracious scenery around them. Among these are the three little Tarnen at the foot of the Gualen the three Murggen, at the foot of the Felsen and, on the Laufboden, N. of the Grase Horn the Wangersee and the Vitzereue the last of which is often frozen over in July. The climate is generally of Alpine severity particularly in the S. and S E. In the W. along the W. alluvial deposits and the lake of Zurich it becomes less severe. On the lake of Constance, and in the valley of the Rhine at least its lower portion, it is comparatively mild. In the bottom of the valley around Sargans, almost an Italian climate is enjoyed. In geological structure the canton is partly of a tertiary soft green sandstone, provisionally called *molasse* partly of conglomerate, and partly of limestone formation. Under the conglomerate are thick beds of sandstone and both formations occupy a large extent of surface, extending along the Rhine and the valley N. from St. Gallen, and S. W. as far as the Spierberg the loftiest summit of conglomerate in Switzerland. Among the strata of sandstone beds of lignite are often found; but there are no minerals of any consequence, though this seems of wood are seen, and also thin veins of silver and copper. The more mountainous districts, within the limits of vegetation are generally covered with wood or good pasture on the

lower slopes vineyards and orchards are seen in every quarter; and where the ground becomes fit for the plough, it is generally of great fertility and so carefully cultivated, as to entitle this canton to rank among the most productive and best managed in Switzerland. The principal products are wine, fruit, corn, maize, hemp and flax. Manufactures have made considerable progress and cotton and linen goods, particularly fine muslins, are extensively made in several districts. This canton was admitted to the Confederation in 1803, and is the fourteenth in rank. The constitution is democratic; but though every citizen of twenty-one years not under legal incapacity has a vote for the members of the Great Council composed of 160 members, none can sit in it without paying about 25 annually of direct taxes. For administrative purposes, the canton is divided into fifteen districts of which St. Gall is the capital. Pop. (1848) 169,508.

GALL (Gr. [German *St. Gallen*]) a town in Switzerland, cap. above can., in an elevated valley 1 bank Rhodan. 18 m. S E Constance. 2152 ft. above sea level. It is well surrounded by antique walls, flanked with towers, but the ditches have been filled up, and converted into gardens. It is tolerably well built and well paved though many of the streets are by no means spacious. It is well supplied with fountains contains a cathedral, once an old abbey church but completely modernized an old monastery now partly converted into public offices, and partly into a school. Three town churches a large townhouse a library, casino, house of correction, and orphan hospital and has extensive manufactures of woollen linen and cotton goods fine muslins, and prints numerous cotton mills, bleachfields and laundries; an important trade, partly furnished by the canton itself, and by cantons Appenzell and Thurgau of which it is the entrepôt a weekly market, and two annual fairs. The environs are very beautiful and contain many fine walks, commanding fine views. St. Gall is said to owe its existence to a Scotch monk, who in the early part of the 7th century left his convent in Iona and after travelling over great part of Europe, finally settled on the banks of the Sarnach, then covered with forests in which bears and wolves had their haunts founded an abbey and made it the nucleus of civilization to the surrounding districts. Pop. (1850) 11,234.

GALLA two small places, Hungary.—1. (*Alco*) A vil. Hild or Danube, on Komorn on the road from Komorn to Buda at the foot of Mount St. George near the Sarnach and about 5 m. from Tisza. It contains a R. Catholic parish church. Pop. 800.—2. (*Nikola*) A vil. near the former on a height, containing a R. Catholic parish church. Pop. 900. Both inhabited by Germans, and belong to Franco Esterhazy.

GALLANT (Low) Strait of Magalhães, S W coast Brunswick Peninsula lat. 53° 41' 42" S lon. 71° 1' 0" W. It is the best haven in the Strait resembling, from the stillness of its waters, a wet dock; bottom even and depth moderate.

GALLAR a town Spain Aragon prov. of 1225 m. S W Saragossa, in a hollow between the Ebro and the Imperial canal. It is indifferently built and has narrow filthy streets a parish church a townhouse, in a ruinous state a primary school a small hospital oil and flour mills and a trade in wheat. Pop. 1015.

GALLARATE, a town Italy Lombardy prov. of 24 m. A W by W Milan it is handsomely built surrounded by ancient walls, and a fine island from the Arno. It has a spacious square, and an old church; manufactures of cotton and pottery, and an active trade in grain cattle, fruits wine, &c. Pop. 4649.

GALLAS, a numerous and powerful race, chiefly inhabiting a territory in E Africa, S. of Shoa, but dispersed in great numbers over the countries adjoining especially N and E. They are divided into many tribes, but are all distinguished by the same general characteristics, moral and physical. Their colour varies from a deep black to a brownish yellow, stature tall, bodies spare, wiry and muscular; frontal profile vaulted; nose often straight or even arched; lips, moderate but often hanging over the neck in long twisted plaits. They have agreeable countenances and are brave but ferocious and cruel manning in war like the resisting and unrelenting young and old, male and female, ripping up the latter who are pregnant. With their ferocity they unite sublimity and want of faith. Their professions of to-day if it suits their purposes, are set aside to-morrow and offered to be renewed without

any apparent signs of abuse. The *Gallies* leave the plains to their horses, sheep, and cows; while they themselves seek their maintenance by cultivating the mountains. In doing so, they are able to bring up a better cavalry than perhaps any other nation. Their arms are a corselet and crooked spear, a lance, &c., in the forms resembling the representations of those which are found in the ancient monuments of Egypt and Nubia. Their language is spoken throughout a great part of Africa, &c. of the equator. They are in a low state of barbarism, have no priests, like other barbarians, and are opposed to the introduction of a new religion. They know only about a Being, whom they call Waka, to whom, on particular occasions, they sacrifice a cow or sheep, but have no system of religion. They adorn their graves with much taste, and surround them with also plants, but it would appear that this proceeding is not the result of good feeling but of a peculiar superstition. (Lansberg and Krapf, *Boisier* *Lasham's* *Journal of Africa*.)

GALLE (Point du) a resort on the S.W. coast of Cayenne, cap. dist. of same name, and the third in importance in the island, situated on a low rocky point of land, projecting into the sea 70 m. S.E. Colombo lat. 6° 5' N. lon. 50° 18' E. The fort is more than a mile in circumference, and contains, besides the usual buildings, a number of houses, occupied by Moscovite families, a Dutch church, a Wesleyan chapel, a mosque, and several shops. The harbor is spacious, particularly the outer road. In the inner harbor vessels may lie in perfect security during a great part of the year. Gallie is a place of considerable traffic, and is much frequented by merchants and traders from distant parts of the island. Ships from China visit the port during the N.E. monsoon and for the mail steamers to and from Bengal and China, it is a regular calling station. The manufactures are tortoise-shell boxes and combs and coil cordage. Great quantities of anise are made in the neighborhood and fish is abundant.

GALLEGO in or Spain which rises on the S. side of the Pyrenees River Ebro, flows first S. then W. then S. again, and joins the Ebro, a little below Saragossa, after a course of about 90 m. It receives, on the right, the Ruben and Ambon and on the left, the Basen, Guayra, and Beton, besides other small streams.

GALLIGOS a river Patagalia P coast lat. 51° 38' S. The entrance to this river is formed on the N. side by the cherty bank of Cape Fairweather and on the S. by a low shore that is not visible at sea for more than 12 or 15 m. It is fringed by extensive sandbanks, most of which may be crossed at high water but at half tide they are almost all dry. The river runs W. for 30 m., and then winds more S. between two ranges of hills. Its banks are formed of down abounding with grasses and ostriches. The water is fresh at 21 m. from the mouth.

GALLIGOS (San Felices de los) a town Spain prov. of and 66 m. S.W. Salamanca, near the frontiers of Portugal. It is tolerably well though not very regularly built, and has paved, but not well cleaned streets. An ancient castle, surrounded by a wall and fosse, a parish church, townhouse, with prison, primary school, nursery and old monastery, manufactures of thread and woollens, several oil and flour mills, a trade in corn, wine, and cattle and a weekly market. Pop. 1963.

GALLIN par. Iron. King's co. 19,168 ac. Pop. 4034. Light. 325 ft. Swineland. See GALL (St.)

GALLINKIRCH a vil and par Austria, Tyrol Vorarlberg about 35 m. from Feldkirch. It contains a parish church. Pop. 1660.

GALLIATI (Latin *Gallatini*) a town Italy Piedmont, prov. of and 4 m. N.E. Novara. It is an indifferently built and dirty place, contains a very ancient parish church, a convent, and an old castle and has manufactures of cotton stuffs, several silk mills, a weekly market, and an annual fair which lasts three days. Pop. 5568.

GALLIANDI, a town Tuscany prov. of and 16 m. N. by W. Lucca, near the bank Serchio. It has a parish church and ancient castle, manufactures of silk to some extent, and an oil castle far. Pop. 1337.

GALLIGNANA or **GALLIGNA**, a town Austria, Styria, fairly situated on a height, and commanding a magnificent view 40 m. S.E. Trieste. It contains four churches, and was once a place of some importance, but is greatly decayed. Pop. 1411.

GALLINA, an isl. off W. coast, Africa, belonging to the Sultan, or Senegal group.

GALLINAB, a river, W. Africa, falling into the Atlantic, in lat. 7° N. lon. 11° 38' W.; and formerly noted for the number of slaves shipped from it.

GALLIPOLI (anc. *Calpis*) a fortified resort in Asia, prov. Ottoman, on a rocky peninsula, E. coast gulf of, and 44 m. S.E. Tarsus lat. (lat. St. Andrew) 40° 5' N. lon. 17° 55' E. (s.) It stands on a peninsula, and is well built, and contains a cathedral, several churches, convents, and public schools. It is well frequented, and has a considerable trade. The principal exports are olive oil, and cotton. With the former for which it has long been famous, it supplies England, Holland, the V. of Europe, and in short, all these countries that require the most perfectly purified oil. The Gallipoli oil, well known in commerce by that name, is clarified to the highest degree, by merely keeping it in casks hollowed out of the rock on which the towers is built. The olives of which it is made are never gathered, but allowed to drop in their maturity from the tree on the ground where they are picked up, chiefly by women and children and carried to the mill, the machinery of which is of the rudest kind. There are also manufactures of mullin, cotton stockings and woollen goods. In the port there are several islands, on the most W. of which named St. Andrew, there is a tower. Between these islands there are 6 and 8 fathoms water and between them and Gallipoli 9, 10 and 13 fathoms. There is an extensive tannery fishery which affords employment to a great many persons. Pop. 8500.

GALLIPOLI (anc. *Calpis*) a market in European Turkey at the N.E. end of the Dardanelles, 128 m. W. 6° W. Constantinople, on a peninsula lat. 40° 24' N. lon. 28° 39' 45' E. (s.) It was once fortified and some of its old defences still remain. It is neatly built with narrow straight streets, and contains no edifices of any mark, except the bazaar, which are large, and tolerably well stocked and some remain the ancient city to be seen at several points in and around the town. It is the seat of a Greek bishopric and has manufactures of cotton silk, and fine Morocco leather, a double harbor one of which serves as a station for the Turkish fleet a good port and some trade in corn wine and oil. Pop. about 17,000.

GALLNEUKIRCHEN a market in Upper Austria, 4 m. N.N.E. Steyersee. It contains an old church, with several paintings, and a burgher hospital and has manufactures of calico and leather. Pop. 815.

GALLOWAY par. Iron. Fermanagh 23,804 ac. P. 7190.

GALLOWAY a dist. in the S. of Scotland, comprising co. Kirkcubright and Wigton but anciently including the entire peninsula between the Solway and the Clyde. It was formerly famous for a particular breed of small horses, called Galloways. They are now mixed with the English and Irish breeds, but still retain the name. The black cattle and sheep are also much esteemed. Galloway gives the title of Earl to a branch of the house of Stuart.

GALLOWAY (Muir) a head of a peninsula, forming the most S. point of Scotland, on Wigton lat. 54° 58' 8" N. lon. 4° 51' 15" W. (s.) The Mts. striding the extremity of the promontory is above 250 ft. high, bleak and rugged while on the N.W. side it presents a perpendicular surface of rock from base to summit. There is here an intermittent light, 325 ft. above sea level.

GALLOWAY (New) a royal and par. bur. Scotland co. of and 17 m. N.W. Kirkcubright, a bank, &c. The houses are generally low, built, and distended giving to the whole place a mean and uncomfortable appearance. It has no trade or manufactures of any kind the inhabitants contenting chiefly of mechanics and agricultural labourers. It has in the centre a courthouse and jail was erected into a royal burgh by Charles I. in 1629 and united with Wigton, Birmann and Whitburn in returning a member to the House of Commons. Constituency 17. In the vicinity is Kenmore Castle. Pop. 447.

GALLUGH a vil and town. Naples, prov. Terra di Lavoro, 55 m. S.W. E. Gaieta. It contains a handsome parish church but is rendered unhealthy by the extensive cultivation of rice in its vicinity. Pop. 1973.

GALLURA, one of the four quarters into which the Sardinia was divided in the Middle Ages. It formed the most N.

part of the island, and extended from the mouth of the Cognines on the N., to Cape Comiso on the E. coast. It comprehended, in addition to Upper and Lower Gallura, the islands off the coast, of which Magdalena and Caprera are the most important. It is now included in division Sassari.

GALLUZZO a tn. in Tuscany prov. of, and 3 m. S. S. W. Florence. It is well built; and contains a church and hospital. Pop. 638.

GALMIER (Str.) a small, but ant. to Franco, dep. Loire, 12 m. E. Montbrison, near r bank, Loire, on the railway from St. Etienne to Roanne. It occupies the site of the *Aque Superius* of the Romans; the mineral springs from which it had this name being still used medicinally and for household purposes. Pop. 3113.

GALOEONGONG or **GALOEONG** a volcano Java prov. Praeger. It is a mountain after which the surrounding beautiful and fertile district is named. No eruption of this mountain was on record, or in the recollection of the inhabitants around till October 8 1823 when a fearful outbreak took place. Ashes, stones, and lava, were thrown out, and a large surrounding district of country laid waste, and 114 villages, upwards of 4000 people, many cattle, rice-fields, and three-fourths of a million of coffee trees were destroyed. The mountain, with those of the district, is now quite bare.

GALISA, a vil. Hungary Thibier Thase co. of, and about 13 m. from Arad. It contains a church and is inhabited by Wallachians. Pop. 1800.

GALSTON a tn. and par Scotland co. Ayr. The town is agreeably situated 19 m. S. by W Glasgow 1 bank Irvine, here crossed by a fine stone bridge of three arches, has straight streets is well supplied with water and lighted with gas, and is improving in appearance. It has an elegant Established church, a Free, and a U Presbyterian church, parish school, and Bide's charity school; the latter old and educating 100 children for four years. Burns is extensively made principally for the army and navy and the manufacture of plaidings and druggists is carried on to a limited extent. But cotton weaving is the staple trade of the place. It is a station on the Scottish S. W. railway. The PARISH is about 13 m. by 4½ m. Pop. 4392.

GALT a flourishing small town Upper Canada, L. bank Ouse or Grand River in a valley surrounded by high hills 55 m. W by E. Toronto. The streets are neatly laid out and the employment of stone in building gives the houses and other structures a substantial appearance. It contains five churches and chapels namely one Episcopal three Presbyterian, and one Methodist also a mechanic institute, and a circulating library. The inhabitants are nearly all Scotch. Pop. (1853) 2348.

GALTÉE or **GALTÉ** MOUNTAINS, a mountain range, Ireland, extending W to E for about 20 m. from Cahir in co. Tipperary to Charleville, in co. Limerick. They possess an excellent soil and are to a great extent either cultivated, or laid out in thriving plantations. Some of the summits rise to an elevation of above 5000 ft.

GALTÉE a vil. in Sardinia, div. of, and 67 m. S. E. Sassari, on a mountain slope, above r bank, Cedrino. In the Middle Ages it was the cap. of a dep. of same name in the old prov. of Gallura and was a place of considerable importance. It is said to have then had 14 000 inhabitants but it has since dwindled down into a village. It still possesses the remains of its old cathedral and contains a parish church, with a crucifix, which attracts numerous visitors by its supposed miraculous powers. Pop. 660.

GALTREIM, par. Irnd. Meath 4129 ac. Pop. 767.

GALVEAS, a tn. and par Portugal, prov. Alemgto 87 m. W S. W. Portuguese with an annual fair. Pop. 1107.

GALVESTON a seaport tn., U. States, Texas, on N. E. end of Isl. of same name; lat. 29° 16' N. Jan 94 45° W (n). It is the seat of a considerable and increasing trade. Pop. 2500. — The ISLAND, which is 30 m. long by 14 m. broad, has parallel to the coast. Within it at the bay of same name, the principal entrance to which, at the E. extremity of the island, is ½ m. wide and has from 12 to 16 ft. of water on the bar. It is divided into E and W bays and extends inland 60 m. The water deepens from 18 to 30 ft., within the bay but near the middle it is crossed by shoals. The entrance at the W extremity of the island has only from 3 to 5 ft. of water.

GALVEZ, a tn. Spain New Castle, prov. of, and 21 m. S. W. Toledo in a beautiful plain. It contains a public square with a copious fountain, a parish church, a handsome town house, a palace, in ruins; and a primary school and has a trade in wool, corn and fruit. Pop. 1490.

GALWAY a seaport co. Ireland, prov. Connaught, having N. Mayo, and Roscommon, E. Sligo, Wick, county Mayo and Tipperary, S. Tipperary, Clare, and Galway Bay W the Atlantic Ocean. Greatest length, E. to W 97 m. greatest breadth, N. to S. 57 m. It contains 1 498 210 ac. of which 742,905 ac. are arable the remainder consists of unimproved mountain and bog and water. The whole of the N. W. portion of the county or district of Connemara is extremely rugged and mountainous, and almost entirely in a state of nature. In this district is Lough Corrib, the third largest lake in Ireland, and part of Tough Mask, the remainder being in the county Mayo. The S. portion of the county is level and mostly arable with much bog. The S. part of this tract is fertile, and tolerably well cultivated producing excellent wheat. Oats and barley form the principal crops elsewhere. In general, however the agricultural capabilities of the county are miserably mismanaged. The habitations of the lower classes are among the worst in Ireland and those of the farmers even are miserable, and generally ill situated. Being on the whole better adapted for grazing than for tillage both the cattle and sheep of the county are of a superior description. The former are mostly of the long horned breed. Lamestons and marble are the chief minerals and beautiful serpentine is obtained near Oughterard in the vicinity of which also there is a lead mine. Iron was also formerly wrought. The fisheries of the coast are valuable, but much neglected. The fishery districts are Galway and Clifden together comprehending 217 m. of maritime boundaries which had, in 1845 3184 registered fishing vessels, employing 18 350 men and boys but in 1850 the number of boats had fallen to 833 and the hands to 5595. Several new plans are in progress for the convenience and encouragement of the fishery. The principal manufactures are coarse woollen hosiery and coarse linen, and dresses for home consumption. Cromlechs and Druidical circles are of frequent occurrence. Square towers, of the early Anglo-Norman period, are also numerous in some districts. The inhabitants are mostly descendants of the original Irish. In 1841 the total number attending school was 15 821 and in 1850 there were 17 270 children in 134 national schools. The county is intersected from its E. boundary to Galway town, by the railway from Dublin. It is divided into 16 baronies and 116 parishes and returns four members to the House of Commons, two for the county and two for the borough of Galway. Its chief towns are Galway the capital, Thom Longford and Gort. Pop. (1841) 432 923 (1851) 298 564.

GALWAY a tn. and seaport, Ireland W. coast, cap. above co. N. side Galway Bay 117 m. W Dublin, the W. terminus of the Midland Great Western Railway lat. (light) 53° 15' 1" N. lon 9° 58' 30" W (n.) at the mouth of the Corrib issuing from Lough Corrib and across which there are two stone bridges. In the more ancient parts of the town the streets are narrow and irregular and many of the houses, once of the most respectable classes, are now crowded with a poorer population and hastening to ruin. Numbers of three old houses are built after the Spanish fashion, regular with an open court, and arched gateway towards the street, there having been in former times an extensive commercial intercourse between this town and Spain. In the more modern parts of the town the streets are spacious and the houses in general handsome and substantial. The town is now well lighted with gas, and is abundantly supplied with water. Of late years a number of new streets have been built tending greatly to improve the appearance of the town; but the suburbs are crowded with wretched cabins. The principal buildings of the town are the Queen's College, a beautiful structure, in the Elizabethan style the Established collegiate church of St. Nicholas a large old edifice, in the decorated English style several R. Catholic chapels, three monasteries, five seminaries, Presbyterian and Methodist meeting-houses the county and town courthouses both handsome Grecian structures and prisons, the county infirmary a fever hospital an endowed and a charter school the workhouse, the union workhouse, and two barracks. Some of the monasteries and

wonderful are large and wealthy establishments. The buildings of the Franciscan monastery, or convent of St. Clara, and of the protection convent, are extensive and imposing. The inmates of the latter are numerous, and nearly all connected

with the borough returns two members to the House of Commons registered electors (1851) 1083, 1707 (1841) 17 975 (1851) 23 695.—The RAY of Galway is a large expanse of water about 18 m. broad at its seaward extremity

County Leit.
2. Town Hall.
3. County Courthouse.
4. Town Courthouse.
5. Church.

6. School House.
7. Hospital.
8. Bank.
9. Workhouse.
10. Library.

11. Roman Catholic Chapel.
12. Protestant Ministry.
13. Protestant Church.
14. Fish Market.
15. Pig Market.

with wealthy families, each required to pay £500 towards the general fund on admission. The grammar-school or college, in the endowment of Erasmus Smith, is a spacious and neat structure. There are three news-rooms, called, respectively the county club house, the Galway Institution and the commercial reading room and a trades mechanics institute. The benevolent and charitable institutions are the town infirmary and dispensary and the fever hospital. Galway is not a manufacturing place, but there are two breweries, two distilleries, a paper-mill a foundry a tannery and several flour mills, in the town and its vicinity. Its retail trade is considerable, there being no other town of any importance within 20 m. of it. The commerce of the port was at one time extensive, but has now much declined, wine is no longer imported in such large quantities as formerly and the trade in provisions is much diminished. Great improvement was anticipated from a line of steamers between Galway and New York which, however proved to be a failure. The principal exports are corn, flour, hop, madder, wool and provisions. Imports—timber, wine, salt, coal, hemp, tallow and Swedish and British iron. The vessels registered at the port, in 1865 were 19 tons. 1562. The vessels January 1 1861, to January 1 1862 were, towards, 166 tons. 17,008—outwards 108 tons. 5608. In the colonial and foreign trade the number of vessels was inwards, 4 tons. 14,373—outwards 31 tons. 9,325. The harbour which has an extensive line of quays, is in process of being connected with Lough Corrib by a canal. Its floating dock, area, 5 ac. admits vessels of 14 ft. draught. On Western Island, in front of the harbour, is a lighthouse, 23 ft. above high water.

On the bank of the Corrib, and forming a suburb, is a large fishing village, called Claddagh, inhabited by a peculiar and peculiar race of people. About 1000 fishermen, with their wives and families reside here, and, beyond the sale of their fish, hold little intercourse with the townspeople; they intermarry amongst themselves, and as regards fishing and pecuniary matters, are governed by their own laws. About 10 tons of salmon are taken yearly out of the Corrib

river. The borough returns two members to the House of Commons registered electors (1851) 1083, 1707 (1841) 17 975 (1851) 23 695.—The RAY of Galway is a large expanse of water about 18 m. broad at its seaward extremity

diminishing to about 8 m. inland, and being about 30 m. long E. to W. It is protected from the swell of the Atlantic by the Aran Isles, of which there are three (see Aran Isles).—(Local Correspondent.)

GAMALENO a vil and com. Italy Piedmont, div. of and 9 m. S.E. W. Alessandria, crowning a height above 1 bank. Bormida. It has an ancient parish church *mon-de-pied*, and a trade in cattle and dairy produce. Pop. 1379.

GAMALEY (Cape) a headland, W coast of Japan, lat. Nippon near its N extremity; lat. 40° 38' N. lon 139° 49' E. (s.)

GAMBALARUM a river Nigritia, rising in the Katsake territory and falling into the S extremity of Lake Tchad after a course first N E. and then N W of about 85 m. direct distance.

CAMBARA a vil and com. Italy Lombardy prov. and 21 m. S. Brescia in a fertile district near the Redona. It has a parish and two auxiliary churches, the remains of an old castle, a weekly market, and an annual fair. Pop. 2308.

GAMBARARE, a vil and par. Austria Italy prov. and 9 m. W. Venice, on the Brenta with a parish and two auxiliary churches, a weekly market, and an annual fair. Pop. 2300.

GAMBAROO a ruined town, Bornon, bank, Teou 5 m. N by W Old Burnie. It contains some extensive ruins and was formerly the residence of the sultans of Bornon.

GAMBETERA, a vil and com. Naples, prov. Kamie 15 m. E. Campobasso. It contains a parish church, and a hospital and has an annual fair which lasts 10 days. Pop. 2849.

GAMBIA a British colony and river W Africa.—The former occupies both banks of the latter including some of its islands. The principal settlements are Bathurst (which see) Fort James, and Fort George. The first is situated on an island at the mouth of the river the second 16 m. further up and the third 180 m. following the windings of the stream from its entrance. Both of the last are also situated on islands, the one on St. Mary's, and the other on M. Corby's. Besides the settlements above mentioned, there are numerous factories and stations at intervals along both banks of the stream. M. Corby's island has an area of 8 sq. m. covered with rich alluvial soil but it is particularly unhealthy and extremely hot, the thermometer frequently rising to 108 or even 106° in the shade. There is here an establishment for liberated slaves, and a Wesleyan missionary school which in 1850 was attended by 121 male and female scholars. This establishment, says Governor Macdonell, has always appeared to me one of the most interesting on the W coast of Africa, and which deserves the most special attention from the Majesty's Government, and all true friends of the natives. The colony so far as yet settled extends about 160 m. in a straight line up the river. But there is little or no fertile land on it belonging to the British Government although large areas have been expended in abortive attempts to establish agricultural settlements, chiefly for the benefit of liberated Africans. The climate is represented by staff-surgeon Kehoe as so bad that few Europeans can reside for any length of time there, without their constitution being impaired for life and that it is particularly fatal to infant life among Europeans, comparatively few excepting. But Governor Macdonell, in his report, dated 1854, considerably qualifies this account by stating, that out of a population of 50 resident Europeans, only five deaths occurred in five years from climatal influence. The Wesleyans have done much for religion and education in this colony having expended large sums of money for these and other laudable purposes, besides having sent out 24 missionaries in the course of the 10 years preceding 1850. The R. Catholics are now making strenuous efforts in

the colony and have established an institution of the nature of charity. The revenue of the colony amounted, in 1849 to £2988 17s. 7d. The principal exports are bees wax, tusk, sea-mould ivory, hides, gold, ginger, gum arabic, palm oil, &c. The river Gambie rises in a mountainous district in Senegal, about lat. 11° 50' N lon 11° W whence it flows N W and W towards the Atlantic, into which it falls in lat. 12° 50' N lon 16° 40' W after a course of about 450 m. In its earlier course it flows through a rich and picturesque country. The soil adjoining the river is in some parts extremely fertile, yielding rice and tobacco in great abundance, while the immediate banks are clothed with the most beautiful trees.—(H. Queen's Africa, Admiralty Sailing Directions Governor Ingram's Expedition up the Gambie Parliamentary Reports.)

GAMBIER ISLANDS a group of eleven small isls. S. Profile Ocean, near the S.E. extremity of the Low archipelago about lat. 23° 8' S lon 184° 58' W (a). They extend over a space about 16 to 18 m. long, N to S and 15 to 16 m. broad E to W. The largest is called Mangrove, a name which the French apply to the whole series. All are surrounded with coral reefs and have the E. or windward side more elevated than the opposite one. The vegetation is luxuriant, but the productions are the same as those of the other Polynesian islands, as is also their fauna and there is not so far as known a single indigenous quadruped. There are, in all 18 species of native birds, including the curlew swallow white heron thrush, magpie, duck and wood pigeon. Fish are abundant in the still waters of the lagoons. The inhabitants are a well-formed race, and are said to be of good disposition their only covering formerly was the mat or they are now tolerably clothed in European fashion their habitations however are still very miserable. The Gambier islands were discovered in 1797 and visited by Capt. Bessely in 1818 and in 1834 some French missionaries settled in Mangrove. The population of the whole group is estimated at 2300, of which 1500 belong to Mangrove.

GAMBOLIO (Latin, *Gambulio*) a tn. Italy Piedmont, div. of and 18 m. S.E. Novara, a bank Tardoppo, here crossed by two wooden bridges. It is the seat of a court of justice, contains two parish churches, a remarkable old castle, several schools, &c. Pop. 5774.

GAMEREN a vil. Holland prov. Gelderland, 11 m. N.W. Tiel on the Waal with a neat church, a school, and the remains of an old castle. Pop. 1042.

GAMKA, or **GRAND LION** a river S. Africa. Cape Colony rising near Beaufort lat. 33° 34' S lon 22° 48' E and flowing S.W. through the Great Karroo, till its junction with the Dryak or Rhinoceros river when the united stream forms the Gamka.

GAMLINGAY par Eng. Cambridgeshire 4143 ac. P. 1282.

GAMMERTINGEN a tn. of W. Germany principality H. Zollern-Sigmaringen in a valley 1 m. N. Lauchart, 11 m. N. Sigmaringen. It is of Roman origin has a castle, a parchment manufacture of linen a paper and a worsted mill, a trade in horses and cattle; and four annual fairs. Pop. 973.

GAMKE, par Scot. Banff 10 m. by 4 m. Pop. 535.

GAMMURST, v. v. Baden, strale, Middle Rhine in a marshy and unhealthy district N. of Offenbach. It contains a parish church. Pop. 1377.

GAMSTON par New North. 2000 ac. Pop. 309.

GAN a vil. France, dep. Basses-Pyrénées 4 m. S.W. Pau. In the environs are two mineral springs. The district is famed for its wines, both red and white. Pop. 1189.

GANAREW par Eng. Hereford; 585 ac. Pop. 147.

GANAT or **JANAT** a tn. W. Africa, Fessen 120 m. S.W. Mourouk, in a sandy and barren region but, owing to its position on the ocean's coast, rich and populous.

GANCH a tn. and com. Shilly prov. Palermo, dist. and 24 m. S.E. Cefalù, esp. cloverfields of various kinds. P. 1853.

GANDELLINO a vil. and com. Italy Lombardy prov. Bergamo 8 m. from Cizzone, on the Serio, here crossed by a bridge. It contains a parish church and has ironworks, supplied by extensive mines in the district a saw-mill and a mineral spring. Pop. 1137.

GANDESBHEIM a tn. Brunswick any circle of main naue, on the Gande, 35 m. S.W. Brunswick. It is walled, has two suburbs, two public squares, a castle, monastery hospital, Latin and burgher schools, manufactures of steel and

ironware, and three annual fairs. Pop. town, 1925 circle, 57,000.

GANDESA, a city Spain, Catalonia, prov. of, and 42 m. W. by S. Tarragona, in a plain, overlooked by a ruinous castle. It is irregularly built, has three squares, two churches, several chapels a townhouse, prison, hospital, schoolhouse and cemetery. In the vicinity are mineral springs, with baths. Manufactures—linen and woolen and silk fabrics, bricks, earthenware, wine, oil and brandy. Trade—oil, almonds, brandy silk, rice sugar salt-fish hardware, &c. Pop. 2816.

GANDIA, a city and port, Spain, prov. of, and 54 m. N. by E. Valencia. A bank, Alcoy strongly fortified, and entered by five gates. It is well built, has straight, spacious, and paved streets, eight squares a handsome gothic collegiate church three convents several chapels, large and convenient primary schools, a prison, hospital, college, several town and earthworks, a prison, barracks two cemeteries and a spacious and magnificent palace of the dukes of Gandia, and in the vicinity by the river side, public promenades. Many features—linen, woolen and silk fabrics, earthenware, marine stores wine, and oil. Trade—linen, hemp, silk timber paper and salt-fish. Pop. 5723.

GANDHICOTTA a tn. and fort, S. Hindostan Carnatic, 7 m. N. Ponnur 70 m. S. Kurnool lat. 14° 51' N lon 78° 22' E now unimportant, but formerly noted for its strength, and for a diamond mine in its vicinity.

GANDINO a tn. Italy Lombardy prov. Milan prov. and 19 m. N. L. Bergamo on the slope of a hill crowned by an ancient castle. It has well built houses with clean streets, a fine parish church an hospital, college, several elementary schools, an oratory a system gymnasium theatre municipal buildings and three suppressed convents two of which are now used as factories, and one as an hospital. Manufactures—linen, cloth, serge flannel and silk fabrics, leather brandy and soap. Considerable trade is carried on in timber grain fruits, wine and cattle. Pop. 3424.

GANDIOLLE, a vil. W. Africa, 1/2 m. near the Senegal opposite its mouth 12 m. S.E. St. Louis. When Melhon visited this place in 1817 it was occupied by the king and his troops and the houses for the most part were shrouded or destroyed, the inhabitants having taken refuge elsewhere from the violence and rapacity of the negroes in the neighbourhood are extensive salt marshes. Pop. 5000.

GANDJA, a tn. Russia, gov. of and 20 m. S.E. Tiflis. It is inhabited chiefly by Tartars and Armenians. The vicinity produces wine, fruits, nuts and excellent raisins. Good houses are reared here and it has an active trade.

CANGALA an al. W. Africa, Lower Gambia, in the Falemé lat. 14° 44' N lon 12° 12' W. It is extremely fertile, and produces excellent crops of millet.

GANGES a celebrated river Hindostan, and one of the largest in Asia, has its sources in the Himalayas, prov. Gurwal. It is formed by the junction of two head streams, called, respectively the Bhagirathi and the Alaknanda, which unite at Deopryag or Deoprag 10 m. below Streamgurg lat. 30° 10' N lon 78° 30' E. 1500 ft above sea-level. The former has been usually considered as the true source of the Ganges, probably because of its being the sacred stream of Hindu mythology. But if volume of water and distance of origin are to decide the point, this honour must be assigned to the Alaknanda, which has greatly the advantage of the Bhagirathi in both these respects, being twice the size of the latter and its source being more remote. The Bhagirathi rises in a deep and savage glen or ravine above a Gangotri about lat. 31° N lon 79° E. where it issues from an aperture called The Cow's Mouth a low arch at the bottom of a glacier about 800 ft. in perpendicular height. The breadth of the river here does not, in summer exceed 9 ft. Its depth being barely as many inches. At Gangotri, which is from 18 to 20 m. from its source, it has become a considerable stream, having been rapidly enlarged by the numerous torrents that flow from the melted snow. The Alaknanda has its source N. of the village of Nid or Neece, 40 m. E. by N. Gangotri, on the S. slope of the Mahalak peak, lat. 30° 50' N lon 79° 50' E. 1800 ft. above sea-level. During the earlier part of its course it is known as the Dhanil. At Haridwar province Delhi, about 80 m. below the junction of the two head streams above noticed, the river is only 1000 ft. above sea-level. Here it fairly enters the great plain or

valley of Hindostan, and flows in a S. E. direction till it discharges itself by its numerous mouths into the Bay of Bengal a distance, exclusive of windings, of fully 1100 m. In this space it is joined by 11 large rivers, the principal of which are the Jamna and Son, joining the r. bank, and the Ranganage, Gomty, Gogry, or Kala, Gomuck, Gari, Mahanadi, and Ater on the l. bank. After being joined by the Jamna, and two or three of the other tributaries just named the Ganges attains its utmost breadth, which is in some places about 5 m., with a depth of about 80 ft. in the dry season increased to 90 in the wet. Where at the lowest, the principal channel varies from 400 yds. to 1½ m. in width but is generally about 2 of a m. across.

About 200 m. from the sea, the Delta of the Ganges, which is considerably more than double that of the Nile, commences a flat alluvial tract of from 80 to 200 m. in breadth, the E. extremity of which, or that part which borders on the sea, is known as the Sunderbunds, or more properly Sunderdum, a dreary unhealthy region covered with wood (mostly the Boondry tree) and broken up by numerous creeks and rivers all of which are salt except those that commence immediately with the principal arm of the Ganges. It abounds with tigers, crocodiles &c. to which it is almost wholly abandoned being uninhabited and uncultivated. Of the last named animals there are three or four species in the G. and its tributary rivers, one of which is the Ganges crocodile (G. real or G. real). These animals swarm in the brackish water along the line of sandbanks where the advance of the delta is most rapid. Hundreds of them are seen to gather in the creeks of the delta, or basking in the sun on the shoals without. They will attack men and cattle, destroying the natives when bathing and tame and wild animals which come to drink. I have not unfrequently says Mr Colbrooke, been witness to the horrid spectacle of a floating corpse seized by a crocodile with such avidity that he half emerged above the water with his prey in his mouth. In tracing the sea coast of this delta eight openings are found, each of which appears to be a principal mouth of the Ganges. The navigation through the Sunderbunds is chiefly effected by means of 8 tides there being two distinct passages, the one named the S. or Sunderbund passage and the other the Ballahang passage. The first is the furthest about, and leads through the widest and deepest rivers, and opens into the Hooghly about 65 m. below Calcutta. The Ballahang passage opens into a shallow lake on the E. side of Calcutta. The navigation by these passages extends more than 200 m. through a thick forest, divided into numberless islands by channels of exceedingly various width. The whole coast of the delta is one mass of mud banks, which are continually shifting, and among which there is seldom a channel that a vessel can trust, with exception of the Hooghly the only mouth of the Ganges which ships of burden can enter. But these vessels do not draw more than 15 ft. of water otherwise the navigation becomes dangerous.

The periodical inundation of the Ganges, which commences about the latter end of April or begun early in May proceeds from the tropical rain which begins to fall about that period. The rise of the river is at first slow and gradual not exceeding an inch a day for the first fortnight. Afterwards it increases to 3 or 4 in., and latterly when the rains have become general in all the countries through which it passes, it rises about 5 in. a day until it has attained a height of 22 ft. above its ordinary level. This height, however it attains at one point only near the commencement of the delta. Below this, the increase of the waters of the river is much less, declining from 14 to 8 ft. and latterly as the sea is approached becoming almost imperceptible. By the end of July, all the flat country of Bengal, contiguous to the Ganges and Brahmapootra, is overflowed to an extent in breadth of 100 m., nothing being visible but villages and the tops of trees, the former being built on artificial mounds above the height of the flood. After the middle of August, the waters begin to subside, running off at the rate of from 3 to 4 in. a day till November from which period to the month of April they decrease at the rate of 1 in. a day. The quantity of water discharged into the ocean by the Ganges is computed to be 500,000

cubic ft. per second in the four months of the flood season, and 100 000 cubic ft. per second on an average during the remainder of the year. The quantity of mud brought down annually by the stream is computed at 255,521,287 cubic yds. and it discharges the sea to a distance of 80 m. from the coast. Owing to the looseness of the soil on the banks, large portions of them are being constantly swept away by the force of the current, and with such rapidity. In some cases, that an acre of ground has been known to disappear in less than half an hour.

The phenomenon called the Bore, a sudden and rapid influx of the tide, in the form of an enormous wave rising at perpendicular as a wall assumes a more formidable appearance in the Ganges than in any other river in which it is known, with the exception of the Brahmapootra. In the Hooghly the Bore rushes onwards with an appalling noise, at the rate of between 17 and 18 m. an hour and at Calcutta it sometimes causes an instantaneous rise of 5 ft., having been probably more than double that height at the mouth of the river. The waters of the Ganges are held sacred by the Hindus, from Gangotri about 15 m. from its source, to the island of Sagor at the mouth of the Hooghly. There are, however, particular places more minutely sacred than the rest, and to these pilgrims resort from great distances to perform ceremonies, and carry off water to be used in future ceremonies. The first of these stations is at Gangotri, one of the other most celebrated ones is at Hardwar where the Ganges enters the plain of Hindoostan. The Ganges water is also esteemed for its medicinal properties, and in the British courts of justice witnesses of the Brahminical faith are sworn upon it.

The valley of the Ganges is one of the richest on the globe, and contains a greater extent of vegetable mould and of land under cultivation, than any other country in this continent, with exception, perhaps, of the Chinese empire. For hundreds of miles along its course down to the Gulf of Bengal, not a stone is to be seen. Wheat and other European grains are produced in the upper part of this magnificent valley while in the S. every variety of Indian fruit, rice, cotton indigo opium, and sugar are the staple commodities. In the rainy season the Ganges or rivers the country on either side for hundreds of miles leaving it, when it retires, covered with fertility. Notwithstanding the sources of the Ganges are at an elevation of upwards of 13,000 and 18,000 ft. respectively above sea level, the fall of the river from Hurdwar nearly at the foot of the Himalaya to the Delta, a distance of about 1300 m., is only 1000 ft. showing how stupendous must be the falls of its head branches, and of the river itself, while descending the declivities of those lofty mountains in which its sources lie, a descent of many thousand feet occurring within little more than 100 m. Although the vast tract of country through which the Ganges flows is generally level its banks, in many places, exhibit scenes of great beauty while in the stream itself clusters of picturesque

THE FAKHER'S ROCK ON THE GANGES.
From an original Drawing by Capt. R. Smith, 1795.

rocks occasionally occur interesting not only from their own appearance, but from the associations connected with them. Two of these occur in the province of Bahar or about 900 m. above the Delta. The first is Jangama, or the Fakher's Rock, near Ballinganga the second, the rock of Colgung.

near the point where the river bends towards the Bay of Bengal, or 110 m W Behar. The Fakar's rock is a pile of large pila, consisting of several masses of gray granite, heaped one upon the other and forming ledges and terraces, which are the sites of several small temples, a principal one rising from the summit and overtopping all. This place has been held sacred for ages, and has been the abode of Fakars from time immemorial, who levy tribute on all passers-by. This rock is also interesting to the antiquaries, being covered with sculptured figures of great antiquity and numerous inscriptions in an unknown character. The rocks at Colga, which have also a singularly picturesque appearance, are likewise esteemed holy by Hindu devotees and are covered, like the Fakar's rock, with sculptured figures.

The Ganges is navigable for boats of a large size nearly 1800 m from its source, and the busy scene which it daily exhibits, together with the number and variety of boats with which it is crowded is not, perhaps, equalled on any other river in the world. Amongst the latter are a number of government iron steamers, commodiously and tastefully fitted up. It forms, with its tributaries the great route of communication and traffic throughout interior India, there being few roads adapted for the conveyance of goods; and its value as a highway for commerce is all the more increased, from the numerous important towns and cities that lie either immediately on its banks or at no great distance from them. Ascending the stream may be named Calcutta, Moorshedabad, Bahar, Patna, Benares, Allahabad at the junction of the Jumna, Cawnpore and Ferozabad. It forms also, the great military highway by which India was conquered and by which that conquest is maintained the main artery by which British power is diffused throughout the vast territory of Hindoostan. The length of the Ganges direct distance, is about 1800 m in its development, 1960 m—(Johnston's *Physical Atlas* Lyell's *Geology* Sumner's *Physical Geography* Strachey in the *Journal of the Royal Geographical Society* Forest's *Tour along the Ganges to the Himalaya* Tourist).

GANGES, a tn. and com. France, dep. Herault, 25 m N N W Montpellier beautifully situated in a fertile plain surrounded by mountains, near l. bank, Herault. Its environs, covered with country seats, and an old castle, seated above it

THE GROTTA OF GANGES.
From *Voyages dans l'Inde* de France.

on a commanding height, give it a very picturesque appearance. It has extensive manufactures of silk goods, especially gloves and stockings, several tanneries, and cotton and silk mills. The rearing of silk worms is carried on to a great ex-

tent in the surrounding district. The great attraction of the Ganges is a grotto in its vicinity which bears the somewhat uncouth name of *Grotto de la Descente de l'Inde*, but which is said to rival, if not to surpass, the famous grotto of Antiparos. Pop. 4500.

GANGI (supposed to be the ancient *Gogio*) a market in Italy island of Sicily prov. Palermo, 20 m S.E. Cefalù, chief place of a district in a fertile local by Pop. 8507.

GANGKOFEN a market t. Bavaria, circle Lower Bavaria near Feggelsheim. Its inhabitants are engaged in the cultivation of flax in yarn-spinning and bleaching. P. 1001.

GANGOOTRI a celebrated place of Hindu pilgrimage N Hindoostan prov. Garwal lat. 30° 59' N lon. 78° 56' E; near one of the sources of the Ganges in the Himalayas 13 000 ft above sea level. The pilgrimages to Gangootri is considered as a great act of Hindu piety and the performance of it is supposed to redeem the devotee from all his former sins, and to insure him eternal happiness in the next world. The water taken from this sacred spot is carried by the pilgrims to all parts of India, and sold at a high price.

GANJAM a tn. Hindoostan v. Orissa cap. dist. of same name, near W coast, Bay of Bengal lat. 19° 21' N lon. 85° 10' E. It stands on an elevated portion of the plain. It was at one time a flourishing place, the public buildings, houses, and gardens, being amongst the handsomest of those of any station under the Madras presidency but, the town having been deserted in consequence of a destructive visitation of fever the former have been long going to decay. The principal arm of the Ganjam river which enters the sea to the S of the town is about one-third of a mile broad. It is a tributary one of the five rivers, is bounded N by Kuttack S. by Visagapatnam E. by the bay of Bengal and W. by the prov. of Orissa. The W. portion isilly but adjoining the shores are some large and fertile plains. It is one of the most productive districts under the Madras presidency yielding rice, cotton, sugar cane and pulses of all kinds. Amongst the exports are gums, drugs, wax, rhoe, salt, &c.

GANBALI a tn. France, dep. Alier on the Ardèche, 24 m S by Moulins and finely situated at the foot of smiling slopes covered with woods and vineyards. It is a poor, busy and uninteresting. Near it are the remains of a feudal castle, now serving as a prison. Gannat is the seat of a sub-prefect, a id a court of first resort has tanneries and breweries and a trade in corn and wine. Pop. 4769.

GANNET ISLAND—1 S Pacific Ocean W coast, New Zealand, N island v W Kewea Harbour lat. 37° 7' S lon. 174° 33' E (a).—2 British N American coast of Labrador lat. 54° 0' N lon. 55° 54' W (a).

GANTHEAUNE BAY Australia, W coast, Edal Land lat. 27° 45' S lon. 114° 7' E (a). Two rivers fall into this bay both of which have their rise in a short range of hills stretching N and S. at a distance of about 12 m inland.—*Ganthems Cape*—1 the most S. point of Kangaroo island S. Australia, forming the S.E. extremity of Victoria Bay Cape Karamat forming the W lat. 35° 5' S lon. 137° 30' E.—2 a point, N.W. coast of Australia, Dampier Land lat. 17° 20' S lon. 122° 10' E.

GANTON par Eng. York, (S Riding) 8650 ft. P. 823.

GANYA or GANITHA, a vil. Hungary 7 1/2 m. S. of Theiss, on Marmaros, on the Tisza, about 18 m. from Seghed. It contains a Greek church. Pop. 1500.

GAP (anc. *Vapocensis*) a tn. France cap. dep. Hautes-Alpes, 245 m. S.E. Paris lat. 44° 58' 57" N lon. 6° 5' 10" E (L). finely seated on the brooks Bonne and Luyra in a beautiful wooded valley. It has a fine old gothic cathedral, a courthouse, townhouse, prefecture, bishop's palace, barracks, a small theatre and a large reservoir of water for extinguishing fires. It likewise possesses a public library of 5000 volumes attached to which is a small museum. It is the seat of a prefect and a bishop and has manufactures of hats, farming tools and linen some tanneries, alumineries, &c. and a trade in grain, fruit, cattle, leather and wool. Gap, formerly capital of the French Gependes, was taken, retaken, burned, and restored several times. Early in the 17th century it had 18,000 inhabitants; but the plague in 1680 the shaking of it in 1693, by the Duke of Savoy and the revolution of the edict of Nantes, nearly completed its ruin. Pop. 5394.

GARA, a vil Hungary Httige Daube, co. and 49 m. N W W. It contains a R. Catholic parish church, and is inhabited by Dalmatians and Germans. Pop. 3600.

GARA LOUGHI a beautiful and romantic lake, Ireland on the confines of the co. Mayo, Roscommon, and Sligo, 13 m. W Carrick. It is 5 m. long and in some parts 8 m. wide; is chiefly supplied from the Breelagh and the Lurg, and on the E. side is indented by many deep and narrow bays.

GARAGHICO a tn. and parson, Counties, 41 Tennesse, 29 m. W. W. W. Orestava. lat. 32° 28' N. lon. 16° 54' W. bounded by the coasts of San Miguel. It has a handsome parish church, several chapels, two convents, municipal buildings, a prison, hospital, and two schools. Manufactures—linen, cloth and wine. The port was once one of the most important in the island but since the eruption of the Peak, in 1703, by which the town was partially destroyed its only trade consists in wine and linen fabrics, sent to Orestava. P. 3500.

GARAH or **At el-Basra**, a small tn. or vil Egypt, on the name of the same name, in the Libyan Desert, about 250 m. S. W. Cairo. It rises above the palm-trees, and bears a striking resemblance at first sight to an old ruined castle of feudal times. The streets are all covered over and are thus rendered so dark that it is necessary to use a lantern in traversing them even at mid-day. The castle consists of a level pt. in enclosed by abrupt precipices, and covered in part, by beautiful palm-trees, other clustered together in de de masses or dispersed in picturesque groups. Salt pools occur here and there, surrounded with an effluence of dead or whitening. The inhabitants whom Mr. St. John met with were civil and hospitable, and exhibited a degree of natural politeness entirely calculated to make a favourable impression on strangers. They are a mixed race some being almost perfectly black, others of a pale yellow complexion, with marked indications of negro origin. Nearly all are destitute of any sign of beard. Their language is a dialect of the Berber. Their costume consists of a white or brown skirt, with long loose sleeves, and a thin linen kull-cap—(addressed to the *L. by the Traveller* by Barth St. John).

GARHAGATI a and com Italy Lombardy prov Milan dist and 5 m. W. Bollate, near the city, in a large lake. It has some soil in corn and oil. Pop. 1823.

GARIANA Latin *Garia* and *De Gariana* a town, Italy Piedmont div and 72 m. N. E. Alexandria with a parish church the remains of an old castle some trade in wool and silk, a weekly market, and five annual fairs. Pop. 1733.

GARBICH a maritime prov Lower Egypt, delta of the Nile, of which it forms the greater part bounded N by the Mediterranean, and inland by the provs Damietta, Rosetta, Menouf, Melouah, and Mansourah. It is a vast plain, 90 m. long by about 45 broad intersected by numerous canals, and for the most part having a fertile and well cultivated soil. It is subdivided into three depts. and seven arronds. Chief place, Melouah-el-Bahr.

GARHOLDIRHAM prov Eng Norfolk 27 (16 m. P. 806

GARCHIZY a vil France, dep Nievre, 14 m. N W Nevers. Here is an important foundry with large workshops for making machines, tools, and implements. Pop. 2504.

GARD or **GARDON** (Latin, *Yard*) a river France, which gives its name to a dep. and is formed by the union of two minor streams, the Gardon d'Anduze, and the Gardon d'Alais. These streams, rising not far from each other in the Cevennes, descend down S. E. into dep. Gard and join about 8 m. N. E. Alais. The united stream, taking the name of Gard, flows circuitously S. E. E. across the dep., and joins a bank Rhone, about 4 m. above Tarascon, after a course of 50 m. It is subject to sudden floods and often causes great devastation. Some gold is found in its sands.

GARD a dep. France, bounded N by Ardèche N W Lozère, W Aveyron, S. Hérault and the Gulf of Lyons, and W Bouches-du-Rhône and Vaucluse; and between lat. 43° 26' and 44° 26' N. and lon. 3° 17' and 4° 50' E. greatest length, E. to W. 80 m. greatest breadth, 75 m. area, 3256 sq. m. In the N. the surface is mountainous, being covered by part of the chain of the Cevennes which also throws out some ramifications to the W. and isolates a small part of the department, causing it to send its waters W. to the basin of the Garonne, while all the rest of the department belongs to the basin of the Rhone. In the S. the surface flattens down into a vast and fertile plain, which in the vicinity of the coast, becomes so low

as to form extensive marshes and salines, very injurious to health, but productive of a considerable revenue from the numerous saltworks established upon them. The principal river is the Rhone, which, however only forms the E. boundary. Within the department, the most important streams are the Gard and the Ouse. The quantities of arable and of waste land are very nearly equal, each occupying about one-third of the whole. The far greater part of the remainder is covered with wood; but a considerable portion is devoted to the culture of the vine and olive. The grain yields little for export of the consumption in ordinary years furnishing more than one-third of what would be required. The industry however is often met, not by importation, but by the substitution of other food, particularly by the poorer classes, whose main dependence is on the potato which grows abundantly and the chestnut of which the lower slopes of the Cevennes furnish almost inexhaustible supplies. Many of the wines bear a high name, and are well known in commerce. Nearly one-half of the whole produce is exported. About one-sixth of it, of inferior quality is also exported after being converted into brandy. The olive increases well on the best E. exposures, and yields an oil which is much esteemed. Other valuable products deserving of notice are the mulberry on which great numbers of silkworms are reared under often cultivated on a large scale and various other dyes and medicinal plants. The minerals include silver copper and calcareous, which once were, but are no longer worked lead worked in several districts, iron is found in some numerous and rich and coal worked near the town of Alais, and in other localities. The quarries furnish abundance of gypsum and building stone and there are valuable beds of flint's earth, potter's clay and kaolin. The principal manufactures are silk goods, pure and mixed, woollen and cotton stuffs, bonnet, carpets, leather and leather gloves. The most important branches of trade are wine, brandy and salt. For administrative purposes the department is divided into four arrondissements—Nîmes, the capital Alais, Uzès and Le Vigan—subdivided into 35 cantons, and 247 communes. Pop. 400,381.

GARDA (Lago di) or **ERZCO** [Dacian name of the Roman] an extensive and beautiful lake, Austria Italy between lat. 45° 26' and 46° 04' N. lon. 10° 33' and 10° 54' E. 53 m. long N. to S. by 8 to 11 m. broad, 915 ft. above sea-level bounded, E. by prov Verona, S by Mantua, W by Brescia, and its N. extremity enters the territory of Trent, in the Tyrol. It receives the Adige, almost its only affluent, at the N. and is drained by the Minolo which issues from its S. E. end, near the fortress of Panchiera. It is well stocked with excellent fish the carp in particular are gigantic, and have been taken 80 lbs. weight. Garda is the largest lake in Italy its greatest depth is 90 ft. Storms blow on it regularly between the ports of Verona and Desenzano and its shores are covered with villas.

GARDA a vil and par Austria Italy prov Verona, on the Lake of Garda, where it has a small harbor. It consists of the town proper and a suburb and contains several fine villas, two churches, and several mills. On a height, in the vicinity called the Rocca di Garda stand the ruins of an old castle. The olive is extensively cultivated here. P. 3000.

GARDATA or **GARDATA** a tn. in Algeria, in the Sahara oasis of Wady Mimbi lat. 33° 35' N. lon. 8° 30' E. It is surrounded by a wall with battlements and defended by nine towers, capable of containing 800 to 400 combatants and has 10 gates. The houses are well built, and white-washed. The town contains six mosques, one of which is of extraordinary size. The native manufactures are of little importance. The women weave woollen stuffs; the Jews exercise the callings of goldsmiths, locksmiths, and gunsmiths and repairs of fire-arms. Powder is also manufactured in small quantities. A considerable trade is carried on with Tunis, Algeria, &c. in oil, corn better negroes, groceries, pottery and numerous other articles. The government of the town is administered by a national assembly presided over by a chief who however is feeble nothing, without first taking the advice of the religious chief whose word has the authority of law not only at Gardata, but in all the other towns of the district. The Jews have a synagogue here, and live in a quarter by themselves. Gardata is surrounded by immense orchards, watered by wells which sometimes have a depth of 900 ft. In these orchards are cultivated the vine, and all other kinds

of fruit common to that part of Africa except oranges and citrons. The rare occurrence of rila discourages the cultivation of cereals but should it rain one year at the proper season, and in sufficient quantity the land will produce for two or three consecutive years enough for all necessary purposes. On a mountain in the neighborhood are the ruins of a large tower supposed to have belonged to the Romans. Pop. uncertain but stated to be little inferior to that of Algiers. (Dummas Sahara Africain.)

GARDANNE, a vil. and com. France dep. Bouches-du-Rhône, on a slope, above the stream of St. Pierre, 18 m. NNE Marseilles. It is surrounded by ramparts, and has a number of good houses in its suburbs but is, in general, ill built, and has narrow and irregular streets. It is well supplied with copious fountains, near one of which stood the old castle of King René; and has distilleries, sawworks and two annual fairs. Best root and radishes are extensively grown, and some coal is worked in the vicinity. Pop. 3020.

GARDE PREINET (La) a vil. France, dep. Var 15 m. S. Draguignan. It stands on a lofty summit of difficult access, near the site of a celebrated Baroque castle, the ruins of which still exist, and though originally consisting of mean houses, and narrow winding, and gloomy streets, has been so much improved within the last 50 years, that it has squares planted with trees, fine fountains, and all the appearance of a handsome modern town. The chief source of its prosperity is the manufacture of coaks, of excellent quality, made from the bark of trees of home growth, and largely exported to Marseilles and elsewhere. Pop. 1641.

GARDELLEN once GARDLEBERG a in Prussia, prov Saxony gov. of and 80 m. N NW Magdeburg capital of same name, a bank, Milde. It is surrounded by an old wall with three gates is the seat of a law court, and several offices for the circle contains two churches and two chapels, two hospitals a normal burgher and other schools, and has manufactures of white and ordinary leather, numerous breweries and distilleries several mills a trade in cattle, and five annual fairs. Pop. 5251. —The CIRCLE, area, 968 sq. m., for the most part, flat, well watered, well wooded, and contains much excellent table land, adapted for turn, hops, and tobacco. Pop. 45,824.

GARDEMPLE, or GARTKEMPE [Latin *Vartempus*] a river France, which rises in the W. of dep. Crouse flows W., then N W across dep. Haute-Vienne, and part of dep. Vienne and joins 1 bank, Crouse, on the borders of dep. Indre-et-Loire, a little above Le-Bois-Peury after a course of about 130 m. Its principal affluents are, on the l the Ardour, Louze, and Vinouat and on the r the Saine, Brann and Leuglin. It is not navigable but when the water is high, becomes an important channel of communication by floating.

GARDIA, a vil W Africa, Boudou in a plain, surrounded by tamarind and other trees lat. 14° N lon. 12° 25' W with dirty and wretchedly constructed cottages.

GARDINER, a vil and township, U States, Maine. The townships, at the confluence of the Kennebec and Cobscook, contain two churches a bank and a lyceum. In the township are two paper and various other mills, a woolen factory a pottery and several tanneries. Pop. 5042.

GARDINER'S BAY and **ISLAND**, U States, New York End of Long Island lat. 41° 8' N lon. 72° 5' W. The bay is a considerable expanse of water of a somewhat circular form, and 8 m. in diameter. The bay is 4 m. long and 2 m. broad and is highly cultivated.

GARDON, a place (Italy Lombardy) — 1. A prov. of and 10 m. N Brescia a bank, Mella. It possesses considerable manufactory of fire-arms a cannon foundry and several silk-mills. An annual and well-attended fair is held in April, for grain cattle and general merchandise. Pop. 1507. — 2. (Riviera) A vil prov. Brescia, 3 m. NNE Salo, near the W shore of Lake Garda. Pop. 1443.

GAREP or **GAREP** S. Africa. See ORANGE RIVER.

GARGENO or **GARGENO** (Lat. *Gargensis*) a tn. kingd. of Italy Piedmont div. and 25 m. S.E. Coni in a beautiful place, 1 bank, Tesaro, there created by a wooden bridge. It contains a handsome parish, and several auxiliary churches, elementary schools and an hospital and has a trade in chestnuts, potatoes, game, fish, hemp and wool, three weekly markets, and two annual fairs. In the vicinity there is a mine of

argenticiferous lead, and fine quarries of red, black, and white marble. Pop. 5448.

GARET a dist. Maroon, prov. Fox, bounded, N by the Mediterranean. Mollis is its principal town.

GARFAGNANA (Latin *Garfagnana*), an anc. country Italy formerly partitioned between the duchies of Modena and Lucca and the grand duchy of Tuscany.

GARFINKY par. Ire. Kerry 8916 ac. Pop. 914.

GARFORTH par. Eng. York (W. Riding) 1700 ac.

GAR 1385

GARGALLANO a decayed to Grecco, near W coast, Morve 11½ m. N by W Naverlun on a height. It has two churches, and a hamlet containing several shops belonging to merchants from Trieste. Pop. about 350.

GARGANO [anc. *Garganus*] a group of mountains Naples, prov. Capitanata. It is a distant ramification of the N.E. slope of the Apennines, and occupies the apex of the foot to which the Italian peninsula bears so remarkable a resemblance. It consists of a lofty mass of a circular form from which, as from a centre, several branches radiate. Its loftiest summit are Colvo, near its centre 5450 ft. Sagro on the E. Spigno on the N. Gargano on the W. and Egnano on the S. They are composed almost throughout of limestone, and the accompanying rocks of the Jura formation and contain some metallic veins and beds of ironstone, none of which are worked. They continue as the as Hercules describes them with lofty forests of pines.

GARGANTA LA OLIA a tn. Spain, Extremadura, prov. of, and 65 m. NNE Cáceres. It is tolerably well built, has wide, straight and well-kept streets a large square, containing a handsome townhouse hospital parish and storehouse a spacious and substantially built parish church a chapel and two schools, and manufactures of linen silken goods, paper wine and oil. Pop. 1972.

GARGNANO a tn. Italy Lombardy prov. of and 23 m. N.E. Brescia, on the W. shore of the Lake of Garda. It is a family situated between hills, on the east of a court of law and several public office contains a parish and two auxiliary churches, and two chapels and has milk mills and three annual fairs. Pop. 4090.

GARGITANO a river Italy formed by the junction of the Lari and Neco near Po. teorrro. It flows S.E. and W. and after a course of 40 m. falls into the S.E. of Gasta.

GARJI a vil. Holland prov. Friesland 8 m. H. Leeuwarden. It is an old place and has a church and school. The whole estate chiefly engaged in cattle-rearing. Pop. 690.

GARIOCH a flk. Scotland in the centre of Aberdeen shire including 13 parishes, comprising 100 sq. m. and surrounded on all sides by hills.

GARIANCO a tn. kingd. of Italy Piedmont div. and 24 m. S.E. Novara, near the Terdoppio. It stands in a very fertile district, contains a magnificent parish church, with a large dome two monasteries with church and schools, an hospital and an ancient tower now used as a prison. It is the seat of a court of justice, and several public offices, and has a trade in corn, cattle dairy produce and silk, and a weekly market. Pop. 5436.

GARLITSTOWN a vil. and seaport Scotland, co. of, and 6 m. S.E. Wigton, at the head of bay of same name. W. side Wigton Bay. It is in the form of a crescent, is built entirely of whitestone and has a rope and sail manufactory and some boat-building a harbour capable of affording shelter for 30 vessels, with a depth, at high tides, of from 18 to 20 ft. and some trade in fish and agricultural produce. Pop. 656.

GARMISCH a market in Upper Bavaria 1 bank, Lonzach, near its confluence with the Isar 50 m. S.W. Munich. It is the seat of a court of justice, has two churches, saltpetre works, and lead mine, and sulphur fountains. Pop. 1560.

GARMOUTH a seaport in Scotland, co. of, and 7 m. E.N.E. Elgin, near the mouth of the Spey. It is regularly laid out but some of the houses are of a very poor description and its harbour which only admits small vessels has since the great flood of 1829, been much deteriorated by the immense quantities of sand and gravel then brought down by the river. Grain timber floated down and salmon, caught in the Spey are exported. Pop. 604.

GARNSEE, or **SARNSEE** a tn. Prussia, prov. W Prussia, gov. of and 9 m. S. Marienwerder between two small lakes, which abound with fish. It contains a church and burgher

school and has manufactures of cloth a brewery distillery factory and a trade in fruit. Pop. 369.

GARONNE (Latin, *Garumna*) a river which rises in the Central Pyrenees, on Mount Plaine Barot, in the valley of Arns, belonging to Spain, flows N W for about 30 m. through that valley and then enters France, still flowing N W till it reaches the S. frontier of France. Near the Pyrenees, where it turns E N E, passing the town of St. Gaudens, and then N E till it reaches the town of Toulouse. Here it is joined by the Canal du Midi or of Languedoc, communicating with the Mediterranean, and assuming a N W direction, traverses depts Garonne-et-Tarn, Lot-et-Garonne, and Gironde, in which last, about 12 m. below Bordeaux, it unites with the Dordogne in forming the G. or rather estuary of Gironde. Its principal affluents all navigable, are on the right, the Arriège, Tarn, Lot, and Dropt; and on the left, the Save, Gimone, Rats or Lavaz, Gers, and Basses Isèbles three, but not navigable, it receives on the right the Puy de Lers, and the Aveyron and on the left the Pique, Neste, Lorge, Touch, and Tiron. The whole course of the Garonne is about 800 m. Of these 43 m. commencing at the point where it enters France, are flutable, and are much used for sending down timber from the Pyrenees, a d 180 m. commencing at the town of Cahors, are as rapids. At St. Remy its channel has a width of about 800 yd. and a depth varying from 10 to 15 fathoms. Its bed bounded on the S by the Pyrenees, N by one of their ramifications, E by the C. enca, and N by the basin of the Dordogne, extends in whole or in part over 10 departments, and has nearly the same length and breadth of about 185 m. During the upper part of its course the river flows through a narrow and very deep duff, and is very much encumbered by rocks and trunks of trees, which greatly impede its navigation. After the junction of the Canal du Midi it flows through a wide and almost continuous plain, but its channel continues shallow, is subject to frequent inundations, and brings down so much debris both directly and by its affluents, that it cannot be considered perfectly clear for navigation higher up than the town of Marseilles, dep. Lot-et-Garonne. About 20 m. below this town near Langon the influence of the tide is felt.

GARONNE (HAUTE) a dep. France bounded N by dep. Tarn-et-Garonne N E Tarn E. Ande and Arriège S. Arriège and Spain and W depts Hautes-Pyrénées and Gers between lat. 42° 42' and 44° 54' N lon 0° 27' and 2° 28' E. It is of a very irregular shape and narrows much towards the S, greatest length N E to S W 9 m. average breadth about 45 m. area, 3629 sq. m. In the S it is covered by some of the loftiest summits of the Pyrenees, and almost throughout is traversed by their ramifications. These however rapidly subside as they recede from the central axis and a considerable part of the N and N P is comparatively level. It wholly belongs to the basin of the Garonne which gives it its name and traverses it circuitously S. to K receiving numerous tributaries, of which the most important are the Arriège, Save, and Lers and furnishing by means of the Canal du Midi, which joins it within the department, a continuous navigation from the Atlantic to the Mediterranean. The proportion of waste land amounts only to about 1/3 of the surface. More than 1/2 of the whole is arable, about 1/3 is under-wood, and 1/4 in vineyards. The soil consists chiefly of vegetable loam along edge and light unproductive loam, largely mixed with sand and gravel. The larger part is of the better kind, and, being cultivated with considerable skill and industry produces heavy crops of grain, maize, flax, and potatoes. Tobacco also, is extensively cultivated and melons grow well in the open air. All the ordinary orchard fruits, including apples, pears, plums, pomegranates, and apricots, are in abundance. The orange tree grows vigorously and is extensively cultivated, though only for its flowers, as it does not properly ripen its fruit. Among the larger trees, an important place is occupied by the chestnut. The proper forests are chiefly confined to the mountainous regions of the S, where they are of great extent and unproductive, furnish so pl supplies of timber and fuel, and shelter numerous varieties of game, large and small. After the arable land, the first place is due to that under the culture of the vine. The annual produce of wine exceeds 14,000,000 gallons, of which about one-third is consumed on the spot, and the rest exported. Several of the wines bear a high name. The

best are the red wines of Villandrie and Fronton. In the more mountainous districts are the red large numbers of cattle, mules, horses, sheep, and swine, generally of tolerable breeds. Poultry particularly geese and ducks, are reared on an extensive scale. Great numbers of them are raised, and their skins are used in making the celebrated duck and geese pie, which forms a considerable article of export. The silvers and laces are well supplied with fish. Minerals are numerous, but not much worked. They include iron, copper lead, antimony, barium, zinc, marble, white and variegated limestones, gypsiferous rock-salt and slate. The manufactures are chiefly woollen and cotton stuffs and after them silks, iron steel, and copperware, mathematical instruments, and chemical products. The trade is chiefly carried on with Spain particularly in the transit of goods from the N of Europe, many of them contraband. The principal exports in addition to the above articles of manufacture, are corn wine silks, wool, cattle, amber, saffron, ginseng, duck pie, orange flowers, &c. For administrative purposes Haute-Garonne is divided into four arrondissements—Toulouse, the capital, Marck, St. Gaudens, and Villefranche and divided into 39 cantons, and 590 communes. Pop. 481,554.

GARON GARDEN KH or GARDON, a vil or station, Tibet, 80 m N N P the Niti Pass lat. 31° 40' N lon. 80° 21' E. It is a place of great trade and activity in sea mer traders coming to it from a great distance, for the exchange of wool as other products of China and Tibet for those of India and Ladakh.

GARPA a river, Punjab. See GHANA.
GARKHANAMANAGH par Irel. h. k. m. 529 ac. Pop. 100—Garranachan, par Irel. Cork 1571 ac. Pop. 1055—Garranachan par Irel. Tipperary, 4718 ac. Pop. 911.

GARREGUEL, a large vil. Benegumbia, Potosi-Dumga 1 bank, Senegal lat. 15° 27' N lon 15° 48' W. It is inhabited chiefly by Mandingoes and fishermen, and has a considerable trade in millet and ox hides.

GARRIGU (LA) a vil and par. Spain Catalonia, prov. of and about 18 m. N E Barcelona, in a fertile plain, watered by the Llobregat. It contains two parish churches, a court house, prison, and school and has several oil and flour mills, and a trade in corn, wine, oil and hemp. Pop. 1160.

GARRIGU EL LA (LA) a vil and const. Spain, Catalonia, prov. of and about 21 m. N N G. rona, consisting of Garriguella proper with remains of Moorish walls and towers and a suburb both larger and much better built than itself. It contains two churches, one small and antiquated, and another large and elegant a court house prison, and primary school and has an oil mill and a considerable trade in the wine and fruit. Pop. 1720.

GARRISTOWN a vil and par Ireland, co. Dublin 5845 ac. The VILLAGE, 16 m. N N W Dublin, is principally inhabited by cotton weavers. Area 5540 ac. Pop. 1731.

GARRIVILLAS A. de ALCOBETRA, a in Spain, Extremadura, prov. of and 19 m. N by W Cáceres, 20 m. E. Alcantara, near 1 bank Tagus. The houses are indifferently built, the streets are regular and paved, and there is a spacious square surrounded with substantial buildings adorned with windows, among which are the municipal offices and prison. It possesses two parish churches, of which that of San Pedro is a large and highly-ornamented structure, with three naves, and a lofty tower three chapels, two hospitals, several schools, a storehouse, and elementary Manufactures.—linen cloth, leather shoes, hats, vinegar wine, oil &c. Trade.—grain, cattle, fruit, and manufactured goods. Two fairs are held for cattle in July and September. Pop. 6573.

GARROWE, a mountainous district, India beyond the Ganges, between lat. 25° and 26° N. In a height of the Brahmaputra which partly encloses it. The country is in general fertile, the surface of the hills, though steep, consisting of rich deep soil which aided by the humidity of the climate, produces a most exuberant vegetation the mountains, where undisturbed by agricultural operations, being covered with fine forests and a great variety of beautiful and curious plants. The inhabitants are a distinct and good-looking race of a deep brown colour, but less dark than their neighbours, the Bengalees, and are still half-nomads. They are stout and well-knocked, but have an unpleasant expression of countenance their temper however is mild, and their disposition gay.

and have a very mollifying effect on the skin. There are several romantic walks in the vicinity and at a short distance is the old castle of Akenstein, on the Rothenberg, where there is a gold mine, producing annually 70 to 90 marks of gold.

GASTAL (Oop-er-Nizw) a par. Holland, prov. N. Brabant including the village of Oud Gastal 14 m. W. by N. Breda, and the hamlet of Nieuw Gastal Dorpe-kwartier (near-Fazelyk) and Stumpersgr. There are two schools, and the inhabitants mostly all R. Catholics, raise wheat, flax and rye. Excellent hay is grown on the banks of the Dintel which flows in the N. limit of the parish. Pop. 1803.

GASTEREN a valley 4 1/2 m. S. on the B. frontier of Can. Bern and W. of the Blumli Alp. It is almost unpopulated in average grandeur having for its background the crags of Teufelsberg glacier between the Schilthorn and Bachhorn, whose summits exceed 9000 ft. in height. A footpath leads out of this valley over the Hochwayden Alps and the Lotschen glacier to Kappel, in the valley of the Lotschen, can. Valais.

GASTHORPE, par. Eng. Norfolk 864 ac. Pop. 103. **GASTORP** a town in Spain Andalusia, prov. of Seville about 75 m. N.E. Cadix, on a height about 1/2 m. S. of Seville. It contains a parish church and primary school and has chalybeate and sulphurous springs, several flour mills, and a trade in corn and cattle. P. 1500.

GASTIOLINI a town in Greece, N.W. part of Moraa, 1 bank, 170 m. S. from its emporium, built of sun-dried brick and rendered unwholesome in summer by the stagnant ponds in its vicinity.

GATA a ridge of mountains Spain between Leon and Estremadura, commencing at the termination of the Pons de France, and stretching S.W. into Portugal, where it joins the Serra de Estrella. It sends off two branches, nearly perpendicular to each other, the one of which proceeds E., forming the watershed between the Aguada and Oca, and the other S., between the Alagva and Ezgas. The principal chain forms part of the watershed between the Rio Douro and Tagus. It is almost entirely composed of granite.

CATA—1 a town in Spain Estremadura, prov. of Seville, 50 m. N. by W. Cáceres, a bank of river of same name. It is inferiorly built, has narrow and crooked streets, three small squares, a fine parish church with a lofty tower, a chapel, a large townhouse built in 1442, with the prison in its lower story, a hospital and several schools. Letters and woollen fabrics, hats, which were wine, oil and soap are manufactured and some trade is done in them and in grain and cattle. Pop. 112. —2 a cape, bay of Algeria—3 a vil. Valencia, 55 m. N.E. Alicante, a bank of Jalon. Pop. 1645.

GATCHINA a town in Russia in Europe gov. of 35 m. S.W. St. Petersburg, on a small lake. It is regularly built and contains one of the finest of the imperial palaces of Russia, surrounded with extensive and well laid out gardens. There are here a Greek and Lutheran church, a R. Catholic chapel, and two hospitals, a school for the blind, and another for horticulture. In the town are a pottery and manufacture of woollen cloths and hats. Pop. (1847) 4501.

GATUNGE par. Eng. Hants 1392 ac. Pop. 260.

GATEHOLSE, a bor. of registry river port, and market in Scotland, on the river of 7 m. N.W. Kirkcubright on the Firth, here crossed by a bridge near its outlet in Firth Bay. Beautifully situated in a valley enclosed in wood covered hills, with an opening to the S. It consists principally of three streets running nearly at right angles with the river and parallel to each other. There are Established, Free, and L. Presbyterian churches, and an independent meeting-house, a library and several friendly societies, several cotton-mills, breweries, a brewery and a soapworks. The Firth is navigable to Gatehouse by vessels of 160 tons. The chief export is grain, potatoes, lime and coal. Pop. 1325.

GATLEY par. Eng. Norfolk; 1490 ac. Pop. 267.

GATSHFAD a municipal and par. bor. and par. England in Durham area of par. 2550 ac. The town is situated 13 m. N. Durham, a bank, Tyne, opposite New-castle, which it may be considered a suburb, and by which it is connected by a splendid railway bridge, and has a handsome iron bridge of stone arching. It consists of one wide broad street with several narrow streets and lanes, all arising from it on either side, has a strong and imposing appearance and is densely inhabited by the working

class. Some of the principal or more frequented streets are paved and flagged, but many of the others are not, and are consequently in a very bad state, often nearly impassable. The houses are built partly of stone, but chiefly of brick, with not a few of common rubble. The town is lighted (wholly) with gas, and is now well supplied with water. The parish church is an ancient cruciform structure, with a finely illuminated window and there are houses, four chapels of ease, of which St. John's opened in 1825, St. Catherine's, in 1843, are handsome buildings; and places of worship for Presbyterians and Methodists. There are several charitable and benevolent institutions the principal of which are St. James' hospital, some charity schools, and almshouses, a dispensary and mechanics institute. The manufactures of Gatehouse are so intimately connected with Newcastle, as to be almost inseparable from it. They include the manufacture of anchors, chain cables, and sails, shipbuilding, hemp and wire rope-making, iron-founding, paper glass, vinegar, hats, brass and copper works, &c. There are also several glass and chemical works, and a large soap-works. In the neighbourhood are extensive collieries, and also quarries of the well-known Newcastle greenstone. The borough is governed by a mayor six aldermen, and 18 common council, and returns a member to the House of Commons. Registered electors (1851) 672. The boundaries of the parliamentary and municipal borough are coincident. Daniel de Foë is said to have written the *Adventures of Robinson Crusoe* while residing in this town. Gatehouse is a station on the York Newcastle, and Berwick Railway. Pop. (1841) 15,505 (1851) upwards of 24,605.

GATESIDE, a vil. Scotland, co. Renfrew 4 m. S. Paisley. It is nearly built and its inhabitants are principally employed in the cotton manufacture. Pop. 678.

GATHIA, GATHA or GATHARON a vil. Hungary Thutur Danubio, on Wessenberg in the Letitia, 13 m. S.W. Jussaburg. It contains a R. Catholic parish church, a synagogue, and castle, with fine parks belonging to Prince Esterhazy. Pop. 1731.

GATINAIS-FRANCAIS—1 a dist. France, in the former prov. Ile-de-France, dep. Melun. It is now included in dep. Seine-et-Marne and Loiret.—2 (Orléans) Another old French prov. cap. Montargis, now included in dep. Loiret, Aube and Yonne.

GATINEAU a dist. France, which belonged to the former prov. Poitou, and is now included in dep. Deux-Sèvres. Its capital was Parly-en.

GATINEAU a river Lower Canada rises in some large lakes, in lat. 48° 0' N. lon. 75° 30' W. from which it flows S. and falls into the Ottawa near Hull. Steamboats have ascended this river for 4 m. and it is navigable for the heaviest bottoms and other small vessels, for 6 m. from the Ottawa, and for canoes upwards, it is said, of 300 m. It is a large wild and rapid stream abounding in the most numerous scenery. It is well stocked with fish, chiefly bass, pike, pickerel, catfish, sturgeon, &c. The Gatineau is thought the largest of the Ottawa's tributaries is little known.

GATO AGATHO or AGATHON a gn. Upper Guinea on a creek of the Bonu river 16 m. S.W. S. Benin, of which it is the port. It is a place of considerable size but extremely unhealthy. Beloni the celebrated traveller died here of dysentery December 3, 1823.

GATRONK, a town, N. Africa, Fezzan, 77 in S.E.E. Marouk, on the S. extremity of a sandy plain. In the centre, is a castle occupied by Marabout and round about it are numerous large date trees. The inhabitants speak a dialect which has a closer affinity to the language of Bornou than to the Arabic.

GATTIOO a vil. and com. Sardinian States, Piedmont, div. of, and 20 m. N.W. Novara, on the crest of a hill. It has an ancient church, recently enlarged and repaired, in the Doric style, and a trade in wine and fire-wood. Pop. 1876.

GATTINARA a town Sardinian States, Piedmont, div. of, and 17 m. N.W. Novara, a bank, Sesia. It is surrounded by walls with four gates, is built with great regularity in the form of a rectangle two principal streets, intersecting each other at right angles, and four streets, near the centre of the town, a public square. It contains a parish church, partly ancient, and partly modern, on a magnificent scale, but still undisturbed four other churches, several public schools, an

almshouse, and the remains of some feudal castles and has a trade in horses outside, and agricultural produce a weekly market, and three annual fairs. Pop. 4701.

GATTON a bar and par England co. Surrey The town 17 m S by W London, was disfranchised by the Reform Act; having previously enjoyed, for nearly 400 years, the privilege of sending two members to the House of Commons. Area of par 1260 ac. 10 p 173.

GATUN a tn. and river New Granada, Panama isthmus The river is situated near the junction of the Gatun with the Chagres, about 8 m. from the sea, and is a station on the railway from Chagres to Panama.—The river runs in the mountains E. from Porto Bello, and flowing W falls into the Chagres, at the point above-mentioned. Its depth does not exceed 7 to 10 ft., even at the mouth shallowing down to 4 ft. and even to 1 ft. a few miles up its navigation is further impeded by number of trees, which undermined by its waters, fall across the stream.

GAU AIGRENIER a tn. Hesse-Darmstadt, prov. Rheinhessen, 1 bank Rhine, about 5 m. S W Mainz. It contains a castle, townhouse, R Catholic parish church, a synagogue and two schools and has several mills a trade in wine, and two annual fairs. Pop. 1862.

GAU-ODENHEIM or **ODENHEIM** a tn. Hesse-Darmstadt, prov. Rheinhessen, 1 bank Rhine, 12 m N N W Worms, surrounded by strong walls with a large church, an ancient tower a Protestant and a R Catholic parsonage, three schools, and an annual fair. Pop. 1614.

GAUCHOS the coffee-growing inhabitants of the Pampas of La Plata. See LA PLATA (C).

GAUCIN a tn. to Spain, Andalusia, prov. of and 47 m. W S W Malaga, on the slope of the Sierra del Hacho. It is well built has generally clean wide, and paved thorough streets, three squares, a parish church chapel, hand. some town and session house prison storeroom, three schools, and an ancient and strong Arab castle, occupying the summit of an adjacent rock. In an almost inaccessible position and guarded by a detachment of infantry and artillery. Manufactures—linen, woollen and cotton fabrics, hair leather, soap, wine, oil and brandy. Trade—wine, fruit, brandy, cattle, cloth, hair, silk and lace. Pop. 9996.

GAUDENS (St.) a France, dep. Haute Garonne, near 1 bank Garonne, 50 m S W Toulouse. It is finely seated on a hill commanding a view of the E Pyrenees, of which it may be called the key. It is chiefly formed of one spacious street, of handsome houses with an antique church and some other interesting edifices and has a communal college, customhouse, and a tribunal of commerce and manufactures of china and doll-work wire, coarse cloths, weaving and spinning saw flour oil and filling mills, tile-works, tanneries, glass-houses, &c. and a trade in local produce. Pop. 3097.

GALDENZDOEF a vil Lower Austria 1 bank, Wien, here crossed by a river bridge and so close to Vienna as to be properly its suburb. It consists generally of new and well built houses. Pop. 2000.

GAUKARNA a mission to S Hindoostan, prov. Canara, 21 m. N by W Mangalore lat. 14 33' lon. 75° 36' E. It is a small scattered group of coconut palms, and comprises about 600 houses, of which one half are occupied by Brahmins.

GAULI a tn. and fort Hindoostan, prov. Candahar, 150 m S E Herat lat. 30 44' N lon. 76 33' E. The town is surrounded by a mud wall and towers. The fort stands on a high rocky mountain, the top of which is surrounded by a stone and brick wall about 1 m in circumference, and 30 ft. high. It is abundantly supplied with water preserved in tanks, and is reckoned a healthy station.

GAULAKILL par. Ireld. Kilkenny 1808 ac. Pop. 780.

GAUENREDBO a market in Lower Austria, on the Werdnabach, 25 m. N E Kornsburg. It consists of three distinct parts, called Markt, Wieden, and Algen Gauerndorf. has a handsome parish church and parsonage, manufactures of linen, and some transit and general trade. Pop. 1337.

GAURE, an town country of France, dep. Finistere in the former prov. of Brittany.

GAURETZ, a river B. Africa, Cape Colony formed by the union of the Gamka and Dwyka in lat. 33° 17' S. lon. 21° 48' E. It flows westerly S. and falls into the Indian Ocean in lat. 34° 22' S. lon. 31° 50' E. after a course of about 120 m., during which it separates the district of George

from that of Swellendam. Its principal affluents are the Olifant, and the Twa and Buffalo. In the rainy season it is rapid, and liable to sudden inundations.

GAUTRY par. Eng. Lincoln 1444 ac. Pop. 89.
GAVARDO a vil. Austrian Italy prov. of, and 12 m. E N E Brescia, 1 bank, Chiara, here crossed by a handsome stone bridge. It has a church a handsome market square, manufactures of silk, and agricultural implements, and an annual fair. Pop. 1901.

GAVE a name in the ancient language of Beira synonymous with river, and used as a prefix to several of the rivers of France, as the Gave de Pau Gave d'Oloron Gave de Maillon, &c. For these see PAU (C) and GAVE.

GAVELLO a vil. and par. Austrian Italy prov. Venice, prov. Polesina, 8 m. E S E Rovigo, not far from the canal of Bussaco. It occupies the site of an ancient town of the same name, which was destroyed partially by the Hungarians, and afterwards totally by the inundations of the Adige and the Po, but whose splendour is still attested by its ruins. It contains a parish church and a castle. Pop. 3040.

GAVI (Latin *Gavium*) a tn. in Scotland, Shetland, prov. of and 19 m. N N W Gairloch at the confluence of the Nairn and the Linn. It is surrounded by walls, and is fortified by a fort situated on a height, is the seat of several civil and military authorities has two squares four palaces, a parish and six small other churches, infirmary almshouse *mont-de-piété* some trade in wine, a weekly market, and two annual fairs. Pop. 5702.

GAVIA LA GRANDE a tn. Spain Arizona prov. of and 8 m. S W Granada. It has a parish church a primary school manufactures of linen several mills, stone and gypsum quarries and a trade in corn flax, and the op. P. 2621.

GAVIAO a tn. and par. Portugal prov. Beira-Roux, com. Castello Branco 31 m. N W Crato, on a height near 1 bank, Tagus. It has an annual fair of three days. Pop. 1234.

GAVILAN (SIERRA DE) a mountain-range, Cuba, near the centre of the island, forming a part of the great chain by which the island is intersected in its whole length.

GAVIRATE a tn. in Austrian Italy prov. of, and 19 m. W by N Como N of one of Lake Varese. It has a hand. some church and commodious municipal offices. Pop. 1478.

GAVOI a vil. in Sardinia, div. of and 64 m. N N E Cagliari, near 1 bank Gussana. It is beautifully situated but miserably built, consisting of a number of huts scarcely fit for the habitation of human beings. It contains an ant. parish and two other churches, and a primary school and has manufactures of coarse woollens, some trade in cattle wool and dairy produce, and an annual fair. Pop. 1476.

GAVERRANO a tn. and com. Tuscany in the Marciana Grossenano, 36 m. S W Livorno. It was once surrounded by walls and defended by a strong castle, of which only vestiges now remain. It is the seat of a court of justice, and contains a parish church.—The diemior in consequence of the water which stagnates upon it, is allowed to remain almost in a state of nature. 1 up to 40 com. 2567.

GAVERAY (anc. *Guadalupe*) a tn. France, dep. Manche, 12 m. S S W Coutances, on the Risle. It has manufactures of hair cloth and cloths, blanket, and manufactures in iron. In the neighbourhood are slate quarries. 1 com. 1057.

GAWELGHUR, or **GAWELGA**, a fortress Hindoostan Deccan prov. Berar lat. 21° 25' N lon. 77° 24' E. 16 m. N W Elkhampoor on a high and rocky hill amidst a range of mountains. Though deemed impregnable, it was taken by storm, in 1805 by the Duke of Wellington, then General Wellesley and Colonel Stevenson after a siege of two days.

GAWLEK RANGE, a range of mountains, S Australia, about 33 m. N E Adelaide, consisting of porphyritic granite considerable for their size and and character being without timber or vegetation of any kind, and without a single stream or water-course. The country around is equally barren and desolate. Their highest elevation is about 3000 ft.

GAWSWORTH, par. Eng. Chester 5442 ac. Pop. 788.

GAYA a city Hindoostan, pres. Bengal prov. Behar cap. dist. of same name, 360 m. N W Calcutta lat. 24 49' N lon. 85° E. It consists of an old and a new town the latter called Seebunge, in which the European station resides, is situated on a plain on the Fidge or Fidge a tributary of the Ganges. The streets of this quarter are wide straight, and lined with trees. They are kept in good order and have an excellent carriage-way in the middle. The old town occupied

chiefly by Basal mud, stands on a rocky craggy slope by and presents a singular appearance, from the fantastic and irregular outlines of its buildings, most of which are of brick and stone and in many of them two or three stories in height. The streets are narrow dirty and crooked. The channel of the river which, when swollen by the rains, rushes past the city with tremendous noise and velocity is here about 500 yards broad. Gaya is considered a place of great sanctity by the natives; almost every remarkable eminence in the neighbourhood is the theme of a mythological legend while numerous objects of Hindoo worship are dispersed around. The place is on this account frequented by immense numbers of pilgrims ascending with their attendants, on ordinary years, to 100,000 per annum and, on particular occasions, to double that number. The old and new towns contain together between 6000 and 7000 houses.

GAYA (Moravian, Popper Latin, Kigovwa) sta. Austria, Moravia, circle of, and 19 m. S.W. of Graz, is a deep and fertile valley on the Steupawka. It is walled by a parish church, a townhouse, a court-house, a parson's house, and a hospital and a trade in fruit, cattle, and horses two weekly markets, and five annual fairs. Pop. 1,700.

GAYA ISLANDS two islands Indian Archipelago, one on the N. E. coast of Borneo, the other on the N. W. coast, it is 200 m. long 115° E. lon. 118° 52' E. (N.) the second in lat. 2° N. lon. 118° E. (N.) The N. E. island is situated at the entrance to Darvel Bay.

GAYBILL, a town, Valencia prov. of, and 2 m. W. by N. Castellon-de-la-Plana, partly on a slope of M. and Pedraza, and partly in the plain. It is well built, consisting of houses generally of three stories, and of streets some of which are straight and level, and others uneven. It contains a parish church, townhouse, prison, and primary school and has oil, sugar and silk mills and a distillery. Pop. 1,224.

GEDUMA, a state, W. Africa on the N. frontier of Senegambia, having N. the Sahara, E. Jafnoo and Kanoa, S. the Senegal which separates it from Galem or Kanyaga and London and W. Fouta-toro.

GEEL, a town, Belgium. See Ghent.

GEELONG, a seaport in S.E. Australia, colony Victoria, near the head of Corio Bay Geelong harbour the W. arm of the bay of Port-Phillip, 43 m. S. W. Melbourne lat. 38° 8' S. lon. 144° 25' E. It is situated on a fine upland and extends for upwards of 1 m. from the shores of Corio Bay to the E. bank of the river Barwon and contains (1856) 6949 houses, chiefly brick and stone, and has wide, airy paved and drained streets. It is the second town in the colony; sends two members to the legislative council; was incorporated in 1849 has a handsome stone townhall of Grecian architecture and several churches of no mean pretensions belonging to Presbyterian, Episcopal, Unit. E. Catholics Wesleyan, and Independent. As a shipping port Geelong surpasses Melbourne and has a trade in wool, tallow, gold dust &c. Its foundation is coeval with the arrival of the first settlers in 1801 Phillip in 1835 but it was not a place of much importance until the discovery of gold in 1851 at Ballarat near Mount Buninyong 48 m. N. W. Geelong and 65 m. W. by N. Melbourne lat. 37° 40' S. lon. 143° 55' E. The deposits met with here have exceeded in value any that have yet been found in any other part of the world. It yields one-third of all the gold produced in Victoria and in 1850 its exports exceeded 25 500 000 sterling. Besides the produce of the western gold fields adding to the importance of Geelong it is also the output of the wool and tallow produce of these districts which are not only the richest in Victoria, but in all Australia, for their extent. A line of railway to (1856) nearly completed from Geelong to Melbourne. The trade of Geelong is facilitated by a regular customs establishment and branches of several Australian banks. Pop. (1841) 454 (1846) 1911 (1851) 6191 (1854) 20 116 (1856) 24 000.

(Relating Corporation Statistics and Private Correspondence)

GEELVINK, a bay N.W. coast, Papua, between Great Bay and Dampier Strait lat. 1° 54' S. lon. 137° 5' E. (N.) It has rocks on each side the entrance with a small inlet on the W. side, surrounded by a reef. There are 30 and 25 fathoms water in the bay. It stretches a considerable way inland, where it becomes very narrow and terminates at a fresh-water river the land on the E. side of this bay is low conterminous to the sea. Wood and water may be obtained here.

GEER or **JAAH**, a small river Belgium which rises in the N.W. of prov. Liège, flows E.N.E. near the S. frontier of Limburg enters that province, passes Tongres, turns E. and then N.N.E. and entering Dutch Limburg joins I. bank, Meuse, at Maestricht after a course of about 40 m.

GEERTUIDENBERG (Lat. *Moss sancti Gertrudis*) locally contracted to den Berg, a town in Holland, prov. N. brabant, 6 m. N. by E. Beers, in a flat low position at the influx of the Donge into the Meuse or Hollands Diep, and possessing a large haven. Its foundations commenced in 1595, were restored in 1595. It has a townhouse, barracks, arsenal, a Reformed and a Catholic church, an hospital, several benevolent institutions and several flourishing schools. Brewing and the fishing of salmon and sturgeon, were formerly the chief employments, but the fishing except of ordinary river fish, of which there are plenty has been given up and only three breweries out of 17 now remain. Wool-dressing is at present the chief occupation. Pop. 1652.

GEERVLT, a town, Holland, prov. S. Holland 6 m. S. E. of Breda, where the Eder meets with the old Meuse, formerly of some importance it is now a scattered place, with a good townhouse, a church, and a school. Pop. 569.

Vine. 1

GEFELL, a town, Prussia, prov. Saxony gov. and 55 m. S.E. Erfurt. It contains a Protestant parish church, and has manufactures of iron, and cloths and washes a trade in cattle, porcelain earth and potter's clay and seven annual fairs. Iron is worked in the vicinity. Pop. 1574.

GEFLE or **GEFLER**, a lake or co. Sweden bounded N. by Hernösand, N.W. Östersund, W. and S.W. Falun S. Westera, S.E. Uppsala, and E. of the Baltic, between lat. 60° 15' and 62° 20' N. area about 8000 sq. m. The coast is very much broken and indented into bays several of which form good natural harbours. The interior is partly covered by mountains generally clothed with pine forests, but its characteristic features is the number of lakes, which occupy a considerable portion of its surface, and with the streams which connect them form a kind of continuous network. The climate is severe and owing both to this and the nature of the surface, cultivation is very limited, and fails to meet the consumption of a very scanty population. The rearing of cattle is the chief employment and considerable returns are obtained from dairy produce. The forests are the haunts of wolves, bears, and other wild animals. Sturgeon and salmon abound in the rivers. The principal mineral is iron which is worked to some extent. The chief exports are iron, timber, cattle, butter and cheese, tar and pitch. It is divided into three bailiwicks, and 51 parishes. Gefle is the capital. Pop. 98 144.

GEFLE, a seaport in Sweden, cap. above lin at the mouth of a river of the same name, on the Gulf of Bothnia lat. 60° 40' 18" N. lon. 17° 0' E. (N.) It stands on two islands, and on the banks on either side of the river communication being maintained between the several quarters by wooden bridges. The houses are built partly of wood and partly of stone, streets spacious and well paved. It has a church, an old castle, elegant town-hall, prison, gymnasium, elementary town, and navigation schools. Manufactures of tobacco linen, sail-cloth cards and leather two shipbuilding yards and an excellent harbour. In point of commerce it is the third and in shipping the second place in the kingdom. Its exports are considerable, and consist of deer's antlers, hax bar iron and chiefly salmon and fish, of which there is an active fishery. Pop. 8137.

GEFRES, a market town, Bavaria, circle, Upper Franconia 13 m. N.E. Bamberg near the white Main here crossed by three bridges. It contains two churches and has manufactures of linen and cotton cloth and ginger-bread, a distillery, sawery and serpentine quarry and a trade chiefly in swine. Pop. 1212.

GEHU or **JHU**, a town in Chin sea empire, Mongolia 118 m. N.E. of Ulan, containing a magnificent Imperial hunting palace.

GEHRE or **ART-GEHRE**, a village, principality Schwarzbürg Baden-Württemberg cap. hall of same name in a beautiful spot at the entrance of the Belcher and Wulfrum 24 m. S.E. Gotha. It is the seat of a court of justice has two parish churches, a castle, iron works, vitrol works, a trade in cattle, and several mills. — The salt, area 68 geo. sq. m. is black and mountainous but well wooded. Pop. 1370.

GLIEBESBILG Borussia, or Kreisstadt in Bohemia circle, and 29 m. S. Kasperitz or head of the Skall Adler It stands partly on a height and partly on a plain has a parish church a castle, with a garden and an hospital, a weekly market and an annual fair. Pop. 1260.

GEILENKIRCHEN, a town in Rhinisch Prussia, gov. of and 13 m. N. Aix-la-Chapelle, cap. circle, of same name, on both sides of the Worm here crossed by a bridge. It is the seat of a law court, and of several public offices, has a R. Catholic parish church, manufactures of woollen and linen cloth, casimere tobacco cloths leather and soap, several breweries a trade in cattle, and six annual fairs. Pop. 1207. — The cloths, area 58 geo. sq. m. consists for the most part of a low plain is watered by the Worm, and has a light but not unfertile soil. Pop. 25 589.

GEILNAU, a celebrated watering-place, Nassau, z. bank, Lahn, 9 m. E. Colmar. The water which is similar to that of Seltzer is annually exported to the extent of 300 000 bottles.

GEISA, a town, Saxo-Wolmar circle, and 21 m. S.W. Eisenach cap. hall of same name, on the Unstrut. It is the seat of a court of justice, and several public offices, contains a church, hospital, and infirmary and has a paper and several other mills a trade in horses, and cattle, and 13 annual fairs. Pop. 1787 but (area, 53 geo. sq. m.) 7800.

NEISELHÖRING a market in Lower Bavaria, r bank, little labor 19 m. S.E. Ratisbona, with a court of justice, two churches, a chapel townhouse, and infirmary and flour mills. Pop. 1172.

It was formerly a place of refuge for criminals till their crimes were compounded for.—2. A town of 18 m. N. Tunis, r. bank M. J. It was supposed to be the ancient Carthage Cordonia.

NEISELHÖRING a vil. Hungary co. Borsod with a Protestant and Catholic church and a synagogue. Gálaj Katona a Hagan writer of some eminence was born here. 1 op. 1077.

NEISELHÖRING a vil. Sweden 13n. Pate, in Lälach Lapp mark, about 100 m. N.W. Piteå. It contains a parish church and has extensive sawworks the ore of which, yielding nearly 67 per cent of pure iron is obtained in solid masses from two mountain ridges in the neighbourhood.

NEISELHÖRING a town, France Gers prov. of, and 16 m. N.E. Auch. It is a town of some name, r. bank, Garonne. It rises in terraces on a hill side, is surrounded by old walls, with six gates contains two churches, the one a large gothic structure of the 15th century with a twisted spire, capitals fine carvings and painted glass and the other exhibiting an early specimen of the round arched style. a townhouse, hospital synagogue and an old castle on an island of the Garonne with interesting remains of the palace in which the Emperor Frederick Barbarossa used to reside and has manufactures of paper tobacco, ordinary and white leather shoemakers liquors, spirits, brandy and vinegar several breweries and mill mills and four annual fairs. Gualdres is a very ancient place, and was indebted to Barbarossa for extensive privileges which soon raised it to considerable importance. It suffered much in the 90 years war and also in 1813. Pop. in 1834 crede 53,922.

NEISELHÖRING a town, Spain, Andalusia, prov. of and 4 m. W.R.W. Sevilla, on a hill slope above r. bank Guadalquivir. The site is beautiful but the town itself is a wretched place, ill built, and so badly paved, that the streets are almost impassable. It has a parish church a palace belonging to the Duke of Berwick and Albuja, a primary school and a prison several oil mills, and a trade in wine and fruit. Pop. 609.

NEISELHÖRING, or **NEISELHÖRING** a town, S.W. Australia, between Montman's Abolition and the mainland. It is about 20 m. in width, and about 60 m. in length. The soundings found by Captain Stokes in crossing this channel were 22 and 36 fathoms, fine white sand, current running N.N.W. a mile an hour.

NEISELHÖRING, a town, in Rhineland Prussia, gov. of and 18 m. P. Düsseldorf, r. bank, Wupper. It properly forms the central part of Barmen, and, along with it and Elberfeld, forms a nearly continuous succession of villages for about 6 m. It contains a Protestant and a Catholic parish church a deaf and dumb institution and a superior school. Pop. 2430.

NEISELHÖRING, a vil. and com. Belgium, prov. of, and 10 m. N.W. Namur with a manufacture of cutlery several tanneries, breweries, distilleries, and oil mills. In 1794, the French defeated the Austrians in its environs and in 1815, it formed part of the Prussian and French positions previous to the battle of Waterloo. Pop. 3424.

GERBERT a vil. Holland, prov. W. Drabant, 18 m. S. E. Hertogenbosch with a R. Catholic church, a common and a Latin school on a slight castle, formerly belonging to the order of the German knights; and two well-frequented annual fairs. Pop. 2326.

GEMİBİKHANA or **GEMİBİKHANA** a m. Asiatic Turkey, pass. Erzurum, 1 bank, and near the source of the Kharabek, 40 m. S. E. Trebizond, well built, has several thousand inhabitants; and is a copper mines in the vicinity.

GEMMI a m. Switzerland, leading across the Bernese Alps, which form the boundary between the cant. Bern and Valais. Its summit is 7180 ft. above the sea, and has the driest aspect imaginable, consisting of naked limestone rocks, on which the hardest ice can stand almost unable to vegetate. The view embracing Mount Rosa, the chain of alps beyond the Rhone, the Weisshorn or Mont Cervin and the Aro de Zan, is one of the most striking in Switzerland.

GEMONA a m. Austrian Italy, gov. Venice, prov. Friuli, on a mountain slope, 14 m. N. W. Udine, near a bank, Tagliamento. It stands in a deep basin formed by mountains, is surrounded by walls, is well built, contains a parish and two auxiliary churches, is the seat of a court of justice, and several public offices, and has an important transit trade, and two much-frequented annual fairs. Pop. 4500.

GEMUND a m. Rhénish Prussia, gov. of and 19 m. S. E. Aix-la-Chapelle in a valley surrounded by lofty hills, at the confluence of the Olf and Urft. It is the seat of a law court, and has manufactures of paper, leather, etc. and is a trade in cattle, and two annual fairs. In the vicinity are iron and lead mines. Pop. 900.

GEMÜNDEN several places, Germany, particularly — 1, A m. Bavaria, circle Lower Franconia, at the confluence of the Saale with the Main, 22 m. N. W. Würzburg. It contains a parish church and two houses, and has manufactures of glass and leather, several mills, a slattery, some shipping, and trade particularly in wine and fruit, and six annual fairs. In the vicinity are the ruins of the old castle of Scherenberg. Pop. 1543. — 2, A m. Hesse-Cassel, bank. Werra, 10 m. S. E. Frankenburg. It has a church with a handsome tower, a townhouse, and school, a trade in iron, in cattle and six annual fairs. Pop. 1480. — 3, A vil. Rhénish Prussia, gov. of and 30 m. S. W. Coblenz, on the Rhine, with a R. Catholic church, manufactures of linen, a trade in cattle, and two annual fairs. Pop. 918.

GENAGUACIL a m. Spain, Andalusia, prov. of and about 55 m. W. S. W. Málaga, on a height above the Almoroch, a tributary of the Genal. It has a beautiful and picturesque site, but is not very well built, the houses being generally small, and the streets uneven, ill paved, and dirty. It contains a handsome modern parish church with three naves, a townhouse, primary school, and very indifferent prison; and has mineral springs, brick and tile works, numerous distilleries, several oil and four mills and a trade in wine. Pop. 1138.

GENAPPE a vil. and com. Belgium, prov. Drabant, 6 m. E. Nivelles on the Dyle, with manufactures of iron, wares, paper, &c. Various military operations took place here in 1815. Pop. 1676.

GENARGENTIV [anc. *Jenna Argenti*] a mountain vil. Savoy, near the source of the Flumadose, div. Saasari prov. Italy, and about 50 m. E. Crastina. The summit, called Punta Blachina, has a height of 5137 ft. and is the collecting point of the island. Snow sometimes remains upon it till the middle of July.

GENAZENO a m. in Papal States in the Campagna di Roma, 24 m. E. S. E. Rome, beautifully situated on the slopes of a steep hill above the Ristiana torrent, and surrounded by a castle, cut off from the hill and protected by a drawbridge. The town has a dilapidated but picturesque appearance. It contains the rich chapel of Madonna di Buon Consiglio, one of the most famous shrines in that part of Italy. Pop. 3396.

GENDRINGEN a large beautiful vil. Holland, prov. Guelderland, 18 m. S. S. E. Zutphen, with a Reformed R. Catholic church and a school. Pop. (chiefly agricultural) 925.

GENLNUIDEV a m. Holland, prov. Overijssel, close upon the Zuyder Zee, 8 m. N. W. Zwolle. It has a convenient townhouse, a Reformed church, a town and an infant school, and one under the care of the Society for general good and a workhouse or retreat for old people. Close by the town is the common, on which every citizen who marries a citizen's

daughter has the right to feed a certain number of cattle. The inhabitants trade in hay and building materials. Pop. 1880.

GENNEP a m. Holland, prov. Limburg, on the French frontier near the junction of the Aars with the Maas, 12 m. S. E. Nijmegen. It has a conventual townhouse, a small but very beautiful Reformed church, a school, and a poorhouse, and the remains of an old castle. Pop. (agricultural) 950.

GENEVA a m. Switzerland, bounded W. and N. W. by France, N. by can. Vaud, and the Lake of Geneva, E. and S. by the Canton of Valais. In addition to the territory thus bounded the communes of Cologny, Le Grand-Saconnex, and Petit-Saconnex are enclosed by Vaud, belonging to it is a canton which is the smallest in the Swiss Confederation, area 198 sq. m. The surface is nowhere mountainous but is broken by several hills, none of which are more than 400 ft. above the Lake. The whole canton belongs to the basin of the Rhone, and the only streams of importance are that river and the Arve which flows into it below the town of Geneva. In the vicinity of these rivers the supply of water is ample, but in the upper districts it is deficient, and in summer considerable scarcity is felt. The climate is generally healthy and mild; it is by no means frequent, the average annual quantity being only half of that which falls on the Great St. Bernard. Winds are very common, both from the lake and the land. The most frequent and most violent are the N. here called the Bise and the Vent. Harvest is about a fortnight earlier than in can. Vaud. In geological structure, the whole can. belongs to what is called the Molasse formation, consisting chiefly of a soft green sandstone. A great many boulders of a different formation are scattered over the surface, and garnets, jasper, and other fine pebbles, are often found. In the hills of Cologny and Desaugery, some coal is worked. The soil of the canton is naturally less fertile than that of most of the adjoining districts, but has been so much improved by alkali and persevering culture that abundant crops of all kinds suitable to the climate are raised, and the whole territory wears the appearance of a large and beautiful garden. Even the natural flora is remarkably rich, and makes the surrounding country a favorite resort of the botanist. With in a circle of 25 m. round the town of Geneva, 1470 species of plants have been found. Part of the surface is under the culture of the vine, but the wine obtained is not remarkable either for quantity or quality. Wood is rather deficient. Manufactures are extensively carried on, and with a success which places the great body of the inhabitants in comfortable circumstances. They consist chiefly of clocks and watches, gold silver and other metal wares, woollen cloths and silk goods of various descriptions, hats, leather and articles in leather, and there are numerous cotton mills for threads and dye works. The territory of Geneva having by the arrangements of the congress of Vienna, obtained an accession of 15 communes, detached from France and Savoy, was admitted a member of the Swiss confederation in 1814, and ranks as the 24th canton. A constitution somewhat antirepublican in its nature was framed and confirmed in force till 1830 when a considerable modification of it took place. In 1841 in consequence of a popular tumult, the original constitution was abandoned for one in which the democratic principle is completely predominant. The legislative power is exercised by a great council composed of deputies of 25 years of age, elected by all male citizens of 21 years of age not under legal incapacity. The number of deputies is at the rate of one for every 883 inhabitants, and amounts at present to 186. They are elected for four years, but one-half retire every second year. Those who retire may be immediately re-elected. Every new law or alteration of law must be sanctioned by the great council. The executive is confided to a council of state, consisting of 13 members, belonging to the great council and appointed by it. The president and vice-president also named by the great council have the title of *syndics*, and receive each a salary of 2120. Each member of the council of state has a salary of about 496. All religious denominations are declared to have perfect freedom, but two of them are paid by the State—the R. Catholics amounting to rather more than a third of the population, and the Protestant national church, many of whose members are understood to have departed widely from the system of theology which Calvin taught them, and to have adopted a modified species of Socinianism. Pop. (1860) 82,476.

GENEVA (German, *Genf* French, *Genève* Italian
Concern Spanish, *Genèva*) a to. Switzerland, cap. above on
on the declivity of two hills, in the centre of a basin, the
sides of which are formed partly by the lower slopes of the Jura.

hotels the lower town, the seat of trade and residence of the poorer classes, is very indifferently built, consisting chiefly of houses remarkable only for their disproportioned height, and lining narrow irregular dark and ill cleaned streets.

The chief exception is along the banks of the Rheme, where a quay about 400 yards long is bordered by a row of handsome modern houses. The public buildings are neither more nor less individually possessed of much interest. The more important is the cathedral or church of St. Pierre, a Gothic structure of the 16th, 11th and 12th centuries, displaying the highest style in the town and by the river. It is a fine and most complete object within itself, somewhat defaced externally by a few incongruous, though magnificent, Greek peristyle, but in its interior within, from the purity of its style and the number of its monuments, the town house, in the Florentine style, the Musée Rath, a most building named after its founder and containing a collection of pictures and other works of art, few of them of much interest, and a most interesting and important ancient armory, the public library founded by Bonaparte the prisoner of Chillon containing 50 000 volumes, 500 MSS., and a collection of autograph letters by Calver and other distinguished reformers, the museum of natural history enriched with the geological collections of Deshayes and the fossil plants of Roegniart and Descaudolle the botanical garden, astronomical observatory, Theatre and old prison, principally the latter, are the more pleasingly beautiful, and houses of correction. The house in which Calvin lived and died is rather commonplace

than known, and the very size of his grave is lost. The only important market for Geneva is that of watches, ornaments, boxes, and jewellery, which employ about 9000 persons, who annually make above 100 000 watches, and work up 75,000 ounces of gold, 5000 marks of silver and precious stones to the value of 240 000. The trade is very much restricted to the narrow limits of the Genevoise territory and the jealous watch which the Sardinian and French governments keep along its frontiers. There is also a want of a proper navigable outlet, the navigation of the Rhone below Geneva being

able outlet, the navigation of this Rhône below Geneva being very much obstructed. It has been proposed to remove these obstructions. Were this accomplished, Geneva would become a kind of port, and doubtless receive a great increase to its prosperity. Manufactures of all kinds, in addition to that furnished by its glass-manufacture, consist in supplying the surrounding districts with colonial products, and numerous minor articles. In literature and science, Geneva has long occupied a distinguished place and of course it does not now possess any of the highest names, it has a considerable number which are honorably known. Education, too, is very generally diffused and the population generally are distinguished for intelligence. It is partly accounted for by the presence of several of the national establishments which the town contains. Among these are the college, which was founded by Calvin and has ever ceased to prosper average attendance 413 the secondary compound of the four faculties of theology law science, and literature with 26 professors, and about 250 students; the primary schools, a number of other schools supported by the state or special endowments, and a great many private boarding-schools none of these of course of high celebrity. Besides the St. R. national school, in connection with the Société Evangelique a theological seminary in which the young men are prepared either for the ministry or for the missionary field. Among the teachers at present (1858) are

and partly by secondary chains of the Alps, at the W extremity of the Lake of Geneva, where it spreads almost to a point, and it seems out the line Rhone is crossed by several bridges, and dividing the town into two portions, the latter and more important of which is on the l or S bank. The environs are covered by handsome villas, and the town itself when approached either by land or water has a very imposing appearance. It was formerly surrounded by walls and regular fortifications but since 1850 these have been removed to make way for the extension of the town

NEW KVA from the team behind the **Stance**

which has been going on with great rapidity. The town is divided into two parts an upper and a lower. The upper town occupied chiefly by the burgher aristocracy contains a considerable number of well built houses and handsome

besides them, there is the Evangelical School, in connection with the Socialist Evangelical a theological seminary in which young men are prepared either for the ministry or for the missionary field. Among its teachers at present (1852) are

Ganzen and Merle d'Anghen. The benevolent institutions include the general hospital, the *Bureau de Bienfaisance*, the Fondation Tronchet, orphan, old men's, and other asylums. Law is administered in accordance with the code Napoléon, by four justices of the peace, a *tribunal civil* of correction, a *tribunal de commerce*, a *council de discipline* for the military offences and a *tribunal de recours* which is composed of four councillors of state, and 24 members of the great council and reviews the decrees of all the other courts.

The origin of Geneva is unknown but its antiquity is proved by the references which Caesar makes to it. On the invasion of the N it was successfully occupied by the Bourguignons, who made it their capital the *Cathogoths* and France. It was formed part of the second kingdom of Burgundy and became incorporated with the Germanic empire. By a grant of the emperor, the temporal was added to the spiritual power of the bishops, and the counts of Savoy having succeeded in controlling the nomination of the bishop, became in a manner masters of Geneva. This state of matters was suddenly interrupted by the Reformation to which the Genevans are indebted both for their civil and religious freedom. The celebrity which they afterwards acquired chiefly under the guidance of Calvin and distinguished themselves as master of European history. Pop. (1800) 49,000.

GENEVA (Lake of) or *LEMAN* (Latin *Lacus Lemanus*) is a largest of the Swiss lakes, surrounded N and W by *can. Vaud*, S W *can. Geneva*, S E *can. Valais* and S Savoy length measured on its N shore, 65 m. and on its S shore, 40 m. central breadth about 6 m. greatest depth 900 ft. It is in the form of a crescent, with its horns turned S and is 1160 ft. above the sea. Its scenery though grand is surpassed by that of several of the Swiss lakes. On the N the shore is low and the ground behind ascends gradually in beautiful slopes, covered with vines. On the S, and particularly on the E side, the shore is rocky and abrupt, and lofty precipices often rise sheer from the water's edge. The numerous small boats on the lake with their luteen sails, add much to the picturesque quality of the scene. The steamers have rather a different effect, but afford excellent facilities for visiting all that is interesting on the shores of the lake or its immediate vicinity. A remarkable phenomenon in the lake is a sudden rise and fall sometimes of 5 ft. but usually only of 2 ft. and never lasting more than 25 minutes. It is not produced by the wind, for it takes place when the air is perfectly still. Many conjectures have been formed as to the cause. The most probable is that which attributes it to the unequal pressure of the atmosphere on different parts of the surface. Owing to the depth of the lake a *navar* freezes entirely though in severe winters its lower extremity becomes covered with ice. It contains various species of fish, and the water is remarkably pure, and of a beautiful blue colour, a phenomenon however which is not observable in small quantities. The Rhone, which enters its E. extremity a muddy turbid stream, issues from its W. extremity perfectly pellucid and likewise of the finest blue.

GENEVA a vil. U. States New York, beautifully situated at the N W extremity of Seneca lake. It has nine churches and two colleges one for general, and the other for medical instruction. Pop. 3600.

GENEVILLE (N) a vil. U. States, Missouri, R bank, Mississippi 126 m. E.S.E. from Jefferson. It contains a R. Catholic church, an academy and some neat dwellings and carries on an extensive trade in lead. Pop. mostly French, 1807.

GENEVOLIS (Italian, *Genovese* Latin, *Genovesium*), a prov. *Repubblica* States, div. Savoy bounded N by *Carona*, N.E. *Faucigny* S.E. *Upper Savoy* S. and W. *Savoy* Proper length E. to W. about 32 m. breadth, N to S., 20 m. Lofly valleys belonging to the *Pennine Alps* bound the prov. on the N.E. and S.E. and cover a large part of the surface by their ramifications. The streams are limited to a number of mountain torrents, of which the *River* and *Cheren* are the chief. The lake of *Amey* is nearly in the centre of the province. Notwithstanding the mountainous nature of the surface, it is so industriously cultivated, that four-fifths of the whole are turned to account. The principal commodities which the inhabitants have for sale are corn, game, poultry, cattle, swine, nut-oil, butter and cheese. The province is divided into seven mandaments. Cap. *Amey* Pop. 80,081.

GENEVRE, a mountain of the *Cottian Alps*, between France and the *Repubblica* States, 4 m. E.N.E. *Briançon*. Its summit, which terminates in a mass of abrupt precipices, has a height of 18,032 ft. Both the *Durance* and the *Dora* R. parli have their sources in this mountain. An admirably constructed road signally over the pass between the opposite valleys. On the plain at the base of Mont *Genevra*, 6000 ft. above the sea, good crops of barley are grown.

GENEVRE (Switzerland) See *GENEVA*.

GENENBACH a tn. *Baden, circles*, *Middle Rhine* esp. hall of same name, R. bank, *Kling* 19 m. S.E. *Strasbourg*. It consists of the town proper surrounded by walls with two gates and of four suburbs has two churches an hospital manufactures of paper and red leather and two annual fairs. Pop. in 2400 Area of hall 68 600 sq. m. Pop. 18 711.

GENÈVE (Str.) or *de Genève* *de la Rive d'Or* a vil. *France*, dep. *Arveyron*, 24 m. N.E. *Rodez*, on the bottom of a beautiful valley on both sides of the *Lot*, here crossed by a handsome bridge. It is well built, consists of houses generally handsome and cheerful looking, and of spacious straight, and well paved streets in the seat of a court of commerce a number of manufactures and a communal college contains a handsome town-house and is the most noted and industrial place in the whole department having manufactures of woolen stuffs, table-covers, and hats numerous worked mills dyeworks and tanneries a considerable trade in timber and six annual fairs. Pop. 2019.

GENIL, a river Spain, which rises in a chasm called *Corral de Veleia*, on the N.W. slope of the *Sierra Nevada*, *Andalusia* prov. *Granada* flows N.W. through the town of *Granada*, then W. S.W. till it reaches *Loga*, when it turns W. S.W. passes the town of *Loga*, and joins *1 bank* *Andalus* *Guir* at *Palma del Rio*, 30 m. below *Granada*, after a course of about 160 m. It receives numerous affluents, is nowhere navigable, but furnishes much valuable water-power and is extensively used in irrigation.

GENIS (Str.) several places France, particularly—1 (*Loire*) a tn. dep. *Rhone*, 4 m. S.W. *Lyon* on the side of a hill covered with fine vines. It has manufactures of stained paper buttons, ink rags and tapestry a trade in excellent wine, grown within the district and three cattle fairs, one of which takes place 3 days. *Genis* is worked especially in the vicinity of *Loire*—2 (*Savoie*) a vil. dep. *Loire*, 5 m. N.E. *St. Etienne*. It has manufactures of nails a foundry and extensive coal works. Pop. 1452.

GENIX (Str.) a tn. *Repubblica* States, *Savoy* 11 m. W. *Chambery* Pop. 2000.

GENNARO a mountain *Papal States*, about 9 m. N. *Tivoli*. It belongs to the E. branch of the central *Apennines* height 4289 ft. With exception of *Guadagnolo* it is the highest point in the chain which bounds the *Campagna* on the E. and is supposed by some to be the *Mons Lavinialis* celebrated by *Horace*. The ascent to it forms an interesting excursion and the summit commands one of the finest views in Italy.

GENNYTS (Str.) par *Eng. Corvord* 5018 m. Pop. 640. *GENOA* or *Genova* an anc. duchy and afterwards a republic, which by the congress of *Vienne*, in 1814 was annexed to the kingdom of *Sardinia*. It is now included chiefly in the division of *Genoa* but partly also in that of *Nice*.

GENOA or GENOVA a maritime division Italy formerly bounded N by *div. Alexandria*, and *div. of Parma* E by the duchy of *Machia*, and grand duchy of *Tuscany* S. by the gulf of *Genoa* and W. by the *div. Nice* and *Cent* greatest length about 180 m. breadth varying from a few miles in the E. and W. where it is narrowest, to 46 m. area about 5000 sq. m. The *Apennines* traverse this *div. S.W.* to N.E. in directions nearly parallel to the shore, from which their central ridge is seldom more than 15 m. distant, and divided into two basins the one, the gulf of *Genoa*, which receives the waters by the *Vax* *Magna*, *Blasone*, *Falco*, and numerous mountain torrents and the other the *Po*, which receives from it the *fluvial*, *Orba*, *Savona*, *Taro*, and *Trobia*. The coast is generally precipitous, but is indented by several bays, and contains some good harbours. The climate is on the whole temperate and salubrious, but the influence of the *sirocco* is often severely felt. The soil is not generally fertile, and the rugged nature of the surface unites a great part of it for agricultural operations. Some of the loftier mountains

summits are bare, but those of less elevation are either covered with wood, or afford excellent pastures. In the low grounds all the finer productions of Italy grow to maturity but still the corn produced falls so very far short of the consumption, that it is scarcely adequate to a month's supply. The most important vegetable products are the vine, olive, and chestnut. The most valuable mineral is marble. Manufacturers have made great progress in large towns, particularly Genoa, where, in some particular tissues, it still leads the world, but the great portion of the Genoese is for the sea and though their nautical celebrity has been surpassed by some other nations, they still carry on a very important trade, both coasting and foreign. For administrative purposes the division forms nine provinces—Genoa, the capital, Albenga, Bobbio, Chiavari, Lavagna, Novi, and Savona. Pop. 560,000.

GENOA (Italian *Genova*, or *Genoa*, French *Gênes*) a celebrated city Italy, Lombardy cap. div. of same name, on the coast of the Mediterranean between two rivers, the Buegno and the Polcevera, at the head of the gulf of the same name, 75 m S.E. Turin lat. 44 34 34 N. lon. 8° 03' E. (L.). The appearance of the city from the sea is beautiful and striking—it is in the form of a crescent, and rises gradually from the shore—the wharves of the houses rise up the outlines of the intervening palace, and the distant villas and gardens heightening the effect of its picturesque position. Immediately behind the city rises an abrupt hill covered with villas and country houses. The city is enclosed by a double line of fortification, forming a vast semicircle, supported by numerous detached forts, redoubts, and outworks crowning hill after hill and constituting one of the most extensive town fortifications in Europe; the outer wall being about 7 m in extent. In the older parts of the town the streets are extremely narrow being seldom more than 10 ft wide with 3-story buildings on either side. They are also dark steep, and crooked and almost wholly inaccessible to carriages. In the newer quarters, again many of them are spacious, and are lined with noble edifices. The finest of these streets are the Strada Nuova and the Strada Balbi. In both of which are numerous

shotting to mules and to persons carrying burdens. Many of the palaces are crowded with works of art, and splendidly fitted up inside, though in a shabby rather than a substantial manner. The principal palaces are, the Doria palace, and the palace of Doria-Serra, Giustiniani Cambesio, Balbi Durando and the palace of the Queen Mother. The churches and hospitals rival the palaces in splendor. The most remarkable of the former is the Duomo, or Cathedral of St. Lorenzo, founded in the 11th century but not completed till the beginning of the 12th. The most conspicuous church in the general view of the city is that of Carignano, finely situated on a hill and having a resemblance to St. Peter's in its general plan. The other churches of note are, St. Stefano della Porta, a handsome structure, but chiefly remarkable for containing a painting of the martyrdom of the titular saint the joint production of Raphael and Giulio Romano San Buro (St. Cyril) the most ancient Christian foundation in Genoa. Saint Ambrose, containing several fine paintings and splendidly decorated within; L. Anunciate, also magnificently fitted up interiorly. There is a number of other interesting ecclesiastical edifices, although more than half the churches in the city were demolished by the French. The principal charitable institution is the Alberghe de Poveri in which 1600 individuals dwell orphans and old people, and shelter the children are brought up to different trades and the girls who marry out of the hospital receive a decent dowry. The hospital unites the beauties of architecture with the most splendid scale, with the most perfect correspondence. The Ospedale del Fanciullone, another splendid institution for benevolent purposes, founded in 1430. The deaf and dumb institution (Sordi Muti) is also much celebrated. There are in and about Genoa fifteen different religious establishments for females, all regulated according to the monastic system though none of the inmates take vows. The largest of these institutions is that of the Fanciulle which contains 250 persons all employed in such light amusements as lace-making, embroidery and the manufacture of artificial flowers. There are two theatres in the city one of which the Teatro Carlo Felice, is an elegant structure and a university also a handsome building. Besides the university the other chief educational institutions are the theological seminary the school of fine arts the royal marine school and the navigation school. Genoa is the seat of royal appeal courts, of a chamber of commerce, and an admiralty court. It is supplied with water by aqueducts 13 m in length.

The manufactures of Genoa are considerable. Its velvets and silks are world famed and it likewise possesses factories of cloth stockings, blouses, neckties, hats, paper, essences, and soap. Besides these, its works in gold silver and marble have a high reputation in need for silver filigree, delicately and artistically wrought into bracelets brooches, bunches of flowers and other kinds of ornaments innumerable. The Genoese workmen stand unrivalled and their productions are sent to all parts of the world.

The port of Genoa, which is of a semicircular form and about 3/4 of a mile in diameter is formed by two moles projecting into the sea from opposite sides, but not opposite each other. The Molo Nuovo, or New Mole, on the E side, being about 790 yards S. of the Molo Vecchio, or Old mole, on the W. Both rise from 13 to 15 ft above the sea. Near the extremity of the new mole is the light-house a beautiful structure 800 ft. in height. The light is revolving, and is seen in clear weather from a distance of 24 m. There is besides, a fixed harbor light on each of the moles. Genoa is a free port in which goods may be warehoused and from which they may be re-exported free of duty. It is the chief outlet, by the Mediterranean for the manufactures of Switzerland Lombardy and Piedmont. There is an immense number of bonding warehouses situated in two localities called Porto Franco these are surrounded by walls, and form a small separate town. The principal articles of export are rice, oil, fruit, cheese, eggs, the products of its manufactures, &c. Imports—cottons, raw cotton, woollen cloth, indigo colonial produce, tobacco, salt fish hides, grain lead outfalls &c. In ancient times the Genoese merchants were remarkable for their enterprise, and for the extent of their dealings. They brought the productions of Hindoostan from Japan to Trebesond, and from thence conveyed them through Kaffa, in the Crimea, and afterwards through Constantinople to Europe. Their commerce subsequently de-

THE STRADA BALBI GENOA.—From the Monument of Vittorioso.

of palaces of the most superb architecture, though often decorated by lawless paintings on their fronts. Most of the streets which are kept remarkably clean, are paved with smooth slabs of lava, the pathway of bricks in the centre to afford

cleared greatly but is now, and has been for some years past, rearing

It imports in 1864 amounted to 211 225 024 and the exports to 24 467 376.

Genoa is in many respects a very desirable, though not particularly cheap, place of residence. Rents are high in the city but provisions of all sorts are abundant, of good quality particularly beef and poultry and reasonable. The climate is healthy and pure, though somewhat cold in winter. The Genoese are shrewd, industrious, and parsimonious but are accused of a want of integrity and sincerity. Their moral and domestic habits, formerly very indifferent, are said to be now much improved.

The origin of Genoa is said to be more remote than that of Rome. As early as the 11th century the Genoese had become formidable at sea; and notwithstanding an almost continuous succession of wars through several ages gradually increased in power and importance. About the middle of the 13th century the rivalry between Genoa and Venice, so famous in Italian history began to manifest itself terminating in 1381 in the ascendancy of the latter. After a long period of in

any very marked projections—the Gulf of Spezia being the most remarkable of the former and Capoa di La Mole, Chiasso, and Varese, the most noted of the latter.

GENOIS (Str.) a vil and com., Belgium, prov W Flandre, 9 m S E Courtrai with manufactures of linen and shawls a tannery brewery rope walk, two tobacco factories, and several mills. Pop. 3012.

GENYOLA (Latin Genesio) a vil and com. Sardinian States, Piedmont div Cune, prov and 10 m S E E Salamea between the Grana and the Biura. It contains two churches and an almshouse, and has two annual fairs. Pop. 1256.

GENONI a vil al. Sardinia, prov Jelli, 4 m. from Locuti. It is well situated on the S. slope of a lofty hill but has ill built houses and irregular dirty streets. It contains a parish and three minor churches and a primary school and has some trade in corn, wool and chalk. Pop. 1078.

GENSANO or GENZANO a m. Papal States, Campagna di Roma, 19 m. S E Rome. It is pleasantly situated and has several broad and straight streets which terminate in a handsome square ornamented with a beautiful fountain. On one of the hills above the town is the feudal mansion of the Dukes of Casertano and at a greater height the Convent of the Capucinini. Gensano is celebrated for an annual festival called the Infiorato di Gensano when the streets are strewn with flowers and the town is crowded with visitors from Rome and the neighbouring country. In the immediate vicinity is the beautiful little lake of Nemi the Lacus Neronianus of the poets. Pop. 4632.

GENSINGEN a vil Hesse Darmstadt, prov Rheinhessen circle and 7 m S E Bingen. It contains a Protestant and a R. Catholic parish church and a town house and has several mills and a trade in wine. Pop. 643.

GENT a vil in Holland Gelderland 7 m E N L. Nijmegen near the Waal with a Reformed church and a school. It is supposed to be a lost the site of a Roman camp. Pop. agricultural 868.

GENTHIN a m. Prussia, prov Saxony gov of and 27 m. N F Magdeburg. It is the seat of several courts and public offices for the circle contains a Protestant parish church, burgher school and hospital and has manufactures of woollen and linen cloth tile-works, mills a trade in cattle and four annual fairs. Pop. 2833.

GENTILLY a vil and com France dep. Seine, a little S. of Paris on the Rive de. The only remarkable institution in the Bievre, now a departmental insane hospital of the most useful and humane kind; also serving as an asylum for aged men.—The commune, a portion of which may be considered as a suburb of Paris, called 1 edit Gentilly, has a large manufactory of mirrors, several bleacheries, &c. At Gentilly was a summer residence of the early French kings, at which 1 edit held a council in 766. Pop. vil., 7759; com., 11 695.

GENTR, three vills Hungary — 1 Thutser Thaus on Szabolcs not far from Great Munkacs. It contains a Protestant and a Greek united church. Pop. 1080 — 2 (Magyar) on Eisenberg on the Marosul 8 m from Fapa. It contains a Protestant and a R. Catholic church produces some wine and rears large numbers of cattle. Pop. 1082 — 3 (Nemes) on Fienberg on the Gyngyos about 8 m from Steinmangas. Pop. 675.

GENZANO a m. Naples, prov Benevento 18 m N E Potenza on a height near the source of an affluent of the Bradano. It contains a parish church and several convents. Pop. about 8000.

GEOGRAPHIE — 1 A strait, Van Diemen's Land separating Sebastian's Island from Freycinet's Peninsula. It is scarcely a mile in width at the narrowest part — 2 A bay W Australia, on Sussex of which it comprises the whole N extremity being about 85 m. in width.

GEORGE, a maritime dist. and m. S. Africa, Cape colony. The country bounded, N by the Black Mountains, which separates it from Beaufort; E by the Orange Mountains, and W by the Orange and Olifant's river

temporal distraction and malaria, the citizens instituted a supreme magistracy called Doge for life excluding by law all the nobles. Thus form of government continued for two centuries, but without remedying the evils it was intended to correct tumult and faction continuing as before. Another and more efficient form of government was introduced by Andrea Doria, in 1528, which existed till overturned by Napoleon. The city was afterwards, 1799 being then in the possession of the French, taken by the united forces of Austria and England and, finally in 1815 united by a decision of the Congress of Vienna, to the Sardinian monarchy and now to the kingdom of Italy. Pop. (1863) 127,938.

GENOA (Gulf of) a large indentation of the Mediterranean in Sardinia, N of the island of Corsica, at the W base of the Italian peninsula, at the head of which lies the city and port of Genoa. Opening widely and imperceptibly from the main body of the Mediterranean no precise point can be named as marking its entrance but it may perhaps, be generally said to comprise the entire space N. of lat 43° 48' N. Its shores are not very deeply indented nor do they exhibit

The coast-line is indented with numerous bays, and intersected by several rivers, the Gambia being the only one of importance. It produces cattle, grain, vines, and tobacco but generally speaking, though possessed of plenty of water it is not productive. The grain is of an inferior quality and the sheep and cattle are lean. Pop. (1888) 9153.—The town cap. is at the mouth of the River Niger, lat. 34° S. lon. 22° 19' E. is a poor place, but still thriving; the houses chiefly built of brick plastered over with a mixture of clay and cow-dung and whitewashed. The chief trade is in timber and supplies for the wealthy farmers in the adjoining valley of the Lange Kloof.

GEORGE LAKE.—1 New B. Water, between the coasts of Argyle and Murray 2000 ft. above the sea, 16 to 18 m. in length and about 7 m. at its greatest breadth.—2 U. States, New York, 26 m. long, and 2 to 8 m. broad studded with numerous islands. Its waters are of singular purity, and the scenery of its shores is extremely picturesque, and on them are the remains of several old forts. A steam-boat plies regularly on the lake.

GEORGE (St.) CHANNEL, the S. portion of that arm of the Atlantic which separates Ireland from Great Britain the S. limit of which may be defined by a line drawn diagonally from Cape Clear in Ireland to the Land's End in Cornwall a distance of about 200 m. Northerly it blends with the Irish Sea, but may be said to terminate in this direction with the parallel of 53° 30' N. or with a line drawn from Dublin to Holyhead, a distance of about 5½ m. Its whole length 4 W. to N.E. will thus be about 210 m. The great tidal wave from the Atlantic enters this channel nearly alternately with its entrance into the English Channel and thus brings high water about the same time to Ireland, in France, Falmouth in England, and Cape Clear in Ireland.

GEORGE (St.) ISLAND, CHANNING, CAPES &c.—**Islands.**—1 One of the Azores a long narrow island about 23 m. in length, between Terceira and Pico separated from the latter by a wide channel from 10 to 12 m. broad. It lies W. N. W. and E. S. E., and has a small road & harbour on the N. side. The extreme N.E. point called Ponta del Topa, is at lat. 38° 30' N. lon. 2° 50' W.—2 An isl. Mozambique Channel 3 m. N. St. Jago Is. lat. 2° 12' S. lon. 40° 48' 30' E. (lat.)—3 Small isl. India, coast of Malabar lat. 15° 31' N. lon. 18° 45' E. (lat.)—4 An isl. N. Pacific Ocean Solomon group lat. 8° 24' S. lon. 154° 40' E.—5 An isl. and harbour of N. Florida W. Appalachicola Bay lat. 29° 37' 24" N. lon. 85° 5' 15" W. (lat.)—6 An isl. N. America, N.W. coast lat. (E. point) 56° 38' N. lon. 109° 11' W. (lat.)—7 A small isl. Bay of Honduras, between the islands Turneffe and Amberg a agreeable and beautiful spot lat. 17° 38' N. lon. 88° 43' W.—8 One of the largest of the Bermudas, about 1½ m. long and 3 m. broad. It is surrounded by rocks, and is approachable by vessels at low water only and even there are without hazard. Lat. 22° 45' N. lon. 68° 30' W.—**Channel.**

9 A channel between the Great and Little Nicobar Islands, Bay of Bengal about 15 m. to 18 m. long, and from 2 m. to 6 m. wide, extending E.N.E. and W.E.W. The bottom in general is foul, with strong tides or currents running in either direction through the channel; few vessels, therefore, pass through it, unless carried by an unexpected current.—10, The strait or channel which separates New Ireland from New Britain.

Capes and Bays.—11 A cape, the S. promontory of New Ireland lat. 4° 46' S. lon. 152° 40' E.—12 A cape, Australia, S.E. coast lat. 35° 10' S. lon. 150° 15' E. (lat.)—13 A cape, N. extremity Kerguelen's Land, S. Indian Ocean lat. 40° 54' S. lon. 70° 10' E. (lat.)—14, A bay cape, and harbour Newfoundland, W. coast. The bay extends towards P. N. E. 54 m. and receives the river St. George, which falls into the head of the harbour of same name, in which the bay terminates. E. The river is navigable for boats only but is fast filling up with sand. The cape, which forms the N. entrance to the bay is in lat. 48° 29' N. lon. 56° 18' W. (lat.)—15 A bay and cape, Nova Scotia, N.E. coast, opposite Cape Breton. The bay is about 20 m. wide at the entrance, and

where it penetrates furthest into the land about 16 m. in length from Cape St. George. The latter forms the W. entrance to the bay and is in lat. 45° 53' N. lon. 61° 52' W. (lat.)

GEORGE (St.) TOWNS FORRE, &c.—1 A town on the E. side of St. George Island, one of the Bermudas, on a gentle declivity which fronts the harbour containing about 500 houses, built of freestone. The town is at the foot of E. coast, Brazil lat. 14° 49' 34' S. lon. 59° 1' W. (lat.)—3 A town W. India, lat. Granada, E.W. coast. It stands on uneven ground and some of its streets are very steep but it is handsomely built, and divided into two parts, one being called Bay Town, and the other the Carenage. At the back of the town the mountains rise to a great height. The harbour is one of the best in the W. Indies. The fort is in lat. 12° 2' 56" N. lon. 61° 48' W. (lat.)—4, A vil. and comm. Belgium, prov. Liège, 10 m. N.E. Huy with coal and alum mines, four breweries, and three flour mills. Pop. 6831

GEORGE D. ELMINA (St.) See ELMIRA.

GEORGEN (St.) several places, Austria, particularly—1 A vil. Upper Austria, near lake Atter 29 m. S.W. Wels with a parish church. Pop. 1100—2 A market to Styria, circa, and 15 m. S.E. Gröden, on the Strubing, with a parish church castle, and poorhouse and two annual fairs 1 924.

GEORGENBLERG or SOOMATHY (Latin Mons Sancti Georgii) in Hungary. St. Ilpe, 1 mile, Poppo 7 m. W. Kowitz. It is built of stone, in a triangular form, on the side of a hill has a Protestant and a R. Catholic parish church, and a normal school a distillery a brewery a weekly market and four annual fairs. Much very fine yarn is hand spun. Pop. 1000

GEORGFATHAI a town Bohemia, circle Leitmeritz, at the foot of the Krusznitz 55 m. N. Prag. It is the seat of a court of justice, contains a parish church and townhouse, and has manufactures of cloth and calico, some general trade, and four annual fairs. Pop. 1703.

GEORGETOWN (under the Dutch *Stadewijk*) the capital city of British Guiana and of co. Demerara, a bank and at the mouth of the Demerara river lat. 6° 49' 24" N. lon. 58° 11' 30" W. (lat.) It is built with Dutch regularity the streets broad and intersecting at right angles, mostly with canals in the middle communicating with each other and with the river and crossed by a multitude of bridges. The houses, of wood and mostly two or three stories high are built in straight lines and as a security against damp are raised three or four feet from the ground on hardwood posts many of them have gardens attached and the luxuriant foliage underlying the houses adds greatly to the pleasing aspect of the city. Water Street, which flows the river is wholly occupied by merchants whose warehouses and wharfs jut out into the stream. This is the only street exclusively inhabited by Europeans. The streets are kept remarkably clean and pigs found wandering in them are seized by and become the property of the street cleaners between whom, and the original proprietors, frequent and sometimes most amusing squabbles take place. Hundreds of negroes often congregate and take part in such contentious and violent brawls their robbing and scavenging, and the equally melodious sounds emitted by the unskilful criers of the hulubir, who is generally lamestrung, and killed in the streets, cause the place that would defy the pencil of a Wilkie or a Breughel. The principal buildings in the city are the townhall, with the government offices, an imposing stone edifice, in a pure style; the episcopal cathedral, also of stone, and the colonial hospital. Besides these, there are also a second Episcopal church built of wood a neat Scotch church, a R. cathedral, and eight other chapels, belonging to Wesleyan Baptists the London Missionary Society &c. numerous schools under the guidance of the various religious communities a numbers hospital a lunatic asylum two theatres, and horse-races twice a year. The market-place, adjoining the townhall is open airy and surrounded by elegant shops well supplied with all kinds of provisions, fish, flesh and fowl. Adjoining, and built over the river is the slaughterhouse, where all cattle must be killed and cleaned. All offal and useless remnants are thrown into the stream, where they are immediately snapped up by sharks and other voracious fish, who watch the slaughterhouse in countless numbers. Were it any one who

here falls into the water he is irreversibly lost, being automatically devoured. At the mouth of the river is Fort Frederick-William connected with it are excellent barracks and military hospital and near it is a fine lighthouse. Georgetown from its low swampy position, is unhealthy; the principal diseases are yellow and intermittent fever dysentery diarrhoea, and dropsy. Anchorage good in 17 ft. water but at the river mouth is a bar on which there is only 15 ft. water exports sugar rum, and coffee. Pop. (1845) 28,000 of whom 19,000 were negroes and people of color. (1851) 25,500

GEORGETOWN several places, U States, including—1 A city and part of entry Columbia district, 1 bank, Potomac, 3 m W Washington with which it communicates by two bridges, across Rock creek. It is pleasantly situated and contains many handsome buildings, comprising a market-house four banks, seven churches, a R Catholic college, and a university with female seminary attached. Here are several commercial and commission houses, lumber yards, tanneries, and mills. The Chesapeake and Ohio canal commences here. Pop (1850) 8966.—2 A vil and port of entry S Carolina, on W side of Winyaw Bay 107 m E.S.E. Columbia. It contains a courthouse, jail bank, four churches and an academy. The harbour admits vessels of 11 ft. draught, and is the seat of a considerable trade tonn. 4415 Pop 2500.—3 A vil Kentucky 17 m. E. Frankfort on a tributary of the Kentucky. It contains a courthouse jail two churches an academy and a Baptist college. Pop. 1551.—4 A vil Ohio 84 m. S.W.W. Columbus. It has a courthouse, jail four churches, two saloons a brewery and several stores. Pop. 600

GEORGETOWN—1 A tn. Van Dusen a Land, N. near, E. shore, entry of the Tamar about 3 m. from its junction with Bass Strait lat 41° 5' 18" S. lon 148° 50' 15" E. (n).—2 A tn al Fulo a Leang or Prince of Wales, Island Malacca Strait lat 5° 25' 6" N lon. 100° 19' 45" E (n).

GEORGIA (Russian, *Grusia* Persian *Gurdschistan* native, *Fars*) a country Asia, situated near the centre of the Russian empire, on the S. side of the Caspian range, and now included in the Russian gov. Tiflis (whok see). It is bounded, N by the Caucasus; E by the Persian prov. Schirvan, now ceded to Russia S by an Armenian range, which separates the basin of the Kur from that of the Aras and W by a branch of the Caucasus, forming part of the watershed between the Caspian and the Black Seas. The name is sometimes employed to designate the whole territory possessed or claimed by the Russians S. of the Caucasus. In this large sense it may have an area of 39,800 sq. m. but when more correctly confined to Georgia proper the area does not exceed 12,800 sq. m. The surface is generally mountainous mountain-ranges, as already described surrounding it on the N and E, and sending out numerous ramifications but the central part of it is occupied by a large and fertile valley in which the Kur flows from W to E and receives almost all its drainage. The soil generally in the lower grounds, and more especially in this valley is of great fertility and during the advantages of a delightful climate, grows in abundance, not only all the ordinary cereals, and maize, hemp and flax, but great quantities of wine and cotton, and unlimited supplies of the most exquisite fruit. The culture however is very imperfect, and though important improvements have taken place since the Russians acquired possession of the country from Persia, in 1800 it has not yet recovered from the disasters brought upon it by ages of misrule and almost incessant warfare. The natives, forming about three-fourths of the whole population, belong to the Caucasian race, and have been as much celebrated as the Ottomans for the athletic frames of the men, and the beauty of the women. These properties have created a large demand for both sexes—the males to serve in the armies, and the females to become inmates of the harems of the Turks. The nobles long derived their chief revenue from this inhuman traffic, valuing their serfs only for the money which they could obtain for them in the Turkish markets. It is said that great numbers of the celebrated Mamelukes were Georgians. Under the Russian sovereignty this traffic has ceased and the distinction which divided the whole population into the classes of nobles and serfs, nearly equivalent to those of masters and slaves, though still subsisting has been greatly modified. The power of life and death, which the nobles claimed,

107. L.

and made no scruple of exercising has been expressly abolished. The Georgians belong generally to the Greek church but both clergy and people are generally ignorant. The Bible, however was translated into their native language, a

THE BIBLE OF THE HIGHS F. TUPPIN

popular dialect, greatly resembling the Armenian as early as the beginning of the 6th century and the benefits though hitherto not very apparent promise to be greatly extended by means of a printing-press which the Russians have established. Capital, Tiflis. Pop. Georgia proper about 800,000

GEORGIA, one of the Southern U. States N. America, bounded, N by Tennessee and N Carolina E. by S. Carolina and the Atlantic, S. by Florida and W by Alabama between lat. 30° 30' and 35° N. and lon. 80° 50' and 85° 50' W. Length N to S, 800 m. breadth, 340 m. area, 58,000 sq. m. The coast is bordered by a chain of islands, the principal of which are Tybee Oostab St. Lawrence's Sapelo St. Simon's and Cumberland consisting of salt marsh and of a rich gray soil, on which the famous sea-island cotton is raised and separated from each other by rivers, creeks and inlets, forming a navigable communication capable of admitting vessels of 100 tons. The surface of the mainland is low and level for 50 or 60 m. inland, the first 4 or 5 m. from the coast being occupied by a salt marsh, succeeded by a belt of land similar to that of the islands. Beyond that commences the pine barrens, extending from 60 to about 90 m. from the coast, and interspersed with numerous inland swamps on the margin of the creeks and rivers, which are partially or totally overflowed by the return of the tide, and constitute the rice plantations. Beyond this region commences the country of sand-hills 30 or 40 m. wide interspersed with fertile tracts, and extending to the lower falls of the rivers beyond which is the tract called the Upper Country having generally strong and fertile soil. In the N and W the surface rises into the Appalachian mountain chain which rises here, in some places 1500 ft. high. With the exception of some streams in the N part of the state, which flow W into Alabama, all the rivers of Georgia flow in a S. or S.E. direction, but chiefly the latter. The principal rivers are the Chattahoochee, which also forms the greater part of the W boundary and flows under the name of the Apalachicola into the Gulf of Mexico and is navigable for steamers for 800 m. the Savannah navigable for steamers, part of the year for 260 m.; and the Altamaha and its affluents, navigable for vessels of 80 tons 800 m. up from the Atlantic, into which both it and the Savannah fall. The climate is generally mild, and snow is of extremely rare occurrence but in the low country it is unhealthy in July August, and September. Cotton and rice are the staple productions but tobacco, Indian corn, wheat, and other cereals, are cultivated with success as are also oranges, melons, figs, grapes, and a variety of tropical and

other fruits. Copper and iron are found, and in the N part of the state gold in considerable quantities. There are numbers of tanneries, flour-mills, distilleries, and other works in the state but the manufactures are not yet of great importance. Cotton and rice are the principal articles of export, and the imports consist chiefly of manufactured goods. Value of exports (1850) £1,573,221 do. of imports, £122,760. In this state are two canals—the Savannah and Ogeechee Canal, and the Brunswick Canal 10 and 12 m respectively and there are also 565 m of railway. The means of education are provided by the university of Georgia, with its different branches, and by a great number of academies and primary schools. There are different religious denominations but the Baptists, Methodists, and Presbyterians are the most numerous.

The state is divided into 93 counties. According to the present constitution which was adopted in 1798 the governor is elected by the people and remains in office two years. One senator is elected for each county and the representatives are proportioned to the population but each county is entitled to at least one. The right of suffrage is enjoyed by every free white male who has resided within any particular county six months preceding the election and has paid taxes in the state for the year previous. McDonoughville is the seat of the legislature and the other principal towns are Augusta and Savannah. Public revenues (1851) £28,000 expenditure, £20,416 debt, £280,031.

Georgia was so named in 1733 in honour of George II. It suffered much in the early periods of its settlement from wars with the Spaniards in Florida. It was taken by the British in the revolutionary war of 1775, and evacuated in 1783. In 1801 it adopted the constitution of the U States, by a unanimous vote in 1789. Pop (1840) 691,392 of which number 240,944 were slaves (1850) 889,726 of which number 249,208 were slaves.

GEORGIA.—1 In lat S. Pacific Ocean one of the Solomon group. Lat. (S point) 8° 53' S. Lon 158° 14' E.—2 (Ave) a name formerly given to the N.W. coast of America, between the mouth of the Columbia and lat 49° 30' E.—3 (Ave) a name given to the N.W. coast, part of the Russian possessions in N America, facing the lat 49° 30' N of the Arctic circle—4 (N.W. Coast) a part of the Antarctic regions S. of N America, now called New S. Shetland.

GEORGIA (CUL OR) an island on the N.W. coast of America, which separates Vancouver Island from the mainland of British Oregon. It has about 20 m. average breadth and communicates with the Pacific in the N. by Queen Charlotte Sound and in the S.W. by the strait of Juan de Fuca.

GEORGIA (NORTH) an isl S Atlantic lat. (N point) 53° 5' S lon. 38° 18' W (N). It is 90 m long and has considerable breadth, possesses a number of bays and harbours, which are encumbered with ice during a great part of the year and when they can be approached are rendered dangerous by icebergs. The coasts are high and rocky and the interior of the island consists of high mountains, covered with snow and valleys, which in summer when the snow melts, present a vigorous vegetation. The coasts abound with seals, and several of various kinds are numerous.

GEORGIYSK a small in Russia, prov Caucasus lat. 44° 0' N, lon 42° 55' E. on a steep height near a bank, Podkookma. Its regularly built, and contains a government house, one Greek and one Armenian church six hospitals, a seminary, and several granaries. The inhabitants are composed principally of Cossacks of the Volga, who are engaged in agricultural pursuits and Russians and Armenians. The environs are picturesque, and the air pure. Pop. (1849) 2551.

GEORGEWALDE, two nearly contiguous places, Boheemia—1 (Ave) A tn and lordship, circle Leitmeritz, on the frontiers of Saxony 55 m N Prague. It contains a handsome parish church, with a painting by Knechtelmann; a

poorhouse, and a bathing establishment and has manufactures of linen, three mills, a weekly market, and two annual fairs. Pop. 4650.—2 (Ave) A vil near the former P 680.

GEFFERSDORF, two places, Austria—1 A vil. Moravia, circle Olmütz; with a parish church, school, distillery, brewery, an oil and a flour-mill. Pop 786.—2 A vil and lordship, Austrian Silesia, circle Troppau near the frontier of Prussia. Pop. 1840.

GERA, a tn. Germany principality Reuss-Johannstein-Eberdorf, cap lordship of same name, in a beautiful valley r bank, Elster here crossed by two wooden bridges, 35 m S.W. Leipzig. It consists of the town proper surrounded by walls, and of two suburbs; and is well and regularly built, most of the houses being of modern construction, in consequence of a fire in 1780, by which the greater part of the town was consumed. It is the seat of several courts of law and public offices, contains two churches, a townhouse, gymnasium, observatory government buildings, theatre, workhouse, lunatic asylum orphan hospital and old castle, now used as a prison and has manufactures of woollen, cotton, and linen mixed silk and other goods camel metal instruments, fire-engines, carriages pipes porcelain and above ware hats, tobacco and leather several m lls, a considerable general and transit trade, and a bathing establishment. Pop. town, 11,255 lordship, area 78 geo. sq m 24,000.

GERA a river Germany, which rises at the foot of the Schneekopf, on the E slope of the Thüringen-Wald, duchy of Saxe-Coburg, flows E. past the town of Plaine Arnstadt, and Ichtershausen to the town of Erfurt, where it forms two branches—the Wilde-Gera and the Schmiede-Gera, which shortly after joins r bank. Unstrut. Total course, about 45 m.

GERACE (Latin, *Meraca*) a tn Naples, prov Calabria Ultra, 96 m. E.N.E. Reggio, on a hill. The streets are narrow and dirty and though there are some good houses, the town has altogether a mean and miserable appearance. It contains a cathedral once a handsome structure, now in ruins, two parish churches, several convents, a seminary and an hospital. It has some trade in wine and has two yearly fairs. The town was almost wholly destroyed by an earthquake in 1783. It stands on or near the site of the ancient *Loeci Epaphrasi*, of which some interesting ruins still remain including those of an aqueduct. Pop. between 5000 and 4000. GERACI a vil and com Sicily prov Palermo, dist and 17 m S.S.E. Cefalu. Pop. 3384.

GERARDMER, or GERMAZ a tn in France, dep Vosges 15 m S. St. Dié. It has a parish church manufactures Burgundy path linen cotton, delf and wooden ware. P 1597.

GERASA JERUSALEM, or DIERAM a ruined city Syria, in ancient Decapolis, 2 m and 80 m S.S.W. Damascus on the opposite slopes of two hills, which ran from either side of the

THE LITTLE THEATRE GERASA.—From Lawrence, *Voyage en Orient*.

Karaca, 2000 ft. above the level of the sea. lat. 37° 16' 30" N, lon. 34° 5' E. The ruins of this city which have been compared to those of Baalbek and Palmyra, attest its ancient magnificence. The most interesting of these remains extend

along the r. bank of the stream, N.E. to S.W. At the latter extremity are a magnificent triumphal arch of the Corinthian order, a mammoth, a bath, and a small temple, with a spacious semicircular colonnade of the Ionic order. From which a street, with a range of columns on each side, traverses the whole length of the city. This street is crossed at right angles by three parallel streets on either of which are the remains of interesting and magnificent buildings, including a fine Corinthian temple with a double row of columns in front, and a single row along the other three sides. Beyond the N wall which is a mile from the S. entrance, is an extensive necropolis with numerous finely-executed sarcophagi. Gerasa was built by the Romans after their conquest of the E. taken by storm by Alexander Jannæus. Burned by the Jews in their vengeance on the Syrians, for the massacre of their brethren at Casarea taken by Antioch, a general under Vespasian who burned down what remained of it; and in 1122, its castle was destroyed by Baldwin II of Jerusalem.

GERBEVILLE a tn. France dep. Meurthe, 20 m. S.E. Nancy with manufactures of woollen hosiery, tanneries, and extensive quarries of building stone. Pop. 2258.

GERBI Gassara, or Janna, an isl. Mediterranean, W Africa, Karkina group, Gulf of Gabon, midway of Tanna, from the mainland of which it is distant, easterly about 18 m. lat. 34° 59' N. lon. 11° 0' E. It is about 10 m. in length and about 4 or 5 m. in breadth. low covered with date trees, and the shores abound with the lotus. Off the S. coast is a productive tunny fishery. The inhabitants are numerous and industrious and manufacture linen and woollen fabrics, and shawls, which are exported chiefly to the coast of Barbary.

GERBILLE DES JONES, a hill, France dep. Ardèche, an agr. branch of the V. Cevennes. height, 5264 ft. and, with exception of Mount Mézenc, the loftiest summit in the branch of the watershed, between the basins of the Rhone and Loire.

GERDALEN a tn. Prussia, prov. E. Prussia, gov. and 40 m. S.E. Königsberg cap. circle of same name, on the Omet. It is the seat of local courts and offices has two churches, two castles, manufactures of woollen cloth and leather slaworks a trade in cattle, and four annual fairs. Pop. 2369. The tract area 247 sq. m. is well-wooded, well watered, and of considerable fertility. Pop. 32,068.

GERBALE a tn. Prussia, prov. Silesia, gov. and 10 m. S.W. Breslau. It contains a parish church and a primary school. The greater part of the inhabitants are employed in agriculture and the rearing of cattle. Pop. of dist. 3000.

GERENZANO a vil. and com. Italy Lombardy prov. and 15 m. N.W. Milan in a fertile plain where it is mulberry is extensively cultivated. It contains a handsome parish and an auxiliary church. Pop. 1440.

GERES several places, Hungary.—1 (Esz) A vil. and Zemplin, about 15 m. from I. Jely. It contains a Protestant church. Pop. 1131.—2 (Nagy) A vil. near the former. Pop. 799.—3 (or Geresen) A vil. co. Rechnik, in a well wooded district 40 m. from Zilah. It contains a Protestant parish church. Pop. 800.—4 A vil. co. Baskabir about 15 m. from Bagos with a Protestant church. Pop. 590.

GERLE (Szeres) a mountain chain Portugal forming a remnant of the mountains of Asturias and situated between the basins of the Douro and the Minho, to the W of Montalegre. It stretches about 18 m. N to S. and is generally composed of a succession of lofty granite peaks. Its highest rising point the Muro de Barregoso has a height of 4396 ft. Marshalled Siles, in 1809, when retreating led his army through a terrible gorge forming one of the passes in the chain.

GERLEZ, two nearly contiguous vills. Hungary.—1 (Esz) Thither Thues, on Ugros, on the Tur, 8 m. from Halm. It contains a R. Catholic and a Greek united church. There is a valuable coal mine in the vicinity. Pop. 1700.—2 (Nagy) Near the former. It contains the parish church. Pop. 700. **GERMAN**, a tn. Spain Andalusia, prov. of and 28 m. N.W. Almería at the W. foot of the Sierra de Baza. It is indifferently built, has a large parish church, a chapel, townhouse, prison storehouse and public fountain. Manufactures—earthenware glass, white wax, counterpane, oil &c. Trade—oil, wine hardware, &c. Pop. 4309.

GERGEI a vil. Isl. Sardinia, div. and 54 m. N. Cagliari, in a marshy and unhealthy hollow on the side of the hill of Gera. It contains a parish church, built in the beginning of the 14th century, and surrounded by a modern dome five

minor churches, and a primary school has a trade in corn, and wine and an annual fair. Pop. 5161.

GERINDOTZ, a tn. Spain, New Castle, prov. and 16 m. N.W. Toledo. It consists of a few good houses and a considerable number of garthens but contains a parish church townhouse and primary school and has manufactures of soap, several oil mills, and a trade in oil and corn. Pop. 1253.

GERINGSWALDE a tn. Saxony circle and 30 m. S.E. Leipzig in a hilly but well-wooded district on the Auhach, and a beautiful lake. It is an old place, has considerable manufactures of woollen and linen cloth, and calico several mills, a trade in cattle, and three annual fairs. In the neighbourhood are the ruins of two old castles. Pop. 2618.

GERIK, a vil. Austria, Salzwasser, requested dist. Peterwardein, on the Donau, near its confluence with the Save, about 6 m. from Radoszica. It contains a Greek non-united parish church. Pop. 2810.

GERLACHSHEIM —1 A market in Baden circle Lower Rhine cap. hall of same name, on the Tauber 17 m. S.W. Würzburg. Pop. 11,000. hall area 44 geo. sq. m. 12,352.—2 Mittel, Nieder and Ober-Gerlachheim, three contiguous vills 1 m. from, prov. Silesia, gov. and W R. from Liegnitz. They contain a parish church, two castles, and several mills. Pop. 2233.

GERMA or GAKAMA a tn. N. Africa, Fezzan 50 m. N.W. Murzuk. It is surrounded by a wall and a ditch houses for the most part of mud and in a ruinous condition inhabitants very poor. The vicinity abounds with date trees. The ruins of ancient Germa are distant about 14 m.

GERMAIN (St.) numerous places, France the most important are—1 (Lombard) A tn. dep. Puy-de-Dôme, 6 m. S. Isacore, on the Creuse with mineral springs, four annual fairs and manufactures of animal charcoal. Pop. 2113.—2 (L'Hér) A tn. dep. Puy-de-Dôme, 12 m. S.W. Ambert, on the Doulon in an arid district with manufactures of lace worsted mills and six annual fairs. Pop. 1009.

GERMAIN EN LAÏE (St.) (Latin *Læta Germana*, a tn. France, dep. Seine-et-Oise, 6 m. N. Versailles, on a height above the Seine and on the railway to Paris. It is well built, and consists of three public squares, and of several wide and well paved, but irregular streets. The only public building deserving of notice is the castle, built in the form of an irregular pentagon crowned with a balustrade, flanked at its angles by five large pavilions surrounded by a wide ditch and bordered by a magnificent terrace, which commands an extensive view and slopes down to the Seine. This castle is of considerable historical interest. Wild in it, the adjoining edifices which time and revolutionary violence has destroyed, were born the French kings Henry III. Charles IX. and Louis XIV. and the two celebrated daughters of Francis I.—Madeleine, better known as a celebrated Scottish queen than the wife of Jan. 2nd and Margaret of Valois, distinguished throughout Europe by her own talents and the generous protection she afforded to literary men. Wild in this castle, too, James II. after his bigotry had driven him from England long kept up the memory of a court, and was used as a paltry tool for the ambitious or vindictive purposes of Louis XIV. The forest of Germain one of the finest in France includes within the walls which surround it, an area of above 10,000 acres and is made perfectly accessible throughout by the five roads which traverse it in all directions, and have an aggregate length of nearly 1000 m. The manufactures of the town consist of cotton, hosiery and hair-cloth. There are also numerous tanneries; a fair is held in the vicinity within the forest, which lasts three days, and attracts vast crowds from Paris and the surrounding districts and a large weekly market, at which from 90,000 to 100,000 ewes are annually sold. Pop. 11,821.

GERMAN par. Isle of Man. Pop. 4510.

GERMAN OCEAN See North Sea.

GERMAN (San) a tn. Porto Rico Spanish W. Indies, near the west coast. In the vicinity coffee and cotton are produced, and cattle are reared in considerable numbers. Pop. 2125.

GERMANO (San)—1 A tn. Naples, prov. Terra-di-Levero z. bank, Rapido, at the foot of Mount Caserta, 83 m. N.W. Capua defended by a fort. It was taken by the Spaniards in 1730 and here Murat was defeated by the Austrians, on the 16th March, 1815. Pop. 4000.—2, A tn.

Italy, Piedmont 55 m. N. E. Turin with a church and a convent. Pop. 2000.

GERMANY (Ct.), a bar market in and per England, co. Cornwall 8 m. W. by N. Plymouth on the St. German's creek, formed by the rivers Tidd and Lynher, cover the principal sea of the harbor of Cornwall. It has a church, the remains of an old cathedral, with a very handsome entrance doorway, a Methodist chapel, a free and 13 daily schools several almshouses, and a farmers club. Inhabitants chiefly engaged in agriculture, and also in taking coals and timber to the mines at Mendon, and fetching back the ore great quantities of which are shipped here. Area of par 1050 ac. Pop. 2842.

GERMAN'S WEEK or WEEK ST. GERMAN, par Egg Devon 3594 ac. Pop. 318.

GERMANTOWN several places, U. States, comprising—1. A in Pennsylvania 6 m. N. W. Philadelphia. It consists of one broad street 4 m. in length and intersected by several others at right angles contains 10 churches, four seminaries, and 21 schools, and has a considerable trade. It was founded by German Quakers, Oct. 1, the British here defeated the American provincials. Many of the merchants of Philadelphia and others have here their country seats situated in spacious grounds. Pop. 5489.—2. A vil Ohio, situated on a beautiful valley 8 m. W. Columbus. It contains four churches, two taverns, a brewery and a printing-office. The settlers were mostly of German descent and

natives of Pennsylvania. Pop. 1200.—3. A vil Tennessee, on the Memphis and Christian railway and near Wolf river 15 m. E. Memphis. It is situated in a rich cotton-growing district, and has an active trade.

GERMANY (Latin, *Germania*, German, *Deutschland*, French *Alllemagne*, Spanish *Alemania*), the name given to a very large portion of Central Europe not forming a single sovereignty but composed of a great number of independent states, and parts of states united together by a common league, called the Germanic Confederation [German, *Deutsches Bund*]. It lies between lat. 45 and 55° N. lon 5° 50' and 19° 20' E. and is bounded N. by the North Sea, Denmark, and the Baltic E. by W. Prussia, with the Duchy of Posen Poland Galicia, and Hungary; S. by the Adriatic Sea and Austrian Italy S. W. by Switzerland and W. by France Belgium and Holland greatest length N. to S. 695 m. greatest breadth, E. to W. 639 m. area, 185 440 sq. m. It is obvious that the contour of Germany is not defined either by political or natural boundaries—not by political boundaries, because several of its more important states have large possessions which are not included in it and not by natural boundaries because though partially washed by three seas the North Sea, Baltic and Adriatic and barred in on different directions by lofty mountains, its frontiers generally are only marked by imaginary lines. The following table gives the name, area, and population of the different States which compose the Confederation.

BY THE OF THE GERMAN CONFEDERATION, NAME, AREA, POPULATION, CONTRIBUTION TO THE FEDERAL ARMY, AND THE NUMBER OF THEIR VOTES IN THE DIET.

The states marked with a * belong to U or in whole, or in part, to the SOLEVEREIGN or CATHOLIC LEAGUE.

* The vote belonging to the extinct line of Saxe-Gotha is given by the five existing Gotha lines, making a total of 63 votes.

As each State is described under its own name the description here given is necessarily confined to a few leading features, which belong to Germany considered as a whole.

Physical Features.—These are greatly diversified, and present such an irregular succession of mountains and valleys, table-land and plains, as makes it extremely difficult to arrange them for the purpose of a distinct general description. The whole country seems, however, to consist of being divided into four distinct parts—a S. mountain region, a central plateau, a central mountain region, and a N. plain. The S. mountain region is covered by the Alps which, entering Germany on the S.E. of Switzerland proceed E. through the Tyrol, throw off one large branch, which descends S. through Illyria to the Adriatic, and continues E. with the other main branch till it becomes linked with the chain of the W. Carpathians. The central mountain region, of much less elevation than the former zone it nowhere attains the limit of perpetual snow and does not in average height exceed 5000 ft. is much more complicated, consisting of a great number of separate ranges, which run in all directions, and become so interlaced with each other that the limits assigned to them are in many instances arbitrary. The only range which has any title to be considered as a common centre, is the Fichtelgebirge, continued E. by the Erzgebirge and the Riesengebirge, S.E. by the Böhmerwald W. by the Thüringwald, Rhöngebirge, and Spessart, and carried to its N. limit to the Harz. The W. boundary of the central mountain region is formed chiefly by the Schwarzwald and Odenwald. Between or rather enclosed by the ranges of the two great mountain groups now referred to lies the central plateau of Germany covering a space of about 60 000 geo. sq. m. Neither in extent nor in elevation can it be compared to the great plateaux of the African and Asiatic continents though in miniature it bears a considerable resemblance to them. Its average height above the sea-level is from 1400 to 1600 ft. and its surface, by no means uniform, is both broken by hills and intersected by valleys, within which important rivers pursue their course. To the N. of the central mountain region is the great plain, which extends without interruption to the German Ocean and the Baltic and extends down so much when it approaches them as in many places to require artificial protection from their waves. Its length W. to E. may be about 550 m. and its average breadth 200 m. To all appearance it has once been covered by the sea, alluvial deposits of great depth being spread over almost every part of its surface and generally with so large a proportion of sand as to make it for the most part naturally unfruitful.

Minerals.—Germany possesses numerous and varied mineral riches. Gold is found in Austria and Baden; silver in Saxony and Hanover; copper from tin, rock-salt, and alum in Prussia and Austria; lead and litharge in Hanover and Austria; manganese in Saxony and Austria; cobalt in Saxony and Prussia; antimony and bismuth in Austria; arsenic in Prussia and Saxony; mercury in Austria and Bavaria; sulphur in Saxony and Austria. Coal, marble, alabaster, talc, asbestos, crystalline, common lime, asbestos, slate, millstones, freestone, brass, and sundry precious stones—as amethysts, garnets, &c.—are also found in various localities. Germany is likewise extremely rich in mineral waters, in cooling chalybeate, sulphurous, alkaline saline, and warm, of all kinds but most in the S. portion of the country.

Rivers.—Germany is remarkably well watered. Its central mountain region and plateau forms part of the great water-shed of Europe, and either gives rise to more than one of its most important rivers, or sends them their principal tributaries. Thus the Danube, rising near its W. extremity proceeds across it in an E. direction and does not quit it till it reaches the confines of Hungary and has itself not only become a large navigable river but been augmented by important navigable tributaries. The Rhine, in like manner though it neither rises nor terminates within Germany flows within it for more than a half of its course, and forms its boundary for more than a half of the remainder. After these come the Elbe strictly speaking, the greatest river of Germany has much as its whole basin lies within it. The Oder, Weiser, Main, Neckar, Mosel, Rhine, and Elbe—all of which are navigable.

Climate, Vegetation, and Zoology.—Though Germany extends over 10° of latitude its mean annual temperature is

remarkably uniform excepting the limited district E. of the Alps the mean annual temperature at Trieste being 58° E. excluding this district the mean annual difference does not exceed 5° the range being between 45° and 50°. This uniformity is evidently owing mainly to the different elevations of the surface, the low plains of the N. having a higher while the hills and plateaux of the S. have a lower temperature, than their latitudes might seem to indicate. The climate, however, is more continental than humid, and hence the range of the thermometer is very considerable; and delicate plants, which grow vigorously and receive their full supply of heat in summer often perish by the keen frosts of winter. Both the Rhine at Mannheim, and the Danube at Vienna, usually receive a coating of ice. The mildest climate is enjoyed by the valleys of the Rhine and the Main, where both the almond and chestnut are matured. The cultivation of the vine is general E. of 51° of latitude, but W. of that latitude it ceases to be profitable. With exception of the loftier mountain districts, where the surface is fit only for pasture, and often where even that fails richer treasures are found beneath it; the growth of all the ordinary cereals is universal, and in some parts to such an extent as to leave a large surplus for export. Potatoes, hemp, and flax, also form most important crops, and in many parts tobacco and hops are cultivated on an extensive scale. The forests are of great extent, particularly in the mountain districts as indicated by their names of Schwarzwald [Black forest], Böhmerwald [Bohemian forest], Thüringwald [Thuringian forest], &c. They abound in all the forest trees of the temperate zone, and furnish timber which cannot be surpassed. The central plateau is more sparingly wooded but the E. part of the N. plain has extensive tracts of oaks and beech as along the shores of the Baltic, and of pines, with a considerable intermixture of birch in the interior. Among domestic animals, the horned cattle of the districts along the North Sea and the Baltic the sheep of Saxony, Silesia, Bohemia, and Moravia, and the swine of Westphalia, have long been famous. The horse, the noblest of all appears to be much neglected. Game is very abundant, and includes, in addition to the smaller kinds, the bear and the wolf. Fish are very numerous, both in the rivers and lakes but do not include many of the finer varieties.

Manufactures.—The long European peace greatly favoured the manufactures of Germany as well as of other countries. Looms are made in every part of Germany but more especially in Westphalia, Silesia, Bohemia, and Saxony—woolens in the Prussian provinces of the Rhine Saxony Brandenburg, and Silesia, in the Kingdom of Saxony in Moravia and Bohemia cotton, which have increased in a remarkable degree, in the Prussian provinces noted above in Saxony and Upper and Lower Austria silk, in Lower Austria and the Rhine provinces where even the Lyons fabrics are equalled. The manufactures of leather of metals porcelain glass was tobacco, fancy dresses, straw hats musical instruments, watches, clocks, wooden wares including toys, &c. are likewise important and breweries and distilleries are to be met with everywhere.

Railways.—The railway system has made considerable progress in Germany and now extends in a connected series (forming in the N. part of the country a close net-work) from the Baltic to the Alps, and from the North Sea to Vienna, and close upon the Adriatic at Trieste. From Hamburg Vienna may be reached by lines passing either through Berlin and Breslau, or through Dresden and Prague and Switzerland may be reached either by lines passing through Hanover and Frankfurt, or through Leipzig and Nürnberg. To the W. the German lines connect with the Belgian and French to the N. with the Danish and to the E. with the Russian and Hungarian so that a traveller starting from Paris or from the coast terminus of any of the French or Belgian lines at Havre, Boulogne, Calais, Ostend, Antwerp, &c., may pursue his journey by railway to any of the more important towns of N. and central Germany or even to Cracow and Warsaw to Vienna and Pesth and in a short time he will also be able to reach the Adriatic at Trieste.

People.—The inhabitants of Germany belong to two principal stocks—Teutonic or Germans proper, and Slavens. The latter who originally entered Germany from the E. are found chiefly in Moravia, Bohemia, some of the alpine valleys of Styria and Illyria, on the N. slopes of Upper Silesia, and along the shores

of Pomerania though of one stock, they are known in different districts by different names as Czechs, Wendes, Slovaks, &c. The former stock, to which the great body of the population belong are spread over the whole of the N. W. and S. The proportion between the two stocks is about 1 to 4. In addition, to them, Italians prevail on the S. side of the Alps, in Tyrol, Friuli and Istria, and French in the Rhine provinces on the W. bank of the Rhine. The Greeks, Armenians, and Jews scarcely require to be particularized. In respect of the religion, the Germans are chiefly divided between the R. Catholics and Protestant churches. The following table will give a general idea of the proportion in numbers the various races bear to each other and also of their distribution according to their religious belief:—

Protestants	R. Catholic	Religion
German	39,400,000	— 21,000,000
Slaves	4,500,000	Protestant
French and Walloons	300,000	Jews
Jews	115,000	Greeks
Italians	210,000	Armenians
Greeks and Armenians	5,000	Gypsies
Gypsies	1,400	— 600

Language.—The language of the Slaves includes several dialects; of which the most marked are those of Bohemia and Moravia, and that which is spoken in Silesia, and as distinct with Polish. The German language, on the other hand, the Gothic, in like manner includes a great number of dialects which, however admit of being reduced to the two great classes of High German (*Hoch-Deutsch*) and Low German (*Nieder-Deutsch*). The Low German is the vernacular of the lower orders and presents itself under a great variety of modifications as Alemannic in Switzerland, Swabian in the Schwarzwald and the greater part of Württemberg, Bavarian on the Bavarian plains &c. High German is the spoken language of the great majority of the educated classes, and is in fact the only proper German language, because the only one which is written and printed. This dialect is even not so much perhaps to its intrinsic superiority over Low German as to the accidental circumstances of Luther having published his translation of the Bible in it—a fact equally honourable to the Reformer and to the Reformation—to the Reformer as indicating the consummate ability with which he had performed his task and to the Reformation, as proving the intellectual superiority of those who espoused it, and the close connection which is established between religious freedom and literary progress. This language, from its peculiar structure is admirably fitted for a concise, scientific style, and yet from its great flexibility and full open vowel sounds, its richness in words, its wondrous capacity for variations and combinations, and the power it possesses of expressing with clearness and precision the minutest shades of meaning, it is equally powerful in conveying to the mind the most exalted imagery and fanciful creations of the poet, and the profound ideas of the mental philosopher. The German is rich in standard works in every branch of knowledge and art, and when its writers fail it is not so much by lagging behind the spirit of the age, as by attempting to outstep it, and thereby bewildering themselves and their readers in a vague and mysterious transcendence.

Constitution.—The characteristic feature in the political institutions of Germany is the number and variety of the sovereignties into which it is divided. No fewer than 33 states exercise sovereign rights, and the modes in which they exercise them are of the most heterogeneous description some claiming power which border on despotism others presenting themselves under the form of constitutional monarchies, in which the popular principle is more or less largely developed, and others, both bearing the name, and occasionally though not always, performing the part of free towns or republics. Notwithstanding community of language and so constituted have no natural bond of union, and hence, against any formidable aggressor who may be permitted to attack them in detail, they are almost powerless. The necessity of a common head under which all the forces of these heterogeneous bodies might be concentrated, and made available for the common defence, was felt at a very early period, and Germany was no more united in political independence, by the dissolution of the empire of Charlemagne, than republics were had to an elective monarchy according to which, what were called the Electoral States, while retaining their individual

independence, made choice for life of an emperor to whom they swore allegiance, binding themselves to him and to each other in an indissoluble league, offensive and defensive. This elective monarchy established in the 9th century underwent many modifications, but was continued by a regular succession of emperors till the beginning of the 19th century when it was brought to a termination in the person of Francis II. who resumed the name of Emperor of Germany for that of Emperor of Austria. This change was one of the results of the victories of Bonaparte. Dissolving the old German empire, he formed another under the specious name of the Confederation of the Rhine, and declared himself its protector. In this character he promised to maintain its integrity but the kind of protection meant was soon explained, when, in 1810, he issued his fiat, simply declaring that all the countries between the mouths of the Rhine and the Elbe were annexed to France. The effect of this decree was to extinguish several of the sovereignties which he had guaranteed, and deprive the Confederation of 5518 sq. m. of territory and 1,188,087 subjects. His downfall in 1813 made new arrangements necessary and accordingly the Congress of Vienna, in 1816, established the Germanic Confederation in the form in which, with some later changes, it is exhibited in the table given above, page 1079.

Referring generally to that Table, it will be necessary to enter into a brief explanation of the leading features of the Confederation. These are contained in the Act of Confederation signed and ratified June 8, 1816, and a Declaration published May 15, 1820. Its object is declared to be the maintenance of the security of Germany internally and externally and of the independence and integrity of its respective states. Its affairs are managed by a representative assembly called a Diet (*Bundes-Versammlung*) which meets in Frankfurt-on-the-Main. Austria presiding and its permanent, but has the power of adjournment. It acts either as a General Assembly or Plenum in which every state has one or more votes, according to rank, the whole number being 69 or in a Minor Assembly or committee, in which as the whole number of votes is only 17 the larger states have no more than a single vote, and the inferior states only parts of a vote several of them being grouped together so as to give single votes by delegates, that, while 11 states have a vote each, 22 states have only six joint votes. The initiative is vested in the Minor Assembly or committee which arranges the business generally and decides what matters are to be submitted to the Plenum, but no organic change can be made till sanctioned by the Plenum and carried by a majority of at least two-thirds of its votes. In regard to peace and war all the states must act federatively as other words, if individual state can negotiate with the enemy separately and the contingent of men and money which each must contribute is fixed generally according to the population.

Recent History.—After the French revolution of February 1848 an attempt was made to replace the German Diet by a representative parliament, to meet at Frankfurt-on-the-Main. Such a body composed of 500 representatives, did meet in Frankfurt, March 30th and drew up a plan of representation in accordance with which the first German National Assembly was elected, and met likewise in Frankfurt, May 18, 1848. This Assembly elected Arndtke John of Austria to be *Leit* Lieutenant or Regent (*Reichsverweser*) of this newly-constituted German empire. The same person was, in like manner elected Regent by the Diet, then also sitting in Frankfurt, and with this transaction the existence of the Diet may be said to have, for the time being at least, virtually terminated. The newly-constituted Assembly proceeded to form a constitution for the German empire, which, however after being passed, was not recognized by several important states, dissensions ensued and on May 30 1849, the Assembly resolved to transfer its place of meeting to Stuttgart. But this resolution not being acquiesced in by the government, it resolved to remain in Frankfurt while a large body of the members withdrew to Stuttgart, where the so-called German Parliament was summoned for June 5. This was the final death-blow to that Assembly which at one time seemed destined to play so important a part in German history. Subsequently in the same period, Francis endeavoured to force a confederation [Diet] with himself at the head of it. This plan was opposed by sundry states, including Austria which last proceeding

to act on the old law of the Confederation, by which, since 1815, the Diet of German states has been annually assembled at Frankfurt, convoked the Diet for May 10, notwithstanding the remonstrances of Prussia. With exception of Prussia and Oldenburg all the states obeyed this summons. Subsequently to this period the pretensions of Prussia to form and head a separate confederation nearly involved Germany in a general war which was however happily prevented. Meetings between the ministers of Prussia and Austria took place, and differences were so far arranged that these two leading powers, with the concurrence of the other states, united in attempting to re-constitute the German Confederation. Various propositions to effect this object have been made, but no definite result has yet (February 1832) been attained.

Zollverein, or Customs League.—This celebrated commercial union was formed by Prussia, in order to unite the various German states for purposes of trade and commerce, by suppressing the rates and tariffs which each had established, and fixing both a uniform scale and mode of levying, by means of which merchandise, after one fixed payment on the frontier, might be transmitted over the country without the impediment and annoyance of new inspections and new payments on the frontiers of every separate state. Having no compulsory powers, Prussia could only adopt the form of a voluntary association, and endeavor to allure the different states into it, by convincing them of its accordance with their true interests. The success has been very remarkable, and the Zollverein now embraces an area of 131,610 geo. sq. m. and a population of 23,254,899 being 68.06 per cent. of the whole area, and 84.85 per cent. of the population. The several states included in this union will be found marked with an asterisk (*) in the preceding Table, page 1078.—(Conversations Lexicon. *Beyersche Lander u. Völkerkunde. Wiener Almanach. Almanach de Gotha. Annual Register*.)

GERMERSHEIM (anc. *Vicus Julius*) s. to Bavaria, emp. can. of same name, near the confluence of the Quedlin with the Rhine, here crossed by a bridge of boats, 40 m. N. Carlsruhe. It is a place of considerable strength being surrounded with strong walls on the land side, and otherwise fortified in the rest of a court, justice and several public offices contain a Protestant and a R. Catholic parish church, and a ruinous old castle, in which the Emperor Rudolf of Hapsburg died and has some shipping trade, chiefly in corn hemp, and flax and a fishery. Pop. can 21,567.

GERMOE par Eng. Cornwall 1287 ac. Pop. 970
GERNONSTOWN two pars Irel.—1 Louch 1809 ac. Pop. 1093.—2 Mueh 2888 ac. Pop. 682

GERRODE, s. to Germany Anhalt-Bernburg, emp. head of same name, on the Harzgebirge, 28 m. W. S. W. Bernburg. It contains two churches and an hospital and has manufactures of fire-arms a trade in cattle, several mills and an annual fair. Pop. 2193.

GERRSRACH s. to Baden, circle Middle Rhine 1 bank Rhine 16 m. S. Carlsruhe. It consists of the town proper and two suburbs. It well built, has a market-place, and numerous saw-mills, employed in cutting up the trees of the Black Forest, preparatory to their exportation to Holland. P. 2265.

GERRSHEIM s. to Hesse-Darmstadt, prov. Starkenburg in a country and immediate district, s. bank Rhine, 10 m. S. W. Darmstadt. It is walled has a handsome parish church a townhouse, and a monument to Peter Schöffer who was born here some shipping trade, a much frequented weekly market, a trade in cattle, and three annual fairs. Pop. 2843.

GEROLSTEIN s. v. Rhinland Prussia, gov. of and 25 m. N. Treves, picturesque situated 1 bank Kyll, in a valley hemmed in by cliffs often precipitous, and seriously chafed. It contains a parish church and the ruins of an old castle, and has a mineral spring, which was known to the Romans a trade in cattle, and three annual fairs. In the vicinity limestone is quarried and iron mined. Pop. 720.

GEROLZHOFFEN s. to Bavaria, circle Lower Franconia 28 m. N. E. Würzburg. It is walled has a church, chapel townhouse, hospital, and poorhouse a trade in cattle, a gypsum quarry numerous mills, a weekly market, and several annual fairs. The hop and the vine are much cultivated in the vicinity. Pop. 2160.

GERONA, a maritime prov. Spain Catalonia, bounded, N. by France, E. and S. E. by the Mediterranean, S. and S. W.

by Barcelona, and W. by Lerida between lat. 42° 29' N. and 43° 31' N. and between lon. 1° 29' and 2° 30' E. Area, 4400 sq. m. The surface is mountainous, branches of the Pyrenees ramifying throughout its whole extent, for the most part rugged bare, and precipitous, near their summits, but well wooded lower down and forming numerous fertile valleys and verdant slopes in many places clothed with vineyards and olive plantations and yielding also wheat, rye, barley oats, hemp, and all kinds of fruits and vegetables. Sheep goats, horned cattle, horses, and mules, are also reared, and game is abundant. The mineral wealth consists chiefly in a few mines of iron, lead, and coal. The province is watered by the rivers Ter Fluvia, Murrer Muga, and several smaller streams; all of which fall into the Mediterranean. Its climate is cold, damp, and ferocious. N. W. winds are frequent, though the valleys are well sheltered. Many features of limited extent—linen, woolen and cotton fabrics, ropes, paper soap, leather cork hark, earthenware hard ware &c. Trade—in raw manufactured goods, agricultural produce wine, oil and cattle. The inhabitants are chiefly engaged in agriculture, rearing cattle, and along the coast in shipbuilding fishing and as mariners. Capital Gerona. Pop. (1844) 184,688.

GERONA (anc. *Gerdunda*) a city Spain, Catalonia, cap. of above prov. 58 m. N. E. Barcelona, on the sides and base of two hills, at the confluence of the Ter and Olla the latter crossed here by two bridges lat. (authedral) 41° 59' 11" N. lon. 2° 49' 45" E. (1.) In shape the city is nearly triangular partly surrounded by walls protected by bastions, and surrounded by a strong square fort called Montauban occupying the summit of the most N. hill and a see the war of independence, its only available out work. Most of the principal streets are spacious, clean, and well paved and the houses substantially built. It has three considerable squares, in the largest of which amongst other handsome edifices, are the town and session houses. The cathedral erected in 1416, is a majestic pile and for solidity and strength combined with delicacy of detail deservedly ranks among the finest churches in Spain. It is built on an eminence and is approached by a superb flight of 88 steps. Connected with the cloisters is a noble old Roman tower. The collegiate of San Felix, a fine erection of the 14th century is remarkable for the height and elegance of its spire within, it is composed of three naves, all sided by pillars, and tastefully adorned in the Gothic style. Of the many other churches, the greater portion are conventional, and possess more or less architectural merit. Gerona once completed 12 convents since the suppression, however four only remain as such the remainder having been adapted to secular purposes and converted into schools barracks, manufactories &c. The remaining public buildings are two hospitals, a theatre, college, numerous schools, and other philanthropic institutions. The piazzas which line the principal squares are used as promenades besides which, there are in the environs along the banks of the Olla and Ter various agreeable public walks, planted with trees. Many theatres—linen and woolen fabrics, paper soap, earthen ware, hardware, &c. Trade—grain fruits, and manufactured goods. An annual fair is held in October. Gerona was the bishopric in the latter end of the 8th century. In the Middle Ages, it was frequently the scene of military operations, and sustained various sieges but the most memorable defence of the city was that against the French in 1809 when, animated by the heroic example of their governor Mariano Alvarez, they successfully resisted their besiegers for seven months and five days, and were only compelled to capitulate by the loss of their leader who became damaged under the united pressure of hunger fatigue, and anxiety. The French lost from 15,000 to 16,000 men. Pop. 8177.—(Maclea.)

GERONIMO (SAR) de Yca, in Peru. See Yca.
GERREANS, or GERREANZ, par Eng. Cornwall 2870 ac. Pop. 888

GERRESHEIM, s. to Rhinland Prussia gov. of and 5 m. E. Düsseldorf in a fertile valley. It has a handsome parish church, of the 12th century a convent, from which, in 1562, Count Guehard of Truchsess-Waldburg archbishop of Cologne, earned off the beautiful Crossens Abbey of Maastricht a distillery a trade in cattle, and six annual fairs. Pop. 1866.
GERRON or GARNOR a headland, N. E. coast Ireland, co. Antrim, between Glenarm and Red Bays 6 m. N. Glenarm

GERE [ana. *Aggeres*] a small river France, rising in dep. Haute-Pyrénées 30 m. E. by E Tarbes, it flows N across dep. Gers, to which it gives its name and falls into the Garonne, about 4 m. S. E. Agas. Total course, 82 m.

GERE, a dep. France, bounded N by Lot-et-Garonne, N. E. Tarn-et-Garonne, E. and N. E. Haute-Garonne, S. Hautes-Pyrénées, S. W. Basses-Pyrénées and W. Landes between lat. 43° 16' and 44° 5' N. and lon. 6° 18' W., and 1° 10' E. greatest length E. to W. 73 m. greatest breadth 56 m. area, 3420 sq. m. The surface is mountainous, particularly in the S. where it is almost covered by ramifications of the 1 Pyrenees. These stretch nearly in parallel lines from S. to N. lowering fast in the latter direction, and leaving between them a number of longitudinal valleys, each drained by its peculiar stream. The far greater part of the department belongs to the basin of the Garonne but in the W. a branch of the Pyrenean forms a separate watershed sending the waters on its E. side into the basin of the Garonne and those on its W. side into that of the Adour. The principal affluents of the former basin are the Save, Gimone, Rats, Gers, which gives the department its name the Baïse alone not navigable, and the lower of the latter basin the Douze, Midou, and Arros. The climate is temperate and the soil very fertile and salubrious. But owing to the proximity of the Pyrenees the cold is often greater than the latitude might seem to indicate. Still, as none of the heights with in the department exceed 1200 ft. the influence of the mountains is more perceptible in a general modification of the temperature than in more immediate results. Snow is rare, and frost scarcely ever lasts beyond 20 days but the winds are very inconstant and being frequently accompanied with heavy rains and storms of hail, cause serious damage. Mists also often occur when the year is advanced and midway the crops. Rather more than $\frac{1}{2}$ of the whole surface is arable $\frac{1}{4}$ in vineyards $\frac{1}{4}$ in permanent meadows and nearly as much under wood. The waste land is less than $\frac{1}{10}$. The soil is only of medium fertility but is tolerably well cultivated, producing grain which after satisfying the home consumption leaves a surplus for export. The principal crops, besides the ordinary cereals, are maize and fax. Omeas also, are cultivated on a large scale fruit is rather scarce. Owing to the large extent of surface under the culture of the vine, the produce is necessarily large but the wines produced of which the chief are of the 1 and 2 Maures the best, are only of ordinary quality. Of the 19,000,000 of gallons produced, about 8,000,000 are consumed on the spot and the far greater part of the remainder converted into brandy known by the name of Armagnac. The surplus left for export is very small. The pastures are not good, and the cattle reared upon them are neither numerous nor of good breeds. The only stock to which much attention is paid is swine and swine the former furnishing a considerable export to Spain. Among the forests are several from which excellent timber is obtained. Game and fish abound and poultry particularly ducks and geese are reared on an extensive scale. The legs and thighs of the latter are salted and form a considerable article of export. The minerals are of little consequence. Not one workable seam of coal is found but there are good quarries of gypsum and large masses of a fume spar much used in making glass. The only manufactures of any consequence is that of brandy distilleries of which are found in every quarter. The trade is chiefly in brandy wine, corn flour, poultry mules, and swine. Gers is divided into five arrondissements—Auch, the capital Condom, Lectoure, Lombez, Mirande subdivided into 23 cantons. 467 communes. Pop. 314,895.

GERBAU a vil. and par. Switzerland, can. of and 7 m. W. R. W. Schwyz, beautifully situated N. shore. Lake Lucerne, embosomed among orchards, and in a manner isolated from the world by the precipices of the Rigi. It has a new parish church, a small but handsome townhouse, some manufactures of silk and a trade in cattle and cheese, large plantations of which ascend far up the surrounding slopes. German, with the small district around it, formed an independent state for four centuries, but was not incorporated with Schwyz till 1798.

GERHELD 361

GERHELD a market in Bavaria, circle Lower Franconia, beautifully situated above the Rhine, near the Fulda, here crossed by a bridge 46 m. N. Würzburg. It contains a Protestant parish church, two castles, an endowment for

noble ladies and an orphan hospital; and has numerous mills, and beds of fine pottery clay. Pop. 1639.

GERSTUNGEN a vil. Saxt-Walmar circle of, and 11 m. W. Elmshorn, on the Werra, here crossed by a bridge. It is an ancient place; is the seat of a court of justice and has four important annual fairs. An imperial diet was held here in 1065. Pop. 1465

GERVAIS (St.) several places, France, particularly—1. A small to. France, dep. Herault, 25 m. N. by W. Béziers, in a narrow but well-watered valley and remarkable only for six coal-mines in its environs. Pop. 1874.—2. A vil. and com. France, dep. Puy-de-Dôme, 18 m. N. W. Riom. It has a trade in cattle and three annual fairs. Pop. 5670.—3. A vil. Sarthe, France, dep. Mayenne, 35 m. S. E. Gennes, with much-frequented warm mineral springs and situated amidst most picturesque scenery.

GERZAT a vil. France, dep. Puy-de-Dôme, 5 m. N. E. Clermont-Ferrand on the Beda. It once formed a seignory of the house of Bourbon. Pop. 3718.

GERZEN or **GERZENAU**, a vil. and par. Switzerland, can. of, and 9 m. S. S. E. Bern, on a small lake of same name to the vicinity of magnificent mountain scenery. Among the most conspicuous objects are the cone of the Niesen, and the mural precipices of the Stockhorn. It is surrounded by fine vines and contains a parish church, and an old and a new castle. At a short distance is the bathing establishment of Thalwil. 1 op 808

GERZENKE, a tn. Rheinland Prussia, gov. and 27 m. N. E. Arnberg, a station on the Westphalian railway. It is the seat of a court of justice has five R. Catholic churches and chapels a synagogue, manufacture of linen and earthenware, a trade in cattle, and three annual fairs. Pop. 3814.

GERZICH a lake, Prussia, partly in S. and partly in W. Prussia gov. Marienwerder. It stretches N. to S. between Neufeldt and Rylen 18 m. has a mean breadth of less than 2 m., and discharges itself by a small stream into the Drewena.

GESPUNART a vil. France, dep. Ardennes, 6 m. N. E. Metz, on the Niedmont. It has four annual fairs. P. 1918

GESO-PALFNA a tn. and com. Naples, prov. Abruzzo Chira, 10 m. S. W. Lanciano. It contains three churches and two convents and has two annual fairs, each of which lasts eight days. Pop. 898

GESTEL commonly **GESTELLEN FELDHOVEN** a vil. Hol land, prov. N. Brabant, 2 m. W. S. W. Eindhoven, with a R. Catholic church and a school. The inhabitants are chiefly agricultural, but among them are many artisans and weavers and formerly the place was famed for its fine linen, which were sent to Italy and Spain but this branch of trade no longer exists here. Pop. 1019

GESTINGTHOIR a tn. prov. Eng. Essex 2030 ac. P. 819

GESTRIKLAND or **GERIKLAND**, a former prov. Sweden forming now the S. part of Gafseberg's län.

GESTURI a vil. sd. Sardinia, day of and about 28 m. N. W. Cagliari. In a fertile district, with a richly decorated and several minor churches, a primary school, and almshouse. Pop. 1779

GESUADO a to. to Naples, prov. Principato Ultra, 31 m. S. W. Frigento. Pop. 4000

GIFTAFE, a vil. Spain New Castle, prov. of, and 8 m. S. Madrid. It is ill built has irregular streets, a square, a parish church, five chapels, a townhouse prison, college, and some primary schools. Manufactures—linen and coarse cloth, wine, and oil Trade—manufactured goods, agricultural produce hardware, earthenware, &c. Pop. 5494

GETTSBURGH a tn. U. States, Pennsylvania, on an eminence, 85 m. E. W. M. Harrisburg. It has a court-house, a jail, county offices, an academy, a bank, six churches, a Lutheran theological seminary established in 1826 and extensive manufactures of carriages, two tanneries, &c. P. 1906

GEULLE, a stream, Holland rising in Eindhoven Prussia, about 5 m. S. Aix-la-Chapelle, and flowing generally N. W., traversing Dutch Limburg and falling into the Meuse, 5 m. N. N. E. Maastrecht. Total course about 53 m.

GEVAUDAN [Latin, *Gauldania*] a territory France, once part of the former prov. Languedoc, can. of, and 10 m. S. W. Montpellier, in the dep. Hérault, near the Lézard. It is now comprehended in the dep. Hérault and Lézard.

GEWITSCH [Maravia, *Gomaba*] a to. Moravia, cir. and 24 m. W. Olmutz. It has a parish church and a townhouse; and suffered much during the Hussite wars. Pop. 3006.

GEX (anc. *Geshen*) a small tn. France, dep. Ain, on the Jura. lat. 46° 11' N. W. Geneva, at the foot of the French Jura, on the Swiss side, and composed chiefly of one long and steep street. Flocks of marmos sheep are bred in the district which is also rich in vines much Gephyre and goats cheese is made here. Gex was once fortified, and was capital of a considerable territory to which it gave name. Pop. 1855.

GEYER, a taxony circle Zwickau, in a mountainous but well-wooded district, 48 m. S.W. Dresden. It contains a town house, and an ancient church with fine carvings and lofty tower, one of which has a remarkably large bell and manufactures of lace, and embroidery a large cotton-mill, smelting furnaces for tin, which is extensively worked in the vicinity, a trade in cattle, and two annual fairs. Pop. 3787.

GEYSERS, or **GEYSERS**, see **ICELAND**.

GHADAMES, or **GADAMES**, a tn. N. Africa in Oasis of same name, Desert of Sahara, regency of, and 210 m. S.E. W. Tripoli lat. 30° 45' N. lon. 8° 24' 30" E. It is surrounded with ruined walls composed mostly of sun-dried bricks houses generally three and four stories in height, built in the Arabian style streets narrow and winding covered in, and dark having only small open spaces here and there to admit the light they are thus constructed to exclude the summer heats, and the rigorous blasts of winter. The principal streets and squares are lined with stone benches, as seats, for the accommodation of the inhabitants. The population is mixed but is chiefly composed of Arabs, Moors, and Negroes. The better class of women rarely go abroad, spending nearly all their time on the flat roofs of their houses though not beautiful their figures are handsome, and their manners gentle and pleasing. Their principal occupation is weaving woollens equally for the use of their families, and partly for sale. The people are of peaceful and inoffensive dispositions extremely devout, and entertain the greatest horror of violence and bloodshed. There are a few rich merchants in the town, but the greater portion of the inhabitants are exceedingly poor still a good deal of traffic is carried on through Ghadames between the coast towns and the interior of Africa. There being no herbage for miles around, the camels must be driven to a distance of two or three days journey. Pop. about 3000. — (Barbary's Desert of Sahara).

GHARA or **GARA** — A river Panjab, being the name by which the united streams of the Beas and Sutlej is known from their confluence near Ferozpur to the junction with the Chenab. The length of course between these two points is about 800 m. It is remarkably direct in the general course, which is E.W. but tortuous at short intervals. Its breadth at Hareke a little below the junction by which it is formed, is 375 yds. at the lowest season and 12 ft. deep running at the rate of 22 m. an hour — A vil. Beaside, N.W. border of the Delta of the Indus and 25 m. from its r. bank lat. 34° 44' N. lon. 67° 56' E. — A small stream in Beaside flowing past the village of the same name, and falling into a long creek opening into the Indian Ocean 10 m. E. Kurrachee; lat. 34° 46' N. lon. 67° 10' E.

GHARMY a vil. Egypt, in the Libyan Desert, a few hours ride from Khiva on the summit of a lofty precipitous rock the houses hanging over and rising high above each other. Close by this village stand the ruins of one of the celebrated temples of the Egyptian Empire. Justinus Ammon the only other existing temple dedicated to that deity being at Karak. Two or three gateways, several fragments of the shafts of columns, a chamber or two, and some walls, are nearly all that now remain of the temple. The gateways and chambers are covered with hieroglyphics. The temple stands on a slightly elevated platform of rock, in the centre of an open glade. From its ruinous condition no idea of the plan of the building can be formed; but, from the vast size of the stones employed as well as from other indications, it would appear to have been a very imposing structure. Various other remains of antiquity are to be met with in the vicinity of Gharmy. — (B. St. John's *Adventures in the Libyan Desert*).

GHARSA, or **GATARA** a tn. Boonaa, r. bank Tchin-tchin river cap of a district lat. 27° 56' N. lon. 89° 18' E. It is a little way S.W. of Mount Chamarai.

GHAT an oasis and tn. in the Sahara, or Great Desert of N. Africa, W. of the S. extremity of Focana lat. 34° 56' N. lon. 11° 15' E. The oasis is comprehended within a circle of not more than three or four miles. The palms it produces are

dwarfish, and half of them do not bear fruit and their dates are of the most ordinary kind. In the gardens besides the palms, a little wheat, barley and grain are cultivated. There are also some fruit-trees, but no roses. The towns, which stand on a hill, is small and the houses are wretched, both within and without they are nearly all built of sun-dried bricks and mud. In the centre of the town is a large square, called Kesh-Bellay the general rendezvous of business and gossip. Two or three palms within the town cast a grateful shadow and make an angle of the street picturesque but no other trees are seen. On the S. without the walls, is a suburb of some fifty mud and stone houses. There are also scattered over the sand on the W. a hundred or more huts made of straw and palm branches. The town is surrounded with walls not more than 10 ft. high but the gates of which there are six are mutually weak, and never so closed as to prevent their being opened at night. All the doors and beams of the houses are of the date-palm wood. Ghât is a great mart for slaves, which are chiefly exchanged for goods.

GHATIS (THE) two ranges of mountains in the penin. near India called the Eastern and Western Ghats the former bounding the table-land of the Deccan, on the E., the latter on the W. They are in general composed of granite, and also contain a quantity of mica. The W. Ghats extend from Cape Comorin on the S. to the Tapti or Tapi river on the N. or about lat. 21° N. a distance of about 1000 m. nearly parallel to the coast, which if approached much more closely than the E. Ghats, the distance not often exceeding 50 m. The range varies considerably in elevation the highest peaks being estimated at 6000 ft. Their width is inordinately rarely exceeding 12 m. With exception of a few places where the rocky masses are too steep to permit any accumulation of soil they are covered with stately forests of teak, oak, and other large timber. Bamboos and the ground rattan also abound here and attain a size which they reach nowhere else. A great deal of beautiful and highly picturesque scenery occurs in these mountains enhanced by numerous magnificent waterfalls. One at Chikm, N. from Poona, is about 1400 ft. high. The E. Ghats commence in the S., about lat. 11° 30' N. to the N. of the Cavery and extend, with little interruption or comparative deviation, on a straight line to the banks of the Kistnah lat. 16° 30' N. separating the low and level country along the Bay of Bengal from the table-land in the interior. They consist of a number of mountain ridges running parallel to one another in their general direction. Their exact height has not been ascertained but they are known to be of considerably less elevation than the W. Ghats the highest summits not exceeding, it is supposed 4000 ft. Their average breadth is about 50 m. They have none of the picturesque beauty of the W. Ghats their surface being very stony dry and exceedingly barren and nearly destitute of trees with exception of a few tracts covered with wild dates. The E. Ghats are in some parts rich in metals iron is very abundant, and copper and lead are worked in several places and diamonds are occasionally found.

GHAZIPOOR, or **GHAKKHOOR** a tn. Hindustan, dist. of same name presid. Bengal prov. of Bengal, pop. 48 m. N.E. Behar lat. 25° 32' N. lon. 85° 32' E. and celebrated over all India for its sublimity. Its position is somewhat elevated above the surrounding country but the town proper is a mean appearance, being principally composed of ruined houses and ghatts, and mud-outcrops fringing the river for about 8 m. with a breadth of not more than ½ m. The only edifice worthy of notice—and that also in ruins—as a building at the E. end of the town overlooking the Ganges, erected by the Nawab Saadat Ali, and now used as a custom-house. It is called the Chakroostom (palace of the 40 pillars) and is built on a basement story of great height rising from the river. It is approached from the town by a handsome Gothic gateway still in tolerable repair the blue, red, and white mosaic pavement is partly entire, and many of the pillars are still remaining. The enclosure, about a mile N. of the town stands on a large plain, and has a neat appearance, the bungalows being laid out in streets, with large compound round each. On a plain near the enclosure is a monument erected to the memory of Lord Cornwallis, who died here in 1805, while on his way to the upper

provinces. The jail is clean and airy, the barracks neat, and well supplied. The E. I. Company have a breeding stud here, where very superior horses are raised for the cavalry. The DISTRICT area, 1850 ges. sq. m., bounded N. and E.

THE CHATEAUFORT PALACE, GHAZIPUR.—From an original drawing by Capt. R. Smith, 1860.

by the Ganges S. by the Ganges, and W. by the Jumna is celebrated for its rice-water and sugar. For the production of which large fields of rice, extending over many hundreds of acres, are cultivated. It is also noted for its snakes the cobra de capella being exceedingly numerous and troublesome. Pop. 1,059,087 or 641 to the geo. sq. m.

(GHEDI) a vil and com Italy Lombardy prov Brescia 5 m. E. Bagno; a plain near the Naviglio. It contains a parish and three auxiliary churches a castle and a school and has a weekly market. Pop. 3193.

(GHEEL, or Genta, a vil and com. Belgium prov of, and 24 m. E. by S. Antwerp 14 m. S. Turnhout on the Grooten Retha. It has four churches manufacturers of cloth, hats wax and tallow candles &c. tanneries, dyeworks, ropeworks &c. and a considerable trade in butter. The community is remarkable for being a colony of deranged persons, who are lodged and boarded in the houses of the country people, who make use of their services, when a suitable, in field and other labor. Little or no restraint is employed, and the best effects thence ensue. Patients are sent hither from all parts of Belgium. In 1841 the number of lunatics residing here were 869 males, and 370 females. P. p. 7079.

(GHEESAN) a tr. Arabia, on the Red Sea, 84 m. N. W. Lolala lat. 16 45 N. lon. 42 30 E. It has a few square stone buildings, but the principal part of it consists of grass huts, which are mostly round, with pyramidal tops, a large fort, greatly decayed and a small harbor scarcely supplied. Water is very scarce. The inhabitants are chiefly employed in the pearl fishery &c. on the neighboring banks.

(GHELENDJIK) a bay and seaport, Circassia N. E. coast of Black Sea lat. (ord) 44 33' 24" N. lon. 38° 3' 15" E. (a) The bay is about 1 m. wide at the entrance, with 7 and 7½ fathoms water in the middle. It affords good anchorage. The harbor is of an oval form about 8 m. long N. W. to S. E. and 1½ m. broad.

(GHIL) (Wib.) a vil and com. Belgium, prov W. Flanders, 23 m. S. by W. Bruges with breweries and vinegar-works, oil mills, and manufactures of thread and starch, and a trade in tobacco and wax. Pop. 3339.

(GHENNE) (Latin, Apennine) a vil and com. Italy Piedmont, div and 14 m. N. W. Novara near the Sesia. It contains two churches, one of them a large and beautiful structure adorned with paintings frescoes and granite sculpture, and surrounded by a tower and has manufactures of cotton cards and musical strings a trade in wine a weekly market, and a much-frequented annual fair. Pop. 2996.

(GHENNE) city Krypt. See KRYEN.
(GHENT) (French Gend. Flemish Gend. Latin Gend.) a tr. Belgium, cap. prov F. Flanders, in a fertile plain at the confluence of the Lys with the Scheldt on the Turnhout canal, which communicates with the sea, and admits vessels drawing 15 ft. and on the railway from Ostend to Brussels, 81 m. N. W. Brussels. It occupies a triangular space, above 6 m. in circuit, is surrounded by walls defended by a strong citadel and entered by seven gates. In the interior the most striking feature is the great number of canals which branch off from the Lys in all directions and forming a kind of net-work within the town divide it into 36 islands, communicating with each other by 42 large and 46 small bridges. Another striking feature is the number of fine promenades of which the most remarkable is the Coupure, formed by rows of trees along the Bruges canal. The town is on the whole well built. In some of the older parts where many of the houses have gable fronts, which rise tier above tier and present a very fantastic appearance, the streets are often dark, and so narrow, that two carriages can scarcely pass; but in the other quarters, the streets are in general straight and spacious, with rows of handsome houses forming canals enclosed by magnificent quays and there are a great number of squares among which the most deserving of notice are the Marché-du-Vendredi where the weekly market is held and where, in early times the Counts of Flanders were inaugurated and the trades unions used to rendezvous the Count or parade, planted with lime trees, and surrounded by elegant edifices the Place de St. Pierre a large space used especially for reviews and military exercises the corn-market, near the centre of the town; the Place St. Fiercée, where the gate of the castle

THE PLACE DE FIERCÉE, AND GATEWAY OF THE OLD CASTLE OF THE DUCHY OF FLANDERS, GHENT.—From the Penitence & Co.

of the Counts of Flanders still stands and the Place des Recoillets, remarkable for the number of its fine mansions and hotels. Before leaving the squares it may be proper to mention that near the Marché-du-Vendredi, there is an enormous cannon 18 ft. long 10 ft. in circuit, and nearly 3 ft. wide at its mouth evidently a prototype or twin-sister of the famous Mons Meg now in Edinburgh Castle; formed, like her of circles and bars of iron, and strewed Duile Grise, equivalent in Flemish to Mad Margaret.

The principal buildings are the cathedral of St. Bavo a vast structure, somewhat heavy in its exterior but within finely proportioned and richly decorated, possessed of a large crypt, a beautifully carved pulpit, many interesting monuments and fine paintings, and surmounted by an elegant tower 272 ft. high the church of St. Nicolas, the oldest in Ghent.

has somewhat defaced by a modern portico; the church of St. Michael, with a colonnade designed by V. Ghyly, which has been almost destroyed by slanting; the church of St. Pierre, with a beautiful dome, and a facade adorned with corinthian columns; the University a handsome modern structure finished in 1886, with a noble Corinthian portico, modelled on the Pantheon at Rome, a museum of natural history a library of 80,000 volumes, and an attendance of about 800 students; the Hotel-de-Ville composed of two distinct ones, the one of the 17th century combining three orders of architecture, and the other of the 19th century of Louis XVI; the Hotel-de-Ville (custom-house) decorated with doric and corinthian pilasters; the beffroi (belfry) a lofty square tower surmounted by a gilded dragon and containing a fine chime, a clock and several bells, one of which weighs nearly five tons; the new Palais-de-Justice, a handsome structure, intended both to accommodate the courts of law and serve as an exchange; the Maison-de-Force (house of correction) an immense octagonal building the Beguinage, a large nursery surrounded by a wall and moat, and occupied by about 600 inmates, who are sent to be borned by any poor and to employ themselves in works of charity within the town, to which they have free access; the new theatre, on which the municipality are said to have expended £100,000; the Jardin-des-Plantes (botanic garden) boasted of as the finest in Belgium; the general hospital; the post-office, &c. Ghent is the seat of a bishop and the seat of courts of primary resort and commerce of a superior appeal court for both E. and W. Flanders, and of a court of assize and possession, besides the university already mentioned, an atheism episcopal university, a ministerial school academy of painting sculpture, and architecture, a superior primary school, a life, literary and musical societies, a deaf and dumb institution, a lunatic asylum, and a school for the blind, and to be one of the most useful associations of the town and has for its object the legitimization of natural children.

The extent to which the cotton manufacture is carried on in Ghent, has procured it the surname of the Belgian Manchester. It absorbs about £1,600,000 of capital, gives employment to 80,000 workmen and produces about a million of pieces of calico, plain and printed. The other manufactures of importance are refined sugar combed and table linen, woollen cloth, flannel, serge silk lace, thread, ribbons, hosiery, wax-cloth, oil chemical products, armour, physical mathematical and surgical instruments, articles in steel, bronzes, and crystal, carriages, paper hats, delft ware, tobacco, blue starch &c. There are also extensive machine works, repairs, tanneries, breweries, and distilleries. The trade in corn, oil, seeds, wine, and Flemish linen—particularly the last, which has been one of its chief exports—is very important. Every Friday about 18,000 pieces of linen are exposed for sale, and several of the annual fairs are very numerously frequented.

The origin of Ghent is uncertain. It is first mentioned as a town in the 7th but does not appear to have acquired much importance till the 12th century when its fortifications were completed. At this time it only occupied the space contained between the Lys and the Scheldt but, by the end of the 13th century it was nearly as large as at present and to much larger than Paris then was, as to justify the long-sore long afterwards said by Charles V.—*Je mépris Paris sans mes Gens de Ghent*. In the bloody fight which agitated Flanders up to the middle of the 14th century Ghent took a leading but not always a successful part and repeatedly by the turbulence of its citizens provoked a fearful retribution. In 1389 when the county of Flanders passed by marriage to the house of Burgundy Ghent followed its fortunes, but shortly afterwards revolted and notwithstanding of severe reverses in one of which it lost 20,000 and in another 16,000 of its citizens, scarcely ceased to be prosperous. The spirit of revolt, however, was subdued, and Charles the Bold was peacefully crowned at Ghent in 1467. In 1500 Charles V. was born at Ghent, and 16 years after succeeded to the most extensive monarchy which had existed in Europe from the days of Charlemagne. The Gantois appear to have dreaded a coalition with such a power but at last, in 1567 when an extraordinary sedition was fomented, broke out in open resistance. Severe punishment soon followed, and the citizens, in addition to other enormous fines, were obliged to pay for the erection of a Citadel intended to keep them in bondage. Ghent afterwards

suffered much during the aggressions of Louis XIV. the occupation of Maximilian, and the commotions of the French revolution; but the advantages of its position and the industry of the citizens, seem to make it superior to all calamities and its prosperity is again as great as ever. Pop. 94,890.

GHIERZIN a maritime town Asiatic Turkey Anatolia, S. coast Black Sea, 16 m. S. by E. Europe. It has some little coasting trade. Pop. about 5000.

GHILAMIA, a town Tibet 110 m. E by N. Lassa. It contains two Bhedist temples of colossal proportions and is a station of a Chinese garrison; carries on a considerable trade in large hard deer horns, and rivets, with Lassa and with the Chinese provinces of Szechuen and Yunnan.

GHILAN a prov. Persia, S.W. shore of the Caspian Sea, bounded N.E. by the latter E. and S.E. by prov. Mazandaran S. by Irak Ajemi N. by Russia, and W. by prov. Azerbaidjan length, 170 m. breadth about 50 m. The general aspect of this province presents a striking contrast to the high peaked plains of Persia, being covered with lofty mountains and magnificent woods although in many parts swampy and unhealthy especially along the shores of the Caspian where the people lose the fresh color of the upper land and look sallow and less athletic. The climate, also, is insubstantial, being extremely damp a greater quantity of rain falling here than in any other of the Caspian provinces, while the mountains are rarely wholly free from snow. A singular hot S.W. wind sometimes springs up, suddenly changing the temperature in a remarkable manner it generally lasts 24 hours, and is followed by a tempest of snow and rain from the N.E. The only grain grown on the plains is rice which, requiring the fields to be constantly under water, renders these parts of the country still more unwholesome. Cotton will not grow and the fruits have an acid and harsh taste. Sugar-cane and orange-trees which abound in the neighbouring provinces, Mazandaran are here cultivated as ornamental plants only. The cattle are small and humped. There exists in Gilian however a wealthy class of land proprietors and the people are well lodged clothed and fed. There are few or no villages, the peasants residing either in single dwellings or small communities, seldom exceeding eight houses. The coast presents a succession of five bays. Capital, Rasht.

GHILJI one of the most numerous and powerful of the Afghan tribes. See AFGHANISTAN.

GHIO a town Asiatic Turkey See KASTAMUN.

GHIR, GHER, or RAP-APPEST a cape, Morocco, on the Atlantic, 65 m. S.W. Mogador lat. 50° 57' 30" N. lon. 9° 58' 30" W. Its highest part is 1235 ft. above the sea.

GHIRLAZZA a vil. in Sardinia, div. and 46 m. N. by W. Cagliari on the elevated plain of Marghina. It has a parish and several minor churches a primary school, and an ancient tower manufacturer of coarse woollens and table covers a trade in wine cattle, skins and cheese and an annual fair. Pop. 2200.

GHIRAI DA a vil. and com. Italy Lombardy prov. Bergamo dist. of 3 m. from Martinengo in a plain on the Serio. It was once fortified and the gates and part of the fortifications, including the walls and towers of a castle which figured during the civil wars, still remain. It has a handsome parish church in the form of a round tower, two auxiliary churches, an almshouse, 456 workshops and houses. Pop. 1874.

GHIRLAIN (St.) a small town Belgium prov. Walloon 6 m. W. by S. Mons near the railway to Valenciennes with a great trade in coals soap-works salt refineries, oil-mills, breweries, bleacheries, a bootbuilding yard, &c. It originated in a monastery founded by Dagobert, in 653. Pop. 1896.

GHISTELLE, a vil. and com. Belgium prov. W. Flanders, 6 m. S. by E. Oostend. It has manufactures of cordage, tanneries, breweries, oil, and flour mills &c. P. 3864.

GHISTEN-DIL a town Turkey in Europe 988 m. W. N.W. Adrianople lat. 42° 19' N. lon. 22° 57' E. capital of same name. It is the seat of a Greek bishop and has some square towers, and warm sulphureous springs. Pop. 10,000.

GHIZEH GHAUS or GHEEN a town Middle Egypt, 1 bank Nile, about 4 m. S.W. by Cairo. It was formerly an important place, much frequented by merchants, and a city beautified by palaces but now it is a heap of ruins around which a mere village is built, having a few cattle and ruined

houses. Eggs have been hatched here by artificial means since the time of the Pharaohs. In its immediate vicinity are the pyramids which have been named from it, though they are continued southwards, at varying intervals of distance, for nearly 10 m. Those close to Ghizah are principally 5 or 6. As they are all formed nearly on the same plan, a short description of the largest, called the Great Pyramid or Pyramid of Cheops, may suffice for all. It stands on a limestone plateau connected with the Libyan chain, about 160 ft. above the level of the Nile. Its base forms a square, each side of which was originally 744 ft., though now by the removal of a cutting reduced to 746 ft. and contains nearly 18 acres. It is built in platform which successively diminish in ascending till, at the summit, the platform contains only 1067 sq ft. The whole height is 456 ft. and the series of platforms present a succession of 203 steps, up which the ascent is made without difficulty. The interior entered 474 ft. above the base of the N. face, contains numerous chambers; one of which called the King's Chamber is 34½ ft. long 17 wide, and 19½ high, and contains a sarcophagus of red granite. The whole pyramid unquestionably the most stupendous mass of stone building ever put together by the hand of man, is said by Herodotus to have employed 100,000 men for 30 years, and its solid contents have been computed at 85,000,000 cubic feet. Another very remarkable work in the same vicinity is the Sphinx, an immense colossal figure cut out of the solid rock.

GHIZNI in Afghanistan. See GHURKHE.

GILIN a vil. and com. Belgrum prov. Hainaut, 8 m. W. Mons, with a large glass-work, and productive quarry of paving-stones, lime-works, &c. Pop. 2917.

GHOJAM SWAN KA KOT, a small but thriving town, Scinde, r. bank, W. branch of the Indus lat. 24° 39' N. lon. 67° 41' E. The surrounding country is well cultivated and productive especially of sugar cane.

GHOZAKA a vil. Persia, prov. Khorasan 14 m. E. Meshed, perpetually harassed in the forays of the Turcomans. Pop. 1000.

GHOEGHALI a tu. Hindostan prov. Bengal, r. bank, Teesta lat. 25° 15' N. lon. 89° 10' E. 1½ m. N. N. F. Calcutta. The most remarkable monument existing among the extensive ruins here is the tomb of Imad Ghazi Khan the first conqueror of the district.

GHORA TRUI a vil. Afghanistan, r. bank, Indus 11 m. S. W. Attock lat. 33° 48' N. lon. 72° 57' E. There is here a very dangerous rapid resulting from the lateral contraction of the high and rocky sides of the river which is here narrowed to a width of only 250 ft. Through this narrow channel the Indus rushes at the rate of 9 to 10 m. an hour and with the noise of thunder.

GHOEBUND a vil. N. Afghanistan, 30 m. N. Cabool lat. 35° 4' N. lon. 68° 47' E. in a gorge on the S. slope of the Hindu Kush surrounded with fine gardens and orchards. It gives name to the beautiful & fertile valley in which it is situated. The latter is covered with multitudes of fragrant shrubs and flowers, with a great variety of tulips. It also abounds in minerals including lead ore, iron lapis lazuli and antimony. There are also veins of silver.

GHORE, a tu. W. Afghanistan, 80 m. N. N. E. Doonhak lat. 33° 58' N. lon. 65° 31' E. It is now an insignificant place, but was at one time the capital of sovereigns whose power extended over Khorasan, Afghanistan, Scinde, and Lahore. Ghore is supposed to have been one of the earliest seats of the Afghan race.

GHORE a vil. and com. Belgrum prov. Hainaut, 27 m. N. E. Tournai with breweries, and manufactory of linens, and shawls. Pop. 2314.

GILIMOURDJINA or **KHOSROUDJINA**, a tu. European Turkey 78 m. S. W. Adrianople, near the coast of the Archipelago and defended by a castle. Pop. 8000.

GHUNPORE, a tu. Hindostan Nizam's dominions, prov. of and 60 m. S. S. W. Hyderabad lat. 16° 33' N. lon. 78° 57' E. It is a fortified hill and contains one of the largest and finest mosques in the Nizam's possessions now however mostly used by travellers as a choultry.

GHURUN a tu. Asiatic Turkey prov. March 30 m. W. Malatiah in a deep narrow valley. The town contains 1770 inhabitants, who are engaged in trade with the migratory tribes of Turcomans and Kurds.

GHURRY a considerable vil. Scinde, on the route from Rohar to Jeddah lat. 27° 31' N. lon. 69° 7' E. It contains a considerable number of shops, and is capable of furnishing supplies in moderate quantity.

GHUZEL-HISSAR, a city Anatolia. See **ANIZ**.

GHUZNEE, or **GUCUR**, an ancient and celebrated city and fortress Afghanistan, 60 m. S. S. W. Cabool lat. 33° 10' N. lon. 68° 57' E. r. bank, and near the source of the Logar on an eminence forming the W. extremity of a range of hills, stretching E. and W. 7736 ft. above sea-level. The city contains about 1500 houses, usually two stories high, and is surrounded by walls, formed of mixed masonry and brick work, carried along the steep the entire length of the spur of the hill on which it stands. The walls are strengthened with numerous bastions and a trench surrounds the whole. The citadel which is towards the N., occupies an eminence overlooking the town, and presents a very imposing appearance, but lying in ruin commanded by the neighbouring hills, is not so formidable as it looks. There are four bastions in the city but of a very inferior description being covered merely

THE FORTRESS AND CITADEL OF GHUZNEE.—From Atherton's Travels in Afghanistan.

with mats and wood. In consequence of the elevated position of Ghuznee, the cold is intense in winter causing the mercury to fall from 10° to 20° below zero and freezing the streams and pools to the depth of several feet while the snow storms are sometimes so severe, it is said so to have destroyed the population several times. Notwithstanding this the country around is productive in grain and fruit, the apples and pears of Ghuznee being much celebrated. Three miles N. are the ruins of the ancient city which, eight centuries ago, was the capital of an empire reaching from the Tigris to the Ganges, and from the Jaxartes to the Persian Gulf. Two lofty minarets, the tomb of Sultan Mahmood and some other buildings, still attest its ancient grandeur. Ghuznee was taken by storm by the British troops in 1839. Upon the intercession in 1841 it again fell into the hands of the Afghans, from whom it was recovered in 1842.—(Chenery; Mission Oriental Interpreter Thornton's Gazetteer.)

GHYRTE, KINCHEH or **TURKE**, a tu. Nubia, l. bank, Nile lat. 25° 17' N. lon. 33° 0' E. Here is a remarkable temple hewn out of the rock, and justly considered as one of the most stupendous monuments of Nubia.

GIACOMO DI LUSANA, a vil. Austrian Italy gov. Vercelli, prov. and N. of Vercelli with a valuable quarry of variegated marble, which is in large demand. Pop. 2500.

GIAGLIONE, a vil. and com. Italy Piedmont, riv. Turin prov. and S. W. of W. Susa, on a hill l. bank, Dora. It contains a parish church of very early date and an ancient castle. Inhabitants engaged in agriculture and cattle rearing. Pop. 1496.

GIANJAR, a dist or native state, Indian Archipelago, 8 N coast of Bali and opposite Baudia Island. It is about 17 m. long by 7 m. broad, is hilly but generally fertile, and covered with rice fields. Its capital, of the same name, lies about 8 m. inland and is the residence of the Rajah. Pop. of state, 800,000.

GIANUTRI [ann. *Arizones*] an uninhabited Isl. Medi terranean, off the coast of Tuscany about 9 m. S. Mount Argentario formed like a crescent, and about 4 m. in circuit. The granite, of which it is principally composed appears to have been quarried by the Romans, who have left some unfinished columns.

GIANVI'S CAUSEWAY an extensive and extraordinary assemblage of polygonal basaltic columns N. coast of Ireland co. Antrim between Bangor Head and Port Rush; lat $55^{\circ} 15' N$ lon. $6^{\circ} 33' W$. It is divided into three unequal parts—the eastern middle, and western causeway; the whole comprising a multitude of columns consisting of prisms of equal dimensions throughout their whole height, which ranges from 15 to 85 ft. with a diameter of 15 to 25 ins. and varying in their number of sides from three to nine, although the greater number have pentagons and hexagons. Each of the pillars is perfectly distinct, and almost invariably differs in size, number of sides and points of articulation from the adjacent columns to which however it is so close, that water cannot pass between them. Almost every column is composed of several pieces the joints of which are articulated with the greatest exactness, and in a strictly horizontal direction. Generally the upper part of the section is concave, and the lower convex, but this arrangement is sometimes reversed. The basalt of which they are composed is of a very dark colour approaching to black.

GIARRATANA [ann. *Cervantes*] a vil and com. Sicily prov. of and 28 m. W by S. Syracuse. It stands on a lofty height, and contains some ancient remains. Pop. 2400.

GIARRE, a vil and com. Sicily prov. of and 15 m. N.W. E. Catania, at the foot of Mount Etna, and at a short distance from the Ionian Sea. It is a flourishing place, and contains a handsome church recently built.

GIARRETTA [ann. *Savanna*] a river Sicily which rises on the W. slope of Mount Etna, and flowing S.E. falls into the Ionian Sea, 8 m. S. by E. Catania, after a course of about 40 m. It may be considered as defining the boundaries of the mountain on the W. and S. Fine specimens of yellow red and black amber are found floating at its mouth but the precise place whence it comes has not been discovered.

GIAVE, a vil Ital. Basilica, div. of and 28 m. S.E. Sassari on a hill of same name, near the crater of an extinct volcano. It has a large parish and several minor churches, a primary school and old castle, a trade in corn and other agricultural produce and an annual fair. Pop. 1576.

GIAVENO [Latin, *Javena*] an Ital. Piedmont, div. of and 18 m. W by S. Turin, in a mountainous district 1 bank. Sangone. It is a large and well built place, with five public squares, one of them adorned with shady alleys. It is the seat of a court of law and several public offices. It contains three parish churches, one of them a handsome modern structure, with three naves two monasteries with churches a palace once the residence of an abbot, a college or gymnasium the buildings of which though partly unfinished, are very handsome a communal school, an hospital, and has manufactures of iron and iron wire, four tanneries, two paper and two silk mills and a considerable trade in wood and charcoal, cattle, dairy produce, apples, pears, and chestnuts. Pop. 8866.

GIBELLINA, a vil and com. Sicily prov. of and 58 m. S.E. Trapani. Pop. 4966.

GIBRALTAR [ann. *Gomel*] a in Spain, Andalusia, prov. of, and 7 m. N.N.E. Huelva 1 bank. Océan here navigable. It is tolerably well built, contains two churches, one

of them a handsome structure, with three naves; a townhouse, a public school, the remains of two forts, the buildings of two monasteries, and a summary and has some trade in corn, wine, wool, and fruit; and an annual fair. Pop. 2804.

GIBRALTAR [Arabic, *Jebel-tarik*—the hill of Tarik a Barber leader who conquered the fort in 711 Italian, *Gibilterra*] a tn. and strongly fortified rock, Spain Andalusia, belonging to Great Britain; lat. $36^{\circ} 9' N$ lon. $5^{\circ} 21' W$. This remarkable fortress which forms the key to the Mediterranean standing on a peninsula at its entrance is connected with the continent of Spain by a low sandy isthmus, $1\frac{1}{2}$ m. long and $\frac{1}{2}$ m. broad having the Bay of Gibraltar on the W. and the open sea of the Mediterranean on the E. Near the point of junction of this isthmus with the mainland are the Spanish lines, between which and the rock is a space called the Neutral Ground. The highest point of the rock is about 1400 ft. above sea-level. Its N. face is almost perpendicular while its E. side is full of tremendous precipices. On its S. side it is almost inaccessible making approach from seaward impossible the W. side, again although nearly as rugged and precipitous as the others, slopes towards the

sea, and here the rock is secured by extensive and powerful batteries, rendering it apparently impregnable. The body of the rock consists of a kind of primary marble, running in strata of 20 to 40 and 50 ft. in thickness. At the N. extremity of the rock are perpendicular fissures, on the ledges of which a number of hawks nest and rear their young in the breeding season. They throw down from their nests the bones of small birds, mice, and other animals on which they feed and these are gradually washed, with a current of red earth, into a breccia of angular fragments of the decomposing limestone. There is a number of remarkable caves in various parts of the rock, some of them beautifully picturesque, but all difficult of access. The most singular of these natural excavations is St. Michael's on the S.W. side the entrance to which is 1000 ft. above sea-level. The natural animal productions of Gibraltar are wild rabbits, woodcocks, teal, partridges, snakes, and monkeys; the latter of a dark brown colour and without tails. When seen from a ship's deck, no

appearance of vegetation presents itself on the rock, the whole having an exceedingly barren and forbidding aspect but it is not in reality so desolate in this respect as it seems. Apples, figs, and orange trees growing freely together with a great variety of odoriferous plants. The climate is temperate during the greater part of the year; and even in the summer months, the excessive heat is allayed by a refreshing breeze that sets in during the forenoon, and continues till sunset. The temperature in winter is considerably higher than in the neighbouring country so that the snow which falls but seldom soon disappears.

Vast sums of money and an immense amount of labour have been spent in fortifying this celebrated stronghold. Numerous caverns and galleries extending 2 to 3 m in length, and of sufficient width for carriages, have been cut in the solid rock forming safe and sheltered communications from one part of the garrison to another without being exposed to the fire of an enemy in cases of attack. Along these galleries, at intervals of every 12 yds. are port-holes bearing upon the neutral ground and bay while trees, shrubs, and flowers of various kinds, have been planted at different points, both for ornament and utility. On the summit of the rock there are several barracks, towers and fortresses. Of late years the fortifications have been carefully strengthened at every vulnerable point. The total number of guns now mounted on the rock is said to be not less than 1000. The principal defences are on the W side, fronting the bay but there is also a battery on the E side though the steepness and ruggedness of the rock render it almost unnecessary.

The town of Gibraltar is situated on the W side of the peninsula, terminating in Europa Point and fronts the Bay. It consists chiefly of one spacious street about $\frac{1}{2}$ m. in length, lined with shops, and paved and lighted. The principal

the settlement is treated as a garrison-town, the power of exacting laws being vested in the governor alone. All criminal cases are determined according to the laws of England. Every precaution is taken to prevent the increase of new residents. Foreigners are permitted to remain during specified periods only and on giving the required security. The population in 1861 amounted to 17,647 of whom 15,469 were residents, and 2185 aliens. In addition there were military 6960 and 572 convicts.

Gibraltar under the name of Calpe, and Mount Aabya, now called Apes Hill opposite to it on the African coast, were called by the ancients the Pillars of Hercules and in very early ages were regarded by the people dwelling E. of them as the western boundary of the world. Gibraltar came into possession of the English, by conquest, in 1704. It has been since repeatedly besieged, but always without success. The last and most formidable attack made on it, occurred in September 1782, when the Spaniards, aided by a powerful fleet and army from France, scaled the fortress with floating batteries but were defeated with great loss by the garrison commanded by General Elliot. On this occasion an immense discharge of red hot shot was maintained on the attacking boats with the most destructive effect.

The Bay of Gibraltar formed by Europa Point on the E., and Point St. Marcus on the W. It is of a semicircular form, about 6 m. in length and $\frac{1}{2}$ m. in breadth, and is varying from 4 to 250 ft. The greatest depths are at the entrance, increasing gradually towards the head of the bay. The tide runs 4 and 5 ft. The best anchorage is from off the middle of Algebras, W side of the bay towards Maracaiva river also on the W side, and near its head. The shipping is protected on the British side by two formidable moles, called the Old and New Mole, one on the N and the other on the S.

side of the town of Gibraltar. The former runs 1100 ft. into the sea, the latter 700 ft. An elbow formed by the shore affords shelter for large vessels in winter the furthest out lying in 6 and 5 fathoms. Opposite the town of Gibraltar on the W side of the bay is the Spanish town Algebras.

The Strait of Gibraltar The narrow channel between the E. part of Spain and the N. of Africa, forming the entrance to the Mediterranean from the Atlantic. Its width at the narrowest part is about 15 m. greatest depth 960 fathoms. Through this strait a powerful easterly current, running at the rate of from 8 to 6 m. an hour sets constantly from the Atlantic into the Medi-

terranean. But there are also two lateral currents, one on the European, and one on the African side, each of them about $\frac{1}{2}$ m. broad and flowing at about the same rate as the central current and edging and flowing with the tide, setting alternately into the Mediterranean and into the Atlantic. An excess of water is constantly flowing into the former from the latter to supply the loss sustained by evaporation.

GIBRALTAR (BAH AMORRINO DE) a to Venezuela, dep. Zulia, prov. of 108 in S. E. Maracaibo, on a small river of same name, which falls into the lake of Maracaibo. It is situated in the midst of an extremely fertile region, where cane and other tropical productions are raised in abundance. It was founded in 1552 but has suffered greatly from the incursions of Indians and pirates. Pop. 3500.

GIDEA, a river, Sweden. Hornosmids lln, rises about lat. 64° 22' N. lon. 17° 25' E. flows S.E. passing the small town of Gideå, forming some small lakes, and falls into the gulf of Bothnia, in lat. 58° 20' N., after a course of above 100 m.

GIDLEIGH, par. Eng. Devon; 3449 ac. Pop. 166

THE TOWN AND BAY OF GIBRALTAR.—From Chappin & Baynes.

buildings are the governor's and lieutenant-governor's houses, the Admiralty naval hospital, victualling office, and barracks, and a handsome theatre. There are Protestant and E. Catholic churches, a Methodist chapel and four Jewish synagogues, seven regimental, and two public schools, public libraries, &c. There are also a Jewish asylum, almshouses, &c. The water for the supply of the town and garrison is collected during the rainy season, the roofs of the houses being so constructed as to receive the falling rain, which subsequently finds its way to a tank beneath, thence every house is provided. Gibraltar is a free port, but its trade has greatly declined within the last half century. It still however continues to be a valuable exception for the distribution of British manufactures to the Barbary States, and to the different countries bordering on the Mediterranean. Cottons, woollens, &c. are imported from England, sugars and rum from the West Indies, tobacco, rice, and flour from America; and wines, silks, wax, &c. from the East. The chief export is wine. The revenue of Gibraltar for the year 1861 was £31,697 and the expenditure £20,835, when a deficit occurs it is met by a parliamentary vote in aid. No executive or legislative council exists here. The administration is vested in the governor who is also commander in-chief of the troops and

GIEBOLDEHAUSEN or **GIEBOLDHAUSEN** a vil. Hanover prov. Hildesheim, cap. hall of same name, 1. bank, Rehme, 14 m. E N E. Göttingen. It is an old place, contains a R. Catholic church, and has manufactures of linen. Pop. in 2140, 1699.

GIELEN a tn. France, dep. Loiret, 88 m. S E Orleans, r. bank, Loire, here crossed by a fine bridge of 12 arches. It has an imposing aspect, and is well built, partly on a height, crowned by the church of St. Louis and an old chateau in good preservation now containing the law courts and government offices. It has several other antique edifices; manufactures of dailware and serge; a brewery; a tannery and some trade in wool. Pop. 5107.

GIELEN is a Wittenberg circle Jaxt on the Bruns, 7 m. S. E. Hildesheim. It has two churches, one of them a handsome edifice, with two towers; a townhouse hospital and Latin school. Manufactures of linen and cotton cloth and a paper and other mills. There are mineral springs in the vicinity. Gießen suffered much from all parties during the Thirty Years War. Pop. 3000.

GIERSDORF several places, Prussia, particularly—1 (Ober-Weser) prov. Silesia, gov. of 38 m. S W Breslau, at the source of the Weistritz, with a Protestant and a R. Catholic church. Pop. 1153. — 2 A vil. prov. Silesia, gov. of 8 W from Liegnitz, with a Protestant and a R. Catholic church, and a paper saw and other mills. Pop. 1888.

GIESMANNESDORF several places, Prussia, particularly—1 (Ober-Mittel and Nieder) a vil. prov. Silesia, gov. Lignitz, 10 m. S W Breslau, with a castle, a Protestant and a R. Catholic church. Pop. 1163. — 2 A vil. prov. Silesia and gov. Lignitz, circle, Bolkow, with a Protestant and a R. Catholic church and a mill. Pop. 1245.

GIESSEN a tn. Hesse-Darmstadt, cap. prov. Oberhessen, beautifully situated, r. bank, Lahn and completely surrounded by water 30 m. N. Frankfurt. It was originally fortified but the ramparts have been levelled, and converted into agreeable walks. It is still entered, however by four gates is substantially though very irregularly built and contains three public squares with a number of private mansions deserving notice. The principal public buildings are the castle, now converted into government offices several churches, the townhouse, the burgher hospital the arsenal, now used as a magazine the barracks and above all the buildings of the university which was founded in 1527 is provided with 58 teachers, attended (1845) by 612 students, and possesses a library of 35,000 volumes observatory botanical garden, valuable philosophical apparatus, and other collections. Among the professors, the most distinguished name at present (1852) is that of the celebrated chemist, Liebig. Besides the university Gießen possesses a gymnasium and several other superior schools. The manufactures consist of hats hosiery cordons, soap, red and white leather wares, articles in gold and silver liquors, vinegar and tobacco and there are also breweries, oil and other mills a trade in cattle, a weekly market, and several annual fairs. Pop. 8105.

GISTEVEEN a vil. Holland, prov. Drenthe 10 m. E N. A. Asser, with a Reformed church and school a normally some linen-weaving and wagon-making. Pop. agricultural 585.

GIEETHOORN a vil. Holland, prov. Overijssel 16 m. N. Zwolle composed of two rows of houses in the centre of which is a wind corn-mill, and the Reformed church an elegant building. It also has a Baptist church, and two schools. The inhabitants are chiefly engaged in turf cutting and cattle rearing. Pop. 1400.

GIFFORD a vil. Scotland, co. of and 4 m. S. S. E. Haddington on a rivulet of same name; houses are all of stone, and though not uniform well built. It has a vicarage church, a Free church, and three well-attended schools. Inhabitants chiefly employed in agriculture two annual fairs are held in the village. John Knox, the Reformer is generally supposed to have been a native of Gifford and Witherspoon an eminent divine, and moral and political writer of last century was born in the manse. Pop. 325. (Local Correspondent.)

GIFHORV, a tn. Hanover gov. of and 53 m. S. E. Lüneburg cap. hall of same name, at the confluence of the Ise with the Aller. It was once fortified, but is now open contains a castle now used as a courthouse, a church, and hospital, and makes a good deal of garden produce. Pop. to 1250; hall 15,563.

GIGANTINI, a mountain, Isl. Sardinia, div. Sassari prov. Oueri, a little S. E. of Tempio. It is the culminating point of the chain of L'imbura, and rises almost perpendicularly above the extensive plain of Oueri height, 4101 ft.

GIGGLESWICK a vil. and par. England co. York (W. Riding) THE VILLAGE 50½ m. W N W York is mostly built; contains a handsome church and a somewhat celebrated free grammar school founded by Edward VI. in which Archbishop Fleury received the rudiments of his education. In the vicinity a remarkable ebbing and flowing well, the water of which rises and falls in 3½ minutes—a phenomenon supposed to be caused by the filling and emptying of a natural syphon. Area of par 18 419 ac. Pop. vil. 855 par 5965.

GIGHA a small isl. Scotland, about 1½ m. off W coast, co. Argyll, between Islay and Kintyre lat. 56 43 N. lon. 5 45 W about 6 m. long and about 2 m. broad at the broadest part. Its coast is rocky on the W side, but at the two ends, and on the E. side, are beautiful sandy beaches, and there are three bays all of them having good anchorage. The island is generally low with exception of one elevation of about 400 ft. and its soil fertile and tolerably well cultivated. At the S W end is a remarkable subterranean passage, into which the sea rushes with great violence emitting a thundering noise on its return, occasioned by the rolling of large stones. Pop. including that of a small inland close by called Cua, 247.

GIG-LAO (GIG-LAO) [ann. Siam] an isl. off the coast of Siam about 8 m. S W of the peninsula of Mount Argenteo area about 8 sq. m. very rugged surface, covered in many parts with lofty granite hills. On the top of one of them stands the town of Giglo, defended by several towers. It contains a parish church and immediately below is a small gulf which forms a kind of natural harbour. The soil is generally fertile, and when not occupied by wood is chiefly appropriated to the culture of the rice. The granite quarries were worked by the Romans. Pop. 1896.

GIGVAC a small tn. France dep. Haut-Rhin, 17 m. W N W Mompeller 1 bank Herant in a district rich in vines, mulberries and olives. It has an antique church and bridge with manufactures of variegated brassy woolen yarn and a trade in olive confections, brassy &c. Pop. 2471.

GIGVOD (Latin Gnidivum) a tn. Italy Piedmont, div. of and 8 m. N N W Aosta, r. bank Dora Baltea. It contains a communal school and the remains of an ancient castle P. 1260.

GIGUELA a river Spain New Castle. It rises on the W slope of the Sierra di Guadalupe, prov. of and 15 m. W by S. the town of that name, flows arcuately S E W and after a course of 90 m. joins r. bank, Guadalupe, 35 m. N E. Cadiz. Real. Its principal affluents are the Hlaneros on the right, and the Zuevera on the left.

GILJON a township in Spain, Asturias prov. of, and 18 m. N N E Oviedo on the Bay of Biscay. The old town occupies the upper part of the slope, and is partly surrounded by ancient walls the more modern portions extend to the shore, both being commanded by a fortress and several batteries. In general the streets are wide, clean and paved the houses well built and commodious. It has a small parish church and numerous chapels a townhouse, prison, hospital nautical and several primary schools, a custom house, triumphal arch economic society and an Augustinian convent, now converted into a cigar-manufactory which employs 1400 persons a glass and bottle work and some coasting trade in coal grain, elder paving-stones and colonial produce. Fishing and sailing ships are carried on to some extent. The anchorage is good, and the harbour safe, though rather difficult of access, and in 1844-1845 was visited by 885 vessels, of which 734 were coasters, tons 57,334. Coal exists in the vicinity but is not wrought. Pop. 6218. (Madon.)

GIL (Sar) or **St. Gil**, a tn. New Granada, dep. Boyaca, prov. Socorro, 84 m. S W Pamplona, on an affluent of the Suarez, here crossed by a stone-bridge. It was founded in 1690 has a college, manufactures of tobacco and cotton cloth and an extensive trade in agricultural produce. Pop. 6000.

GILA a considerable river N America, in the latter part of its course forming the boundary between the U States and the Mexican State of Sonora. It is an affluent of the Colorado del Occidente and has its sources in the mountains of Santa Katherina, in the State of New Mexico; about lat. 32° 45' N and E of lon. 108° 30' W from which it flows W, and joins the Colorado, at lat. 32° 40' N and W of lon. 114° 0' W just before it falls into the Gulf of California. Its whole course being about 450 m. About lon 108° 40' W or probably about 80 m. from its source, it is 50 ft. wide, with an average depth of about 3 ft. swift and clear; the banks covered with trees and a luxuriant vegetation: the former consisting chiefly of cotton-wood, a new species, mesquite, yucca, a few oaks and larch. Here also a species of trout abounds. Further down, or about lon. 110° W the banks of the stream and the country around assume a wild, rugged and inhospitable appearance: the mountains of trap, granite, and red sandstone in irregular and confused strata but generally dipping sharply to the S. cluster so closely together that it becomes difficult to tell from what direction the river comes, or in what direction it is going. A few miles lower down the valley of the Gila widens, and is covered with a dense growth of mesquite, (*Acacia prosopis*) cotton-wood and willow the pathways, and every other variety of cactus, the latter flourishing in great luxuriance. Little or rather nothing is known of the tributaries of the Gila. The R. O. San Pedro which joins it from the S and the rivers San Francisco, Salinas, and Bonita from the N are almost the only affluents of which anything has been ascertained. Most of the tributaries are insignificant at their junction with the Gila and can be stepped across the result of their traversing deserts of sand and arid regions unwatered by runs, by which their waters are gradually absorbed. The Gila is navigable for small boats only and that but to the village of Yuma, about 100 m. above its junction with the Colorado.

The ruins of numerous houses are found along the whole course of the Gila proving that these regions were much more populous at a former period than they are now. These ruins are uniformly of the same kind, not one stone nor remnant on the top of another and they are discoverable only by the broken pottery around them and at times laid in regular order showing the traces of the foundation of a house. Most of these outlines are circular and vary from 40 by 50 to 200 and 400 ft. in diam. They are unknown and are mostly of an unexplained, round, but by tradition.—(*Notes of a Military Reconnaissance in California* by Lieut. Col Emory Washington, 1848).

GILAD a vil Hungary Thutier Thence, on the Temevar on an arm of the Temevar, about 4 m from Zeebely. It contains a Greek non-anted parish church. The inhabitants are Wallachians. 1 p. 4000.

GILBERT ISLANDS, or KINGSMILL GROUP a group of 16 lks Pacific Ocean between lat. 1° 0' S and 2° 30' N and lon. 171° 0' and 174° 30' E. They are of coral formation all low the highest land in the group not exceeding 50 ft., and are but wearing away by the action of the sea. Their soil, which is but a few inches in depth, is of coral, sand and vegetable mould. Their cultivation consists for the most part, in that of the cocoa-nut and pandanus, which are the chief articles of food. The natives also cultivate with great care, a species of the taro (*Arum cordifolium*). The bread-fruit tree is to be found on the N islands but it has not been seen on the S. The climate of these islands is equable and though of high temperature, is found to be less oppressive than in most tropical countries. For the most part constant breezes prevail and frequent rain falls which moderates the great heat, and at the same time imparts fertility to the soil. The islands of this group differ in their personal traits from those of Polynesians, and more nearly resemble the Malays. Their colour is a dark copper, hair fine, black, and glossy now slightly aquiline large mouth full lips, and small teeth average height about 5 ft 6 inches. The women are much smaller in proportion than the men with delicate features, and slight figures. In character they are deceitful and dishonest, and, like most savages, treacherous and cruel but they are hospitable and generous, and kind and affectionate to their children. Another characteristic, and a sufficiently remarkable one, is a predisposition to dependency and misanthropy which often drives them to commit suicide. Having but little intercourse

with strangers, a small amount only of the manufactures of civilized nations have found their way into these islands. The pop. of the entire group has been estimated at 40,000.—(*U. States Explorer Report*).

GILLOLO KAZAKHSTAN, prov. Dzhambul, on the Russian Archipelago, the largest of the Molokas, lat. 3. or 4. or 5. or 6. N lon 128° 22' E (N.) separated from the W. from Celebes by the Molokan Passage, from Papua and Waygout on the E. by the Gilolo Passage, and from Ceram and Soere on the S. by Pitt's Passage; extreme length, N to S. 197 m. extreme breadth about 80 m.; area estimated at 5500 sq. m. The island is of singular form, the result as on the east of the island of Celebes to which it has a very remarkable resemblance, of violent volcanic action. It consists of four peninsulas, radiating N. E. E. S. E. and S. from a common centre and having large bays between, named Chlawo Btjoli and Weda the first about 68 m. N. to S. and 41 m. narrowing to 15 m. wide the second 40 m. E. to W. and 25 m. narrowing to 14 m. N. to S. and the third, 63 m. S. E. to N. E. by 53 m., narrowing to 17 m. wide. Gilolo, like several other islands in these seas, rises abruptly from an unfathomable sea, a circumstance unfavourable to its productiveness, since a large portion of the rich soil created by the decomposition of the volcanic rock is washed every into the ocean.

It contains a volcano, Gantacacura, 6500 ft. high now of doubtful activity but of which an eruption is recorded as having occurred in 1873. The principal productions of the island are sugar, coffee, nutmeg, spices, fruits, edible birds nests a durable and beautiful wood, well adapted for shipbuilding pearls and gold dust, horses, horned cattle, and sheep, also abundant Deer wild boars, and other descriptions of game are likewise plentiful. The original inhabitants of Gilolo called Alifloras, are robust, temperate, and brave, but have been gradually pressed into the interior of the island by the Malays, who have established themselves along the coast. The latter are strongly disposed towards commerce, and have an irrepressible predilection for a seafaring life.

Gilolo is divided for administrative purposes into two parts the largest, comprising three of the four peninsulas the S. N. and N. E. is under the authority of the Sultan of Ternate having a pop. of 19,000 the other is nominally under the Sultan of Tidore with a pop. of nearly 4000 according to a census of 1840. (Penny Cyclop. Edinburgh. Exr.)

It has two annual fairs. Pop. 1160.—5 A vil. and com. prov. Terra d'Otranto, dist. of, and 3 m. E. Taranto. Part of the original inhabitants were Albanians. Pop. 1708.—6 (de Mole) a tn. and com. prov. Principato Ultra dist. of, and 12 m. N. W. Arzano. Pop. 5318.

—7 (*de Montagna*) a vil and prov. Principato Ultra, dist. of, and 10 m. N. Avellino. Pop. 1818.

GIORNICO or Iarna, a vil and prov. Switzerland, cant. Ticino, dist. Leventina, postemporally situated amid abundant plantations and lofty warm-falls, on the Ticino, here crossed by a bridge 10 m. in N. N. W. Bellinzone. It is well built of stone, contains two churches, both very ancient and interesting, as furnishing specimens of the earliest form of Christian buildings and the remains of a tower supposed to have been built in the 10th century. In 1478 the Swiss confederates here defeated a very superior force, under the Duke of Milan. Pop. 43.

GIUVANNI (San) several places, Italy.—1 A to the east 20 m. S. E. Florence, 1 bank Arno. It has a cathedral a parish church and two female convents. It was the birthplace of the painter Masaccio and Giovanni Manzoni. Cotton is manufactured here. Pop. 8000.—2 (*in Peruvia*) A to. Ensl. prov. leg. of and 10 m. N. Bologna on the Cenisio canal. Pop. 6783.—3 (*del Monte*) A to Naples, prov. Castellana, 18 m. E. Soriano, near Monte Gaziano. Pop. 4500.—4 (*di Camerota*) A vil and com. Sixty prov. of and 22 m. N. by E. Girgenti. Pop. 2011.

GIUVANNI FINEA, a to Nayles, prov. Calabria, Citra, 27 m. E. by S. Cosenza, at the confluence of the Arvo and Neto. Pop. 6150.

GIUVANNI DI GALDO a vil. Naples, prov. Napoli, dist. of, and 6 m. N. E. Campobasso. Pop. 2,000.

GIUVENAZZO (*San Andrea*) a seaport in Naples, prov. of and 10 m. N. E. Bari on an elevated rock which projects into the Adriatic. It is surrounded by high walls, and is defended by an old castle. It is the seat of an archbishop, and contains a cathedral, three other churches, four convents, and two hospitals, one of which is a foundling. Its streets are narrow, dark, and dirty and have a peculiarly dismal and miserable appearance. Carrots are manufactured. 155000. LILAPETRA a small ruinous tn. in Candia, R. E. coast 16 m. S. W. Setina.

GIRDLENESS, a headland E. coast, Scotland, no. Kincardine, forming the S. point of the entrance of the Dee, and the E. extremity of the Grampians, 2 m. S. Aberdeen. It has a lighthouse, with two fixed lights. lat. 57° 54' N. lon. 2° 17' 15" W. (n.)

GIRGLI or GIRIZZI a modern prov. and to Upper Egypt. The river occupies both sides of the Nile, and contains some fertile and highly-cultivated plains. The river on 1 bank river 110 m. S. S. W. Cairo lat. 26° 30' N. lon. 31° 55' E. is built with irregularity but has some mosques, tombs, squares, and a Latin convent or monastery the oldest E. Catholic establishment in Egypt. Girgeh was formerly a quarter of a mile from the river but it is now on the bank, and part of it has been already washed away by the stream showing the great changes which have taken and still are taking place, in the course of the Nile. P. 10,000.

GIRONTI a prov. Sixty S. W. coast, greatest length N. W. to S. E. 84 m. mean breadth about 22 m.; area, about 1800 sq. m. The greater part of the surface is covered by ramifications of the Neptunian Mountains, which have their highest points in the N. and descend rapidly S. to the shore. They are intersected by numerous valleys which are remarkably fertile, and produce in abundance corn, oil, and wine. The pastures also are excellent, and much good cheese is made. The principal streams are—the Salvo, which bounds the prov. on the S. E. the Belice, which bounds it on the S. W. and the Platani, which traverses it centrally in a W. S. W. direction. The most important mineral products are—bitumen, naphtha, sulphur and salt. Some fine agates also are found. The manufactures and trade are unimportant. For administrative purposes the province is divided into three districts—Ugenti the capital Bitona, and Scusano subdivided into 10 cantons. Pop. 212,590.

GIRGENFI or Girgenzi a to. S. W. coast, nearly opposite of same name, 56 m. S. E. E. Palermo; lat. 37° 15' 30" N. lon. 13° 31' 45" E. (n.) on the slope of a hill 1200 ft. in height. It presents rather an imposing appearance, but is irregularly built, streets mean, dirty and wretchedly paved, and so steep and narrow as to be unsuitable to carriages. It contains a cathedral, forty-five churches, fifteen convents, a seminary, an orphan hospital, and a lycium. The inhabitants are not remarkable for

industry; but the place has a considerable export trade in corn, oil, fruit, and sulphur. Three or four miles N. from the town is a mud volcano, called Muculula. On a rocky plateau, E. of Girgenzi stood the famous ancient city of Agrigento whose ruined temples, and other superb remains bear evidence to its former grandeur. Among the more remarkable of the former are the temple of Juno, Concord, Valium, and Heracles. That of Concord which is 128 ft. long by 54 broad, is the most perfect specimen of a Grecian temple now in existence. Of the temple of Valium, two elegant columns are now all that remains. Near the latter is the bed of the Phlegeton, a subterranean river which was kept for public festivals. It is now covered with orange-groves and gardens. The population of Agrigento, which was founded 680 a.c., is said to have been 800,000. The country around Girgenzi is fertile and pleasant. Pop. 17,757.

GIRIFALCO a vil and com. Naples, prov. Calabria, Ultra II, dist. of and 10 m. S. W. Catanzaro. It has an annual fair which lasts three days. Pop. 8476.

GIRSEK a fort and vil. Afghanistan, rank Iskandur, 70 m. W. Kandahar. lat. 31° 45' N. lon. 66° 12' E. The fort, which is not of great strength, is built upon a mound about 2 m. from the bank of the river which is here deep and rapid in the spring and about 1000 yards wide; but in autumn when lowest easily fordable. The country immediately adjacent to the river is very fertile, but neglected.

GIRLEY par. Irell. Month; 5050 a. Pop. 922.

GIRLOMAGNY a small tn. France, dep. Haut-Rhin, 25 m. S. W. Colmar on the Savoureuse, and in the slopes of the Vosges. It has manufactures of calico and cotton hosiery some power-looms factories, cotton spineries, brick and tile works, &c. In the environs are mines of copper lead, cobalt, zinc, &c. but they are not worked. Pop. 2683.

GIRON a small tn. New Granada, dep. Boyaca, prov. of and 46 m. W. Pamplona. It is well built; but formerly a brisk trade, now greatly declined.—The territory is fertile in tobacco, cacao, cotton, and sugar.

GIRONDE, a river or rather estuary France, forming the common mouth of the Garonne and Dordogne. It commences about 15 m. below Bordeaux; and, to its termination in the Bay of Biscay has a length of 50 m. in a N. N. W. direction. Its breadth at its upper extremity is 2 m. but gradually widens till it attains its maximum of nearly 7 m. On approaching point Grave, it again narrows to 8 m. It has great depth of water and when once within it, any number of vessels can find complete shelter from all winds in the roads of Verdon but its entrance is much embarrassed with sandbanks and the tide—rushing in with immense rapidity particularly at the time when the waters of the Dordogne are low—forms a bore, here called *Mascaret*, of from 12 to 15 ft. in height which unless much precaution is used, is attended with considerable danger. This estuary gives its name to one of the departments of France.

GIRONDE, a dep. France, bounded N. by the estuary which gives it its name, and dep. Charente, E. Dordogne and Lot-et-Garonne S. dep. Landes, and W. the Bay of Biscay. greatest length, E. to W. 107 m. greatest breadth E. to W. 75 m. area, 3610 sq. m. The surface is generally flat, and consists of three parts, distinguished from each other not only by natural boundaries, but by other peculiar physical features. The first, situated on the E. bank of the Dordogne, consists of plains occasionally diversified by low calcareous ridges, and presents a pleasing succession of corn-fields, pastures, plantations, and vineyards. In the S. E. rich rural scenes are formed by the valleys of the Isle and the Dronne. The second part comprehends the district Entre-Deux-Mers (so called from its position between the Dordogne and Garonne) and the ancient Bourgeois, abounding in picturesque beauties, and entitled, by its fertility to rank with the fine valleys of the Loire and the Rhone. The third part, situated on the E. bank of the Garonne, is of a very different description. It includes the whole sea-coast of the department; and consists, with few exceptions, of a barren, arid, and often almost desolate tract, belonging to the Landes; though its sandy gravel along the Gironde, can boast of raising the vine, from which Madon, one of the first-rate clarets, is obtained. The whole department, with exception of the W., which sends its waters either directly to the coast or the long series of lagoons by which it is lined, belongs to the basin of the Gironde, which

is formed in its interior by the junction of the Dordogne and Garonne. The only other streams deserving of notice are the Leyre, which discharges itself into the vast & lagoons the Giron, a left affluent of the Dordogne and the Isle, with its tributary Dronne. The climate differs much in the separate divisions, but is generally characterized by great moisture, and a superabundance of moisture. The quantity of waste land is very great, amounting to more than one-third while the arable land is rather less than one-fourth of the whole surface. Of the remainder about one-seventh is occupied by vineyards, and one-ninth under wood. The corn raised fails considerably short of the consumption, but much hemp and tobacco are grown and the fruits, consisting chiefly of pines, figs, and almonds, are excellent. The great staple product is wine, much of which is of the finest quality and is well known in some parts under the general name of Medoc, or the particular names of Chateau Margaux, Lafite, and Latour. The quantity grown amounts to about 20,800 pipes. The forests of the department are very extensive. In the interior they consist chiefly of oak, but in the neighborhood of the coast form part of the vast forest of pines which stretches without interruption along the sandy deserts of the Landes. The minerals are unimportant, but large quantities of salt are obtained from the marshes and lagoons. The manufactures are very various; and include the building of vessels chiefly large masted steamers, woollen and cotton tissues, doll-making, and articles in iron steel copper silver and gold. The trade, which has its centre at Bordeaux, is very important. The principal exports are wine, brandy, corn, flour, fruit, roan leathers &c. the principal imports are colonial produce, silk &c. For administrative purposes, Gironde is divided into six arrondissements—Bordeaux the capital, Blaye, Lesparre, Libourne, and La Réole subdivided into 45 cantons, and 844 communes. The great body of the inhabitants are nominally R. Catholics, but the number of Protestants is not inconsiderable. Pop. 603,444.

GIRONS (5r) a tn. France, dep. Ariege, 23 m. W. Foix, on the Salat, over which are two marble bridges. It is finely situated at the foot of the French Pyrenees, in a valley surrounded by fertile hills, at a point where five valleys and three streams meet (i.e. the Salat, Les, and Bessy). The town itself is old, and has few remarkable buildings except the parish church a most gorgeous pile, with a lofty spire. On the opposite side of the river in the suburb of Villeneuve, where are the newest and best houses and an antique chateau now used as a courthouse and prison. St. Gironne has a communal clock manufactures of osseous lemons and woollens, with quarries of ironstone and marble to the environs. Pop. 8081.

GIRTHON par Scot. Kirkcaldy, 15-430 ac. 1787. GIRTHON two par. Eng. -1. Cambridge 1874 ac. Pop. 412-2. Notts 1075 ac. Pop. 181.

GIUVAN a seaport market tn. and par. Scotland on Ayr.—The town situated at the head of a fine bay 1 bank, Girvan, near its junction with the sea 18 m. S.W. Ayr lat. 56° 14' N. lon. 4° 50' W. is composed chiefly of cottages, of one story and has on the whole a mean appearance. It contains the parish church, situated in the centre of the town a library several benevolent societies, a U. Presbyterian church, and small congregations of R. Catholics and Methodists. The inhabitants are chiefly weavers, and of Irish extraction extremely poor ill lodged, and generally of an uneasy habit. They are employed principally by the manufacturers of Glasgow and Paisley.—The harbour has been improved of late years, and a new quay built, which has had the effect of bringing a considerable trade to the port. The principal exports are grain and coal.—The FARRIS is 9 m. by 4 m. area, 19,000 ac. soil, generally fertile, and in good cultivation. Pop. 5688.

GIYVAK river Scotland on Ayr. It rises in a small lake, 80 m. S. by E. Ayr flows first N.W. and then S.W. falling into the Irish Sea at the town of same name opposite Ailsa Craig. Total course about 80 m.

GISBURN par Eng. York (W. Riding) 17,963 ac. Pop. 1978.

GIRLEHAM par Eng. Suffolk 1844 ac. Pop. 810. GIRLENGHAM par Eng. Suffolk 2261 ac. Pop. 696.

GISORRE, a tn. France, dep. Eure, 38 m. E.S.E. Evreux on the Epée, begut with antique walls, surrounded with fosses,

now turned into pleasant promenades. On a hill close to the Epée, at the extremity of the town, are the remains of an extensive castle, one of the chief strongholds of the country at the time it was built, in the 11th century. Gisors has a communal college, a parish church, a large apothecary and brewery, and manufactures of soldiers' belts and calicoes, tanneries and breweries, a trade in grain and in the environs, copper and zinc setting mills. Pop. 3184.

GISSER, an isl. Indian Archipelago one of the Baule group. It is low and sandy surrounded by a coral reef. It was formerly but is no longer inhabited the people, in consequence of war having all fled to Oeram-Laut and other islands.

GISSI a tn. Naples, prov. Abruzzo Citra, 17 m. S.E. L'Aquila, near r. bank, Adriatic 109, 3000.

GISSIGHEIM a vil. Baden, circle Lower Rhine near Bischofsheim on the Rhine. It contains a castle, and a parish church built in the Byzantine style, and has a distillery brewery and several mills. Pop. 968.

GISSING par Eng. Norfolk 1,381 ac. Pop. 485.

GISWILL or Grewitz a vil. and par. Switzerland cant. Unterwalden, on the Leawilth from the mountains of which the village has often severely suffered, 6 m. S.S.W. Sarnen. It contains a handsome church situated on a height. A lake above the village the outlet of the Länggarnsee forms the fine cascade. Pop. 1008.

GLIS, a vil. and com. Belgium prov. W. Flanders 15 m. N.E. Ypres, with manufactures of hosiery cordage, breweries, vinegar works, &c. Pop. 8525.

GITSCHIN or Gitsin (Latin Gitsinum) a tn. Bohemia, circle Budechow in a plain among mountains, on the Ljulina 48 m. N.E. Prague. It consists of the town proper surrounded by walls with three gates and of four suburbs; is the seat of a civil and criminal court, and of several public offices contains two churches and two chapels a fine old castle a Jesuit college, now used partly for government offices, and partly for barracks a townhouse a gymnasium a high school a military school and hospital &c. has some general trade, and a trade in corn and cattle a weekly market, and four large annual fairs. Pop. 3698.

GITTELDE a tn. Brunswick on a slope of the Harz, above 1 bank, Ass. S. m. S.W. Brunswick. It contains three churches and has scolding-benches and other iron works, trade in cattle and two annual fairs. Pop. 1213.

GITTISHAM par Eng. Devon 2067 ac. Pop. 284.

GIUBIASCO a vil. and par. Switzerland cant. Tesin picturesque situated in a valley r. bank, Mar bluffs have crossed by a new bridge of three arches, 4 m. S.W. Dell'isola. It is cheerful looking and well built contains a large square, surrounded by walnut and chestnut trees and three churches one of them the landmark in the canton and has a large annual fair chiefly for horses and cattle. Pop. 613.

GIUGLIANO a tn. and com. Naples, prov. of, and 10 m. N.W. Naples, cap. circondario of same name. It contains a fine castle four elegant churches two of them collegiate, and an hospital. Pop. 9081.

GIULIANO (San) a tn. Sicily 5 m. E.N.F. Trapani in an elevated situation. It contains a number of churches and convents, an hospital and a most-dep. In the vicinity on the summit of a hill, called Monte Eryx, are the ruins of the celebrated ancient temple of Venus whose splendours have been spoken of in the most enthusiastic terms by Pausanias, Virgil, Diodorus Siculus, &c. Jasper is found in the neighbouring mountains. Pop. 10,244.

GIULIANUOVA a tn. Naples, prov. Abruzzo Ultra, 14 m. N.E. Teramo on a height near the Adriatic. It has a church three convents an hospital and a considerable fishery. Pop. 2200.

GIULIOPOLI a vil. Naples, prov. Abruzzo Citra 24 m. S. L'Aquila near r. bank Sauro. Pop. 1065.

GIUFANA, an isl. Calabria, in the Abroto, within 2 m. of the shore, 12 m. N.W. Reggio. It is 6 m. long by 14 m. broad has a rocky shore, but a fertile interior and produces in abundance wine and oil. Pop. 901.

GIURGEWO Giurgevo or Decuracowowa a tn. and river-port. Wallachia, 1 bank, Danube, opposite Rutenok, 48 m. S.S.W. Bucharest, of which it is the port. Its situation raised on an insulated height, called Slobetza, surrounded by the Danube, is connected to the town by a bridge. Gjur

gewo has mean houses, narrow and dirty streets a district school and a court of first instance. It is the most important shipping-port on the Wallachian side of the Danube, and carries on a considerable trade, importing from Austria, Germany, Hungary &c., to the annual value of £275,000. In 1778, the Russians here defeated the Turks. It was taken by the Russians in 1811 and again in 1852, when its defences were dismantled. Pop. 7000.

GIUSSANO a vi Italy Lombardy prov. of and 18 m N Milan, with a church and an old castle. Pop. 1088

GIVALLA a vil. and com. Italy Piedmont, div. of and about 31 m. S.W. Alessandria, with two churches, a common school a trading estate, and a large annual fair. P. 1186.

GIVENDALE (Gzerat) par Eng. York (E. Riding) 12th co. Pop. 5

GIVET a fortified town in France, dep. Ardennes, 28 m. N by E. Metz, on both banks of the Meuse, across which is a handsome stone bridge. It has a public library; manufactures of white-lead, tobacco pipes, pencils, sealing-wax, glass, copper and zinc vessels, and sells marble-yards and tan-works some transit trade and in the environs, quarries of fine stone. The fortress, fortified by Vauban, consists of a bastion, the ramparts and towers of the town and Givet St. Hilaire, both of which it commands. Pop. 4040.

GIVORS, a town in France, dep. Rhône, 14 m. S. Lyons, on the Rhône the canal of L'Isle-d'Arde and near the railway between St. Etienne and Lyon. It is a centre of the coal trade, but not otherwise remarkable, has bottle and window glass works, and numerous rice-fields. Pop. 7010

GIVRY a town in France, dep. Saône-et-Loire 7 m. W. from Chalon-sur-Saône on the Orbe, at the foot of a vine-covered slope, which yields the best wine in the Chalonais (Burgundy). It is regularly built with straight streets occupying a large square and has a parish church, which is a remarkable round edifice, manufactures of coopers, warms, with tanneries, linen weaving, and bleaching and, in the environs some fine stone quarries. Pop. 2120

GIZEH or GIZA, Egypt. See GHIZEH

GLATSK a town in Russia in Europe gov. of and 132 m. E N E. Smolensk on a river of the same name. It has three churches, some linen manufactures, and a considerable trade in corn, hemp, and iron. Pop. 2600

GLADBACH a town in Prussia, dep. of Rhine and Moselle, prov. of and 16 m. W. Düsseldorf cap. circle of same name, agreeably situated on a height above the Rhine. It is the seat of a law court and several public offices, contains a Protestant and two R. Catholic churches, one of the latter an ancient edifice surmounted by a tower and has manufactures of cotton and of seed cotton goods, silk, common and white leather copper-wire, tobacco &c. and numerous mills. Pop. 3150. The Rhine is flat watered by the Rhine, and several other streams and, though not particularly fertile, raises a great number of cattle. Area, 71 sq. m. P. 64 003

GLADBACH a market in Hesse Darmstadt, Ober-Hessen, 10 m. S.W. Marburg, it has manufactures of tobacco, a slate quarry and five annual fairs. Pop. 1050

GLADSTON par Wales Radnor 3798 ac. Pop. 362 GLADVOVA (Turkish, *Fet-islam*) a town Turkey prov. Servia on the Danube, 100 m. E.S.E. Belgrade, below the passage called the Iron-Gate. It is a mean place but goods and passengers are here shipped and unshipped both having to be taken by land to and from Orsova (10 m.) to avoid the intermediate rapids. About 2½ m. below Gladvo is the remains of Trajan's bridge over the Danube.

GLADSTON par Scot. Haddington 10 sq. m. P. 1780 GLADSDALE a tn. par of Derby England York (N. Riding) 8570 ac. Pop. 986

GLAMIS a vil. and par Scotland, Forfarshire the former encompassed among trees, in the fertile valley of Strathmore, 10½ m. N. by W. Dundee, and a station on the Scottish Midland Junction Railway. It consists of one principal street, running E. to W. houses respectable, and of a fine-grained and hard sandstone obtained from quarries in the neighbourhood. It has a handsome parish church and school an infant school, two libraries, and two friendly societies. The castle of Glamis, about 1 m. N. of the village, is an ancient venerable structure, though some parts of it are comparatively modern. The ruins to the village is a considerable flax spinning-mill built in 14th year which the inhabitants of the parish make into

brown linen, chiefly Ouseburne and shottings, for the Dundee market, the annual average produce being 6000 pieces. A good many of the inhabitants are also employed in the neighbouring quarries. Area of par about 14,900 ac. Pop. 2122. (Local Correspondent)

GLAMORGAN or GLAMORGANSHIRE, a maritime co. S. Wales, having N. the coast of Brecknock and Carmarthen, E. Monmouth and the river Severn, S. and S.W. the Bristol Channel length E. to W. about 50 m. greatest breadth, 27 m. area, 600 sq. m. or 432,400 ac. The N. and N.E. parts of the county are extremely mountainous, though some of their summits reach a great elevation; the highest being only 1850 ft. high the others vary from 200 to 1000 ft. The hills in general are barren, yielding little herbage, although here and there verdant declivities are met with, on which flocks of sheep are depastured. In many places the sides of the mountains are covered with wood presenting in combination with narrow valleys and deep glens, scenes of the most romantic beauty. The M. part of the county is level and very fertile, particularly the vale of Glamorgan the soil of which consists principally of clay and when well cultivated produces the finest crops of wheat. The climate, in this part of the county is remarkably mild. Snow seldom lies long on the ground; and myrtles, arbutus, and other tender shrubs, thrive in the open air. This fertile valley is in many places from 8 to 18 m. in breadth. Glamorganshire belongs wholly to the basin of the Severn and all its streams, of which the Taf or Taff is the largest, flow in a S. direction. Other streams are the Tawe, Neath and Elwy &c. The cattle reared in this county are reckoned the best in Wales, with the exception of those of Pembroke. The more recently built cottages are remarkable for their neat, clean, and comfortable appearance. They are constructed of stone and mortar and white-washed inside and outside. The mineral wealth of Glamorganshire is of incalculable value. Its coal fields are inexhaustible and its stores of ironstone and limestone are nearly equally extensive. The smelting establishments of Merthyr-Tydfil, Neath, Swansea, Aberdare, and Abercrombie, are the largest in Britain. The woollen manufacture is also carried on to some extent. The county is intersected by numerous canals and railways, which afford ready means of communication throughout the interior and with the towns and ports on the coast. Principal towns—Cardiff, the capital, Merthyr-Tydfil, Swansea, and Neath. This county returns five members to the House of Commons—two for the county one for Merthyr-Tydfil, and one each for Cardiff and Swansea and their contributory boroughs. Glamorgan is divided into 10 hundreds, and 118 parishes. Pop. 271,819

GLAMORGAN a co. Van Diemen's Land bounded, N. by the St. Paul and S. Rak rivers separating it from the county of Cornwall on the W. by the county of Somerset on the E. by the Little Swan Port river on the E. by the ocean. Its towns are Swansea, Llandaff, and Rarborough.

GLAN a lake, Sweden, in the N.E. of the Län of Gäddede about 9 m. long by 6 m. wide. The Mottia, which discharges Lake Wetter after passing through Lake Ronen, enters the S.W. extremity of Glan and, issuing from its E. extremity passes the town of Norrköping and forms a long estuary called Raviken in the Baltic.

GLANDFORD par Eng. Norfolk 864 ac. Pop. 6 GLANDFORD-HOUSE a tn. and chapelry England, co. of and 28 m. N.E. Lincoln The towers intersected by a branch of the Ancholme, here crossed by a stone bridge, is a station on the Manchester Sheffield and London railway. It consists of three regular streets, well kept, and lighted with gas and has a handsome church with a lofty tower, places of worship for Wesleyan and Primitive Methodists, Friends, Independents, and R. Catholics and two schools, one of which is a free grammar school, founded in 1669. The drawing of hares and rabbit skins has been extensively carried on here for a long period. A considerable trade is also done in coal, iron, and timber. Weekly market, Thursdays. Pop. 1202. (Local Correspondent)

GLANDON a harbour and small vil. S. coast, Ireland, co. Cork. The harbour, 5 m. W. Ross Bay is about 1 m. wide at the entrance, and stretches inland about 3 m. The village, about 2 m. above the mouth of the harbour, is much resorted to during the bathing season.

GLANDOIRE a small tn. and harbour inland, E. coast, co. of and 84 m. S.W. Cork; lat. 52° 35' lon. 10° 12' W. The town is situated on the E. side of the harbour and contains many handsome houses, erected for the accommodation of bathers, and others attracted to it by the beauty of its situation and the salubrity of its climate. Fish are abundant in the bay. The harbour affords safe anchorage to vessels of large size.

GLANDORF a vil Hanover prov. Osnabrück, ball Igum. It is an old place, and has often suffered from war.

GLANDRE, a stream Switzerland can. Fribourg, an affluent of the Rhone. It rises behind Romont, and joins the Saane below Avenches. Below Romont are the baths of Glens.

GLANMIRE, a narrow sheltered valley or glen, in the vicinity of Cork, much resorted to by the Irish tenants of that city. It is about 3 m. long with banks on either side of considerable elevation, which are covered with handsome villas, surrounded by trees. At the upper end of the glen which is traversed by a small river of the same name is the village of Glanmire, with flour mills, cloth factories, factories for spinning wool, bleaching, drying and finishing calico. The scenery here is sufficiently pleasing.

GLANWORTH a vil and par Ireland co. Cork. The village, on the rich valley of the Funchon 23 m. N. by E. Cork, has near it the ruins of Glanworth Castle, the ancient seat of the Roches; and the ruins of a Dominican abbey founded in 1227. Pop. 889. Area of par 4881 ac. pop. 2974.

GLAPHOR a par England co. of Northampton situated on the bank of the river Yene 1870 ac. P. 467.

GLARNISCH a mountain Switzerland co. of and about 5 m. S.W. Glarus. It has several peaks, and is connected with the Todi. It is 892 ft. high, rises abruptly from the valley below and is difficult of ascent. In 1598 four large rocks were riven off by an earthquake, and thrown into the valley beneath. Lat. (border Glarnisch) 47° 1' 29" N; lon. 9° 2' 30" E.

GLARUS, a canton, Switzerland bounded, N. and E. by St. Gall S. by the Grisons, and W. by Uri and Schwyz between lat. 46° 47' and 47° 10' N lon. 8° 35' and 10° 14' E. greatest length N. to S. 35 m. greatest breadth 31 m. area 198 sq. m. The greater part of the surface is covered by mountains, many of which, as the Glimsch, Karpfisch, Hanzstock, Ruzli, Kistenkamm, Seltsch, Todi and Sandgrath are covered with perpetual snow. The principal chain which stretches from the Hanzstock to the Schelle, has a height of more than 8000 ft. and contains many glaciers. There is only one principal valley opened into by three minor valleys. The principal valley stretches throughout the canton N. to S. and forms the basis of the Lint. The chief minor valleys are the Berni and Kili. All of them have streams of the same name and, through the Lint, ultimately send their waters to the Rhine. The lakes are numerous but are less remarkable for their extent than the magnificent scenery in their neighbourhood. A considerable part of the Wallenberg, however belongs to the canton. The climate is very severe and only the deeper valleys and milder districts are fit for human habitation during the whole year. Even in these, the snow generally remains the greater part of March, and occasionally to the middle of April. The prevailing rocks of the canton are conglomerates generally overlain by mountain limestone. In some districts, particularly in the valley of the Berni, there are vast masses of a species of graywacke. The minerals are not of much consequence though ancient mines, both of silver and copper are found in different spots. Some seams of coal are found and marble, slate, and gneiss, are abundant. From the nature of the surface and the climate, there is little room for the plough; and the far greater part of the canton is necessarily occupied by alpine pastures. A good deal of fruit, particularly cherries, is raised and chestnut trees are not uncommon. The most fertile part of the canton stretches through the principal valley and produces a good deal of corn. Wood is not very abundant; but many of the mountains are covered with pine. After it, the prevailing trees are beech, maple, and ash. There are very few oaks. The species of game are not numerous and are chiefly confined to the chamois, fox, hare, badger and marmot. The flora, extending over a range

of altitude commencing at 1500 ft. and continued to the highest limits of vegetation, is very rich and considerable the comparatively narrow limits of the canton, is remarkable for its variety. The manufactures include woollen, linen, cotton, and silk goods, muslin, prints, paper, writing slates, and numerous articles in wood and an active trade is carried on both with Germany and Italy. The principal exports are wood, leather, chamois skins, butter, cheese, and cattle. Glarus occupies the seventh place in the Swiss Confederation; and has a very democratical constitution. For administrative purposes it is divided into seven districts. The Protestants form nine-tenths of the inhabitants. Pop. (1840) 30,187.

GLARUS (Italian *Glara*) a tn. Switzerland exp. can. of same name, pleasantly situated in a secluded spot, at the foot of the Glimsch and Schill, not far from r. bank, Lint, which is here crossed by a covered bridge, 32 m. S.E. Zürich. It is well paved, but not very well built and has, in many parts, a dull and gloomy look. It contains an ancient gothic church used as common by Protestants and E. Catholics, with a good organ and a pulpit occupied during 10 years by the celebrated reformer Zwingli. A townhouse, situated on a square, planted with lime trees, but itself an old and ungainly building, a new government house, of the former order a handsome casino, an hospital and a free school for 700 children and has manufactures of woollen, linen, and cotton goods, calico, muslin, and prints and a considerable trade particularly in a kind of green cheese, called solabaijer peculiar to the canton. The environs of Glarus contain many romantic walks with commanding positions from which magnificent views are obtained. Pop. (1840) 4700.

GLASBURY a par Wales co. of Breck 9216 ac. Pop. 1375.

GLASCOMB a par Wales, co. of Radnor 6084 ac. Pop. 544.

GLASHEN a vil Prussia, gov. Oppeln, circle Leobschitz. It contains a castle, a E. Catholic parish church, and has a saw and a corn mill. Pop. 899.

GLASHENBACH a vil Austria duchy and near Salzburg. It consists of scattered houses on a rivulet of the same name, which here emerges from the Jagerthal. In its vicinity is an iron-works.

GLASENDORF a vil Bohemia, circle Bistulow. It lies high on the Bohemian mountains in a valley on a rivulet of its own name and has a school and a mill. The climate here is severe, and avalanches are sometimes formed which cause great destruction. Pop. 210.

GLASESDORF a vil Bohemia, circle Bouditz at the source of a small affluent of the Elbe. It has a school and two mills, and is named from some glass-works which formerly existed here. Pop. 1217.

GLASESDORF several places, Germany particularly two places, Prussia:—1. (*Nieder and Mittel*) A vil. gov. Liegnitz, circle Lieben. It has a castle and three wind mills. Pop. 277.—2. (*Ober*) A vil. gov. Liegnitz, circle Lieben. It has a castle and a E. Catholic church. Pop. 665.

GLASFORD a par Scotland co. of Lanark 11 sq. m. Improvements have taken place in this parish of late years that leave no doubt that the greater part of its waste lands will be rendered arable in a comparatively short period. It contains freestone, lime, and coal. Pop. 1955.

GLASGOW the principal commercial and manufacturing city of Scotland and a river port, co. Lanark, Lower ward, on both sides of the Clyde 42 m. W. by S. Edinburgh lat. [Glasgow Bridge] 56° 51' 54" N lon. 4° 16' W [N.] greatest length E. to W. 3 m. breadth, N. to S. 2 m. circumference, about 8 m.

The city proper stands wholly on the S. bank of the river having the suburbs of Calton and Bridgeton on the E. and those of Anderson and Finnieston on the W. the whole forming one continuous town besides these, the suburban villages of Camisburgh, Westmear and Parkhead, on the E. and of Partick, on the W. are so closely connected with it as to be likewise almost continuous. On the opposite or N. bank of the Clyde is the ancient suburb of Gorbals, and, of more modern growth those of Havelocktown on the E., and Langlands, Tranterston and Kingston on the W., the whole also so blended as to constitute one unintermitted series of streets and houses, with which the village of Govan, on the W., is almost

united. These two sections of the town are connected by three substantial stone bridges; and an elegant suspension one is (1867) in progress of erection. In addition to these, another stone bridge crosses the river at the E. extremity of the town. One of these bridges, the Glasgow or Broomielaw Bridge, designed by Telford, is a splendid structure, faced with granite,

500 ft. long and 60 ft. broad. The greater part of the city and its suburban portions, stand on level ground, lying along the banks of the river; but on the N and N W at once comprising the oldest and newest parts, is rises to considerable elevations, occupying in the former quarter the base and summit of a steep ridge. In the latter, ascending, and cover-

ing several gentle acclivities. Its plan is very regular both on the N and S. side of the river the streets generally lying E. and W. nearly parallel to the river or N and S at right angles to it.

The general appearance of Glasgow on being approached is almost any direction, is not, perhaps very prepossessing owing at once to its generally low situation and to the obscurity of a vast number of tall smoking chimneys and other manifestations of manufacturing industry still the great number of its handsome squares forms a striking feature in its general aspect, when viewed from a distance and when surveyed in detail it is found to present many pleasing and attractive features. All its buildings, with exception of factories, and a few suburban houses for the working-classes, are built in a superior style of fine white and generally polished freestone, imparting a peculiar air of combined solidity and elegance to the whole city. Many of the streets are hand some and spacious, some of the public edifices magnificent, and the new ornamental squares, and isolated rows of dwellings, particularly in the W. and S. of the town, present as beautiful specimens of modern domestic architecture as are to be seen anywhere having the additional advantage, in numerous instances, of fine commanding situations. Indeed, there are few of the admirable specimens of the factory.

There are, altogether 35 m. of broad and paved streets in the city the principal of which are, in general, remarkably

straight and most of them of considerable width. They are kept in good order and are well paved and lighted by between 7000 and 8000 gas lamps; the total annual quantity of gas used in the town being 441,000,000 cubic ft. The still more essentially necessary article of water is supplied at the rate of 27 gallons a-day to each inhabitant, the total daily supply being 12,000,000 gallons. The principal street is the Trongate, with its continuation—the Gallowgate on the E. and Argyle Street on the W. It lies E. and W. for all about 2 m. long and 60 ft. wide, and is justly considered one of the handsomest streets in Europe. The finest N. and S. streets are Buchanan Street and Queen Street the former the fashionable street of the day and the most remarkable for the elegance of its shops. Many of the interesting streets in this part of the town are also spacious and handsome. Some of the older streets have much character if little else to recommend them. The principal of these are High Street and Saltmarket, both of which have a certain degree of the character in their general aspect. The squares of Glasgow are few in number and generally small. The principal are George Square, containing several handsome monuments, to be afterwards alluded to and occupying an elevated situation Blythwood Square which, though not the largest, is the finest square in the city all the houses with which it is flanked being elegant mansions. The crescents and terraces of Glasgow are of modern creation and are, therefore, all confined to the growing, or W. and N. W. end of the city.

Public Buildings, Monuments, &c.—Glasgow has many public buildings of great architectural merit. Excluding the churches, which will be afterwards noticed, the first place is due to the University situated in the High

engrave. The Royal Infirmary situated near the Cathedral, and founded 1792 is a large and handsome edifice. But by far the most magnificent of all the public buildings in the city is the Royal Exchange in Queen Street. It is in the Corinthian style, surmounted by a band

THE UNIVERSITY OF GLASGOW.—Drawn from Nature and a Word, by W. L. Litch.

Street. It comprises five quadrangles or open courts, bounded by the various rooms and offices belonging to the institution. Its street front is in the Elizabethan style, and dates about the middle of the 17th century. Behind is the Hunterian Museum, so called from its founder the celebrated Dr. William Hunter who studied at the university. It is an elegant Roman Doric edifice, contains Dr. Hunter's valuable collection of anatomical preparations, a collection of objects

among the chief architectural ornaments of the city (the Union British Library, Royal Kilmac, Western and City Banks, may especially be particularized for their elegance. The Western Club-House Assembly Rooms, now the Athenaeum, Hutchison's Hospital the Trades Hall Anderson's University the Established and Free Church normal seminaries, City Hall Corn Exchange, the extensive Lunatic Asylum at Garrahal, 2 m. W from the city and the Ob-

servatory about $\frac{1}{2}$ m. nearer in the same direction some of the more recently erected schools, both private and charity are all more or less deserving of notice as are also the Town's hospital and the N. and S. prisons. The public monuments comprise that to Nelson in the Green, an Egyptian obelisk 144 ft. in height an equestrian statue of King William III at the Cross the statue of Sir John Moore a native of Glasgow by Flaxman, and one of his finest works of James Watt, by Chantrey and a fluted Doric column, surmounted by a figure, in freestone, to Sir Walter Scott—the last three in George Square; and the equestrian statue of the Duke of Wellington, by Marochetti in front of the Royal Exchange.

Churches and Places of Worship.—There are, within the parliamentary city and burgh of Glasgow, 168 places of worship.—Established 25, Free 86, 11 Presbyterian 25,

of natural history a cabinet of coins, a library of 19 000 volumes, and a small, but choice collection of paintings, purchased for the founder by Sir R. Strange, and including several of the originals of the finest works of that cabinet

Episcopal 5, R. Catholic 7 Independent 11 Baptist 7 other denominations, 35 affording, altogether sitting-rooms for 114,378 persons. As specimens of ecclesiastical architecture, many of these churches are of a high order. First is the

THE TRONGATE AND OLD EXCHANGE, GLASGOW.—Drawn from Nature, by R. Gordon.

ancient Cathedral or High Church a majestic pile, situated on the N and oldest part of the town, on the edge or W bank of a ravine, traversed by the Molendinar Burn. This fine old edifice was founded in 1122, during the reign of David I. by John Abchelm, bishop of Glasgow and dedicated to St. Mungo or Kentigern. It received, however, subsequently many additions and embellishments, by successive prelates, as far down as the Reformation. It is in the early pointed style, with a lofty tower and spire rising from the centre length E. to W 310 ft., width 63 ft., height of the nave 90 ft. of the choir 85 ft., of the tower and spire 220 ft. A low square tower, formerly existing at the W end of the building has been recently removed, and the whole edifice subjected to a complete repair. The crypt of the cathedral, according to Mr. Mackenzie, is not equalled by any in the kingdom. The piers and groins are all of the most intricate character, the most beautiful design, and excellent execution. Many of the other churches in the city are remarkable for the beauty of their architecture. Among the Established churches, St. Andrew's a building of the composite order one of the oldest, is also, in many respects, one of the finest after St. David's, in the decorated Gothic style, St. George's and St. Enoch's, in the Roman style, may be named as most worthy of notice. The finer specimens of ecclesiastical architecture, of more recent erection, are the Free churches of St. John St. Matthew St. Peter and St. Stephen all Gothic buildings, with elegant and lofty spires and the Rindfield Street U. Presbyterian church, and the new Independent chapel, tasteful Gothic structures.

The Green Dotted Garden and Cemeteries.—The Green as it is emphatically called, is a large and beautiful park comprising 140 ac. of smooth verdant lawn and adorned at various points by rows of noble trees. It is situated at the S.E. part of the city on the E bank of the river is the common property of the inhabitants, and is used principally for purposes of recreation. The Botanic Garden, about a mile W. from the city or about two from the Green, comprises 21 ac. occupying the gentle slope overlooking the wooded banks of the Kelvin, which forms part of its boundary. It is tastefully laid out, and has an extensive collection of native and exotic plants. The Necropolis occupies a steep rocky eminence rising from the Molendinar Burn opposite the Cathedral and is tastefully and prettily adorned with trees and shrubs. The numerous monuments, many of them exceedingly handsome, with which it is crowded, are finely displayed in terraces rising above each other on the face of the steep imparting to the Necropolis a very striking appearance, and enabling it to compare favourably even with the famed Père-la-Chaise. There are other fine cemeteries of a similar kind in the outskirts of the town, all of them extensive and well laid out and, altogether the number of places of sepulture in and around the city is twenty-two.

Markets and Consumption of Food.—Glasgow is well supplied with all kinds of provisions but has only one general public market-place that need here be noticed, namely the Bazaar in Candlemas Street which is spacious and well arranged. The cattle market, at the E end of the city occupies an area of 30,000 sq yds. and is well laid out. It appears that the use of bread has doubled since 1846. To supply the demand there are, besides numerous smaller bakeries, several very extensive establishments at the largest of which as many as 40,000 quarters (4 lb.) loaves have been baked for some weeks in succession. The number of animals slaughtered in Glasgow during the four years ending in 1861 is given in the following Table.

Descriptions.	1848.	1849.	1850.	1861.
Oxen	10,790	95,222	90,500	88,599
Cattle	3,374	6,266	4,878	4,444
Sheep	2,290	66,481	98,116	72,800
Pigs	25,483	69,517	14,000	94,000
Goats	13	18	29	60
Figs	3,191	1,285	3,994	5,127

Roughly then, large quantities of salted and dried provisions, including herrings, both salted and fresh, are consumed.

Devotional Institutions.—There are no numerous, but we can do little more than name the principal. They comprise the infirmary and fever hospital eye infirmary night asylum

for the homeless the Town Hospital or city poorhouse, and the Buxton and Govan parish poorhouses; the asylum for the blind, institution for deaf and dumb, indigent old men's asylum, house of refuge for females, house of refuge for males, lock hospital, three lying-in hospitals, Hibernian hospital for the maintenance of despatch surgeons and their widows, and the education of boys, sons of burgesses a female asylum, humane society the merchants' house, and the 14 trades associations, the last two dispensing a large sum annually besides numerous free schools for the poor benevolent societies, and minor charities.

Educational, Literary and Scientific Institutions.—At the head of the educational institutions of Glasgow stands the University founded in 1450 by Bishop Turnbull. It comprises 23 professors, in the four faculties of arts, theology, law and medicine there is, besides, a lectureship on the structure and disease of the eye. The professors derive their incomes partly from fees paid by the students, and partly from funds belonging to the college, augmented by several grants from Government. There is only one session in the year commencing in the beginning of November and terminating 1st May. There are 99 bursars, the benefits of which are extended to 65 students the highest is £50, the lowest 24, 10s. The number of students varies from 1000 to 1200. This university has had many men of the highest talent and literary eminence amongst its professors. Of these may be named Melville, Halliwell, Leishman Barrow, Stephen Hutcheson, Joseph Black, Colin Adam Smith, David Milne Richardson, Young and Hamilton. The Andersonian University was founded for the use of the unacademic classes, in 1795 by John Anderson professor of natural philosophy in the university of Glasgow and endowed by him with a valuable philosophical apparatus, museum, and library. Other public educational institutions are the Mechanics Institution, the first of the kind established in Britain, the High school or grammar school, under the superintendence of the Corporation; the Normal seminary of the Established and Free Churches, for the training of teachers—the former the first seminary of the kind in Scotland, the latter conducted on Stow's training system and the Government School of Design. The number of minor elementary schools is also very great but there seems to be still a very large amount of educational destitution in the city especially as regards children between the ages of five and ten years the number of whom, not attending school Dr. Brown estimates at about 6000 or 7000. The principal literary and scientific institutions are the Philosophical Society Library and Commercial Society Natural Club Athenaeum the Glasgow Medical Society the Medical-Chirurgical Society. The public libraries are Stirling's library about 12,000 volumes; the Glasgow library 15,000 volumes the college library 101,000 volumes and the libraries of the Athenaeum, the Andersonian University and the Mechanics Institution. There are three public reading-rooms; the Royal Exchange, the 1st and 2nd Old Exchange, and the Athenaeum, besides a number of minor rooms established by private individuals in different parts of the city. There are at present (1859) 14 newspapers published in Glasgow—3 weekly 2 twice a week 1 thrice a week and 1 daily Several of these are conducted with great ability.

Sanitary and Moral Condition.—The climate of Glasgow is marked by great humidity and the prevalence of S.W. and N.W. winds. It is particularly unfavourable to human life during childhood, as fewer than one child out of every 20, under 15 years of age, dying annually there while in Edinburgh, Dundee, and Greenock, only one child dies annually out of every 50 living. But this high rate of mortality amongst children must have special reference to the poorer and more crowded parts of the city; as, in the better ordered and more airy districts, inhabited by the wealthier classes, the mortality is certainly not greater than that of any other large town in Great Britain. To adults, however, and the aged the climate is more favourable Glasgow being ranked, as regards these, as the fourth healthiest town in the kingdom. The average mortality for 1860 has been estimated at 1 in 36.6, or 2.73 per cent. The most prevailing diseases is consumption; next, bowel complaints and next, typhus fever. It is so observed, however, that the above results are not, by any means, the effects of climate alone

bet proceed, in great part, also from a number of other indirect influences combined.

Of late years, much has been done by the public authorities towards the improvement of the sanitary condition of the city but much still remains to be done. There are, at present 43 m. of main sewers 21 in. of which have been formed during the last six years. The evil condition of the working population of Glasgow has been greatly exaggerated and their delinquencies, most especially as regards intemperance, are travestied over the world. There is undoubtedly much to deplore in the conduct of the lower or we should say the very lowest classes; for happily to these alone are habits of gross dissipation now chiefly confined. But a more careful scrutiny and more rigid discrimination than has been hitherto exercised in inquiring into and fixing the limits and extent of intemperance in the city is necessary before the sweeping charges brought against it can be admitted as a truth. While Glasgow is perhaps no better than any other large town similarly circumstanced, it will not readily be believed by those who know it best that it is any worse.

MANUFACTURES.—The manufactures of Glasgow are extensive and exceedingly various. The great staples may be classed under the general heads of cotton and iron, with their endless varieties of name, form and purpose but, besides these, there are sundry other manufactures, particularly those of a chemical nature which are carried on here more extensively than anywhere else.

Textile, &c. The principal of these are the cotton manufactures, which include the spinning of yarn and of sewing thread, and the weaving both by hand and power loom of shirtings including an immense variety from coarse unbleached, to the finest bleached imitations of linen sheetings, twilled and plain, cambrics, bed-covers, gingham, checks, and stripes cordis. In coloured fabrics for foreign markets calicoes, cambrics, jacquets lawns, muslins plain and fancy &c. Besides these, mixed fabrics of cotton and silk, cotton and wool and cotton and linen are manufactured to a considerable extent. Of wool and silk the manufacture is comparatively limited, still in the department of carpets the former is somewhat noted. The calico print works are numerous, and produce goods of every variety in quality. The following table, obligingly furnished by Her Majesty's Lord Inspector of Factories, will give a good general idea of the extent to which the various manufactures already alluded to are carried on, including the additional branches of flax spinning and rope-making—

STATISTICAL TABLE of the FACTORIES and PRINT-WORKS

Nature of Work.	Number of Works.	Aggregate Persons Employed.	Aggregate Horse-Power.	Aggregate Spindle.	Aggregate Power-Loom.
Cotton Spinning	40				
Cotton Weaving	33				
Cotton Spinning and Weaving	16	21,787	8,550	865,486	18,572
Woolen and Worsted Spinning and Weaving	26	770	170	14,399	80
Silk Throwing and Weaving	7	703	180	32,706	
Flax Spinning and Reaping	4	1,360	810	25,000	
Cotton Print Works...	110	34,487	8,590	948,685	19,782
	11	3,164			
Total	181	57,681	6,230	948,685	19,832

To complete this section of the manufactures, dyeworks must be added in which there are employed, in dyeing Turkey red for which Glasgow has long been noted, about 850 hands; and in other colours connected with manufactures about 770. But a very inadequate idea of the extent of the Glasgow manufacturing interests, in the branches already mentioned, will be formed, unless it be recalled that, in addition to the factories concentrated in the preceding table, the hand-loom weavers in all the villages for many miles round are employed directly by Glasgow houses and that the spinning and weaving factories of Blantyre, Lanark, Cathie, Dennison, Rothery, &c., and the print-works of Alexandria, Bonhill, Barrow, and Melton, &c. are quite as much the factories of Glasgow as those situated within the bounds of the city.

In connection with the textile manufactures, the embroidery of muslins and of woollen fabrics, both of which are very

extensively carried on fails to be noticed. The embroidery of muslins commonly called the several muslin manufactures is a branch of business almost peculiar to Glasgow about nine-tenths of the whole of this kind of work being done for that city the remaining tenth for Belfast. The number of persons employed, either originally or partially in these manufactures, in the counties of Lanark, Ayr and Renfrew in Scotland, and in the N of Ireland is very great they are chiefly females who work in their own homes, many of these however only at bye-times. One Glasgow firm employs upwards of 25,000 and the total number employed by Glasgow houses is estimated at about 110,000. The embroidery also with silk on woollen fabrics such as ladies' dresses, vestings &c. gives work to many thousands hands, located chiefly in the surrounding villages, and scattered over the three counties above named.

Iron.—The iron manufactures of Glasgow in all their departments are at least as important as those of cotton. In 1849 there were 79 smelting furnaces around the town each producing an average of 6000 tons of pig-iron per annum or 475,000 tons yearly. The principal articles manufactured from this metal are—land and marine engines, locomotives, railway wheels and axles, carriages, waggon, trucks, rails, chairs and power-looms, and machinery of all kinds, hydraulic presses, mills of various descriptions, anchors, chains, and ship mounting in general bars &c. and a vast quantity of iron is now consumed also in the building of both sailing vessels and steamers. The following table furnishes a view of one department of iron manufactures that connected with marine engines and steamers, in which the number of hands employed is between 4000 and 5000—

MANUFACTURES OF IRON STEAMERS constructed at GLASGOW the years 1847-1861.

Year.	From Power of Marine Engines constructed.	No. of Vessels for which built.	Engines in tons.	Displacement.	Persons Employed.	Aggregate Tonnage.
1847	2,118	14	19	12	8	6,886
1848	3,350	19	19	12	8	4,818
1849	8,394	27	17	18	9	9,774
1850	6,287	27	17	18	9	4,408
1851...	8,444	28	19	19	9	15,708
Total	19,597	81	81	81	31	41,876

Besides what is done for private companies a considerable amount of work is also done for government the Clyde, on

which steam navigation first commenced, still retaining pre-eminence for its steamers and marine engines. The Cunard mail packets, the most successful line of ocean steamers afloat, were all built on the Clyde, and their engines were constructed by Robert Napier of Glasgow.

Chemical Manufactures.—The most extensive chemical works to existence are those of St. Rollox, in the N.E. part of Glasgow.

They cover about twelve acres of ground employ about 1000 hands, have several lofty chimneys, one of which is 450 ft. high 50 ft. diameter at the base, and 14 ft. at the top and consume annually from 70 000 to 80 000 tons of coal. About 80 000 tons of raw materials are used in these works consisting chiefly of salt from Cheshire, limestone from Ireland, sulphur from Sicily, manganese from Hessen in Germany and talow and oil. The manufactured products amount to about 25 000 tons annually principally of alkali bleaching-powder, vitriol, and soap. Indine is manufactured to a great extent by several houses in Glasgow, indeed with exception of one establishment in the N of Ireland, a small one at Greenock, and another at Borrowmanston, all the British lodine is made in this city. Cellulose is almost exclusively a Glasgow manufacture. Substitutes of pitch is largely produced. The other principal chemical productions are ammonia, pitch-oil, pitch, sulphate of ammonia, carbonate of ammonia,

and liquid ammonia animal charcoal salt of ammonia, and some rare pyroxygous acid acetic acid, and their combinations, such as sugar of lead, iron molybdate, &c. extremely used in dyeing and printing, a small quantity of tartaric acid and cream of tartar with aquafortis, muriatic acid, and the various solutions and combinations of the iron, copper, &c. used by calico-printers and dyers, are also manufactured. Alum and potassium of potash are extensively made by Glasgow houses but the works are at some distance from the city.

Potteries, Tobacco-pipes Glass, &c.—Till 1857 there was only one pottery work in Glasgow now (1862) there are 8, with the prospect of a rapid increase the town being quite as favourably situated in respect of clay as the Glasgowshire potteries, and much more so in respect of fuel, and the ready means of conveyance of goods to all parts of the world. All kinds of ware are manufactured, from the coarsest description to the finest porcelain employing upwards of 1800 hands. The common ware is made of red clay obtained in the vicinity of the town and for the finer kinds about 10 000 tons of clay are annually imported chiefly from the counties of Devon, Devon and Cornwall. Besides the potteries there are allied to them an extensive manufactory of fire-bricks, and other articles from fire-clay including chimney-top-pieces and other ornamental objects. But probably the most remarkable advances made in the manufacture of clay have taken place in the making of tobacco-pipes, which is now carried on to a greater extent in Glasgow than in any other place in Great Britain. Twenty years ago there were but 50 persons employed in this branch of manufacture in the city while now (1857) there are 450, who produce 6000 to 7000 gross (about a million) of pipes weekly which are exported to all parts of the world. The manufacture of green glass bottles commenced in 1730, and of flint glass in 1777. For many years there was only one manufactory of each, there are now (1857) 11 of which 6 are bottle, four flint, and 1 crown, employing altogether about 400 persons. Flint glass is exported to a considerable extent, chiefly to Canada and the East Indies. There are ten distilleries within the bounds of the Glasgow collection producing annually when in full work, which they usually are, about 2 500 000 gallons spirits at 11 overproof and in the city and suburbs, there are five breweries, the most extensive of which exports 240 000 dozens of bottled malt, hater and pays £4000 annually for coals. The number of manufacturers of hard confections as in the largest of these establishments works the pans by steam-power and uses a ton of sugar daily. The extent to which beef hams are made—a manufacture almost peculiar to Glasgow—may be guessed at from the fact that during the six months ending December 31 1851 upwards of 128 tons of fresh beef came from Edinburgh alone to be converted into hams.

Fisheries and Quays.—Before alluding to the trade and commerce of Glasgow it is necessary to notice the improvements of the river and the accommodation provided for shipping, two of the most remarkable features connected with the city. The harbour at the Broomielaw below Glasgow Bridge, is usually crowded with vessels from all parts of the world from the steady ship to the humble scow or gabbard. The quays which line each side of the river were in 1815, 941 ft. in length in 1855 they had extended to 4461 ft. and now they are 10,575 ft. in extent, furnished with long ranges of docks and strong cranes, and capable of accommodating vessels of 1000 tons burthen. There being no wet docks, all vessels must lie in the river. The average available depths at high water of neap-tides, is 16 ft. At spring-tides there is an additional depth of about 2 or 3 ft. and hence the greatest depth attainable, irrespective of the increased depth created by land floods, or strong W winds, 19 ft. Towards the W extremity of the quays and extending a quarter of a mile up and down the river, there was, as late as 1 58 a shoal, called the *Hwa*, assuming a threshold or bar on which there was only 15 inches at low and 39 at high water. There are here, as already mentioned, between 16 and 19 ft. Various other formidable obstructions, including some islands, one or more of which was situated near Govan, from 2 to 3 m below the city have been also removed, and a clear passage made to the sea. In 1815, the depth of water at the top of spring-tides was 34 ft.; which now (1855) is about the depth at the lowest state of neap-tides. The pro-

cess of deepening is still going on and further improvement is also in progress by generally straightening the course of the river and cutting away all points and projections which impede the flow of the tide. Altogether there has been expended by the Clyde Trust, on construction and repairing of quays and shoals, general management, interest of debt, &c. and in deepening and improving the river from 1770, to June 30, 1851 the sum of £1,888 024 of which sum £1 023 840 have been expended since 1842.

That this great expenditure has not been fruitless, is evidenced by the following tables, showing the number of vessels arriving at the port, and the rapid increase in their tonnage, as indicated by their tonnage—

Tonnage during the Years and by July 1850, 1840, and 1830.

Year	1830	1840	1850	Year	1830	1840	1850
Under 50..	2177	3866	4619	500 to 550..	0	1	918
50 to 55..	3517	5008	5945	550 to 600..	0	72	148
55 to 60..	4825	7346	8994	600 to 650..	0	63	310
60 to 100..	1889	3976	5904	650 to 700..	0	18	34
100 to 150..	218	938	1500	700 to 750..	0	6	151
150 to 200..	20	349	517	750 to 800..	0	3	15
200 to 250..	14	171	861	800 to upward	0	0	28
250 to 300..	3	254	136				

The whole tonnage which arrived during the same period was as follows—

Year	1830	1840	1850
1830	21,615	40,154	50,154
1840	37,848	54,877	64,877
1850	50,008	77,138	87,138

The rapid and extraordinary increase of the revenue of the Clyde Trust presents, in another striking point of view, the vast improvement which has been effected in the navigability of the river and harbour.

Year	1830	1840	1850
1830	25,219	16	1
1840	3,528	18	10
1850	30,258	18	6
1860	46,481	1	9
1870	61,481	1	9
1881	67,975	4	1

Trade and Commerce.—Besides being the seat of a great amount of trade arising from what may be called the native manufactures, Glasgow is a general mart for all the manufactures of Scotland, and for much of those of the N of Ireland. It has also an extensive foreign and coasting trade, for the accommodation of which there are numerous spacious bonded warehouses and granaries in convenient localities, most of the former being in the vicinity of the quays. One of the most remarkable branches of the trade is that in grain, the quantities of which imported from Ireland and direct from abroad to the Clyde and by way of Greenock—also later arriving at Port Dundas, the extensive harbour of the Forth and Clyde Canal—for the years 1850 and 1851 were as follows—

	IRELAND	PORT DUNDAS AND GREENOCK
Wheat ..	bu. 3,570 7 250	qrs. 397,000 281,753
Oats ..	do. 38,670 11,770	do. 40,000 11,770
Barley ..	do. 112,520 160,800	do. 129,940 179,821
Unmalted ..	bu. 15,800 14,890	do. 32,000 15,800
Beet ..	do. 9,750 5,550	do. 48,700 48,700
Beans ..	bu. 11,530 11,530	do. 44,511 9,518
		do. 10,000 10,000

Besides these importations of grain, about 30 000 tons are brought annually from the E. of Scotland by the Edinburgh and Glasgow Railway.

The quantity of fresh and salted meat imported in 1851 was—

Harbour of Glasgow—Beef, Mutton, Hams, &c.	16,278 tons.
Firth and Clyde Canal ..	do. do. .. 34
Edinburgh and Glasgow Railway ..	do. do. .. 1,040
North Western ..	do. do. .. 1,040
	17,358 tons.
	or, 446,481 lbs.

In addition to the above, there were imported into the harbour the same year 6900 tons of eggs, butter and lard nearly the whole of which was foreign.

The number and register tonnage of steam vessels which arrived at the harbour of Glasgow from 1st July 1850 to 30th June, 1851 was 11,029; tonnage 1,021 831. The number

and tonnage of the sailing vessels which arrived and departed during the same period is shown in the following table:—

ARRIVED AND DEPARTED FROM THE HARBOR OF GLASGOW, WHICH ARRIVED AT, AND DEPARTED FROM, THE HARBOR OF GLASGOW COASTWISE AND FOREIGN, FROM 1st July, 1850, to 30th June, 1851.

Name of Vessel	INWARDS				OUTWARDS			
	Landed.		In Ballast.		Landed.		In Ballast.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
Scotland	1,935	45,769	1,064	123,764	3,034	88,907	51	6,318
England	438	50,708	17	10,564	528	68,005	5	715

But no general statement can be made, until we give a clearer view of the great extent and rapid increase of the commerce of the port, than the following table showing the progressive increase in the tonnage of shipping (Glasgow property) and the amount of customs duties collected at various

periods the increase in the latter being all the more remarkable, from the well known fact, that many and important duties have in recent years been wholly abolished.

AMOUNT OF CUSTOMS DUTIES collected and of SHIPS (Glasgow property) registered.

Year	Duties.	No. of Ships.	Tonnage.	Remarks.
Jan. 1.				
1790	£125 15 0			
1801	489 15 6			
1810	1,353 7 11			
1815	3,134 8 4	38	9,890	Glasgow Ships required to be registered at Fort-Glasgow or Greenock till 1815, and it continued optional to do so till 1864.
1818	5,800 4 2	10	4,559	
1820	11,000 5 9	86	6,004	Glasgow made a Bonding Port for particular articles in 1817 and 1818 and in 1823 extended to all articles except Tobacco and Tea.
1828	41,159 6 7	111	14,084	Glasgow made Port of Call for the port of R. India goods in 1828.
1830	59,018 17 8	348	40,978	Glasgow made Port for Importation and Warehousing of Tobacco in 1834, and of Tea in 1834.

1868	706,419 10 9	528	165,556	

Railways and Canals.—On the N. side of the river the Edinburgh and Glasgow, the Caledonian, and the Glasgow, Garnkirk and Coatbridge railways have their termini; and on the S. side, are those of the joint Glasgow, Paisley and Greenock, and Glasgow and South Western (the Glasgow, Barrhead, and Neilston, the Clyde and the Glasgow, Glasgow, Paisley and Greenock, and Glasgow, Garnkirk and Coatbridge, are exclusively mineral lines). The Forth and Clyde canal communicating as its name indicates, with the Clyde on the one hand at Bowling, and the Forth on the other at Grangemouth, unites at Port Dundas with the Monkland canal. The former is the medium of an extensive trade with the E. coast of the country and with the Baltic &c. the latter is chiefly used for conveying coals and iron to the city from the mining districts to the E. of it.

History.—The name Glasgow (G) old documents frequently spell Glasgow (Glasgow) is probably derived from the Celtic *Glas-gow* (dark ravine) in allusion to the locality in which the Cathedral is situated. Here resided (A.D. 580) the founder of the bishopric, the patron saint of Glasgow, St. Mungo or St. Kentigerna whose dwelling and those of his followers formed the nucleus of the future city though the exact date of its foundation is not known. In remote times the new great emporium of the West of Scotland ranked quite as a secondary place to the small but ancient burgh of Rutherglen, situated about 3 m. S.E. of the city which for a long period, enjoyed nearly the whole trade of the Clyde. Even so late as the beginning of last century *gaberds* sailed every day from that port to Greenock, freighted with coals. Some of the principal lines of street are believed to have been opened soon after the formation of the bishopric, in 580 and several are known to have been in possession of the public for 750 years or since A.D. 1100 while others date as far back as the beginning of the 14th century. As early as the 16th century Glasgow appears to have possessed a regular magistracy and courts of justice—the court-hall and the provost and bailies of the city being alluded to in a charter dated 1268 and nearly a century before this the annual fair still continued was established. About this period there were several convents, churches, and hospitals in the town besides which, and the court-hall already alluded to it is probable that the only other public building in the city at this time was the old bridge, built about 1844, by Bishop Raa. It consisted of 5 arches, and was so narrow that one carriage could not pass another. It was subsequently widened on two different occasions but has recently been taken down to make room for a granite structure, called Victoria Bridge, now (1859) in progress of erection.

During the 16th, and probably the earlier part of the 17th century the people of Glasgow still retained the fierce and barbarous spirit of earlier times. Every man almost carried arms, generally a quinger (saber or dagger) or 'quidial.

(boats) which was truly used on the slightest provocation, as the records of the local courts of the day abundantly prove; even second or third case involving a charge of quibag or quiball drawing.

In 1638 was held, in the Cathedral the famous Glasgow Assembly of the Kirk of Scotland which deposed the bishops, abolished Prelacy and restored Presbytery and accomplished what has been called the Second Reformation in Scotland. In 1663 a third part of the city uniting almost all the shops and warehouses, was destroyed by fire and a similar visitation in 1677 consumed upwards of 1800 houses and 150 shops. Nearly all the houses at this time being constructed of wood, and covered with thatch, will account for the extent of these devastations. Early in the 17th century Glasgow already possessed a commerce and manufactures. Its merchants were engaged in whale-fishing and soap-making as early as 1667. Sugar-baking was commenced in 1669 and about the same time were begun tanning, rope making, and the manufactory of plaid, of coarse cloth and linen. The spinning, weaving, and exporting of salmon and herrings were actively carried on.

But it was not till the 18th century that the advantageous position of the city for commercial pursuits—situated on a navigable river and in the immediate vicinity of exhausted fields of coal and iron—began decisively to assert its fortunes. The union of Scotland and England having opened Virginia and Maryland to Glasgow enterprise, it very soon became a great mart for tobacco, and supplied the firmers-general of France with that article. In the year immediately preceding the American war the imports of tobacco amounted to 57 143 bbls. This trade absorbed the greater part of the Glasgow capital, and promoted those engaged in it to the first rank among the merchants of the city. The foreign trade was at first carried on through English ports, and through the port of Ayr &c. It was not till 1715 that the first vessel built on the Clyde crossed the Atlantic, and direct communication was established with America. On November 14 1715 the Glasgow Gazette, the first newspaper published in the city appeared, and ten years later (1725) took place the Shaverdell mob riot excited by the importation of the mul-tia in which the house of Daniel Campbell of Shaverdell, M.P. for the city was completely gutted and six persons killed and nineteen wounded by the military who were called out to quell the disturbances. About the same year (1725) the manufacture of linens, lawns, cambrics, &c. was introduced which continued a staple till superseded by muslins. At this period Glasgow is described as being a very beautiful city. Captain Barr, the elder son of a Lord of the North of Scotland 1730 who said as little in favour of anything he met with in Scotland as he possibly could, says that Glasgow to outward appearance, as the prettiest and most uniform town I ever saw and I believe there is nothing like it in Britain. In 1732 ink-balls were introduced from Haarlem. In 1740 Alexander Wilson formerly professor of astronomy in the University of Glasgow along with his friend, John Belne introduced the art of type-founding, this foundry soon after became the most famous in Europe for the beauty of its types, as well as for its articles. About the same year (1740) the celebrated printer Robert Foulis, commenced business, and in company with his brother Andrew obtained a degree of excellence in the art which gave the Glasgow press a European reputation for accuracy as well as beauty of execution. The first printfield belonging to Glasgow was established at the neighbouring village of Pollokshaws in 1742. While residing in this city (1768-4) James Watt, then a young man of 27 years of age, commenced the series of practical experiments on the steam-engine, which issued in his splendid improvement of that right-arm of our manufactures. In 1765 Turkey-red dyeing well known long had previously existing in Britain, was introduced into Glasgow by George Macintosh and David Dale, who, having engaged Pierre Jacques Papillon, an eminent Turkey-red dyer from Rouen, established their works in the vicinity of the city. Cotton-spinning works were established in 1792 but it was not till the beginning of the present century that any considerable quantity of cotton was spun. In the following year (1798) power-looms were introduced. From this period the progress of the Glasgow manufacture is exceedingly rapid the merchants

entering with energy into the working of the various important inventions and discoveries connected therewith, which in the latter end of the 18th and the beginning of the 19th century followed each other in such quick succession. About this time Charles Tennant discovered bleaching liquor which was followed, in 1798 by the discovery of bleaching powder by Charles Macintosh; and soon thereafter these two chemists united in establishing the Rollex chemical works, already alluded to. The importance of the discovery of bleaching powder will be appreciated, when it is stated that the quantity of cotton goods now manufactured is so great that the entire surface of Great Britain would not suffice to bleach them by the old method of exposure to the air.

The first steam-boat (the Comet) successfully propelled on a navigable river in Europe was started on the Clyde, by Henry Bell, in 1812 and in 1828 Neilson obtained a patent for using heated air in the manufacture of iron, commonly called the hot-blast, by the introduction of which the extensive iron fields in the vicinity of Glasgow hitherto only partially worked were rendered fully available, and an amazing impetus was given to the iron manufactures generally throughout the country.

The events of any importance of a purely literary character of which Glasgow has been the scene, or with which it has been intimately connected are few. In 1556 Queen Mary visited the city and two years later many of the misers fought against her in the Regent's army at the battle of Langside. At the rebellions of 1715 and 1745 Glasgow furnished considerable bodies of troops in support of the House of Hanover and at the latter period it narrowly escaped being plundered and burned by the Pretender's forces, having been saved only by the timely interposition of one of the Chevalier's own chiefs, Cameron of Lochnell. On one occasion, however 25000 in money and 2500 in goods and on another 12,000 linen shirts, 8000 cloth coats 6000 pairs of shoes, 6000 pairs of hose, and 6000 bonnets, were looted. In 1818-20 took place the fiercest known as the Radical war when an unfortunate man James Wilson was hanged and beheaded at Glasgow August 20 1820 for the part he took in the contemplated rising. The last great event in the history of Glasgow was one of the most unexpected, was the visit and enthusiastic reception of her present Majesty Queen Victoria, in August, 1843—being the first native sovereign who had entered the city for nearly 300 years.

Though the names of many eminent men are intimately connected with Glasgow those that can be claimed as natives are few. The more remarkable of these are General Sir Thomas Munro General Sir John Moore, who fell at Coruña and Thomas Campbell, the bard of Eltop. Glasgow is a royal burgh and parliamentary borough, and is governed by a Lord Provost, 8 Bailies, and 59 Councillors in addition to whom the Dean of Guild from the Merchants and the Deacon-Convener from the Trades Houses are members of Council ex officio. The income of the burgh in 1851 was £20 490 and the expenditure £18,903. It is the seat of judicial sheriff, burgh, county small debt, and police courts but also a river court, a custom house, and a chamber of commerce and sends two members to the House of Commons. Registered electors (1851) 15 555.

The progressive and present population of the city is shown in the following table—

Year	Pop.	Year	Pop.
1700	4,500	1811	110,280
1708	12,708	1821	147,043
1763	30,900	1831	205,488
1773	44,600	1841	260,833
1801	63,700	1851	347,201

—[Chalmers Calendars Chalmers's Annals of Glasgow Statistical Account of Scotland Memoirs of Charles Macintosh by his Son, George Macintosh. The Progress of Glasgow—Report on the Course of the City of Glasgow and Suburbs for 1851 and Report on the Morality Bills of the City of Glasgow and Suburbs, for 1851 by John Burns, LL.D.] Annals and Reports of the Trustees of the River Clyde and numerous Private Communications.] See Supplement.

GLASGOW (PORT) a tw. Scotland. See Port-Glasgow GLASHARE, par. Irrel. Queen's co. 2756 ac. P. 653. GLASHUTTE, a h. Saxony circle of old 15 m. S. Dresden, on the Elbe. It has a parish church, with fine

coloured glass; manufacture of straw-plait, saw and other mills, and three animal farms. Pop. 1065.

GLASNEVIN a vil. and par. Ireland, co. Dublin. The vil. is, strictly situated in a valley watered by the Tolka, 8 m. N. by E. Dublin Castle, was, until of late years a favourite suburban retreat, and among the more distinguished of its former inhabitants, Addison, Swift, Steele, and Sheridan, may be mentioned. It contains a botanical garden belonging to the Royal Society of Dublin, an agricultural school, and a deaf and dumb institution. Area of par. 995 ac. Pop. 1162.

GLASOW a to. Russia, gov. and 100 m. E. Viatka, esp. circle of same name. 1. bank Tchepets; with a church. Pop. agricultural (1851) 1061. — The circle, in the N. W. of the gov. consists of a succession of hills and ridges generally covered with almost impervious forests of pine, and, in the intervals between these, numerous heaths and meadows. Pop. 143,800.

GLASS, par. Scot. Rar. 30 sq. m. Pop. 978.
GLASSARY par. Scot. Argyle, 16 m. by 10 m. P. 471.
GLASSBORO par. Scot. Wigan 8 m. by 5 m. P. 1487.
GLASSLOUGH a market in Ireland co. of and 6½ m. N. E. Monaghan. It is neat and clean; has a parish church, and is the vicinity several other places of worship. Pop. 465.

GLASTOOLE or **GLASTIER** a vil. Ireland co. of, and 5 m. S. E. Dublin on Dublin Bay. Pop. 1889.
GLASTON par. Eng. Rutland 1145 ac. Pop. 252.
GLASTONBURY a market in and par. England co. Somerset.

It is 23 m. S. W. Bath, one of two principal streets crossing each other at right angles plentifully supplied with water well paved cleaned and lighted the type modern houses well built, for the most part of blue has but many of the older tenements are composed chiefly or in part, of stone taken from the ancient abbey. In the market place, in the centre of the town is a handsome new square, there are two parish churches, St. John's and St. Benedict's, both elegant structures, in the perpendicular style with graceful towers places of worship for Wesleyan Methodists, Friends, Independents, and Baptists eight daily schools two almshouses and other charities and a reading-room and mutual improvement society. The silk manufactures and glove-making were at one time extensively carried on but the former has completely disappeared, and the latter has dwindled down to comparative insignificance, and there is now very little trade of any description. Glastonbury derives its interest and importance solely from the ruins of the once magnificent Benedictine abbey founded by Augustine of Canterbury in 596, but built chiefly during the 12th and 14th centuries, and consisting of some fragments of the church, the chapel of St. Joseph of Arimathea, and what is called the abbey's kitchen. The abbey lived in almost regal state had the title of lord, and sat among the barons in parliament a greatness brought to a close at the dissolution of the monasteries in 1539 when the last abbot, Richard Whiting, was hanged in his robes, with two of his monks, by order of Henry VIII., for refusing to surrender the abbey. Glastonbury possesses some chalybeate springs, whose medicinal virtues were at one time highly celebrated. Market day Saturday. Area of par. 7068 ac. Pop. 8125. — *Local Correspondent*.

(G) **ATT** a small river Switzerland can. Elzrich. Issued from the Gröbensee, 5 m. E. Zürich, it flows N. W. receiving numerous small tributaries, and joins the lake Rhone. In the course of Baden a little below Eggen, after a course of about 20 m. It is well supplied with fish, but is subject to floodings, which often cause serious damage.

GLATTFELDEN a vil. and par. Switzerland, can. of and 15 m. E. Zürich, in a valley enclosed by steep slopes, near the mouth of the Glatt, here crossed by a covered bridge. It is well built, has a parish church, and a trade in corn and wine. Pop. 1093.

GLATTON par. Eng. Huntingdon 2100 ac. P. 266.
GLATZ (Polish, *Kłodzko* a to. Prussia, prov. Silesia, gov. of, and 61 m. S. W. Breslau, esp. circle of same name, in a narrow valley on both sides of the Boles, here crossed by two bridges. It is strongly fortified has five churches, three chapels, a townhouse, gymnasium, and several schools, an asylum for destitute children, hospital and infirmary, armaments, barracks, and other military buildings, it is the seat of courts

of law and several public offices and has various manufactures particularly linen, ordinary and damask, cotton and woollen goods, red leather and carpets, numerous distilleries, tanneries, and mills. A trade chiefly in cattle and the above articles of manufacture a weekly market, and four annual fairs. The celebrated Harren Frank was confined here and made his escape by leaping from the walls. Pop. 9658, of which 3011 are military. — The circle, area 248 sq. m. is very richly watered by the Boles and its affluents, and has generally a thin stony soil, of very indifferent fertility. Pop. 91,066.

GLAUCHAU or **GLAUDER** a vil. in Saxony circle Zwönkau r. bank Mulde, 54 m. W. S. W. Dresden. It is well built, nearly in the form of a crescent, partly in a hollow of the Wisenthal and partly on a series of steep and picturesque eminences. In the seat of a superior court and of several important public offices contains a large castle partly occupied as the residences of the Schönburg-Hinter-Glauchau line and partly as public offices two churches a normal and several other schools, an orphan asylum, poor house, and two hospitals and has extensive manufactures of woollen and linen cloth, marine, bootery, carpets, and leather dyeworks printfields, and worsted mills, a corn market, and three annual fairs. The lower part of the town often suffers much from inundation. Pop. (1849) 10,800.

GLAZLEY par. Eng. Blyth 686 ac. Pop. 62.

GLAZBYN two places. 1. Polish Prussia. — 1. A vil. gov. and 10 m. S. W. Düsseldorf with a Catholic parish church. Pop. 978. — 2. A vil. gov. Aix-la-Chapelle, near Schleiden having in its vicinity the lead, iron and copper works of Neuberg. Pop. 888.

GLEIWITZ, a to. Prussia, prov. Silesia, gov. of and 89 m. S. E. Oppeln, on the Klodnitz and the railway from Oppeln to Cracow. It has three churches, a gymnasium in the buildings of an old Franciscan monastery several schools, barracks, and two hospitals and manufactures of linen and woollen cloth an extensive iron foundry glass-works, a large worsted and other mills, a weekly market and eight annual fairs. Pop. (1846) 8317.

wooded rise almost perpendicular from their base, and, from their height, nearly exclude the sun when at his highest elevation in June. In some parts they are entirely inaccessible. The N.W. and of the Glen was the scene of the massacre of Glencoe on wall and widely known for its singular beauty—2 (*Glencoe*) co. Argyle, at the head of Loch Lough about 6 m. long enclosed by lofty flowing mountains, the sides of which are covered with huge masses of rock. It is one of the wildest glens in the Highlands of Scotland, and ranks next to Glencoe in the rude grandeur of its scenery—3 (*Glenogary*) co. of and 45 m. S.S.W. Inverness, traversed by the Garry in the centre of the great valley extending from Inverness on the E. coast, to Fort-William on the W. It contains a beautiful lake, and is bounded by finely-wooded mountains—4 (*Glenloch*) co. of, and 96 m. S.S.W. Banff. It is entirely destitute of wood, but is celebrated for the quality of its whisky—5 (*Glenoy*) co. of, and 25 m. S. by W. Inverness celebrated for its Parallel Roads. These roads consist of a series of perfectly level terraces, running parallel to each other on both sides, and throughout the whole length of the glen the most elevated being 1263 ft. above sea-level and the other two respectively 88 and 313 ft. below the highest. Caphien is much divided in its origin, but they are pretty generally believed to be the remains of ancient lakes or other enclosed bodies of water—6 (*Glenloch*) N.E. extremity of Perthshire about 7 m. long by nearly 1 m. wide. Near its head is the Spittal of Glen shee, a stage on the great military road to Fort-George, 20 m. N.W. Coupar-Angus—7 (*Glenloch*) co. of and 24 m. N.W. Perth dist. Athole a beautiful and romantic vale, famous as a sporting rendezvous and for the stalking of red deer.

GLENANES, a group of islands, France off S coast, dep. t. unites. They are nine in number and are surrounded by dangerous rocks and shoals. The largest, called Penfret, is about 2 m. in circuit, and has on it a revolving light lat. 4. 45' 18" N. lon. 8 57' W. (u)

GLENANM a small town and port, Ireland, on bay of same name. Co. of and 204 m. N.E. Antrim at the foot of a romantic glen. It has a neat Episcopal church a R. Catho. ch. and meeting house and during summer is much resorted to for sea-bathing. coals are imported from Scotland and grain and provisions are brought in. Pop. 851.

GLENDALEIGH (H) a valley and lake, Ireland on Wick low 24 m. S. Dublin. The valley 3 m. long abounds with romantic scenery and interesting ruins. The lake, celebrated by Moore for its gloomy and desolate appearance, is 441 ft. above sea-level 1 m. long by 1/2 m. broad and surrounded by almost perpendicular cliffs, which rise 1800 ft. above its surface.

GLENELG several places, Australia—1 A maritime town, S. Australia, 6 m. S.W. Adelaide on the Murrumbidgee—2 One of the most N. co. of W. Australia about 60 m. E. to W. containing some extensive open plains and downs and in the W. part a group of hills called the Wangan hills. It is closely and heavily wooded in the N. parts, and occasionally hilly—3 A river Australia Felix rising in the Victorian mountains, about lat. 37 10' S. lon. 143 15' E. flowing W. and S.W. and falling into Discovery Bay about lat. 38° S. lon. 148° E. total course, short distance, about 110 m.—4, A river N.W. Australia, Tasmann Land, rising in a short line of hills called Stephens Range, about lat. 16° S. lon. 125 10' E. It flows N.W. then W. and S. and falls into the Gulf of Carpentaria by its way through a hilly district whose length 60 to 70 m. It is salt for nearly half its length from the sea, and has in some parts a velocity of more than 5 m. an hour. Its banks are composed of fine white sand its tributaries are numerous, and many of them large. In the upper parts it is much obstructed by rapids.

GLENELG a head promontory N. coast of Ireland, co. Donegal, forming the W. point of Cullinst Bay 24 m. N. by E. Londonderry.

GLENARIFF HARBOR, an inlet Ireland, co. Cork, near the head of Pentry Bay about 2 m. long and 1 m. wide.

GIFNLUCHE, a vil Scotland, in a valley of same name, near Loch Bay co. of and 134 m. W.N.W. Wicktown. Cattle fairs are held here monthly between April and December. The ruins of the once magnificent abbey of Glendassie stand about 14 m. N.W. the village. Pop. 890.

GLENTWORTH par Eng Lincoln 8043 sq. Pop. 818. GLENN MARSH par Eng Lincoln 2510 sq. P. 852.

GLENNIE ISLAND, a cluster of small isles, S. coast Australia, in Bass Strait lat. 39° 15' S. lon. 146° 15' E. (u)

GLENN'S FALLS, a vil. U. States, New York, 1 bank Hudson, 54 m. N. Albany with three abutments an academy and a female seminary. The picturesque falls on the Hudson here have a total descent of 80 ft., and afford excellent water-power propelling several saw and marble mills, &c. P. 1800.

GLENTIES, a vil Ireland co. of, and 6 m. N.W. Donegal among wild and rugged mountains. It has a chapel a national school a police barracks and a large union workhouse. Pop. 506.

GLIN a market to Ireland, co. of and 29 m. W. by S. Limerick, 1 bank Shannon, here about 8 m. broad. It consists of three principal streets, straight and well kept. houses not large, but solidly built of stone, and generally two stories high supply of water ample and, as a whole, is gradually improving. It has a broadwell, an Episcopal church a R. Catholic chapel and several schools, and the remains of the ancient castle of Glin. Glin is resorted to in summer for sea-bathing and, being the depth of the salmon fishery of the Shannon and its tributaries, a considerable quantity of that fish is annually pickled here and exported and large quantities of butter are sent to Cork and Limerick. Market day Saturday Pop. 1243 (Local Correspondent).

GLINA, a town Austria, Croatia, in a plain surrounded by hills, 7 bank Glin, near the E. shore of a marshy lake, 23 m. E.S.E. Carlsbad. It contains a Greek church, and two schools, and has important cattle markets. Pop. 1760.

GLINTON par Eng Northampton 1580 sq. P. 454. GLOCKN h.t., or Gluck N. coast of Austria, a mountain, Austria, on the frontiers of the Tyrol Carinthia, and Salzburg lat. 4 7' N. lon. 12 43' E. height 12776 ft. It is the culminating point of the North Alps is composed of schists and calcareous rocks, but appears to have a nucleus of granite. It takes its name from the resemblance of the principal summit to a large bell. This ascent has been repeatedly accomplished but is difficult, and not without danger.

GLOCKNITZ, or GLOCKEN, a market to Lower Austria, on the Schwarzen and the Glin Railway 41 m. S.W. Vienna. It has a handsome Greek Catholic castle picturesquely situated on a mountain, and originally a Benedictine monastery manufacture of white lead Prussian blues, and plate glass two iron mills, and two stone quarries. Pop. 1520.

GLOGAU (Glose) a town Russia, prov. Silesia, gov. of and 33 m. N. Liegnitz, cap. circle of same name, 1 bank Oder. It is a place of considerable strength being both surrounded by walls and otherwise fortified is the seat of a law court and several public offices contains four churches, one of them a large and ancient structure, formerly a cathedral an old castle, a Protestant and a R. Catholic gymnasium several other schools, an arsenal artillery depot, extensive barracks, and other military buildings an infirmary pesthouse, and several hospitals and has manufactures of vinegar liquors, sealing-wax beet-root sugar &c. dye-works numerous mills, and some shipping trade. Pop. 15,825, of whom 2229 are military.—The climate is flat, warm, by the Oder and several small streams and is generally fertile, producing much corn, and rearing many cattle. Area, 276 sq. sq. ft. Pop. 72,212.

GLOGAL (Klein or Oker) a town Prussia, prov. Silesia, gov. of and 23 m. S. Oppeln 7 bank Oder. It is surrounded by walls, contains a castle, a R. Catholic parish, and two other churches a chapel hospital normal, and other schools and has tile-works, a rope-walk, and several waxed and flour mills. Pop. 3633.

GLOGONITZ, in Austria. See GLOCKENITZ.

GLOGOVATZ, a vil Hungary co. of and 4 m. from Arad, in a fertile district on the Maros. It is built out of the ruins of the old and celebrated town of Oro, which was founded by the Emperor Probosc in 277 and afterwards destroyed by the Tartars Tobacco is extensively grown in the vicinity. Pop. 3085.

GLOMMEN the largest river in Norway. It rises in Lake Orund, in the S.E. corner of S. Trondhjem flows S.W. till it reaches the mountains of Troen then S.E. through Hedemark to the town and fortress of Kongsvinger thence it turns, first W.N.W. and then S.W. through

Aggerhus and Smalsholm, forming by its expansion in its course, Lake Olsken and another smaller one and falls into the Skagerrack, at Frederikshavn, by two mouths course more than 378 m. Its channel is much interrupted by cat-racts and lofty falls and frequently becomes so much swollen, by heavy rains or melting snows, as to produce great devastation. Its principal affluents are, on the right, the Folds and Lougen or Worsan and on the left, the Rasm and Flasen.

GLONS, a vil and com. Belgium, prov. of and 6 m. N W W Lodge. The manufacture of straw hats engages most of the inhabitants old and young and there are breweries, oil-mills, and lime-works. Pop. 2004.

GLORFON par Eng. Leicester 660 ac. Pop. 158. GLORFON a to. Norway prov N Bergenhus, 101 m N N E Bergen situated on the E. side of a small gulf of same name, communicating with the Vangs-fjord. Pop. 5301. GLORIOSA ISLANDS, two isls N E. entrance to the Manabique Channel about 100 m. N W Cape Amber the most N point of Madagascar. The E island about 1 m long is in lat 11 32 S lon 47 39 E the W which is 12 m long and 1 m broad, is in lat 11 35 S, lon 47 30 E. They are covered with brushwood and trees 20 or 25 ft. high and are about 15 ft. above sea-level. Turtles and birds are plentiful on these islands but there is no fresh water.

GLORFON a market tn. and par England co. Derby The town within ½ m of the Manchester and Sheffield Railway, and 19 m W N W Sheffield, consists of two portions, called the New and the Old town. The former irregularly built, and the latter containing many respectable shops and dwellings. It has a townhall market-house, a handsome church, and places of worship for Wesleyans Independents, R. Catholics, and other Dissenters an endowed school, savings-bank, and a number of useful charities.

The parish, which is extensive comprises numerous chapels and is the principal seat in Derbyshire of the cotton manufacture. There are also woollen and paper mills dyeing bleaching and print works, and iron foundries. Area 48 980 ac. Pop. 23,626.

GLoucester, or GLOUCESTERSHIRE a maritime co. England, bounded, S. by Wilts and Somerset E. by Oxford N and N W by Warwick, Worcester and Hereford W by Monmouth and the Severn. Length, S W to N E, about 64 m. Greatest breadth, about 30 m. Area, 805,120 ac. of which 750 000 ac. are arable, meadow and pasture. The co. is naturally divided into three distinct districts, the hill or Cotswold, the vale, and the forest districts. The first comprises the hilly country stretching from Chipping Camden, on the N to Bath, on the S, and called Cotswold from sheep-cotes and wolds the old English name for hills. The second, or vale district, comprehends the whole of the Low lands from Stratford upon-Avon to Bristol, and includes the vales of Evesham, Gloucester and Berkeley. The third or Forest district, includes the parishes on the W side of the Severn, up to Gloucester and afterwards on the W side of the Leden to the Wyre. The hill district is in general bleak and bare but includes many beautiful dells, and much picturesque scenery. It lies on the limestone and clay of the colliery formation. Much of the soil in the vale is extremely fertile and the climate mild. The geology of the vale district is exceedingly varied including all the formations between the upper stratum and oolite. A large portion of the district lies on the blue lias and is in pasture generally of poor quality. The Forest district derives its name from the royal forest of Dean formerly very extensive, but now much reduced by the progress of cultivation and other means. Great part of it, however, is still Crown property. The principal rivers in Gloucestershire are the Severn, with its affluents, the Wyre, the Leden, and Lower and Upper Avon, and the Ise or Thames, with its affluents the Cotnes, Churnet, and Windrush. The Severn was formerly famous for its salmon but they have now become scarce. Iron and coal are found in the Forest the former is not extensively wrought but the collieries employ large amounts both of labour and capital. Coal is also found, and extensively worked in the S part of the county and lead ore is found in various parts, but not in sufficient quantities to pay the expense of working. Limestone and freestone are also met with. Agriculture is in a backward state in this county, espe-

cially in the vale districts of it—the improvements introduced by some of the more public-spirited proprietors having been but slowly and partially adopted. Wheat barley oats, and beans, are the crops principally cultivated. The latter are produced mostly on the clay soils of the vales and much depended on by the farmer. Gloucestershire is, however much more of a dairy than an agricultural county being remarkable for the richness and extent of its natural pastures, the most valuable of which lie along the banks of the Severn. The celebrated cheeses, known by the name of doilies and slings Gloucester is produced chiefly in the vale of Berkeley. A good cow yields from 12 to 13 quarts of milk per day which again produces 8½ cwt. and upwards of cheese in the year. The native sheep of the Cotswold hills are large, with coarse wool; but the breed is now largely intermixed with Leicester and South Downs. The total stock of sheep in the county has been estimated at about 550,000 and the annual produce of wool at 15,560 packs. In the vale and forest lands, and on the sides of the hills, there are numerous orchards, from the produce of which large quantities of apples are made. The celebrated orange called styra, which requires to be kept the several years before it is sufficiently mellowed for use is produced on the W banks of the Severn. Gloucester is a considerable manufacturing county and has been long famous for its fine broad cloths. It is intersected by the Birmingham and Bristol railway by a branch of the Great Western railway from Swindon, through Stroud to Stonehouse, on the Birmingham and Bristol line and a small portion of the S. of the county is crossed by the main line of the Great Western. The county is divided into 28 hundreds, and 339 parishes returns 15 members to Parliament—four for the county two each for the cities of Bristol and Gloucester and the boroughs of Gloucester Stroud with the adjoining parishes and Tewkesbury and one for Cheltenham. Pop. (1851) 458,505.

GLoucester, a city co. of itself, par. bar and river port, England, exp. above co. in the vale of Gloucester on a gentle eminence, 1 bank Severn here divided into two channels, and crossed by two bridges, 38 m. N by it Bristol and 34 m. W by it London. It consists of four principal streets, crossing each other at right angles, and a number of smaller all tolerably straight. The houses, which were formerly of wood, are now principally of brick and stone, most of them substantial, and many of them handsome buildings. The streets are well paved and the town is well lighted with gas, and pretty well supplied with water. The most remarkable public edifice is the cathedral one of the noblest edifices of the kind in England. It was originally the church of a Benedictine abbey established here in the beginning of the 11th century and converted into a cathedral at the Reformation. It is cruciform, 444 ft. in length, 154 ft. in breadth, and 55½ ft. in height, with a tower 280 ft. high. Having been built at different periods throughout several centuries, it exhibits a great variety of style, the specimens of some of which as here exhibited, are unrivalled. This is the case, particularly with the choir which is one of the finest examples of florid gothic in existence. In the interior of the cathedral are many ancient and interesting monuments. Amongst them those of Robert, son of William the Conqueror who together with his brother Richard, was interred here, and of Edward II. murdered in Berkeley castle the former carved in oak, the latter of alabaster. Besides the cathedral, there are ten other Established churches some of them handsome old edifices and places of worship for various religious denominations, including the Society of Friends, R. Catholics, and a Jews synagogue. The other public buildings worthy of notice are the shire hall the tolkey or guildhall the county jail, market-house, new savings bank, custom-house, infirmary and blue-coat hospital. The theatre situated in the centre of the city is a handsome building with a portico of four columns erected in 1814. The county jail built in 1791 stands a little W of the town, on the site of an ancient castle, of the time of William I. It is remarkable as having been the first prison in England where the humane system of discipline was introduced. The market-house, the one situated in Hartgate Street, for the sale of corn, meat, poultry vegetables &c. built in 1786, has a handsome front; the other for the sale of butter fish, &c. is situated in Southgate Street and there is also a summer-house called the Col. There are here numerous daily and several boarding schools, besides

several charity schools; the latter including the college school founded by Henry VIII. The lowest school founded in 1866 and the free grammar school of St. Mary the Crypt, founded in the time of Henry VIII, and endowed with two exhibitions of £50 per annum each, tenable for eight years, for the maintenance of two scholars at Pembroke College, Oxford. The educational institutions of Gloucester include, also, a Lancasterian and a National school the one established in 1813, and the other in 1816. There is also a literary and musical association, well supported and having an extensive library. Among the benevolent institutions are several hospitals of ancient foundation, the oldest being that of St. Bartholomew; the infirmary the inside asylum, about half a mile from the city on the London road, an eye institution and a house of industry. Flax form the principal article of Gloucester manufacture, though much destined from what it was formerly. Oatmeal is also made to a considerable extent, as are, likewise, soap, gloves, silk and mullock ropes, and saddlery. There was formerly a bell foundry of very ancient date, but it is now removed several miles from the city, in which sugar pans, mortars, &c. are manufactured. Ship-building is also carried on to some extent.

Gloucester has been a inland port for centuries, but it is only of late years that it has become a place of importance in a commercial point of view a result chiefly owing to the opening of the Gloucester and Berkeley ship canal in 1827 by which the exports and imports are now effected at the port itself, instead of being transhipped as formerly and conveyed by barges up and down the Severn. Gloucester has now a considerable trade, consisting in its imports, chiefly of corn and timber, the exports are salt, iron and bricks and coal will shortly be added to them. Gloucester being now in progress (1868) to bring coal to Gloucester for the purpose from the Forest of Dean and the Welsh coal fields. The docks comprise an area of about eight acres. The number of vessels entering the port in 1851 was 165* and ranging up to 1000 tons register. The foreign and colonial produce imported in the same year was 160,000 tons. Gloucester has returned two members to the House of Commons since the time of Edward I. It is a place of high antiquity and is said to have been in existence long previous to the Roman invasion but was, at any rate, undoubtedly an important Roman military station and was then known by the name of *Colonia Glouca*. Pop. 17,573

GLOUCESTER, several townships, U States.—1 A seaport, Massachusetts, on a small peninsula, 29 m N.E. Boston. It has a good harbour open at all seasons of the year; inhabitants extensively engaged in navigation and the fisheries. Shipping of dist. (1840) 17,078 tons. Its agreeable situation renders it a favorite place of resort in summer. Pop. 6360.—2, Rhode Island, 16 m W.W. Providence. Pop. 2504.—3, New Jersey 10 m S.E. Woodbury. Pop. 1687

GLOUCESTER.—1 A cape, Australia, N.E. coast lat. 20° 1' 15" S.; lon. 148° 26' 10" E. with an island of same name off it, lat. 19° 57' S. lon. 148° 26' E. (n.); and about 6 m long by 3 m broad, 1874 ft. high with steep, rocky shores.—2, The most S. of the Society Islands, S. Pacific Ocean; lat. 12° 58' S.; lon. 140° 3' W. (s.)

GLOUCESTER, a maritime co. New S. Wales, 85 m N.W. to S.E. and about 75 m. in breadth at the broadest part but, being of a triangular shape this breadth diminishes N.W. to a point. N. water numerous. Area, 1,875,500 ac. The chief river is the Manning, which separates it from the co. of Monmouth. Chief towns—Raymond Terrace, the capital, Carrington, and Stroud.

GLOUCESTER, a town in Europe, gov. of, and 148 m. E. by K. Tchernogov near r. bank Vorkovka. It is surrounded by an earthen wall, and contains five churches and two convents has extensive cloth manufactories, and a considerable trade in grain and brandy. Pop. 8000.

GLOUCESTER, a vil. Denmark, Schleswig, half of and about 5 m. N.E. Flensburg, not far from the Flensburg Sound. It contains a fine old manor, which in 1628, was bestowed by Frederick VI. on the Duke of Schleswig-Holstein-Gottorp-Romanen, with the title of Duke of Glueksburg. Pop. 750

GLUCKSTADT (Lutia, *Thyphus*) a tn. and port, Denmark, 13 miles, r. bank Elbe and at the mouth of the

Rhida, 27 m. N.W. Altona, with which, and with Kiel it communicates by railway; lat. (mid.) 58° 47' 8" N.; lon. 9° 24' 20" E. (s.) It depends solely upon collected rain for water for ordinary purposes. It is the seat of several courts has a town church, a St. Catharine chapel, a synagogue, high school house of correction, and several charitable institutions. It has limited manufactures; the inhabitants being chiefly engaged in trade, navigation, and whale fishing. The harbour formed by the mouth of the Rhida, has 5 ft. depth at low water and 16 ft. at high and two good docks. Glueksstadt was founded in 1619, withwood the attacks of Tilly in 1628, and had its fortunes diminished in 1814-15. Pop. 8000.

GLURNES, a tn. Austria, Tyrol circle Ober-Innthal on the Adige or Etsch, 60 m. S.W. Innsbruck. It is surrounded with lofty walls and towers, and has been almost entirely rebuilt since 1798 when it was burnt down by the French. It contains a parish church. Pop. 695

GMUND or **GMUNDA**, a tn. Austria, Styria, at the foot of the Alps; bank Elzer at the confluence of the Mülfer 48 m. W.W. W. Klagenfurt. It has a castle, a Protestant and a St. Catharine church, iron and steel works, and an adorned spring. There is a copper mine in the vicinity 1690

GMUND a tn. Württemberg circle Jact, cap. bail. of same name, 1 bank Rhine have crossed by a handsome stone bridge, 28 m. E.N.E. Stuttgart. It is surrounded with walls flanked with towers and is cheerful looking and well built.

contains several churches, three of them very ancient, and one a handsome Gothic structure a townhouse, a Latin and a normal school, a deaf and dumb institution, a blind school, and orphan hospital and has manufactures of woollen and cotton goods jewellery and trinkets and carries on a trade in these articles, and in woollen tobacco bowls. Area of bail 82 sq. m. Pop. in 6100 bail 24,402

GMUNDEN a tn. Upper Austria, circle Traun, capital of same name, beautifully situated in the midst of magnificent scenery at the N. extremity of the Traun or Goschen lake, where the river Traun issues from it, 80 m. S.W. Linz. It is well built has a parish church with a finely-carved altar a chapel, antique townhouse, and model manuf., containing a collection of models of the salt mines and of the machinery employed in working them and manufacturing the salt. These mines, and the works connected with them, employ the greater part of the inhabitants. Pop. in 1850; dist. 8000

GNADENTHAL, a Moravian missionary station, S. Africa, Cape Colony 70 m. E.N.E. Cape Town. Pop. 1400.

GNENEN or **GNIZZO** a tn. Prussia, prov. Posen, par. of, and 46 m. S.W. Bromberg cap. circle of same name, 1½ m. from district, between hills and lakes. It is surrounded by water, and the sea on the archbishop, contains a handsome cathedral, eight other St. Catharine churches, a Protestant church, an ecclesiastical seminary, a monastery, and a nursery. It is the seat of several law courts and public offices and has several distilleries, breweries, and numerous a trade in horses and cattle, and four annual fairs. In early times the archbishop of Gnesen was prince of all Poland, and its king was elected in the cathedral. Pop. 7709 —The **OGNEA** is that, is watered by the Wolna, contains numerous lakes, and has a fertile soil. Area. 288 sq. m. Pop. (1840), 55,616.

GNIEWKOWO, a tn. Prussia, prov. of, and 79 m. E.N.E. Posen, on a height in a fertile district. It contains a St. Catharine parish church and has a trade in corn, horses, and cattle and four annual fairs. Pop. 900.

GNONEN, a tn. Mark Brandenburg-Schwartz, circle Westphalia, on a hill above a small tributary of the Rhenish, 24 m. E.S.E. Bielefeld. It rises up in the form of terraces, surrounded by walls, and encircled by several gates contains a church

and a poorhouse and has manufactures of linen and shoddy and a copper foundry, tannery several distilleries, and three annual fairs. Pop. 1982.

GNORALL, par Eng. Standard 10,497 sq. Pop. 2678

GOA, a city, Hindostan, prov. Bombay, Malabar coast lat. 15° 25' 15" N lon. 75° 57' E (n.) 260 m S.S.E. Bombay; cap. of all the Portuguese possessions, E. of the Cape of Good Hope. The name is now applied to two distinct places, namely Old Goa and New Goa or Panjim. The former now almost entirely deserted, is situated 5 m. further inland than the latter which stands near the entrance of the harbour. Old Goa, deserted on account of the unhealthiness, was at one time a populous and magnificent city as the elegant good sense of Indian architecture, exhibited in its cathedral and numerous other religious edifices sufficiently prove. There are here several large monasteries, a convent, the edifice formerly occupied by the Inquisition, and the viceroy's palace. The whole buildings are going fast to ruins and are used as a quarry whence to obtain building materials for the new town, to which everything worthy of preservation and easily removed has been transported, including the tomb of Francis Xavier. A few monks, however still reside in this deserted place, and make fruitless attempts to keep certain edifices in repair. New Goa or Panjim founded in the beginning of the 16th century is walled and fortified. It is situated on an island formed by two rivers and is a hand some well built town streets wide and straight and is now the seat of business the site of an archbishop, the residence of the viceroy and of the principal Portuguese inhabitants. The houses are of stone with thick walls pierced with small grated windows, and roofed with tile and altogether it presents much the appearance of a European town. It abounds with edifices with a court of first resort, and some other courts, and several educational establishments. The harbour is a noble and capacious basin, land locked, and well protected from the monsoon, and overlooked by a fortress, at the foot of which stands the large and commodious custom house. The trade of Goa, at one time its most extensive of any place in India, is now imperceptible. Its imports are pecc goods, raw silk ivory sugar woolens, glass, &c. Its exports lamp, betel nut, cowries toys, beads &c. P. 24 000. The territory around Goa belonging to the Portuguese is about 40 m. in length by 20 m. in breadth. Within this district there were at one time 500 churches and chapels, and about 8040 priests. It is well watered and fertile and its inhabitants, with the exception of a few of the higher classes, are chiefly descendants of Europeans by native women. Goa was taken from the Hindu raja of Bysnagar by the Portuguese Mahomedan sovereign of the Decan about 1499 and in 1610 was besieged and taken by Albuquerque who made it the capital of the Portuguese dominions in the east. Goa was in possession of the English from 1807 till 1815. There are 24 forts in the territory. Pop. 350,000

GOACHE, a to. In Calcutta, W coast, the native cap. of the Muzammar country lat. 6° 13' N lon. 119° 21' E.

GOADBY MARWOOD par Eng Leicester 1816 ac. Pop. 246

GOAKATI or GOVATTI a to. Assam, L. bank Brahmaputra, 830 m. N.N.E. Calcutta lat. 26° 55' N lon. 91° 40' E. cap. of an ancient Hindu territory which included great part of Assam. It is now quite reduced.

GOALPARA, a to. India, prov. Bengal, L. bank Brahmaputra, 290 m. N.N.E. Calcutta lat. 26° 55' N lon. 90° 59' E. It contains some good houses and a street of shops. A great portion of the town, however is composed of miserable huts which are for two months of the year flooded with water 2 or 3 ft. deep. In other respects, also, this place exhibits a squalid scene of vice and misery. It is, nevertheless, a place of considerable resort, and the principal mart of the intercourse with the Assamese, who bring here coarse cloths, silk-hat, tea, wax; taking salt in return.

GOANDS, Gonds or Gondos, a wild tribe of Indians inhabiting the hills of Omkharak, central Hindostan, at the source of the Son and Nerbudda. They are one of the lowest classes in the scale of civilization to be found throughout India. Their manners and customs are peculiar to themselves, and their physiognomy differs very widely from the usual characters found in the natives. Their skin is much blacker than the ordinary shade, lips thick, hair woolly,

resembling that of an African; forms are well proportioned, being strong and athletic. They live upon wild roots and vegetables and such animals as they can snare or kill.

GOALS (Str.), a to. Rhineland, France, gov. of, and 39 m. S.S.E. Colmar, cap. circle of same name, beautifully situated 1 bank Rhine, about a mile below the Lurel-rack. It contains a Protestant church, with the tombs of the princes of Hesse, and a R. Catholic church on the seat of a law court, and several public offices and has manufactures of leather an important salmon fishery a trade in leather wine, and cattle, and three annual fairs. On a height overlooking the town and commanding a magnificent view stands the old castle of Kibitz, once a strong fortress, but now only the most extensive ruin on the Rhine. Pop. 1438. — The castle, area 125 aq. sq. m. is for the most part covered with hills, which, in the interior on the Himmelfrick are cold and bleak but, on approaching the Rhine, present much beautiful and romantic scenery. Only a small portion of the surface is arable but a good deal of wine is grown, and many cattle reared. Pop. 24,980.

GOARSHAUSEN (Str.) a to. Nassau cap. had. of same name, on bank Rhine, opposite the Prussian town of St. Goar and 30 m. S.S.E. Colmar. It is partly surrounded by steep walls flanked with towers, and is for the most part poor and irregularly built. It has manufactures of leather and paper several mills, a fishery and some shipping. On a height above the town stand the ruins of the castle of Von Katzenelumbogen, better known by the name of the Katzen [cat] and destroyed by the French in 1806. Area of bail 40 aq. sq. m. Pop. in 1871 hall 18,180

GOAT ISLAND—1 S. Pacific Ocean, off the coast of Chili, S.W. Juan Fernandez lat. 33° 30' S lon. 79° W of moderate elevation with its summit surrounded by many conical embankments or hummocks. It is about 4 m. in circumference elevation 400 to 500 ft. shores precipitous and chiefly composed of a brown volcanic stone. It has a burnt and desolate aspect, and affords no vegetation higher than a stunted shrub. Vast numbers of violet-colored crabs occur on the rocks of the coast, and fish are abundant aquatic birds also are numerous and fresh water may be obtained.—2 N. Pacific Ocean 14 m W N.W. GOAVE (GHEAT and LATTIA) two hays The former 7 m. E., the latter at the embouchure of a small river of same name. Little Goave 32 m W.S.W. Port-Republican on a small bay of same name, has a commodious and safe harbour capable of admitting the largest vessels it is the port of Great Goave and other places, and carries on a brisk export trade in coffee sugar indigo and cotton. The last two of the water and the marine in the neighbourhood render the air unhealthy.

GOBAIN (Str.) a to. France dep. Aisne, 11 m. W. by N. Laon. It has a manufactory of mirrors on a large scale, said to be the first in Europe. Pop. 1419.

GOBI or SHAMO an immense tract of desert country occupying nearly the centre of the high table-land of E. Asia, between lat. 35° and 45° N and lon. 90° and 110° E. and extending over a large portion of Mongolia and Chinese Turkestan its length is probably about 1800 m. breadth, between 850 and 400 m. area, 800 000 sq. m. intersected in its E. extremity only by a few spots of pasture and low bushes. General elevation 4250 ft. above sea-level but it is intersected W. to E. by a depressed valley named Shamo, or the Sea of Sand, which is also met with salt-W from it flow the Han-Hai Dry Sea, a barren plain of shifting sand blown into high ridges. Wide tracts of this dreary region are flat and covered with small stones or sand

and widely separated from one another are low hills destitute of wood and water. In summer which lasts scarcely three months, the heat of the sun is overpowering but in winter the cold is intense, snow and frost frequently occurring in July and August; indeed no month in the year is entirely free from them. Flies and bitter water from the low regions of the N. also prevail. The desert of Goch is comprised within one of the British Districts of the coast, and is consequently almost devoid of vegetation. The E. Goch is occupied by different tribes of the Mongolian race, which have numerous herds of camels, horses, and sheep. In the W. Goch are some nomadic tribes of the Turkish Tartar race.

GOCH, a walled town, Rhineland Prussia, gov. of, and 40 m. N.W. Düsseldorf, 1 bank Rhine. It is the seat of a law court, has a Protestant, a R. Catholic, and a Moslem church, an old castle, orphan and ordinary hospitals; manufactures of woollen, cotton, and linen goods, muslin, hosiery, hats, pins, staves, soap, vinegar and tobacco several worsted mills, tanneries, distilleries, dye-works, and blackfields and an annual fair. Pop. 3744.

GOCHSHEIM, a village in Baden, circle Middle Rhine, 1 bank Rhine, 17 m. N.E. Karlsruhe. It has a parish church, an old castle, now used as a school house and four annual fairs. Pop. 1870. A vil. Bavaria, circle Lower Franconia, 25 m. N.E. Würzburg with a townhouse, an old castle, and in the environs, a number of market gardens. Pop. 1787.

GÖCKELINGEN, a vil. Bavaria Palatinat 7 m. S.W. London with a R. Catholic parish church, and as iron and a flour mill. Pop. 1819.

GODA or **GODAT**, a vil. Saxony circle of, and 5 m. W. S.W. Bautzen, on a small stream of same name. It has a large and ancient parish church, in the Byzantine style, a brewery with and granite quarry. Pop. 938.

GODALMING, a town in Surrey, England, on the river 32 m. S.W. London, on a branch of the Great Eastern and Haverhill railways, in a beautiful valley on the W. side of the high road, and surrounded by finely wooded heights, consists principally of one street, extending about 2 m. along the high road from London to Fortingale. It has a parish church, an ancient ex-cathedral and places of worship for Baptists, Independents, Wesleyan Methodists and Quakers almshouses for ten aged persons, a national school, an apprenticeship fund, and some minor charities. The woollen trade, which was at one time considerable, is now nearly extinct. In the vicinity are several paper mills, and leather mills, and some clocking and dress-making are also manufactured. A trade of some consequence is carried on in corn, malt, flour, bark, timber wool and hops. Corn market on Wednesday. Pop. 2188. Area of par. 9096 ac. Pop. 4487.

GOLDAVER a large river joins the Hindoo river, having its source in the W. Ghats, about 70 m. N.E. Bombay near lat. 6° 34' N. long. 75° 13' E. and its embouchure in the Bay of Bengal, lat. 16° 45' N. long. 83° 30' E. thus nearly covering the entire peninsula of Hindoostan. Its source is generally S.E. and is in length about 550 to 600 m. About 50 m. from the sea the river divides into two channels, the most N. of which flows into Coringa Bay. It is only however in the rainy season that either of these branches are navigable, and then for small craft only; but it is believed to be quite practicable to open up a navigation in this river of 400 m. in length for four months in the year. The forests along the banks abound with timber fit for shipbuilding.

GODDINGTON, par. Eng. Oxford, 1030 ac. Pop. 87.

GODELLA, a vil. Spain, prov. of, and 4 m. N. Valencia, 1 bank canal of Menorca, in the *Assens* or orchard of Valencia. It contains a palace, with two towers a parish church, townhouse, and two schools and has manufactures of chocolate, and a trade in corn, oil, silk, and fruit. Pop. 1344.

GODELLA, a vil. and com. Spain, prov. of, and about 15 m. N. Valencia, on the side of a hill. It contains a parish church, courthouse, miserable prison, primary school, and a Moslem tower in ruins; and has two flour-mills, and a trade in corn, wine, and oil. Pop. 1000.

GODERICH, a small town, Upper Canada, on the Harrow, on Lake Huron, at the mouth of Maitland river. It was laid out in 1827 and contains five churches and chapels, a jail, and a courthouse. P. (1828) 1322. — 3 An island on

W. Australia, about 55 m. square, in which upon plains alternate with thickly-wooded land, fertile valleys, and extensive pastures. The capital, Melbourne, is 90 m. N.W. Albany.

GODESBERG, a vil. Rhineland Prussia, gov. Cologne, circle of, and 2 m. S.E. Bonn, on a hill of same name. It is one of the most agreeable summer residences on the Rhine contains several fine villas and has a mineral spring and bathing establishment, much frequented by the citizens of Bonn. On an isolated height is an old castle, with a cylindrical donjon tower commanding one of the most beautiful views on the Rhine. Pop. 900.

GODHAYN, a Danish colony on the S.W. part of Disco, lat. Davis Strait, and residence of the Inspector of N. Green land. In the vicinity are coal mines. Pop. 250.

GODIASCO [Latin Godiscus] a vil. Italy Piedmont, div. of, and 13 m. E. Alessandria at the foot of Mount Barbaresco, 1 bank Stura, near the confluence of the Arco. It contains a regularly-built square, on which are two handsome palaces, two churches, and a courthouse and has a trade in cattle, a weekly market, and an annual fair. Near it are some remarkable caverns and petrifications. Pop. 1607.

GODING [Moravia, Godolitz] a vil. Moravia circle of, and 84 m. S.E. Brinn, circ. dist. of same name, r. bank March. It contains a castle, parish church, and chapel; and has manufactures of tobacco, a trade in wool, horses, and cattle, a weekly market, and four annual fairs. Pop. of town 2829 of dist. 17,497.

GODMANCHES or **GURMANCHES**, a municipal bor. and par. England, co. Huntingdon. — The town situated on the Ouse, 2 m. S.E. Huntingdon within the parliamentary limits of which it is included, has a handsome church in the later English style, a free school, founded by Queen Elizabeth besides a number of parish charities. Area of par. 8590 ac. Pop. 5327.

GODMANSTOWN, par. Eng. Dorset 1144 ac. P. 179.

GODOLPHIN, a hamlet, England co. Cornwall, 84 m. N.W. by W. Helston. The neighbourhood has long been celebrated for its mines.

GODHILL, par. Eng. Isl. of Wight 6386 ac. P. 1316.

GODSTONE, par. Eng. Surrey 8788 ac. P. 1857.

GODTHAAB, a Danish colony W. coast Greenland in Gifford Sound, about lat. 64° 30' N. It is the residence of the Inspector of the S. district, and is the oldest Danish colony in Greenland, having been founded in 1731 by Hans Egede. It has a seminary for the instruction of native catechists, under the superintendence of a missionary. Pop. 740.

GÖDEREDE or **GÖDER**, a vil. Holland, prov. S. Holland, on the island of Goederede or Overflakke, 10 m. S.W. Breda. It had a township in the marketplace, a reformed church, and a school. It was formerly a large, walled, commercial town and has been brought into the present state by inundations, fire, and war. Pop. 1116.

GÖDEREDE or **OVERFLAKKE** an island, Holland, forming the most S. portion of prov. S. Holland bounded by the N. Sea, N. and E. by the Haringvliet, and S. E. by the Vollerak, Kammer and Grevelingen, which are all portions of the estuary of the Waal, and communicates with Holland by Diap. Before 1761 it formed two islands; since the conjoint name of Goederede or Goeder and Overflakke, which were united by the dike, and partly naturally, and partly by artificial means, of a water-course that separated them and which, at full tide, was navigable for vessels of considerable size. It is about 24 m. long, N.W. to S.E., by 6 m. broad. Its inhabitants are chiefly engaged in agriculture, raising a considerable quantity of madder. Pop. 20,000.

GOENONG API or **API**, a small volcanic island, Indian Archipelago, Banda Sea, lat. 6° 35' S.; lon. 128° 40' E. It contains no active volcano, the last eruption of which occurred in 1820. — 3 An ill. from Sea, of the N. coast Sumatra; lat. 6° 11' S.; lon. 119° 5' E. It also contains no active volcano. — 4 A burning island, near group (which see) GOENTOE, or GOENTOE-GOENTOE, an active volcano, lat. Java, prov. Franango, about 94 m. S.E. Batavia height,

6669 B. In eruptions of 1818 1835, 1835, and 1841 all caused great damage to the surrounding country destroying large numbers of coffee-trees, and covering extensive tracts with ash, sand, and stones.

GOES, or **Trancoso** [Lath. *Goss*] a tn and port, Holland, prov Zealand, lat. 5.4. N. 16.1. W. Burgoon-Ezom. It is surrounded with walls protected by a ditch, and has seven gates. It has five open squares of which the Great Market [Groote Markt] the finest and largest, is in the form of a parallelogram is planted with trees, and is further adorned with the townhall, an old, respectable-looking edifice, which once contained the weigh-house. There are also a new corn exchange, a prison a Calvinistic, dissenting, Baptist, and E. Catholic church, and a synagogue numerous schools, a poorhouse, orphan hospital, and several other benevolent institutions, and charitable and religious societies. It has an old and a new harbour defended by forts a considerable commerce, but unimportant manufactures. Pop. 4725

GOEZE a tn and par Portugal prov Beira-Baixa, com. Coe, near r bank Cezra, 17 m E. Coimbra, at the foot of the Serra d. Estrella, in a valley so deep, that in winter it is scarcely visited by the sun. It contains a parish church and a fine castle. Pop. 8150.

GOETTA a river Sweden See GÖTA

GOGGINGEN a market tn, Bavaria, circle Swabia, capital of same name 2 m. S.W. Augsburg. It contains a castle, parish church chapel, and hospital and has manufactures of woollen cloth white lead, clocks, and potato starch, and saw oil, and other mills. Pop. of tn. 1225 of dist., area 80 sq. m. 16,135.

GOGO or **Gooms** a seaport in W Hindoostan, prov Orissa, on the W coast of the Gulf of Cambay lat. 17° 40' N. 75° 18' E. 80° E. (N) It is an ancient town, but had fallen much into decay while under the Mahratta government. The roadstead is considered safe during the S.W. monsoon

GOGRA **GOOGRA** **SARJOY** or **Dewa** a river Hindoostan. It rises in the Himalayas, near Tadagur about lat. 30° 11' N. lon. 81° 18' E. from which it flows generally S.W. through Nagpur Oudh, and into the Ganges. Near where it falls into the Ganges, a little W from Churprah; lat. 25° 45' N. lon. 85° 10' E. It is one of the principal tributaries of the Ganges, and is navigable for large boats to the foot of the hills. It is held sacred by the Hindoos, but not in equal estimation with the Ganges. Length, in a nearly straight line, about 450 m.

GOHOD a fortified tn. N W Hindoostan prov Agre, 23 m N E. Gwalior lat. 26° 24' N. lon. 75° 30' E.

GOIANINHA a tn. Brazil, prov Rio Grande-do-Norte, near Lago Groenhins, 28 m. S. Natal. It contains a parish church and a primary school. It has some trade inhabitants chiefly labourers. Pop. 1500

GOLL (Loon) a picturesque mts-rng, W Scotland, com. Argyll, stretching 4 m. N. from Loch Lomond. It is upper and is the pretty village of Lodinghill. **GOLLE**, a vill Holland prov N. Brabant, 15 m S.W. of Brussels, on the Lalle with a E. Catholic church, and school Pop. (agricultural) 705.

GOLTO a tn Italy Lombardy prov of 9 m. N.W. Mantua, r bank Mincio, here crossed by a bridge. It was formerly surrounded by a strong wall, and defended by a castle; a place of considerable military importance and the scene of several engagements an annual fair is held in October. Pop. 4127

GOJAM, a prov., S.W. Abyssinia, Amhara, E. of Lake Denbosh. It is a pastoral country and consists principally of elevated plains and high mountains, surrounded by the Ahal, in the form of a semicircle. The middle region is a tableland from 5000 to 5000 ft. above the level of the river. This tableland is about 30 m wide. Nearly the same space is occupied by the broken country which lies between the plain and the river. It is intersected by numerous small streams most of which fall into the Blue Nile. The ridges of mountains rise in some parts to the regions of frost and snow and hillsides have fallen here of such size as to kill people and

castles. This hill lies on the ground sometimes for three days, before it melts by the heat of the sun.

GOKAUS a tn. Hindoostan, prov Belajoor 49 m. N. Davaur lat. 18° 11' N. lon. 74° 58' E. on the N. seely of a hill, on the Gargura, 333 m. S.E. Bombay. It is enclosed by a wall and ditch on its E. and N. side, and is a place of considerable extent and importance. It had formerly a considerable manufactory of silk and cotton fabrics, both in the form of dresses and of piece goods.

GÖKTSCHÉ-DANSEN [Blue lake] also called **KASHAW** **SAN**, and sometimes **SARVAN** a lake Russian Armenia, to the N.E. of Erivan about 40 m. long from N.W. to S.E., and on an average 12 m. broad. It is situated about 5000 ft. above the sea-level, in a basin surrounded by mountains, many of them covered with the richest verdure, not a few of the most fantastic forms, and several covered with snow. The water is fresh, and of a deep blue colour, and is said, by Chomney never to freeze, though Dubois de Montperoux asserts, that when he visited it in the beginning of February it was covered with ice m. which the people who live on the banks of the lake were making holes to catch the fish with which it is known to abound. In the N.W. of the lake there is an island called **Sewan** or **Seyan** with a convent on it.

GOLA SACCA, a vil and com. Austrian Italy prov of and 63 m. N.W. Milan 1 bank Pione. It contains a parish church. The inhabitants are chiefly employed as bargemen on the river. Humbel crossed it here with his elephants. Pop. 1601

GOLCONDA a tn and fortress, Hindoostan prov of and 6 m. W N.W. Hyderabad on a hill lat. 17° 23' N. lon. 78° 26' E. formerly the capital of an extensive kingdom. The fortress is now used chiefly as a state prison. The principal inhabitants and bankers of Hyderabad are also permitted

THE TOWERS AND FORT GOLCONDA.—From Capt. Hodgson Taylor's 'Sketches in the Deccan.'

to retain houses in it, in which, on any alarm, they retire with their money and other portable effects. Golconda and diamonds is an old association but is no otherwise warranted than that the town was at one time a principal mart for these precious gems, which were brought there to be cut and polished. No diamonds are or ever were, found in any part of the adjoining country; the nearest mines, most of which are now deserted being probably 100 miles distant.

GOLD COAST British possessions, on the W coast of Africa having Windy Coast on the W., and the Slave Coast on the E. Its precise limits are not determined, but the jurisdiction of British authority in the part of Africa, extends, with exception of a few sea-side towns, from Freetown on the W. lon. 6° 10' E. to the river Annies on the W. lon. 8° 18' W. or 230 m., stretching inland, to Aschantee. The British forts and stations on this coast are Dix Cove, Cape Coast Castle the residence of the governor Annamaboe, and Fort James. There were formerly several others, but they have been all abandoned, one after the other; there were also some Dutch and Danish forts and stations on this coast, but the latter have been sold to Great Britain. A considerable trade is carried on with the Ashantees, who bring Ivory gold

4000.—A small isl. Dalmatia, in the Adriatic, about 200 m. N. E. of Ist. Arva.

GOLLERSDORF, a market in Lower Austria, on the Gyllenbach, 25 m. N. W. Korneuburg. It contains a castle and a parish church. Pop. 1378.

GOLLNOW, a town, Pomerania, prov. Pomerania, gov. of, and 14 m. N. E. Stettin, 1 bank line and on the railway from Stettin to Damig. It consists of the town proper surrounded by walls, and defended by four forts; and of two suburbs; contains two churches, and three post-offices, and has manufactures of woollen cloth, ribbons, paper and tobacco as iron and a walk with a trade in cattle and six annual fairs. Pop. 5188.

GOLLUB, a town, Prussia, gov. of, and 40 m. S. Marienwerder 1 bank Drenow. It has a Protestant and a R. Catholic church, manufactures of woollen and linen cloth, a trade in corn, cattle and horses, and nine annual fairs. The village Dobrin, so near Gollub as to be only its suburb belongs to Poland. Pop. 1745.

GOLLUMBINCEZ, or **GOLUBINCEZ**, a vil. Austria, Slavonia, 22 m. S. E. Petrowatz. It contains a castle, a Greek non-united and a R. Catholic church. Pop. 3500.

GOLNITZ, a market in Hungary Hither Thuria, co. Zips, 1 bank river of same name 17 m. S. W. Eperies. It stands among mountains in the seat of a mining directory; contains a Protestant and a R. Catholic church, and a high school, and has manufactures of iron and copper ware wire, and cutlery. Both iron and copper are extensively mined and smelted in the vicinity. Pop. 2800.

GOLQ, a river, Corica, which rises in Lake Ine on the E. slope of the mountain chain which stretches through the island about 15 m. W. Corva flows E. N. E. and, after a course of about 40 m. falls into the sea 10 m. S. Bastia.

GOLOVATCHEFF, a cape N. W. coast isl. Tanaka or Saghalin empire of China; lat. 52° 33' N. lon. 141° 54' E. (n). With the most N. W. cape of the island Cape Maria it encloses the bay of Nadijale.

GOLA, or **GALOS**, a market in Hungary co. Wieselburg 52 m. S. E. Vienna. It contains a Protestant and a R. Catholic church and stands in a fertile district which yields heavy crops of corn, and raises fine cattle. Pop. 1800.

GOLIEVE, a maritime vil. and par. E. coast Scotland co. Sutherland.—The village pleasantly seated on the coast, 7 m. N. E. Dornoch is inhabited by fishermen agricultural labourers, and other working people.—The parish is about 8 m. long by 6 m. broad; and contains Dunrobin castle, the seat of the Duke of Sutherland. Pop. 1553.

GOLSEN, a town, Prussia, prov. Brandenburg, gov. of, and 48 m. W. S. W. Frankfurt, 1 bank Dahme. It has a church manufactures of tobacco which, as well as flax are extensively grown in the vicinity and a trade in sheep swine, poultry and carp. Pop. 1061.

GOLTHO par Eng. Lincoln 2540 ac. Pop. 159.

GOLTSCHKEIM, a town, Bohemia, circle Chaslau, 50 m. N. E. E. Prag. It contains a church chapel, castle, and townhouse and has manufactures of tobacco, a general trade and two annual fairs. Pop. 2080.

GOMANIZA, a vil. and port, European Turkey Albania, 24 m. W. S. W. Janina; lat. (S. E. point) 39° 25' 25" N. lon. 20° 35' 25" E. (n). The village is of little consequence, but the port is safe and commodious.

GOMARIN, a vil. Wittenburg, circle Black Elbe, 3 m. W. Rummelsburg on the Wisnietz, here crossed by several bridges. It contains a parish church. Pop. 1485.

GOMBAR, a vil. Hungary Hither Danube, co. Lipitz, in a mountainous but well-wooded district, on a height, above the Waag 7 m. from Rosenberg. It contains a parish church and has glass-works. Pop. 1000.

GOMBEROON, or **GOMBEROON**, see **RENDER-ABRA**.

GOMBIN, a town, Russian Poland, 55 m. W. N. W. Warsaw with a church, and manufactures of woollen cloth, some general trade and two annual fairs. Pop. (1841) 2465.

GOMBERA (Vizian) or **GOMBERA** (see **PERSEUS**) a town, Maroon, prov. Fes, with a fort, on the Mediterranean, 55 m. S. E. Ceuta. It is situated between two high mountains; and contains about 700 houses.

GOMERA, one of the Canary Islands, W. by S. Tenerife, N. point; lat. 28° 15' N. lon. 17° 10' W. about 18 m. long and 9 m. broad. It contains, property, of one high mountain,

the upper part of which in winter, is covered with snow. It is naturally very fertile, but cultivation is entirely neglected, being confined to a tract contiguous to the coast. The centre is occupied by forest. Pop. 11 489. The capital of the same name is on the E. coast, and has a good harbour.

GOMERSAL, a township England, co. York (W. Riding) 7 m. S. W. Leeds the inhabitants of which are chiefly employed in the manufacture of woollen stuffs, and the spinning of worsted yarn. Pop. 9938.

GOMETRA, or **GOMERVA**, a small isl. Scotland, on Argyle between Staffa and Mull and separated from Ulva by a very narrow sound.

GOMEZ, a small isl. New Granada, in the Caribbean Sea, at the mouth of the river Magdalena.

GOMMEREN, a town, Prussia, prov. Saxony gov. of, and 5 m. S. E. E. Magdeburg, on the Elbe. It is the seat of a court of justice; contains a Protestant parish church; and has a trade in cattle and three annual fairs. Pop. 1807.

GOMONA, a small isl. S. Pacific Ocean Pitt's Passage S. Isl. Oby lat. 1° 45' S. lon. 127° 27' E. (n). of muddling height, and sloping from the coast towards east and west.

GOMOR, a co. Hungary Hither Thuria bounded, N. by Lipitz and Zips E. Turas, S. E. Borsod Borsod Herce and Neograd, S. W. Neograd, and E. Soli. area, 1236 sq. m. its capital, Pálos, in lat. 48° 50' N. lon. 20° 20' E. The surface is traversed by ramifications of the Carpathians, one of which contains the lofty summits of Ercs, Treznik, Csizsán, and Szécsen, and stretching S. W. to N. E. divides the county into two distinct portions the smaller of which in the N. W., is drained by the Gran which flows W. and carries its waters to the Danube, and the latter is drained by the Sajó and its tributaries which belong to the basin of the Thamis. The climate is cold and variable and the grain raised barely suffices for the home consumption. Some parts however are of great fertility and produce good crops of tobacco and flax. Wine also, of good quality is produced and the hills are generally well covered with wood. But perhaps the principal source of wealth in the county is its mines, which are numerous and include iron, cobalt tin, and sulphate. For administrative purposes, the county is divided into five districts.—E. North Putnok Kaszab Rosman, and Szekes. Pop. 202 000.

GOMOR-SAJÓ, a market in Hungary in the co. to which it gives name, 7 bank Sajó, 46 m. W. S. W. Kaszab. It has a Protestant parish church a gymnasium, with a library and museum and manufactures of earthenware Much tobacco fruit, and wine, are produced in the district. Pop. 1049.

GOMUL, a river of E. Afghanistan, the channel of which forms the Gomal river or great middle route from Hindoo tan to Khorasan by Dera Ismael Khan and Ghaznee. It rises about lat. 33° N. lon. 69° 22' E. 50 m. S. S. W. Ghaznee, flows S. S. W. for about 50 m. when it bends round to the E. and having made its way through the Soliman range of mountains, about lat. 32° 25' N. is lost in the sand to the E. of it. Previous to its entering the range it is joined by the Zhobe, a considerable stream flowing from the S. During the rains however it continues its course to the Indus lat. 33° 6' N. lon. 71° E. Total course, to the Indus about 100 m.

GONAIVE, an isl. Caribbean Sea, off W. coast, Hayti 28 m. W. N. W. Port Republic lat. (W. point) 18° 50' 54' N. lon. 73° 15' 15' W. (n). It is about 87 m. long by 9 m. broad, and is almost surrounded by rocks and sandbanks. It has no permanent inhabitants being destitute of fresh water.

GONAIVES (Lm) a town, Hayti, on the bay of same name, 65 m. N. N. W. Port Republic. It has an excellent harbour a naval and military hospital public baths, and a mineral spring.

GONALSTON par Eng. Nottingham 850 ac. Pop. 100.

GONQALO-SAP, a town, Brazil, prov. Rio-Grande-do-Norte, 1 bank Potengi or Grande, 18 m. W. Natal. It contains a parish church and a primary school.

GONQALO-SAP AMARANTAS, a town, Brazil, prov. Piauí, 56 m. N. N. W. Orléans. It was originally formed for the residence of Indians, called Amara and Guituba, who were living dispersed among the mountains in which the Parakatis has its source. It contains a parish church. The inhabitants cultivate provisions, and raise some cotton. Pop. 1800.

GONDAR the cap. city of Abyssinia, 71 m. N. E. Lake Zana, or Demben lat. 12° 50' N. lon. 37° 32' E. It is

built on a lofty insulated hill, which is an extinct volcano between two rivers, which unite below the town; houses widely apart from each other of red stone, roofed with thatch entire circumference of the city about 11 m. It contains a ruined palace, many churches, and other buildings devoted to religious purposes. Gondar was, formerly a royal residence but is now with the whole province in which it is situated, in the hands of the Gallas and has lost much of its former splendour. Cotton cloths, of a fine quality are manufactured here. The people of this city are represented as extremely headstrong, and addicted to the most barbarous and brutal practices. Pop. estimated at 50,000.

GONDELSHEIM a vil Baden, circle Middle Rhine 14 m. E. N. E. Carlsruhe. It contains a parish church and a castle, with a fine garden and has a saw oil and other mills. Pop. 1320

GONERBY (GRAY) par Eng. Lincoln 2180 ac. P. 1423
GONERBY, an anc. tn. Frisco, dep. Seine-et-Oise, 10 m. N. W. E. Paris. It has a remarkable church, founded in the 12th century, manufactures of hosiery lace, cotton fringes, large blackstones and a trade in grain and fodder. Here after the battle of Waterloo the headquarters of the British army were established, July 2 1815 Pop. 2147

GONIOVIZ, a tn. Russia, prov. of and 82 m. N. W. Nizhny, in a marshy district, 1 bank Bober. It consists of the town proper and two suburbs and is a poor place, with upswampy streets. Pop. 1873.

GONNINGEN a vil. Wurtemberg circle Black Forest, on the W. side of the foot of the Alps, 6 m. S. E. 7. m. S. It has a parish church a paper and other mills and a trade in seeds and fruits, raised in the vicinity Pop. 7433

GONNOS, several places in isl. Sardinia, particularly—**1** (Fonadiga) A vil and dist div. of, and 20 m. N. W. N. (aglian). It consists of two distinct portions, separated by a stream the one on the right being called Gonnos, and the other Fonadiga. It contains a large church and a primary school and has manufactures of woollen and linen cloth, and also in wool and iron and a considerable trade in fruit, particularly cherries, raisins, and some brandy, cheese, and hides. Pop. 3518 — **2** (Gonad) A vil. dist Cagliari, about 30 m. S. E. Oristano, on the E. slope of a hill, near r. bank Ussello. It has a very unhealthy site contains an ancient parish and two minor churches. One of these dedicated to St. Daniel, used to attract about 20,000 persons to the festival of that saint. A large fair was held at the same time, and a good deal of business done. Pop. 544. — **3** (Trunata) A vil. near the last mentioned on both banks of a small stream. It consists of indifferent houses, of stone and mud, and of narrow irregular streets, so dirty and ill paved, as to be almost impassable in winter. It contains a church and a primary school, and has manufactures of woollen and linen cloth, and an annual fair. Pop. 650

GONOWITZ, or GANOWITZ, a market tn. Austria, Styria, in the neighbourhood of the Pollansberg, celebrated for its wine 19 m. S. E. W. Marburg. It consists chiefly of a long street, has a castle and a parish church and, as its vicinity mineral springs and mines of iron and argentiferous lead. Its cattle markets are important. Pop. 670

GONNSBORO Ocean, a lake, Adulze Russia, gov. Irkutsk, 56 m. S. by N. Khatka, called also Gonn Lake, from the immense numbers of geese that frequent it in the mounting season; and multitudes of which are killed by the inhabitants of the neighbouring districts. Near it are several pagodas, around which are grouped small houses of wretched appearance, for the accommodation of the lamae.

GONTTSWELT, or GUNDESWELT, a vil. and par. Switzerland, cant. Aargau, on the frontiers of Luzern, near the W. end and about 14 m. S. E. E. Aarau. It contains a hand some new church and has in the vicinity, at Schwarzenberg a bathing establishment, finely situated, and well frequented. Near the bath there is a small town of a hard black soil, resembling marble, which takes on a fine polish, and is cut into a variety of articles. Pop. 2113.

GONZAGA a tn. Austria Italy prov. of, and 15 m. S. Mantua. It was formerly strongly fortified, and still possesses an ancient castle and has a parish church, nine vicarages, and several public offices. Silk is manufactured here and a large fair for cattle and agricultural produce is held in September Pop. 14,580. — (*Dizionario della Italia*.)

GOOD HOPE (Cape of). See Cape of Good Hope.
GOOD SUCCESS BAY Tierra del Fuego, La Maitre Strait; lat. 54° 49' S. lon. 68° 18' W. (a.) It is a good anchorage, perfectly safe, provided that a vessel does not anchor too far in towards the muddy beach at its head. Helig, of about 1200 ft. above the sea, surrounds the bay. Wood and water are to be obtained. The natives met with here have good figures, and pleasant-looking countenances, low foreheads, and high cheek-bones (see lower face); the lower part projecting, hair coarse, and cut short on the head, leaving a narrow border of hair hanging down; over this a kind of cap, or band of skin or woollen yarn is worn. Their whole appearance, little improved by inflated and sore eyes is filthy and disgusting, but they are a simple and inoffensive race subsisting principally on fish and shell-fish.

GOODFRESTONE, par Eng. Norfolk 2781 ac. P. 615.

GOODLEIGH par Eng. Devon 1167 ac. Pop. 234.

GOODMANHAM par Eng. York (E. Riding) 2850 ac. Pop. 355

GOODMAN'S ISLANDS, S. Pacific. See FRANK and GOODMAN'S ISLANDS

GOODNESTONE, two pars Eng. Kent — **1** 334 ac. Pop. 69 — **2**, 1864 ac. Pop. 892

GOODRICH par Eng. Hereford 2421 ac. Pop. 784

GOODWIN SANDS, dangerous sandbanks, England about 4 m. or 5 m. off the E. coast of Kent, the intervening channel forming the well known roadstead called the Downs. Their entire length, N. to S. is about 10 m. breadth, varying from 1½ m. to 2 m. and many places may be dry at low water. They are divided into two parts by a narrow channel called the Swash navigable by small boats. Off the N. end of the Sands, a light vessel is placed, another off the Swash and a third near the S. Sand head. In heavy weather a bell is kept constantly ringing, to warn vessels of their danger. According to tradition, these Sands formed at one time, part of the Kentish land, belonging to Earl Goodwin whence their name and were submerged in the year 1097—the sea having broken through the wall by which they had been previously protected from its incursions.
GOODJAH in Souda, 60 m. S. W. Hyderabad lat. 24° 45' N. lon. 67° 48' E. on a navigable creek opening into the Indian Ocean, close to Karachi. It contains a small bazaar

GOJERAT — **1** A small fortified tn. Panjab, l. bank Dhawan, a tributary of the Chenab, about 70 m. N. W. Lahore lat. 32° 55' N. lon. 78° 54' E. Here, on the 31st February 1849 the Sikh army was totally routed by the British forces, under Lord Gough. The former were 60,000 strong the latter about 20,000. The battle was fought almost wholly by artillery the British having about 100 cannon in the field, the Sikhs 59 of which 53 were captured. The country around Gojerat is clear and open, extremely fertile and well cultivated. — **2** A prov. Hindoostan, See GUJERAT

GOOLD an isl. N. E. coast Australia, Rockingham Bay lat. 16° 54' S. lon. 145° 11' 50" E. (a.); about 7 m. in circumference, gradually rising towards the centre to form a peak 1576 ft. high. The shores are rocky with occasional sandy beaches and the island is well wooded up to its summit—eucalypt (gum trees) frequently of great size, being the predominant trees. The gum is very luxuriant, and water abundant. The natives affect a friendly dependence towards Europeans; but are treacherous, and at once avail themselves of any opportunity that may offer of attacking and plundering boats or vessels. Their houses are simply constructed of a single sheet of bark of the gum-tree, brought together at the ends and secured by stitching

GOOLE a tn. and river-port, England on York (W. Riding), on the Ouse, 32 m. W. by S. Hull the N. terminus of the Fosses and Goole Railway. It consists of several spacious streets lined with fine houses, and some of a new church, with a lofty tower, and places of worship for Wesleyans, Primitive Methodists, and Independents also national and infant schools, a library and scientific institution, and several churches. But the docks of Goole form its most important feature one of these the ship-dock, is 600 ft. long, by 200 ft. broad, with 12 ft. water; the other, the barge-dock is 900 ft. long, by 150 ft. broad, and will contain 200 vessels, averaging 50 or 60 tons each. There has

been recently added two large docks, one wet and the other dry. There are, besides, extensive bonding warehouses, spacious sheds, a range of yards for bonding deals and iron, a pond which will hold 8000 loads of timber and patent slip for repairing vessels. The number and tonnage of sailing vessels registered as belonging to the port, in 1850 was 512 tons. 23 878—steamers, 8; tonnage 551. The number and tonnage of vessels that entered and cleared at the port during the same year was sailing steam, British and foreign, inwards, 1818 ton, 194, 639;—outwards, 9240 ton, 173 138. Gross amount of customs duties for the same year, 224 856. Ship and boat building, sail-making, iron-founding, and agricultural machines making, which are carried on to some extent, comprise nearly the whole manufactures of the place. The town owes its rise and subsequent importance, in part, to its situation on the Orse, but chiefly to the opening of the Knottingley and Goole Canal by the Aire and Calder Navigation Company by which a direct inland navigation has been effected to Leeds, Manchester, Liverpool, &c. Pop. of town, 4722.

GOOLKOO a mountain-range, Afghanistan, 80 m S W Ghazni; lat. 33° 22' N lon. 67° 50' E; upwards of 13 000 ft high and covered with snow throughout the year.

GOOMTY a river of N Hindoostan, having its sources in the hills of Rohilund about lat. 28° 42' N lon. 80° 10' E. whence it flows S.E. and, traversing Oude, enters pro Bahar and falls into the Ganges, between Ghazipur and Benares, about lat. 25° 50' N lon. 85° 30' E. In its course it passes the cities of Lucknow and Jaunpur becoming exceedingly tortuous below the former and confining more or less so to its junction with the Ganges. Its entire length, in a nearly straight line, is about 850 m. There are many other rivers in India, of a secondary class, of the same name which signifies a winding course.

GOONANG TFFILA Calceas. See **GONDVALLA**.

GOOL, a town in Holland, prov Overijssel, 18 m E Devanter. It has a Calvinistic and a E. Catholic church and two schools, an old towhouse, a brewery and some cotton and linen weaving. Here, in 1833, Thomas Alisworth commenced his experiments in calico weaving which led to the formation of a weaving-school for the teaching of workmen. So efficaciously did this school operate, that in a short time numerous workmen were taught and dispersed over the country; and the weaving of calicoes increased to such an extent, that Holland no longer required to be indebted to Belgium for supplies of that article, but manufactured sufficient for home consumption, and for exportation to the East India market. Since 1841, however, the weaving of calicoes has again fallen off. A monument to the memory of Alisworth has been erected in the town. Pop. 1837.

GOORBAN a river Scheldt. It rises in the mountains east of Kurrachhe and Solwan, about lat. 25° 30' N lon. 67° 38' E, and, after a S.W. course of about 60 m, falls into the bay of Kurrachhe, lat. 24° 48' N lon. 67° 6' E. Though occasionally flooded and having thus a considerable body of water it is dry the greater part of the year.

GOORKHA a city Nepal nearly in the centre of the kingdom, 68 m W Kathmandu. lat. 27° 52' N lon. 84° 25' E. Formerly the cap. of the Goorkhas, before the formation of the present kingdom of Nepal. The Goorkhas are the descendants of Nepal with whom a good understanding with the British exists. They now freely enter the native army, and are amongst the most faithful, active, and courageous of our troops; having particularly distinguished themselves in the battles on the Sutlej in 1845-6. Besides the market, they carry a formidable short bent sword, called a kukri, with the edge on the inside of the bend, after the manner of a scything hook, with which, at close quarters they do dreadful execution.

GOOSE ISLAND—1 British America, river St. Lawrence, about 45 m below the lake of Orleans. It is well cultivated, and produces wheat and hay. It also maintains numbers of cattle.—2 U States, Connecticut lat. 41° 18' N; lon. 72° 48' W (a).—3, One of the Furneaux Islands lat. 40° 19' N lon. 141° 47' E (a).—4 Christmas Sound, E coast Terra del Fuego, so named by Captain Cook.—5, Australia, E coast, between Cape Arid and Middle Island lat. 24° 5' S; lon. 123° 9' E about 1½ m long by 1 m broad at the widest part. The rock is a coarse siliceous forming detached

bare masses and ridges, but none of considerable height. In the hollows the soil appears rich, dark, and cultivated with much admixture of unburned bit-gum. The scanty vegetation is apparently limited to grass growing in tussocks, and a few maritime plants. The ground resembles a rabbit-warren being everywhere undermined by the burrows of the native bird, a dark shorewater (*Puffinus brevicaudus*), the size of a pigeon. Snakes of a dangerous species are numerous. There is a lighthouse on the island.—(*Voyage of the Rattlesnake*).

GOOSEBERRY ISLANDS, a group of small islands, Newfoundland E coast Bonaville Bay.

GOORNARGEH, a township England Lancashire, 5 m N N E Preston. It contains a richly-endowed hospital for decayed gentlemen founded by Dr Barrell in 1785. Pop. 1483.

GOOTY a town and fort, peculiar India, prov Balahant 56 m S S W Kurrul lat. 15° 18' N lon. 77° 43' E.—The town is approached from the plain by two breaks or openings, forming fortified gateways.—The town is composed of strong works occupying the summits of a circular cluster of hills or rocks connected with each other and enclosing a space of level ground. The highest part of these rocks runs 1000 ft. above the surrounding plain.

GOPIO or **GAPIO** a lake, Prussia, prov Posen, gov Bromberg and circle Inowrazlaw. It forms a long and narrow expanse, having nowhere a breadth of 2 m and yet is about 20 m long. In several places it is dry. At its N W extremity there is a small village of same name.

GÖPPINGEN a town Würtemberg circle Danube, cap. of a small county, a bank Rhine 22 m S S.E. Stuttgart. It is regularly built contains a handsome church, towhouse, old castle and hospital and has mineral springs with a bathing establishment, manufactures of woolen and linen cloth hats, paper and combs, a bleachfield a trade in wool, and several annual fairs. Pop. to 5035 bal. 32 642.

GORABUNDER a vil and small fort, Hindoostan lat. Salsette, W coast, about 20 m N Bombay.

GORAM a small vil Indian Arcipelago, S E Ceram lat. (N.E. point) 6° 50' S lon. 131° 50' E (a). It is a small harbour on its N W side, and is a place of considerable trade. Its inhabitants, mostly Mahomedans, are subservient inclined to a martial life, and claim the sole right of trading with some parts of New Guinea, from which they obtain nutmegs, trepang, birds of paradise, and slaves. Refreshments, consisting of fowls, fruit and sago, are abundant. It is sometimes visited by South Sea whalers.

GORRALA, par Scot. included in Glasgow P 60 748. **GORBATOV** a town Russia, gov of Samara, r bank Oka, Nijni Novgorod cap. circle of same name, r bank Oka, a little below the confluence of the Kizama. It has a parish church, a convent, tanneries and rope works, a fishery and some shipping trade. Pop. (1849), 2597.

GÖRGEN or **MISTWA GÖRGA** a town Prussia, prov of and 52 m S Posen. It contains three churches and has several distilleries and breweries a trade in cattle, and four annual fairs. Pop. 1418.

GORUM a town in Holland. See **GONZEX**.

GORDA 3 UNITS, several headlands, including—1, A point on the S coast of Cuba, 62 m S by E Havana.—2, A cape, Central America, Mosquito coast, 47 m E of Cape Gracias a Dios.

GORDES (Latin, *Gordis*) a vil France, dep Vaucluse, 6 m W W Apt. It has a trade in ironware and cattle, and four annual fairs. Pop. 1212.

GORDON a small vil and par Scotland co. Berwick. The village is 8½ m N W Kelso and the parish which contains 8800 ac. gave the title to the noble family of Gordon, supposed to have settled here in the reign of Malcolm Canmore. Pop. 968.

GORDONA a vil and com. Italy Lombardy gov Milan prov Sondrio dist. of and about 6 m S S.W. Chiavenna, r bank Mera, at the entrance of the valley of Bodengo. It contains a parish church and several mills. The Bogie, in the vicinity in descending from the mountains, presents the appearance of a stupendous cascade. Pop. 975.

GORDONCILLO a town Spain, prov of and about 22 m from Leon, in a plain. It contains a parish church, a large towhouse, and a primary school; and, besides, a large wine and some transit trade, particularly in wine. Pop. 1808.

GORE, a dist. Upper Canada, comprising co. West-
worth and Halton, bounded E. by Lake Ontario S. and W.
by the districts London and Niagara, and N. by York and
Hume. It is watered by the Ouse or Grand River, the head
branches of which are diffused over the whole of the W. part
of the district and contain some of the richest, best settled,
and most highly-cultivated arable lands in Upper Canada.
Many of the farms here have flourishing orchards attached to
them. Freestone and limestone are abundant, and are ex-
ported. Pop. about 40,000.

GOREK, a small isl. belonging to the French, on W.
coast Africa, immediately S. of Cape de Verd, and separated
from the mainland by the Strait of Dancer lat. 14° 39' N
lon. 17° 24' W. It is 3 m in circuit, and consists of a naked
mass of black basalt, rising in some places to the height of
several hundred feet perpendicular. The landing-place is on
the N.E. side of the island, in a small sandy bay. In the
centre on an elevated plateau, stands the fort, and on a sandy
plain, at the foot of the rock, is the town of Goré, occupying
in all about two-thirds of the whole area of the island. It is
fortified, has local courts, two schools, some manufactures,
and boat-building yards, but the only remarkable building is
the barracks. The roadstead is N.E. of the island well
sheltered and safe for eight months in the year. The island
produces nothing and is scarce of water. It is, however, the
chief entrepot of the French trade in W. Africa. It belonged
originally to the Arabs who took possession of it in 1617.
Pop. (1857) 4994.

GORELOV one of the Aleutian isls., containing an
active volcano lat. 51° 56' N lon. 178° 40' W (N.).

GORES ISLAND See MATTHEW (St.) ISLAND
GORESBIDGE, a vill Ireland co. of and 16 m E.S.E.
Ailkeny r bank Barrow Pop. 419.

GOREY a market in Ireland, co. of, and 24 m N.N.W.
Wexford. It is of a decent and respectable appearance. It
has a handsome courthouse and market-house, a spacious
parish church, a Catholic chapel and Wesleyan
Methodist meeting-house, two endowed and five private
schools, a fever hospital, dispensary and other charities,
extensive flour-mills, and a large brewery. Two cattle shows,
and shows for horses, cattle and pigs are held annually.
Weekly market on Saturday. Pop. 4393. (Local Cor-
respondent.)

GULÉNY SEKT-IMRE, SZ. EMERICH or GUMOR a
market in Austria, Transylvania co. Thorenburg l. bank
Gergény 68 m. E. Klausenburg. It stands in a mountain
valley, but well-wooded district contains a Protestant and a
Greek united church, and the ruins of an old castle and has
a paper and several flour mills, glass-works, and salt mines.
Pop. 1145.

GURGO two places, Hungary:—1 (GARNOW or GARA)
a vil co. Zips Hither Theiss, dist. of, and about 4 m from
Leitceba in a plain on a stream of same name, here crossed
by a stone bridge. It contains a handsome chapel. P. 906
—2 (or GEMOON) a vil Hither Theiss co. Torna about 15 m
from Bacsana. It stands in a valley contains a Protestant
and a R. Catholic church, and has four mills. Pop. 1450.

GURJONGA—1 An isl. Pacific Ocean, off the coast of
New Guinea, from which it is distant about 25 m. lat.
1° 40' S N lon. 178° 9' W (E.), 6 m. long by 1 m
broad, and 1296 ft. high. It is well covered with large trees
and its only inhabitants are numerous black monkeys, Indian
coconuts, and nutmegs. Shell-fish, on which the monkeys chiefly
feed, are abundantly found at low-water. (Dampier)—2 An
isl Gulf of Genoa, about 30 m. S.W. Leghorn lat. 43° 25' 45"
N lon. 9° 55' 30' E. (N.). It is 9 m in circumference
about entirely covered with wood, and noted for its anchovy
fisheries, in which the inhabitants are chiefly engaged.—3
A vil New Granada, between of Province a station in the
railway between Chagres and Panama.

GURGONZOLA a tn and com. Italy Lombardy gov. of
and 17 m E.N.E. Milan, pleasantly situated near the canal of
Martesana. It is the seat of a court of law and several pub-
lic offices contains a magnificent parish church adorned with
numerous sculptures, frescoes, and paintings, and supported
by 44 Corinthian columns and has an extensive trade in
crown-milk cheese of the kind called cremenese, and an annual
fair. In 1156 the Milanese were here surprised and defeated
by the troops of Frederick Barbarossa. Pop. 3536.

GURI or GORY a market in Russia, gov. of, and 46 m.
N.E. Makhov on the Ruzin. It contains three Greek united
churches.

GOREI a considerable tn. of W. Africa, on a small isl. of
same name, l. bank Niger about midway between Egga and
the confluence of the Tshadda. It is a place of some impor-
tance, and has a noted weekly market, to which slaves are
brought for sale from all parts around. The other chief
articles disposed of at this market are milk, tallow, country
silk, camwood, bees and shovels, calabashes, wooden spoons
and plates, mats, straw hats, bows and arrows, twine and
silk, Indian corn, beads, blue bottle yams, dried buffaloes'
feet, and dried fish.

GORIN a river Russia, which rises about 18 m S.S.W.
Krasnoyarsk, in the N.W. of gov. Yekhtyn, near the frontiers
of Galicia flows N. in a very circuitous course, through that
government, passing the towns of Zaslav and Ostrog enters
gov. Blauk, and shortly after among the marshes of Pink,
divides into two branches, which join r. bank Zripet. Its
whole course is about 300 m. Its principal affluent is the
Slutch, which joins it on the r. and nearly doubles its volume.

GORINCHEM a tn. Holland. See GORICUM
GORING, two pars. England —1 Oxford 4377 ac.

Protestant church, and several mills. Pop. 2463.

GÖRITZ—1 A tn. Austria. See GÖRZ.—2 A tn.
Prussia, prov. Brandenburg, gov. of, and 21 m. N.N.E. Frank-
fort, near r. bank Oder. It contains a Protestant parish
church and has two annual fairs, chiefly for horses and cattle.
Pop. 1601.

GÖRITZ, a tn. Illyria. See GÖRZ.

GORIZIA a tn. Austria. See GOZZ
GORJAN a vil Austria, Slavonia, co. Veroco, 8 m.
from Deskovar. It contains a R. Catholic parish church.
Pop. 1290.

GÖRUM, or GORCUM [Dutch *Gorickum*, usually
shortened to *Gorika*] a tn. Holland, prov. B. Holland 23 m
S.E.E. Rotterdam, l. bank Merwede, at the junction of the
Linge by which it is intersected and connected by canal with
Vianen, on the Lek. It is surrounded by walls, has four
gates, and a good harbour formed by the Lunge which is
crossed by three wooden bridges. There are several open
market-places, in one of which stands the townhouse, a good-
looking old building. There are also a prison, custom-house,
barrack, arsenal and military hospital, six churches, and a
small synagogue. The charitable and benevolent institutions
are numerous the more important are the general hospital,
orphanhouse, and the hospitals for old men, for old women, and
for orphans. Gorkum has also a library a literary society
a Latin, town, drawing and mathematical school a burgher
a poor and numerous other schools. The principal trade is
in grain, potatoes, hemp, and other farm produce, and in
fishing, but there are also breweries a vinegar-works, ma-
nufactories, hat-building yards, rope-works, &c. Pop. 5420.

GORLA (MAGGIOR and MINOR) two adjacent vills
and com. Italy Lombardy gov. of and 40 m. S.W. Milan.
1 bank Oltia near the top of the valley formed by the
stream. Each of them contains a church that of G. Ma-
giore being particularly handsome. Gorla-Minore has
cotton-mills. The district produces excellent wine. There
is an elegant palace, called Magna, in the vicinity. P. 2087.
GORLAGO (Latin, *Gerpulacum*) a vil and com. Italy,
Lombardy gov. of, and 7 m S.E.E. Bergamo in a plain r.
bank Cherio. It has a magnificent parish church, adorned with
frescoes and paintings by distinguished masters, the remains
of an old castle, manufactures of muslin, silk-mills, and an
annual fair which lasts several days. Pop. 1149.

GORLESTON par Reg. Suffolk 2176 ac. Pop. 3999
GORLICE, a tn. Austria, Galicia, dist. Jasle, on the
Zappa or Rappa, 20 m E.N.E. Neu-Baden. It lies on a
height and has a church, blacksmiths, and important grain-
markets. Pop. 5560.

GÖRLITZ (Wendisch, *Altberg*; Polish, *Gorko*) a tn.
Prussia, prov. Silesia, gov. of, and 54 m W.B.W. Liegnitz,
chief place dist. of same name, pleasantly situated on an
elevation above l. bank Elbe, and on the railway from
Dresden to Breslau. It consists of the same town surrounded

by walls, with eleven gates and of three suburbs and is well built, having generally substantial houses lined with arcades, several large squares, and spacious streets. It is the seat of a civil and criminal court, and of several public offices; contains one R. Catholic, and eight Protestant churches one of them handsome, and among the largest in the country with five aisles and a curious crypt hewn in the rock a gymnasium, four bazaar and other schools, a porch, orphan asylum, infirmary and three hospitals; and has manufactures of woolen and linen cloth, tobacco and starch numerous windmills and other mills, dye-works, a weekly market, and three annual fairs. Pop. (1840) 18,036.—The climate, area 226 sq. m. is for the most part covered with well wooded mountains and hills but there is little arable and no great extent even of good pasture land. Pop. 80 163

GORO or Kono one of the Fijee islands lat. (N point) 17° 14' S. lon. 179° 28' W (A). It is 8½ m. long by 4 m. broad high, and apparently susceptible of cultivation to its very top. The produce of Goro is oil and tortoiseshell, and exceeds in quantity that of any other island of the group. Pop. estimated at 2000

GOROCHOW tw. Russia. See GOROKHOV
GORODISCHTCHIE several places, Russia, particularly—1 A m. gov. of, and 15 m. S. E. Nijne-Novgorod. It has three churches and a monastery in which the grand duke Alexander lived as a monk within precincts and manufactures of Prussian blue and white-lead. Pop. 8000—2, A m. gov. of and 53 m. S. E. Nijne-Novgorod, cap. circle of same name, on both sides of the Kishka Koshka. It contains two churches. Pop. 1800.—The climate is well wooded, and rears great numbers of cattle. Pop. 104,000—3 A market to gov. of and 98 m. S. E. W. Tver. Pop. 1500—4, A market to gov. Grodno near Navogrodok. Pop. 1500

GORODNIA, a m. Russia, gov. of and 30 m. N. N. E. Tolstogor cap. dist. of same name, on the Gorochna. It contains three churches, and has some general trade both by land and water. Pop. 1800.—The climate is well wooded and tolerably fertile. Pop. 99,800

GORODNIK several places, Russia, but the only one deserving notice is Gorodnik, or Gorodok a m. gov. of, and 21 m. N. W. Vitebsk, cap. circle of same name on the Gorochna and lake Nezhedra. It contains a Greek united church and a synagogue, and has a little trade. Pop. 1500 of whom about two-thirds are Jews.—The climate is densely wooded, contains numerous lakes, produces much corn and rears great numbers of cattle. Pop. 46,900

GOROKHOV tw. Russia.—1 (or GOROKHOVEN) Gov. of and 90 m. E. Vladimir cap. circle of same name, at the foot of a hill near the confluence of the Muplanka with the Klyazma. It contains four stone churches and has manufactures of leather soap, and fine yarn a bell foundry flax-works a considerable transit trade, particularly in fur, wax and leather sent to Astrakhan and in wax and salt-fish sent to St. Petersburg; and several large annual fairs. Pop. 3000.—The climate, to the E. of the gov. is only of tolerable fertility and is more adapted for pasture than agriculture. Pop. 68,900.—2 (or GOROKHOV or HOROKHOV) Gov. Vol. hysa, circle of, and 59 m. E. Vladimir. P. 1835

GOROMBOLY a vil. Hungary. Hübner Thales, co. Based on the Baljo with a Greek church. Pop. 1070.

GORONTALO or GOOWANG TELLIA, a spacious bay E. end of Calabute with a breadth of 55 m. at the entrance, widened towards its inner extremity which is very little known, to 100 m. On the N side of the bay and not far from its entrance is Goroentalo river and village lat. 0° 28' 30" N lon. 125° 15' E. The river has two small coasts just within the entrance of the E. side, in either of which small vessels may anchor. The village is about 2 m. up the stream, and the natives, who are chiefly Mahomedans, carry on a considerable trade in wax and gold dust. Refreshments of all kinds are to be obtained here including buffaloes, bullocks, sheep, goats, and poultry horses also may be procured

GORRAN tw. Eng. Cornwall 4725 ac. Pop. 1186.

GORREDIJK, a market to Holland prov. Friesland, 10 m. S. E. Leeuwarden, consisting of one street, on either side of a canal, and another built on the highway and intersecting it at right angles. It has a Calvinistic and a Baptist church, a synagogue, and a large school; corn, saw, and walk mills

Pop. 1

boothbuilding yards, distilleries, tanneries a good trade, especially in grain; and two annual fairs. Pop. 1720

GORRON a m. France, dep. Mayenne, 23 m. N. W. Laval; with some remains of an old castle. In the environs also is the old castle of Baillet. Pop. 1834.

GORRBACH a vil. Prussia, prov. Saxony gov. of, and about 55 m. E. N. E. Merseburg with a church. Flax is grown in the neighborhood. Pop. 866.

GORSCHEIN (Gross) a vil. Prussia, prov. Saxony gov. of, and 10 m. S. E. Merseburg on the Elbe, one of the vicinity of Lützen. A battle was fought here in 1813, between the French under Napoleon and the Allies under Blücher and others. The former had rather the advantage. Prince Leopold of Hesse-Homburg to whom a monument has been erected on the spot, was killed the Prussian general Boharhorst mortally and Blücher severely wounded. Though the Prussians have given this battle the name of Gross Gutesen it is better known by that of Lützen.

GORSEL a vil. Holland prov. Gelderland, 5 m. N. Zutphen, on the road to Doornik. It has a Calvinistic church and a school. Pop. agricultural 629

GOET a market in Ireland co. of, and 17 m. S. E. Galway. It consists of three wide and spacious streets, diverging from a square where the markets are held houses substantially built of stone and of a comfortable and respectable appearance. It has an elegant parish church, R. Catholic chapel, courthouse, bridewell, consistory and military barracks a union workhouse, and a national and other schools. It has no manufactures, and little trade. Market day Saturday. Four annual fairs. Viscount Gort, the proprietor takes his title from the town. Pop. 5045.—(Local Correspondent.)

GOETROE par. Ire. Cork 9045 ac. Pop. 1745.

GOETZKE, a m. Prussia, prov. Saxony gov. of and 37 m. E. Magdeburg on the Havel. It has a Protestant church manufactures of stone-bottles, and several saw and other mills. Pop. 1454.

GORUCKPOOR a m. Hindoostan, prov. of, and 104 m. N. E. Benares, cap. dist. of same name 1 back Rapti lat. 26° 35' N lon. 83° 10' E. It is a backwater of the Ganges and has several stations in India. In its W. suburb is a temple of Ganesha a Hindoo deity in high repute in those quarters.

—The district has an area of 7345 sq. m. or 4,877,793 sq. m. of which 1,945,583 ac. are cultivated, and nearly as much more is capable of being cultivated. It is generally flat and traversed by numerous streams, of which the principal are the Rapti and larger Gunduck both large, particularly the last, which is also remarkable for the magnificence of the scenery on its banks. The absence of water to be met with here is not entirely resemble either the lakes or marshes of Europe. In the rainy season they are of great extent, and pretty deep but even then they are in many parts hid by reeds some aquatic trees, and many aquatic herbs, while in the dry season they nearly altogether disappear. The soil is moderately fertile, but requires much watering. This attended to, it yields large crops, two annually for the first three years after a fallow of two years. The villages are always built in high places, and each usually occupies the highest spot that is near the summit of its territory. The land nearest the village, and therefore the highest, usually extends from the village 400 or 500 yards, and receives the chief attention of the inhabitants and being generally more or less manured, and carefully watered, usually gives two crops in the year. The lands next to these generally produce only one crop. The most remote and lowest lands are cultivated with winter rice, or with some kinds of pulses.

The jungle forests abound in game of all descriptions. Elephants, tigers, rhinoceroses, bears, and buffaloes are also numerous. The Gunduck district came into the possession of the British in 1801 when it was ceded by the Mahol of Oude in consideration of subsidy. Pop. 2,276,683.—(Trigonometrical Survey of India.)

GOZE, GÖRZ, or GORZ [Latin Gorizia], a m. Austria, Illyria, prov. Carinthia, cap. circle of its own name, on the Isarno, 23 m. N. W. Trieste. It occupies a very picturesque site, being built in the form of an amphitheatre, on a mountain slope, and consists of the high town, surrounded by walls, and descended by an old castle; the new town, situated in the plain on the L. bank of the river; and several suburbs. The houses are generally substantial, and in the

160

Hebrew style but the etymology is erroneous and most of the words are unexplained. Givra is the seat of an archbishop, of course of the schismatic and patriarchal Jerusalem and of several public offices. The cathedral, a fine building with a beautiful chancel and apse, is surrounded by a garden. The palace, a four-story, towered, arched, and domed building, is the residence of the archbishop or Casa della Prelatura, a theatre, a general and convalescent seminary, an old Jewish college, now converted into a school, a hospital, a lunatic asylum, a school of several schools, and literary museum, and benevolent institutions. The manufactures are of considerable importance, and consist chiefly of leather, confectionary, earthenware, soap, refined wax, and refined sugar. There are also several silk mills. Charles X. of France died here 1836. Pop. (1846) 10,438. — The climate, near 814 feet, or 24 m. in its N. declivity, is temperate, the winter mild, the summer sultry but fertile, rather much over wine and oil. Pop. 17,100.

with four gates. The houses are generally well built and the streets wide, tolerably straight and well paved. The principal buildings are the Ducal castle or palace, called Friedenstein, occupying the crown of the height on which the town is situated. It is a large and from its elevated site, a conspicuous edifice, not possessed of much architectural merit, but surrounded by fine terraces and containing an interesting museum, a good picture gallery and large library. There are also other two palaces occupied by members of the ducal family seven churches, none of them particularly handsome; a gymnasium, and numerous other schools the new mint, arsenal, theatre, house of correction, lunatic asylum, infirmary and several hospitals. The manufactures consist chiefly of woollen, linen and cotton weaves, hats, carpets, leather, porcelain, musical instruments, and articles in gold and silver and there are several tile-works and numerous mills. Pop. 14,228.

GOTHA (PRINCIPALITY OF) *See* COBURG.

GOTHAM, par Eng. Not.; 2740 sq. Pop. 792

GOTTHARD (Str.) a mountain range, Switzerland on the confines of cant. Tessin and Uri, belonging to the Lepontine or Helvetic Alps, which it connects with the Bernese Alps, and forming a kind of central nucleus in the great watershed of Europe. Each of its slopes giving rise to an important river—the N. to the Rhine, the E. to the Rhine, the W. to the Rhone, and the S. to the Rhine; all which rivers rise within a circuit of 10 m. from its centre. Its culminant point has a height of 10,600 ft. and at least three of its lofty summits are beyond the limits of perpetual snow. The Cr. of St. Gotthard, which, at its summit level, where the Hospice stands, at 8908 ft. high, was long the principal pass over the Alps into Italy and though only a bridle path, formed a very important line of traffic, from which the cantons of Uri and Tessin derived great benefit. On the completion of the Simplon road this traffic was almost annihilated, and these cantons, with the view of recovering it, have, at their joint expense, completed an excellent carriage road in which particularly on the Italian side, formidable difficulties have been surmounted, and much engineering skill displayed.

GOTTENBURG to Sweden. *See* GOTTEBURG

GOTTLAND Isl. Sweden. *See* GOTTLAND

GOTTER, a small Is. Scinde, 6 m. from 1 bank Indus, 27 m. W. Baluchistan lat. 28° 10' N. lon. 69° 17' E. The houses, built of mud are mean but there is a showy bazaar with numerous vendibles, and likewise a mosque of considerable size. The vicinity is infertile on account of the predatory and sanguinary character of its inhabitants.

GOTO or the **FIVE ISLANDS** a group of Is. Japan Isl. Kiushu, prov. Fusan lat. (S.W. extremity) 32° 35' N. lon. 128° 44' E. (N.) extending thence to lat. 38° 5' N. The principal are Fukuji the largest Fuso-sima, Nara-sima, Misaki-sima, and Fusan-sima besides three others smaller named Amakima, Misaki-sima, and Ukonosima.

GOTTENBURG [Swedish Göteborg] a co. or Is. Sweden, of irregular shape, on the E. shore of the Skager Rack. It is about 60 m. long by an average breadth of 14 m. bounded N. by the Kattegat, E. by the Wenerburg and S. by the Skagerrak. Its coast is rocky much indented by bays and inlets, and lined by an immense number of islands, generally small. The Is. generally is of granite and gneiss in addition though tertiary Basaltus also occurs. It is well sheltered and abundantly watered by numerous small streams, of which the most important is the Göta, which connects Lake Vänar with the sea at Gotteburg and, with the Ölle, forms the harbour of that town. Agriculture has made considerable progress in recent years, though still the quantity of grain raised does not equal the consumption. Cereals, rye, wheat, potatoes, and flax, are the chief crops and, in some parts, wheat is grown. Since the herring fishing has fallen off, the fisheries have lost much of their importance. Manufactures consist chiefly of coarse woollens and flax. The principal export is timber. For administrative purposes, the Is. is divided into five regiments and 30 districts. Gotteburg is the capital. Pop. 168,000.

GOTTENBURG or **GOTTEBURG** [Swedish, Göteborg Latin, Goteborgh] a seaport in Sweden, the second in the kingdom in respect of population and trade, cap. Is. of same name, picturesque situated on the Göta, or GÖTA, here nearly 1 m. wide, 5 m. E. of its mouth, on the Kattegat, and

265 m. W.S.W. Stockholm lat. 57° 41' 18" N. lon. 11° 54' 30" E. (N.) It consists of the town proper originally surrounded by walls, of which only fragments now remain and of several suburbs; and is defended by two forts, placed on the opposite sides of the river so as completely to command it. The houses, either of brick, faced with stucco, or of stone, have always a substantial and often an elegant appearance the streets, generally spacious and well paved, intersect each other at right angles while several canals, branching off from the river traverse the town in different directions; and by the numerous and often handsome bridges which cross them, and the rows of trees which line their banks, produce a very pleasing effect so that Gotteburg, on the whole, is generally regarded as the best built place in Sweden. The principal public buildings are the cathedral a simple but elegant structure, in the form of a cross, with a tower an excellent organ, and a richly sculptured chancel; two other churches, one of them handsome, and crowned by a dome the townhouse, new exchange, governor's residence, bishop's palace, gymnasium, with library attached infirmary several hospitals, and other benevolent institutions theatre baths, and artillery barracks. The manufactures include malldoth, linen printed calicoes, leather tobacco, and vinger and there are also oil-presses, cotton-mills, dye-works, and building-works at which a considerable number of factories are launched; but by far the most important industrial establishments are tobacco factories, porter breweries, and sugar refineries, all of which are on a very large scale. The trade is very extensive; though the want of a sufficient harbour is much felt—the only harbour at present being a kind of natural haven, formed by the river where vessels drawing 17 ft. lie in perfect safety but at such a distance from the shore, that they cannot load or unload without employing lighters. The chief exports are iron and steel, copper, wood, the finest bark, snow, juniper berries, cereals, and the above articles of manufacture the chief imports—coloured produce, wine, salt, seal oil cotton yarn, and twist. A considerable proportion of this trade is in the hands of the inhabitants, who possess shipping which some years ago amounted to 23,000 tons and has since rapidly increased. In 1842 the vessels of all nations which entered the port were 858 tons 116,322 and cleared 708 tons. 90,232 Gotteburg is the residence of a governor the see of a bishop the seat of several courts and public offices and possesses numerous societies—literary scientific, musical, and benevolent. It was founded by Gustavus Adolphus, in 1610; but its history possesses no interest. Its environs are well laid out in planted walks and its extensive communication, both with the interior by the Göta canal, and with other places by regular steam packets, make it a desirable residence but its site is said to be somewhat unhealthy. Pop. 36,000.

GOTTEN (GOTTEN) a vil. Prussia, prov. Saxony gov. of and 24 m. N.W. Erfurt, near the Unstrut with two Protestant churches, a considerable trade in garden produce, and an annual fair. Pop. 1843.

GOTTENBURG a co. Prussia, prov. Saxony gov. of and 43 m. W.S.W. Breslau. It has a Protestant church and two porches manufactures of calico and hosiery silks, and several mills. In the vicinity is a coal-field from which about 40,000 tons are annually raised. P. 2871.

GOTTESGAB [Latin Theodosius] a n. Bohemia, circle Rhinogen, in the highest part of the Krageburg, near the frontiers of Saxony 70 m. W.N.W. Prague. It has a town church, and an hospital. Iron and tin are worked in the neighbourhood. Pop. 1322.

GÖTTINGEN [PRINCIPALITY OF] a political and administrative division of Hanover in the landgraviate of Hildesheim area about 800 sq. m. It forms the most S. part of Hanover and is separated from the main portion of the kingdom by a part of the duchy of Brunswick. It is generally covered with mountains, mostly basaltic, belonging to the chain of the Harz but seldom of great elevation. The principal river is the Weser which partly bounds it on the W., and is formed within it by the union of the Werra and Fulda. In the E. it is watered by the Leine, and its tributary Ranne. There are several lakes but none of large extent. The mountainous districts are much embellished with forests of fir, notwithstanding, yield tolerable crops and the valleys are of great fertility. Potatoes are a favourite and abundant crop and

tobacco, flax and rape are extensively grown. Cherries grow well in the open fields but the other orchard fruits are confined to gardens. The pastures are rich, and feed great numbers of sheep but the horned cattle are few and horses, though chiefly used in agriculture, are not generally homebred, but obtained by importation. The minerals include silver, copper, lead, iron, salt, and alum. The principal manufactures are woolen and linen cloth, leather dress-wares, glass, and paper. The forests furnish a large export of timber. The other exports, in addition to the above articles of manufacture, are corn, thread and metals. Almost all the inhabitants are Protestants. Pop. 113,546.

GOTTINGEN a tn. Hanover prov Hildesheim esp. principally of same name, in the beautiful and fertile valley of the Leine, surrounded by gardens and country seats, 59 m. S.S.E. Hanover. It is a place of great antiquity and was early fortified but the ramparts have been planted, and converted into agreeable promenades. It consists of three parts—the Altstadt, separated by the Leine from the Masch and Neustadt communities is maintained between them by six bridges. The town is generally well built, having wide and spacious streets, fine public squares, and houses which are almost always substantial and often elegant. The public edifices include seven churches and a synagogue; a

STREET IN GOTTINGEN
From Bauer's Hannover, Bielefeld and Deutsch-Breslau

townhouse, court-house, merchant-house, infirmary, orphan and other hospitals; but they are all eclipsed by the university which has long enjoyed a European reputation. Though greatly fallen off, it still numbers several distinguished names among its professors, and has an average attendance of about 600 students the principal building, to which William IV of England contributed £30,000, was completed in 1837 and connected with it are a museum, with extensive and valuable collections, an observatory, an anatomical theatre, botanical garden, and a library possessed of 330,000 printed volumes, and 8000 MSS. The manufactures are of very little importance and consist chiefly of a few woolen tissues, tobacco, leather, paper books, and philosophical instruments. There is scarcely anything which deserves the name of trade. Among the distinguished men whom Göttingen has produced, may be mentioned Kiebohn, Meibohm, Michaelis, Heyne, and Bismarck. Pop. 10,644.

GOTTALAND or **GOTTLAND** [Swedish, *Götaland*] one of the large nations into which Sweden was originally divided, and including the whole of that country S. of lat. 59° 30' N. It contains about one-fourth of the whole surface, and formed nine provinces, two of which had the names of E. Gotland

and W. Gotland; but is now divided into the ten counties or län—Malmö, Kristianstad, Önemärken, West, Jönköping, Calmar, Linköping, Marstrand, or Skaraborg, Wernersborg, and Götaland or Götterborg.

GOTTALAND, or **GOTTLAND**, the largest län in the Baltic, belonging to Sweden, from the coast of which it is at its narrowest point 55 m. E. lat. (S. point) 56° 55' 17" N. lon. 18° 7' E. (S. p.). It is of an irregular shape, bulging out considerably near its centre, and thence tapering gradually towards the N. and E. extremities, greatest length N.N.E. to S.S.W., 78 m. central breadth 34 m. It consists generally of a limestone plateau from 80 to 130 ft. above the sea, and intersected, particularly towards its centre, by a range of rocky heights, which nowhere rise higher than 300 ft. though their abruptness often gives them a greater apparent elevation. The coast is for the most part rocky and is deeply indented by bays, forming numerous harbours of which that of Silbo, on the N. E. coast, is the best, and is not surpassed by any other in the Baltic. The climate being inland is much milder than its latitude might seem to indicate, and many plants which cannot live on the mainland flourish to its thrive well. Even the walnut, mulberry and vine ripen their fruit in the open air. The soil is fertile, but the culture which it receives is very indifferent. The grain produced however more than equals the home consumption, and might easily be increased so as to leave a large surplus for export. Domestic animals are neither numerous nor of a good description and manufactures have made little progress. Wood is abundant, and not only furnishes excellent timber and fuel but gives great richness and beauty to the general scenery of the island, the plantations are chiefly of fir but with a considerable mixture of hardwood descending to the shore, and forming a fringe along the water's edge. The principal exports are corn, lime, timber, pitch, saw-logs, and the so-called Gotland marble. Gotland attained its highest prosperity during the House League, of which its town of Wisby was an important member. It then possessed above 100 churches, most of which, though in a ruinous state, still exist, and form objects of antiquarian interest. A disastrously Gotland, with the islands along its coast, including Faro and Gotland, forms a län which takes the name of Wisby. Pop. 8,418.

GOTTJEREN a vil and par Switzerland can Thurgau esp circle of same name, 2 m. W. Constance. It has a Protestant parish church a R Catholic chapel and an old castle in the dungeons of which John Huss and Jerome of Prague were confined. Pope John XXIII. the chief instigator of the deed was shortly afterwards sent to the same dungeons, by order of the Council of Constance.

Pop. 255.

GUTTO a country of central Africa, between Danbarra and Tuilunio; formerly divided into several petty states, dependent on Danbarra; but now an independent kingdom, of which Nomiote is the capital.

GOTTSCHEE, or **HANZICHTEN**, a tn Austria, Styria, cap. duchy of same name almost surrounded by the Russ, 37 m. S.E. Laidbach. It has a fine castle and church, and manufactures of linen and earthenware. Part of the inhabitants travel about selling wooden articles, fruit, ironware, and household utensils. Pop. 171,750; of duny 70,000; area, 224 sq. m.

GOTTSCHEE a small isl. Sweden, in the Baltic, N. of al. Gotland; lat. (W. point) 59° 53' 17" N. lon 18° 19' E. (S. p.). It is chiefly composed of sand, has on it two houses, and is known for its seals.

GOU DA [pronounced *Gouda*] or **Den Gouten**, contracted Ten-Gow a tn. Holland, prov of Holland, 11 m. N.E. Rotterdam, separated into two unequal parts by the Gou, which here unites with Hollands IJssel on the R bank. It is nearly round in shape, and naturally defended by the sea with which the surrounding country which is laid out in beautiful gardens can be laid under water. The town is entered by five gates, is composed of neatly built houses, and every street large and small, but a canal in its centre. The great market is a large, irregular triangle, with the townhouse in its centre—a spacious, substantial edifice, with a tower and spire. Other public buildings are—the prison, weigh-house, butter-house, and post-office. The Calvinistic church of St. John is noted for its painted glass windows, executed by the brothers Wouter

and Dirk Krabeth, and said to be nearly the finest in Europe. There are also an evangelist Lutheran, two R. Catholic, and a Jamesist church, and a synagogue. The charities and benevolent institutions are various including several general hospitals, one for old men and one for orphans, and several other special foundations and associations and schools of different kinds and grades, including Latin drawing poor &c. are numerous. Cloth and bombazine were at one time manufactured to a considerable extent in Gouda and, in 1751 there were 874 pipe-works employing 3000 hands and potteries and breweries were likewise at one time numerous. The cloth manufactures no longer exist and there are now only 16 pipe-works, 10 potteries, and two breweries. The other manufactures carried on are bricks which are largely made from clay obtained from the bed of the IJssel cotton-weaving parchment, leather white lead and there are three boat-building yards, two soap-works, three stuff four corn and several other kinds of mills. Excellent pike and smelts are caught in the river. Gouda communicating directly by canal with Amsterdam Rotterdam, &c., has a considerable transit trade. It is, likewise a market for fax but more especially for cheese, large quantities of which are brought here to the market, and sold under the name of Gouda cheese. There are several annual fairs. Pop. (1850) 13,791

GOUDHURST par Eng Kent 9685 ac. Pop. 2594
GOUDHURST a river Lower Canada. It rises in some rocky hills called Mount-des-Roches, on Saguenay and falls into the St. Lawrence, opposite the vil. Coudre lat. 47° 20' N. lon. 70° 40' W. It is winding, tortuous, and full of rapids but runs either violent or formidable. The estuary of this river with exception of its bed is almost dry at low water.

GOUGH'S ISLAND or **DIEGO ALVAREZ**, an island S. Atlantic, B.R.E. Tristan d'Acunha; lat. 40° 19' S. lon. 15° 41' W. (a). It is 15 to 16 m round and rises about 4000 ft. above the sea is covered mostly with mossy grass, and small bushy trees. The steep cliffs rise almost perpendicularly from the sea, having several beautiful cascades of water issuing from the fissures between them.

GOLICHAH LAKE, Upper Canada, a continuation of Lake Simcoe, about 12 m long and from 3 m to 8 m broad. The scenery around it is very romantic; the shores being indented with many beautiful bays, and the lake itself studded with islands.

GOLKCHA a lake, Russian Armenia. See **GÖRKCHES**
GOLBULN a vil. N. New S. Wales, co. Argyle, 125 m S.W. Sydney near an angle formed by the junction of the Mulwara with the principal branch of the river Wollondilly called Goulburn plains. Pop. 1171

GOULBURN **WILKINS** two vil. N coast of Australia, between Cape Cockburn and Cape Brathwaite the one called North Island the other South Island the N point of the former is in lat. 11° 20' S. lon. 133° 24' E. (a). The S island, as described by Captain King, is covered to a great extent with luxuriant grass 6 ft. high, and the sides of the hills with wood principally a eucalyptus, of small size. Flowers and shrubs also abound, including a superb geranium with scarlet flowers. The only edible fruit found on the island was a small black grape, of inferior quality.

GOULCHERY par Eng Lincoln; 1440 ac. Pop. 879
GOULDAM a vil. of W. Africa 1 per Gelsen r bank lat. 14° 40' N. lon. 13° 19' W. is inhabited during the season of cultivation but after harvest it is evacuated to the enjoyment of the insouciance of the Bembarras and Moors.

GOUMIAN, two vil. of W. Africa, Bondues—1 (Soud), lat. 14° 50' N. lon. 17° 24' W. It is of considerable size and is well supplied with good water.—2 (Amadou, about 22 m S. by W. the former

GOUR, or **GAUR**, a ruined city Hindoostan sm. cap. of Bengal, dist. Dinapore 50 m. N. Mooradabad lat. 24° 55' N. lon. 88° 15' E. It extended about 7 m along the banks of the Ganges, or including suburban villages, about 15 m with a breadth of 2 m to 3 m, and was a populous and flourishing city upwards of 3000 years ago. Its decay proceeded from a change in the course of the Ganges, which, about two centuries since, deserted its old channel along by the city and took that which it now occupies, distant 4 m. to 5 m. The principal ruins of this ancient capital are those of a magnificent mosque, 170 ft. long by 180 ft. broad, built of brick, and faced with a kind of black porphyry two

picturesque gates, and a large edifice faced with bricks of various colours. This edifice contains a noble staircase, about 56 ft. square, and 40 ft. to 50 ft. in height. There are several other mosques in tolerable preservation and an obelisk or tower of about 100 ft. in height, with a stair inside. The numerous tanks and reservoirs, some of them very large, which supplied the ancient city with water are now swarming with alligators, mosquitoes, and all sorts of vermin. Several villages now stand on the site of the city.

GOURDOA a m. Franco dep. Lot, on the Rion 30 m. N. by W. Cahors, on a sandy slope, backed by a rock, and once strongly fortified. It has a communal college, an old church with lofty towers the ruins of a chateau founded in 960 manufactures of linen, hats and woollens and a trade in wine and walnuts. Pop. 2708

GOURIEV a m. and fortress, Russia, gov. Orenburg, r bank Ural, at its embouchure in the Caspian. It contains three churches, and 400 houses and has an active trade in fish caviar and furs. Pop. 2000

GOURNAY or **BAUX** [Latin *Gonsens*] a m. Franco, dep. Seine-inférieure, 28 m. E. Rouen, formerly situated on the Epte. It is a well built, and begirt with agreeable boulevards has an old church, a tribunal of commerce, a public library, tanneries, leather-works glass-houses, and potteries, and a trade in excellent butter made in the vicinity. Pop. 2540

GOUBROCK a pleasant maritime vil. and watering place, Scotland co. Renfrew 1 bank Firth of Clyde 3 m W. Greenock. It consists chiefly of a row of houses many of them elegant villas, facing the sea, and extending along the shore more than a mile is inadequately supplied with water but kept in good order and well lighted with gas. It has an Established a Free, and U. Presbyterian church, and three schools. Gourock was the first place in Britain where red herrings were prepared the process having been introduced there towards the close of the 17th century. Some of the inhabitants are engaged in fishing but the greater number support themselves by house-letting; Gourock being greatly resorted to during the summer months, especially by the inhabitants of Glasgow. In 1832 a sailing vessel was sunk off Gourock, when 48 persons perished; and in 1835 a steamer (the *Cowen*) went down near the same spot, through collision with another steamer and 60 persons were lost. Resident pop. (1851) 2194.

GOUS, a river Russia, which rises in the gov. and about 77 m. S. Vladimir and flowing S. enters gov. Ruzan and empties itself into a lake, after a course of 60 m. Important iron-works have been established on its banks.

GOUSTA or **GOWRA FIELD** a mountain Norway lat. 60° N., belonging to, and on the E. side of the Langfjord range height 6354 ft. and compared in respect of the magnitude of its scenery to some of the loftiest summits of the Alps. It is composed of gneiss and schist, covered in many places with masses of quartz and porphyry. The white larch is found growing on its sides to a height of 2700 ft.

GOUVÉA, a m. Portugal, prov. Beira on a height near the foot of the Serra da Estrella, 40 m. E. N. E. Coimbra. It has two parishes, a convent, a nunnery and an important annual cattle fair. Pop. 1740

GOUY or **LE-PÉRON** a vil. and com. Belgium, prov. Hainaut, 9 m. N. W. Charleroi. Inhabitants chiefly engaged in agriculture but some are employed in coal-mining and malting; and there are a brewery a distillery and some four mills. Pop. 2048.

GOUZEACOULET a vil. Franco, dep. Nord, 11 m S. W. Cambrai. It has a fair every month. Pop. 2850

GOVAN a vil. and par. Scotland co. Lanark and Renfrew.—The **VILLAGE** is prettily situated, 1 bank Clyde, 2 m W. Glasgow. At its W. end and about 100 yards from the river stands the parish church, a neat structure, with a tower and spire. A few years ago Govan was a quiet, secluded village, though within the sphere of Glasgow maelstrom, it is now the site of extensive shipbuilding yards, of a large dyework, and of a factory for throwing silk, the first established in Scotland. The salmon fishery here was at one time considerable, but is now all but extinct. This ancient little village was elevated amongst the largest in Scotland, in the 15th century.—The **PARK** contains about 10 sq. m., the most populous portion of which is included within its boundaries of Glasgow. Pop. of vil. 1444.

GOVERNADOR, an *Is. Brazil*, in the bay and 8 m. N. Rio-de-Janeiro. It is very irregular in shape, its coast being much indented by creeks and at about 8 m. in breadth, and 30 m. in circuit. The soil is sandy and favourable to the growth of the *passiflora*, a kind of fruit from which a jelly of a somewhat acid, but agreeable taste is made. In some parts, where the soil is of a more substantial nature, sugarcane, mandarin, millet, and haricots are grown. The island contains a church and a primary school, and a building which, though little deserving it, bears the name of imperial palace.

GOVERNOR'S ISLAND, U States, in the harbour of New York. It comprises 70 ac. and contains two forts—Castle Williams and Fort Columbus; the former a round tower 600 ft. in circumference, and 50 ft. high, with three tiers of guns; the latter a star fort, occupies the summit of the island, and mounts 105 heavy cannon; there is also a battery on the S.W. part, and extensive barracks.

GOVONE (Latin, *Gove*), a *tu. kingdom* of Italy Piedmont, div. of and 87 m. N.E. Coul, 1 bank Tanaro. It was once fortified, and is still partly surrounded by a wall. It is the seat of a court of justice, contains a magnificent castle, with fine gardens, an ancient parish church, of Gothic architecture and a Capuchin convent and has a weekly market and an annual fair. Pop. 2838.

GOWER, or *Gwyr*, a *parish* in Wales, forming the most W. portion of Glamorganshire and lying between the Barry and the Bristol Channel. It is between 40 m. and 50 m. in circumference has rocky shores, deeply indented with bays and contains numerous antiquities and natural curiosities. The E. part of it is fertile and well cultivated. A colony of Flemings settled here in the time of Henry I. their descendants still preserve, to a considerable extent, their original language and dress, and rarely intermarry with the Welsh.

GOWER ISLAND one of the Solomon group lat. 7° 55' S. lon. 160° 55' E. In shape it resembles an arrow it is low, and covered with wood.

GOYEN a *market* in and par. Ireland co. Kilkenny. The town, 8 m. E.S.E. Kilkenny contains the interesting ruins of Goyran abbey and castle. Market day Thursday. Area of par. 6347 ac. Pop. 2444.

GOWRIE (Latin, *Gori*) a rich and fertile dist. Scotland Perthshire, extending for about 15 m. along the bank of the Tay between Perth and Dundee.

GUXHILL two parts. Eng.—1 Lincoln 8790 ac. Pop. 1158.—2 York (E. Riding) 881 ac. Pop. 58.

GOYANNA, a *tu. Brazil* prov. of and 48 m. N.W. Pernambuco, cap. com. and a bank river of same name. It is a large, well-built place, adorned with various fountains, and containing five churches and two convents. It has a tannery, a weekly cattle market, and a considerable trade in cotton sugar cane, hides (dressed and undressed) timber dye-woods and oil of manioc. The coast of Guyanna is 12 m. from the sea, and has sufficient depth of water for the largest class of coasting vessels. The current is one of the most fertile in the province. Pop. of dist. 80,000.—The river is formed by the union of the Trombetas and Capiche-Mirim, takes an E. direction, passes the town of Guyanna, and about 16 m. below falls into the Atlantic. It is both wide and deep.

GOYAVE, a *tu. al. Gaudeloupe*, on bay of same name, at the mouth of a small stream called the Petit-Goyave.

GOYAZ, a central prov. Brazil between lat. 6° and 30° S. and lon. 46° and 52° W. bounded, N. by Para N.E. Maranhão E. Piauí Bahia, and Minas Gerais S. São Paulo and W. Mato Grosso. In shape it somewhat resembles a parallelogram the longer side of which stretches, N. to S., 960 m. average breadth, about 260 m. area, 860,750 sq. m. The surface is mountainous, being traversed by lofty ridges, generally stretching from E. to W. and maintaining a considerable degree of elevation. One principal chain, called the Cordillera Grande, forms the watershed between the Tocantins on the E., and the Araguaia, which bounds the province on the W.; and another principal chain, bounding the province on the E. takes in succession, from S. to N. the names of Serra Mata (Serra Crista, Serra, Tabatinga, Serra Mangabeira and Covado); and forms the watershed between the Tocantins on the E. and the Rio Francisco and Piauí, on the W. A branch from the latter chain, stretching W. from near its centre, takes the name of the Fyrene, and has the

highest summits in the province. The space between the chains is occupied by vast plains and mighty rivers. Of these, the Tocantins and Araguaia, already mentioned, flow N.; each receiving in its course numerous mountain torrents, and carry the water of the province to the Para, and through it to the N. Atlantic Ocean; but in the S., where a watershed is formed by the Fyrene, rivers, such as Bealvada, and Marão; the rivers take a S.W. direction, and, joining the Parana, belong with it to the N. Atlantic. The climate is healthy excepting in the neighbourhood of some of the rivers, where extensive swamps have been formed. The hot season, during which violent thunder-storms are frequent, continues without interruption from November to April; the remainder of the year during which there is a frequent alternation of sunshine and rainy weather is regarded as winter. The low lands of the province are generally sandy and very unproductive; the high lands, on the contrary and those on which there is much wood, are of great natural fertility and, when under proper cultivation, produce large crops of millet, manioc, rice, and haricots. In the same localities, the cotton plant, sugar-cane, coffee, tobacco, water melon, bananas, and oranges, find a genial soil. The grape yields two vintages in the year; and all kinds of fruit are in superabundance. Sarsaparilla, rhubarb, senna, and other valuable medicinal plants grow spontaneously and, in every quarter numerous varieties of the family of palms occur. Here, too, grow the sapote, from which a gum resembling amber is obtained, the tree which produces gum copal the indigo and the coccol plant. The forests are of vast extent, but the want of the means of transport makes it impossible to turn them to account. There are immense herds of horses and cattle swine are very numerous and in the woods are multitudes of ant, snakes, wild boars guavas, a species of wolves cutas, or wild rabbits; various kinds of monkeys, and birds without number. The lakes teem with alligators, and other aquatic animals. The minerals of the province is little known but among the minerals which have been actually found are gold, iron, diamonds, and various other precious stones and or steel, granite, limestone, rock salt and different kinds of potash clay. For administrative purposes the province is divided into eight comarcas—Araçuaia, Carolina, Calcutta Flores, Goyas, Palma, Porto-Imperial, and Santa Cruz. It sends two deputies to the general legislative assembly and one senator. The provincial legislative assembly is composed of 20 members and holds its sittings in the town of Goyaz. Pop. 180,000.

GOYAZ, or *VILLA BOA DE GOYAS*, a *tu. Brazil* cap. of above prov. in a valley surrounded by wooded mountains, on both sides of the Yernulho, here crossed by two bridges, 680 m. N.W. Rio-de-Janeiro; lat. 16° 31' S.; lon. 50° 55' W. It occupies a central position almost in the very heart of the empire its site is uneven its streets are straight and clean, but ill paved and its houses mostly of earth. It is the see of a bishop the seat of the provincial assembly and a provincial court of justice; and the residences both of a civil president and a military governor. The buildings most deserving of notice are the governor's palace, the courthouse, the parsonage and seven other churches, the hospital, and the establishment for smelting and refining gold. It has a superior and two primary schools. There are no manufactures described by the name, and the trade is confined to the ordinary articles of consumption. Owing to the looseness of its site, the town is liable to inundation from which it suffered severely in 1826, when a number of buildings including a church, were swept away. Pop. 7000 to 8000.

GOYCK a *vil. and com. Belgium*, prov. S. Brabant, 12 m. S.W. Brussels. Inhabitants chiefly engaged in agriculture, but there are also some breweries and corn-mills. P. 8043.

GOYTREY par. Eng. Monmouth 1883 ac. Pop. 554.

GOYZUETA, a *tu. Spain*, prov. Navarra valley of Euzkara, on an extension of the Urreux, 37 m. N.W. V. Pamplona. It contains a parish church good townhouse, and primary school; and has iron-works and a flour-mill. P. 1460.

GOZZANO (Latin, *Gaudemum*) an *anc. tu. kingdom* of Italy Piedmont, div. of, and 22 m. N. by W. Novara, in a plain. It has steep, winding and angular streets, some good modern houses, a large and handsome parish church, of the Constantinian order and the remains of a strong castle. Pop. 1768.

GOZO or *Gum* —1 [anc. *Gondos*] a small *Is. in the Mediterranean*, belonging to Great Britain, to the N.W. of

Melita, from which it is separated by a channel scarcely 4 m. wide in which lies the small island of Comino. It is about 9 m. long, by 5 m. broad area, about 40 sq. m. (Cape Dimitri, or N.W. point) 38° 4' N; lon. 14° 8' E (z.). It is surrounded by rocks and shoals, with openings through them to several small harbours. The interior is rocky and contains several hills; the most conspicuous of which near the centre, is crowned by the fort of Rabato. The soil is very thin, and in many places scarcely covers the bare rock. It is, however, of great natural fertility and much grain and fruit are raised but the most important crop is cotton, the growing of which is one great source of employment. There is also an alabaster quarry in the N.W. part of the island, and, on the S. side, at Port Magliore, there are salt-works.—The town of Gomo, the principal place, has about 3000 inhabitants and there are a number of villages. Pop. 15,000.—2 A small isl. in the Mediterranean, off the S.W. coast of Candia. lat. (W. point) 34° 35' N; lon. 24° 15' E (z.). Inhabited by a few Greeks. A little N. of it is the still smaller island of Anti-Gomo.

GRAAF REINET or **REINERT** a division and in Cape Colony. The river between lat. 29° 30' and 33° S; lon. 28° and 28° E; bounded, N. by the territory of the Bechuanaland, and surrounded on other sides by Beaufort, Uitenhage and Somerset. Area, about 10,000 sq. m. The Boesmansberg, or Snow Mountains, intersect the S. part of the country S.W. to N.E.; and from this elevated region proceed the head streams of the Cameroos, Sunday River and Great Fish River which flow N.; and of the Zekoe, and other rivers which flow N. Great numbers of cattle are raised, the distilling principally devoted to grazing. Pop. about 10,000.—The towns of the division, are situated on Sunday River, 109 m. N.W. Uitenhage. It is regularly laid out with streets at right angles—the intervening squares being planted with vineyards and gardens. The place of worship belonging to the Dutch Reformed Church has a lofty tower and spire. The town is said to be unhealthy in summer. Pop. about 3000.

GRABAT or **GRABAT** a tn. Central Africa, country of the Zande, finely situated at the foot of a low hill, in a valley of same name, 195 m. W.S.W. Marokou about lat. 12° N; lon. 11° E. It is surrounded with walls of sand and whitish clay and the houses are built of the same material. It is a clean place, and has a superior mosque. Pop. about 1000.

GRAAUW a vil. Holland, prov. Zealand, 16 m. S.W. Bergen-op-Zoom. It has a R.Catholic church a school and a small harbour frequented by country boats carrying grain to Rotterdam and Belgium. Pop. 815.

GRABALOE, a tn. Spain, Old Castile, prov. of and 85 m. S.E. Logroño. It is tolerably well built, has steep streets, a square, parish church, several chapels, a ruinous townhall prison, storehouse, cemetery and two schools. In the neighbourhood are mineral baths much resorted to. Pop. 981.

GRABER, or **GRABER** a tn. Bohemia, circle Leitmeritz, 88 m. N. Prague. It contains a parish church and an hospital. A good deal of flax is here hand-spun. Pop. 965.

GRABOW,—1 A tn. in Mählenburg-Schwarz, 1 bank Elbe, 5 m. S.E. Schwarz. It stands partly on an island, surrounded by two gates, contains a handsome church, and has a manufacture of woollen cloth and tobacco, several mills, a distillery, trade in butter and four annual fairs. Pop. 164.—2 A tn. Prussia, prov. and 11 m. S.E. Posen, district Posen. It contains a R.Catholic parish church, and a Franciscan monastery and has a trade in cattle, and four annual fairs. Pop. 1245.

GRABURA, a small isl. Grecian Archipelago, off N.W. coast of Isl. Crete; lat. 35° 38' N; lon. 28° 35' E (z.) about 1½ m. in circumference. Between it and Crete a kind of harbour is formed, deep enough for the largest vessels, and protected by a fortress.

GRACAY a tn. France, dep. Cher lat. 37° N W by N Bourges. It is ancient, ill built, and has some remains of its old battlements; and near it is a rude probably a Druidical monument. Pop. 1105.

GRACIASA-DIOS,—1 A city Central America, state Honduras, 40 m. N.W. Comayagua lat. 14° 55' N lon. 88° 18' W on a fertile plain, but now in a state of decay.—2, A cape, Central America, Mosquitia lat. 14° 50' N; lon. 88° 11' W.—3 A bay near Cape Gracias a-Dios, of which

the latter forms the E. point; with 20 ft. water at the entrance, and 16 ft. within bottom clean, and of stony clay.

GRACIORA, one of the Azores lat. 39° 12' N lon. 33° 4' W. It is 6 to 8 m. in length, 2 and 3 m. in breadth, and is the most productive of all the islands; but is destitute of wood and is much frequented by smugglers. It exports brandy and wine. Santa Cruz is the chief town. Pop. about 3000.

GRACIORA (La) a small isl. one of the Canaries, N.E. Lanzarote from which it is separated by the channel of Rio length about 10 m. and breadth about 5 m. Its nucleus is wholly volcanic; but a third part, near the S. consists of a limestone, full of marine shells. The interior is lofty and consists chiefly of two lofty volcanic mountains, with a plain between them. On this plain, some barley and barley are grown. The rest of the surface, where not bare is covered by a low brushwood, among which rabbits are very numerous.

GRADACHATZ, a tn. European Turkey Bosnia, chief place of dist. 87 m. N by E. Bosnie-Serai. It is surrounded by walls, and has a great trade in cattle and timber. Pop. within the walls, about 8500 with extensive suburbs, inhabited by Greeks.

GRADE, par Eng Cornwall 1981 a. Pop. 115.

GRADISTES, a vil. and com. Spain, prov. of, and 16 m. E. Leon, in a plain, r. bank Esla. It is well supplied with water contains a parish church and a convent and has an annual fair. Pop. 1255.

GRADISKA several places Austria, particularly—1 (anc. Servetum) A tn. Dalmatia, r. bank Drava, 23 m. N.W. Trieste. It is very picturesquely situated consists of the town proper surrounded by ancient walls, flanked with towers, and a suburb contains an old castle, now used as a house of correction a parish church, normal school and theatre and has a silk-mill P. 1140.—2 (O. or Alj. old) a tn. Slavonia, generalship Pterwarden, 1 bank Sava, emp. regimental dist. and opposite the Turkish fortress of same name 23 m. S.W. Pocega. It is a place of some strength, contains a cathedral a Greek church, and custom-house and carries on a considerable trade with Servia and Bosnia. P. 2299 of regimental dist. (area, 486 sq. m.) 71,500.—3 (Z. or Yag. [new]) a tn. Slavonia, about 9 m. N.E. of the same, near the Sava. It contains a R. Catholic and a Greek non-united church, and a German school and has several mills. Pop. 2000.

GRADISKA, or **GRADISKA**, a fortified tn. European Turkey Croatia, r. bank Sava, 29 m. N by E. Hengelska, and opposite the Austrian fortress of Alb-Gradiska. It was first laid in 1774 by French engineers.

GRADITZ, or **GRADITZ** a market tn. Bohemia, circle of, and 15 m. N. Königgrätz, emp. lordship of same name. It contains a parish church and four mills. Pop. tn., 1090; lordship, 3578.

GRADO a tn. Austria, Illyria, on a rugged and precipitous cliff on the sea-coast, at the mouth of the Natisa, 19 m. W. Trieste. It contains a handsome church and two chapels and has a small harbour much frequented by small vessels engaged in the tunny fishing. Pop. 2200.

GRAMRAY an isl. Scotland, on Orkney 1½ m. S. Stromness. It is nearly 2 m. long, by 1 m. broad generally level, and produces a considerable quantity of grain P. 265.

GRANA a tn. Spain Andalusia, prov. of, and 38 m. E N E Granada. It has a parish church, a palace belonging to the Marquis of Estafar a court-house, primary school and a trade in corn wine, and cattle. About 1 m. E. are thermal baths, visited annually by about 800 persons; temperature of the water 84 to 104° F. Pop. 445.

GRÄFENBERG,—1 A tn. Bavaria, circle Upper Franconia, between two hills, on the Peller and Fischbach 25 m. S.W. Bamberg. It is the seat of a court of justice, has a Protestant parish church and a cattle vinegar-works a brewery three mills and a trade in fruit and vegetables. Pop. 1069.—2 A vil. Austria, Moravia, circle Troppau near Zwettl-dan famous for its much-frequented hydropathic establishment founded by Friesenre.

GRÄFENHAUSEN a vil. Baden, circle Upper Rhine, bell Etschenheim with a R. Catholic parish church. Chicory, beet-root, and tobacco, are extensively grown in the vicinity. Pop. 1278.

GRÄFENHAYNCHEN a tn. Prussia, prov. Saxony gov. of, and 84 m. N.E. Merseburg, in a marshy district. It

fine pasture, while masses of wild but romantic heathy are of no unfrequent occurrence.—4, A mountain-range, New S. Wales in Victoria, Portland Bay district, discovered, in 1826, by Mr T. L. Mitchell. It is about 66 m. in length, N to S, between the parallels 36 50' and 37 40' S; and the meridians 148° 10' and 148 30' E. Mount William the principal eminence, rises 4500 ft. above sea-level and is generally accessible, but cold and bleak on the summit.

GRAMPOUND, a decayed bor and market in England, so Cornwall 13 m. N. E. Falmouth, on the Felt, born crossed by a good stone bridge. It sent two members to the House of Commons (1824, when it was disfranchised for bribery) Market day Saturday Pop. (1851) 568

GRAN (Hungarian *Granyos* and *Granyos* Latin, *Granyos*) a free, royal in Hungary cap. of same name, 25 m. N. W. Pesth r bank Danube, at the confluence of the Gran, the former here crossed by a flying bridge. It consists of the town proper and seven suburbs is the see of the prelate of all Hungary and the seat of several courts and public offices contains a cathedral situated on a lofty promontory rock overlooking the town and river the most splendid building in Hungary commenced in 1321; an archbishop's palace and chapter-house, both adjoining the cathedral a town-house, occupying the centre of a square, adorned with a fine obelisk a Franciscan monastery with an adjacent church a gymnasium a courthouse, and well-adorned

The manufactures consist chiefly of woollen cloth. A considerable trade is carried on in wine. Gran is said to be of Kosovan origin was long the residence of the Hungarian monarchs and was considered as their stout city. It was destroyed by the Turks who having made themselves masters of it, retained possession for 70 years. It was re-erected by the Hungarians in 1683. Pop. (1846) 12 700 occupies area, 206 geo. sq. m. is flat in the centre and several places marshy but is enclosed and partly surrounded by the Rakovec-wild hills, which yield limestone and coloured marble. The Leucite, traversing the county W. to E., receives all drainage. The soil particularly in the low ground is fertile. Fruit, game and potash clay are plentiful. The inhabitants are chiefly R. Catholics and a very large proportion of the land belongs to their clergy, particularly to the archbishop of Gran and to his chapter Pop. 62,000

GRAN (anc *Granyas*) a river Hungary which rises in Mount Hrona, a branch of the Larchians in the N. W. of co. Gomel about lat. 48° 47' N lon. 20° 10' E. flows N. W. and S. passing Ruene-Banya, Nemohi, and Alsokoh and after a circuitous course of about 150 m. joins r bank Danube, almost opposite the town of Gran. Its principal affluents are, on the r the Bistria and the Hermancea and on the l, the Gerna, Salsina, and Saklancza. It is partly navigable.

GRAN CANARY See CANARY (GRAN)

GRAN CHACO See CHACO.

GRAN BASSO-D'ITALIA, a mountain, Naples. See CORBO
GRANA a vil and com. klged. of Italy Piedmont, div Alessandria, prov., and 12 m S Casale, r bank Grana. It has a church school, three palaces, the remains of an old castle, and some trade in wine, corn, hemp and hay. Pop. 1363

GRANADA (San ANDRÉS-DE-LA), a seaport in Spain, Cap. of prov Cordoba, on a steep height facing the E. on the R. of the sea nearly 1 m. W Ferrol. It is built in the form of a triangle and consists of a public square and several very stately streets but contains several good buildings, a handsome parish church, and a primary school. It was once a flourishing place; but depending entirely on Ferrol has suffered much by its decay. Its trade is now confined to a few articles of primary industry. Its inhabitants are about all sailors, and many of them live by fishing. Pop. 1850

GRANADA, an extensive tract in the S. of Spain, forming one of the four kingdoms which the Moors established in Andalusia, and the last from which they were driven—their final expulsion not having been effected till 1492. It now constitutes the provinces of Granada, Almería, and Málaga.

GRANADA, a prov Spain, forming one of the three provinces into which the Moorish kingdom of Granada has been divided and bounded, N. by provs. Jaen and Almería, E. Almería, S. the Mediterranean, and W. Málaga and Cordova; greatest length, N. E. to S. W., 166 m. greatest

Yoc. L.

breadth N to S 84 m. area, 4225 geo. sq. m. The coast, which has a length of 66 m., is, for the most part, rocky and dangerous, from the shoals which line it; but has several small bays in which vessels find tolerable shelter. The interior is generally mountainous, being traversed obliquely from E to W by several ranges, particularly the Sierra Nevada, whose culminating point, Mulhacen is 11,877 ft high, and is the loftiest summit in Spain. The mountains are generally composed of micaceous schist, which passes into gneiss and argillaceous schist; above these, on the S. slope, occur black calcareous rocks, often rich in the sulphate of lead. Between the mountain ranges are numerous valleys, many of them distinguished by their beauty and fertility. The province is divided by the mountains into two principal basins, the one of which carries its waters N to the Guadalquivir and the other S. directly to the Mediterranean. The principal streams are the Guad. Dario, and Guadalquivir. From the rocky nature of the surface, the extent of arable land is limited and on many spots the soil has no great depth but industry has done much for its improvement and many spots apparently of little natural fertility present the appearance of large gardens. The principal crops are wheat and barley next are those of mules, beans, haricots, hemp and flax. Both the olive and vine are extensively cultivated and fruit, in great variety and of excellent quality is very abundant. The sugar-cane thrives well in some parts, particularly at Almonester on the coast. Neither manufactures nor trade are of much consequence. The former mediate silk and woollen goods, hair-cloth and soap the latter is chiefly in wheat, wine, honey oil, and fruit. For administrative purposes, the province is divided into 15 districts. Granada is the capital. Pop. 421 350

GRANADA (Latin, *Grannata* French *Granade*) & in Spain Andalusia, cap. prov of same name, beautifully situated partly on two spurs of the Sierra Nevada, and partly on the flat between them forming the extremity of the rich plain of Vaga, at the junction of the Dario or Daura and the Guad.

THE FORTRESS OF THE ALHAMBRA GRANADA.
From Robert's Spanish Sketches.

lat 37 18' N lon. 3° 50' W. Its site, about 3445 ft. above the sea, and the snowy mountains which form its back ground, give the air a delicious freshness even in the hottest season; the sky is generally serene, and the whole district around

in memory whose beauty and grandeur amply justify the choice of the Moors in making Granada their favorite residence. In their time it was surrounded by lofty walls, flanked by 1030 towers, and was entered by 20 gates. The most of these have disappeared, with exception of a small portion of the N. enclosure, still in tolerable preservation, and the town, consequently is now open. It is divided into four quarters—*Albacea*, a celebrated fortress and palace, occupying one of the hills; *Alfahia*, a suburb occupying the other; *Antegorria*, another suburb, the residence chiefly of the working classes, and the town proper the largest and most important of all, covering the space between the two hills, and extending into the plains. When seen from a distance the appearance of the town is very imposing, but the impression thus produced is scarcely confirmed by an inspection of the interior. Fountains and gardens, spacious squares, and handsome mansions, are seen in many quarters, and even where the houses are of an inferior description, their antiquity and oriental structure make it impossible to view them without interest, but the far greater part of the streets are extremely narrow and tortuous. The most remarkable buildings are the *Alhambra*, an immense Moorish structure, of simple and rather forbidding exterior but within gorgeous almost beyond description, partly remaining as the Moors left it, with its splendid Court of Lions so called from the beautiful fountain

of very great antiquity the tower of which still remains; the old Christian convent, finely situated on a height in the suburbs, and adorned with fine paintings by Curo, Murillo, and Morales; the monastery of San Gerónimo, founded by the great Captain Gonzalo de Córdoba, whose remains lie deposited in a splendid mausoleum contained in its church; the *Generalife*, a beautiful Moorish palace, surrounded by fountains and gardens; the Episcopal palace, the general hospital, college, &c.

The manufactures of silk and of mail cloth, once very important, were almost extinguished by the loss of Spanish America, and the civilization of the Spanish fleet, and the only manufacture now deserving of notice, is that of coarse woollens still carried on to a considerable extent in the suburbs of *Alfahia*. The trade is insignificant. Granada is the see of an archbishop, the residence of a captain-general and of civil and military provincial authorities, and the seat of several courts of law though it has lately lost the most important of all, the supreme court of appeal, by its removal to *Albacea*. It was first founded by the Moors in the 10th century near the site of the ancient *Illiterna*, and belonged to the kingdom of Córdoba. In 1235 it became the capital of a new kingdom, and attained to almost matchless splendor. Its population at this period has been estimated as high as 700,000. In 1491 it remained the last stronghold of the Moors in Spain, and numbered 80,000 men to defend itself against Ferdinand and Isabella, who had now subdued the power and strength of their united kingdoms, and encountered before it. The defenses proved unavailing and the besiegers took possession of it in 1492. The great body of its inhabitants still were Moors, and its prosperity continued almost without diminution for another century till 1610, when the decree expelling the Moors from all parts of Spain was nowhere more severely felt than in Granada, which immediately sank and has never recovered. Pop. 61,510.

GRANADA, a N. Central America, Nicaragua, on the N. W. border and about 100 N. above the level of Lake Nicaragua. lat. 11° 57' N. lon. 86° W. It was founded in 1523 in regularly built streets at right angles, and roughly paved. It has several churches and convents, all of ancient date and private houses in the old Spanish style, are of one story but many of them spacious and commodious. It is advantageously situated for trade, having easy access to the Pacific, and constant water communications with San Juan or Grey Town, on the Caribbean Sea, and exports chiefly indigo, hides, and Brazil wood. The climate is for the most part pleasant, and provisions abundant and cheap. Pop. about 10,000.

GRANADA (New) [Spanish *Reino Granada* French *Royaume Granada* Latin *Castella Aures*] an independent state of S. America (my Bogota or Santa Fé de Bogota) formerly a viceroyalty under the Spanish Crown but subsequently part of the Republic of Colombia, the middle and W. provinces of which it now embraces. Its N. shores are washed by the Caribbean Sea, with the gulfs of Santa Martha and of Darien. On the W. it has the Pacific Ocean, with the bays of Panama and Choco. Between the two seas, on the N. W., it is bounded by Costa Rica, Venezuela, and Brazil confines it on the E. and S. E., and the republic of Ecuador on the S. It extends through nearly 10 degrees of latitude (from 1° 40' to 12° 30' N.) and 10 degrees of longitude (38° to 78° W.) area, 480,000 sq. miles. This country was first included by the Spanish conquerors under the general name of Tierra Firme, which is applied at the present day only to the E. part of the coast of Venezuela. King Ferdinand named it *Castilla de Oro* [the golden castle] This title soon fell into disuse, and gave way to that of the New Kingdom of Granada; but the viceroyalty included besides the territories of the present republic, the kingdom of Quito also, which now forms the separate state of Ecuador.

This country is the most equally diversified in soil and climate of all the S. American States. Neither plain nor mountain can be said to predominate; the sea coasts are ample and commodious, and, owing to the wide ramifications of the Andes, there is an unusual extent of country at that elevation—from 5000 to 10,000 ft.—which, in such a climate, is most favorable to industry and the increase of civilized man. Yet the fecundity of the zone surrounding this favored region, the comparative inaccessibility of the moun-

THE GATE OF THE MOORS, IN THE ALHAMBRA, GRANADA.
From Don Juan Taylor's *Voyage Picturesque* at Bogota.

In its centre, supported by 12 lions, surrounded by a gallery resting on 130 pillars of white marble, &c., and bearing ample testimony by the magnificence and taste which it displays to the high state of refinement to which this ingenious people must have attained, and partly accepted by an untroubled nation, in which Charles V. appears to have wished, without having been able to efface them; the cathedral, a heavy and irregular building profusely ornamented with Jasper and marble, surrounded by a dome resting on 13 arches, upheld by as many pillars, and containing in the adjoining Royal chapel, among its numerous fine monuments, those of Ferdinand and Isabella. The church of *Monja Señora de las Angustias*, with two beautiful towers, and elevated high above the church of San José, a modern edifice, built on the site of one

porate valleys and the great difficulties which the first efforts of industry have to encounter in a country where every natural feature is in a measure, have hitherto counterbalanced its apparent advantages, and prevented the development of its varied and abundant resources.

Diversions.—New Granada is now divided into nine Federal States, which with their population and capital are given below—

State.	Capital of the respective province.	Pop. 1881.	Capital.
Veraguas.	Panamá, with Arroyo, Yaguajay, Chiriquí, and Darién.	156,546	Panamá.
Bolívar.	Cartagena, Bahía de Moravia, Moravia.	136,147	Cartagena.
Magdalena.	Sta. Marta, with the territory of Guadalupe, Rio de la Hacha, Valle de Upar, part of the province of Cauca.	78,038	Sa. Marta.
Bombander.	Pamplona, Socorro, parts of the provinces of Valle and Cauca.	978,479	Pamplona.
Antioquia.	Medellín, part of the province of Magdalena, etc.	264,428	Antioquia.
Boyacá.	Tunja, Tunja, Guaduaque, parts of the provinces of Valle.	277,388	Tunja.
Cundinamarca.	Bogotá, and the far greatest part of Magdalena and Rio de la Hacha.	484,648	Bogotá.
Tolima.	Bogotá, and the far greatest part of Magdalena and Rio de la Hacha.	200,261	Popayan.
Federal District.	Town of Bogotá and environs.	45,000	Bogotá.

Mountains.—A little N of the town of Paná, on the borders of Ecuador (lat. 1° 20' N) the ridge of the Andes separates into two branches, the western of which running parallel to the sea-shore, is entitled the cordillera de la Costa; the other, on the E., contains several parallel ranges of high plains, and the heads of the rivers Putumayo and Japura, which join the Amazon; and further N., from the province of Las Papas to Sancho, spring the Cordillera de la Sierra Nevada de Maricao, the central cordillera separates the valleys of the Magdalena and the Cauca, while the W. cordillera divides the valley of the Cauca from the metalliferous district of Chocó. But the first of these mountain-chains is by some named the cordillera de la Sierra Nevada, from the colossal group of this name near Santa Fé de Bogotá, the second is often called the Quindío chain, while the third takes the name of Chocó. So long as the middle chain rises to the height of perpetual snow the E. cordillera never exceeds an elevation of 10,000 ft. but it rises to the limits of snow at the point (lat. 6° 5' N) where the W. Nevados cease and is collectively the loftiest of the three chains. But to the middle or Quindío chain belongs (1) a Peak of Tolima (lat. 4° 40' N) which reaches the absolute height of 15,370 ft. and is the loftiest summit of the Andes, properly so called, in the N. hemisphere. The Sierra Nevada de Santa Marta is not considered as belonging to the Andes, though it extends along the coast between the cordilleras of Cundinamarca and Quindío. It rises abruptly about 30 m. from the sea-shore, from the level plain which extends between the Gulf of Darién and the Sea of Maracaybo to the height of at least 19,000 ft. These mountains all oppose serious restraint on internal communication. The Chocó or maritime chain though comparatively low, but few and difficult passes. The route from Santa Marta to Popayan, by the name of Guaduaque and is dangerous from their height and inability to move. The province of Antioquia, rich in mineral treasures, is hardly accessible without the aid of native carriers.

Valleys.—Alternating with the mountain chains here described are plains and valleys, all luxuriant, but varying in character from W. to E. The W. sea coasts and the isthmus generally are covered with impenetrable forests, and are but imperfectly known. The continual heavy rains, and noxious climate, discourage European settlers. Hence no advantage has been taken of the circumstances that the Atrato which falls into the Gulf of Darién, runs in a swampy plain, often inundated, where its waters mingle with those of the San Juan, which flows into the Pacific Ocean. By means of a canal, dug in the ravine of Rapadaria between the two rivers, under the direction of an active-minded monk, the navigation between the two seas has been practicable here for boats, at all seasons since 1788. On the E. side of New Granada, the

plains or llanos, extending to the Orinoco, are alternately swamps or hard and sun-burnt deserts. The intervening valleys of the Cauca and Magdalena have a middle character between those of the W. coast and the llanos, growing continually more equable, humid, and insalubrious towards the W. and N.

Rivers.—The chief rivers of New Granada are the Magdalena and the Cauca, which both rise in the cordillera, in lat. 2° N pursue a nearly parallel course till they unite in lat. 9° and reach the Caribbean Sea through many mouths, in lat. 11°. The Magdalena which has a course of nearly 700 m. is navigable in flat-bottomed boats, with great labour up to Honda, in lat. 5° N. The Cauca though a great river descends with the impetuosity of a mountain torrent, its valley being generally 1500 or 2000 ft. above that of the Magdalena. The numerous streams which descend from the W. cordillera into the Pacific Ocean, are unimportant. The F. Cordillera sends the Guaviara, Vichada, and Meta to the Orinoco while the Uaupé and Rio Negro flow into the Marañon. There is no deficiency of small streams. The Putumayo or river of Bogotá, which flows by the capital is famed for its catfishes at Tequima, where it falls at once from the region of cold willows, and wheat, to that of palms and sugar-cane. It is supposed that the plain of Bogotá, 8500 ft. above the sea, was formerly the bed of a lake, and was drained by the opening of the channel—the work of an earthquake perhaps—through which the river now descends. Small lakes are numerous throughout the cordillera. One of these, the lake of Guaviara, not far from Santa Fé is remarkable from the circumstance that the Indians hang all their treasures into it when about to abandon the country to the conquerors. The attempt made to drain it has not, we believe, succeeded, but many curious and valuable articles have been at different times, drawn from its depths.

Minerals.—The mineral wealth of New Granada is various and abundant, though as yet imperfectly explored. Fine coal occurs on the plain of Bogotá, 8000 ft. above the sea. Platinum is found in Chocó but only on the W. side of the cordillera whereas gold is collected both on the E. and W. sides, in Antioquia, and the valley of the Cauca. The annual produce is worth about half a million sterling. The tract of country so productive of a precious metal is, however, a wilderness inhabited only by a sparse population of mixed origin and lawless habits always suffering from the dearth of provisions, and the deadly climate. It is said that rich veins of silver are extant at Marquandine and elsewhere in New Granada; but the mines are not worked. There was formerly a pearl fishery at Rio de la Hacha. The chief emerald mines are situated in the valley of Tunja near Bogotá, in strata of argillaceous schist. Small diamonds are found with the gold of Antioquia and in the same district the sulphate of mercury is abundant. These productions are either wholly neglected or very indolently sought after. The civil wars have exhausted all the capital of the country, and left the business of mining to the poor and ignorant.

Climate.—The climate of New Granada presents the most remarkable contrasts. At Honda, nearly 1000 ft. above sea-level so intense is the heat that the hand cannot be held on a stone exposed to the sun's rays, and even the waters of the Magdalena are lukewarm. At Mompox, near the head of the delta of the Magdalena, the sea breeze cools, and the remainder of the voyage up to Honda, 350 m. is made under the most oppressive atmosphere conceivable, and through myriads of mosquitoes, and other stinging insects the attacks of which allow no respite the backs, at the same time, being guarded by caymans or alligators jaguars, venomous snakes, and bees. The water of the Magdalena is said to be productive of goitre with which the inhabitants of Mompox are afflicted. Among the seamy inhabitants of the valley higher up towards Honda, malignant fevers are frequent; the mortality is great, and few children are reared. The yellow fever is endemic at Cartagena, and on the W. coast and in general, the lowlands of New Granada are as dangerous to the inhabitants of the highlands as to Europeans. Not on the elevated country as the plain of Bogotá, 8000 ft. above the sea, the air is perfectly salubrious, and the temperature (from 56° to 70° Fah.) seems that of perpetual spring. Here the rains in the wet season darken the sky only for a few hours daily in the afternoon. At Mompox, the day is always cloudy the

night clear. The summits of the cordilleras are often shrouded in mist; torrents of rain fall successively in the forests of Pácor; the Gulf of Choco is perpetually vexed with violent storms, but these seasons of the elements are all unknown in the middle regions or Tumpulandia, and, excepting the earthquakes, which have left here as elsewhere in the Andes, deep traces of their destructive visitations, there is nothing which detracts from the general benignity of nature. Even up to the limits of perpetual congelation the climate continues healthy though it may cease to be agreeable.

Zoology.—To the stranger according the Magalhães, the alligators seen outside, by their numbers and formidable appearance, to be considered as the true possessors of the country though the fine liver the harvest tribute on the new corner pumas, jaguars, and several smaller species of the feline tribe, occasionally show themselves in the forests but they are few in comparison with the plaques of the river. These, however cease to annoy at an elevation of a few thousand feet, while the woods are still densely peopled with monkeys, of which the New World has many species, all peculiar to it in general less among them and mischievous than those of Africa and Asia, and distinguished also by having prehensile tails. At the height of 2000 ft. where the lion constructor and crocodile cease, the tapir the largest wild quadruped of the country makes its appearance. The sloth, armadillo, ant-eater (a bear) and every inhabit the lowland forests deer of different species are distributed at all heights bears and caracaras approach the limits of perpetual snow. The condor soars above the snowy heights while countless varieties of the feathered tribes animate the woods below. The tropic (Orizaba) the nightingale of these countries, deserves especial mention.

Botany.—The remarkable equality of the climate in this part of the world where the seasons differ little the one from the other seems unfavourable to the multiplication of vegetable species. Each kind seems on some locality or region, whereas it predominates to the almost total exclusion of others. On the plains of Bogotá, in the region of perpetual spring though vegetation is most luxuriant, the species are not numerous. Yet the woods, imperfectly explored, teem with valuable productions. The wax palm, 200 ft. high clothes the sides of Tolima to an elevation of 3000 ft. The forests of Popayan yield china or chinchorra the casahuate of some, meroe or Jomati bark in abundance. Rice, cotton, tobacco, cane, sugar-cane, with all tropical fruits, are among the productions of the coast while the elevated plains yield maize, wheat, and all the fruits of Europe. With nature so bountiful, the wants of the population so few and the demands of commerce very moderate, the cultis alone of the soil is carried on, as might be expected, very remotely and the reclaimed land bears but a small proportion to the waste.

Productions.—The industry of New Granada amounts to little. In the llanos, towards the Orinoco, the people are occupied wholly with the rearing of cattle and horses. The Llaneros are mostly Crooles. Agriculture is chiefly in the hands of the converted Indians, who errove a decided preference for these tranquil labours. Manufactures can hardly be said to exist in the state. Straw hats carpets, and some other articles, are indeed made in Bogotá, and the other chief towns but in no case does the native industry satisfy the demand of the country and nearly all the manufactured articles in use are imported. The principal ports are Santa Marta, Cartagena, Rio de la Hacha, and Porto Bello, on the Caribbean Sea and Buenaventura and Panama, on the Pacific Ocean.

Population.—The population here, as in the other American states of Spanish origin, is composed of different races—Spaniards, Indians, and Negroes, with their mixed progeny distinguished into five or six different classes. The Mulattoes and Mestizos are supposed to be together equal in number to the whites—that is, the Spaniards and Crooles. The Indians are rather more numerous; the Negroes make but a sixth of the whole population which may be estimated, in round numbers, at 1,500,000. Under the republican institutions, all races and colors are politically equal, but the influence of the white men still predominates. Slavery has ceased entirely in the state and care has been taken, so far as it lies within the power of legislation, to secure the equal rights and liberty of all but, where civil discord rages, it cannot be ex-

pected that the laws will be impartially administered. The freedom of the press, the impartiality of the courts, freedom of trial by jury and religious toleration are all established by law. The religion of the State is the R. Catholic; but the Pope's supremacy is denied, and, in New Granada, the head of the church is the Archbishop of Bogotá.

At Cartagena, and other places on the coast of New Granada, the white population generally exhibit the effects of the pestilential climate, in want of energy and of colour. Their teeth decay at an early age. On the plains of Bogotá, on the other hand the ladies are famed for their fine complexion. In the city of Bogotá the better class dress in the French fashion; the ladies, however go barefoot in the house, and the gentlemen often wear for morning dress a great cloth cloak which hides their drababilla. But, from the capital down to the sea-coast, the dress and domestic habits vary much, according to local situation and class of life. The Llanero is full dressed in light drawers and shirt, wide straw hat, and mandale of back. He rides without a saddle, and lives on beef taking the wild bullocks with the lance. Red pantaloons, great boots, and spurs with enormous rowels, a broad-brimmed hat, and simple mantle, distinguish the high-born cavaliers. At Cartagena and Mompasa the day is usually spent in the hammock, the night in the open air. The inhabitants of the highlands incline to the imitation of European manners. In one respect all are alike: the love of gaming is universal, and cock fighting, in particular is the favourite sport of all classes. Day and night the game goes on. There is, at present, no want of education in New Granada. The constitution provides for the support of public schools. The Lancasterian system is generally adopted. There are two colleges in Bogotá and a public library. Among the ornaments of the churches of Bogotá are the least remarkable are the paintings of Baroque, a naïve artist who studied in Italy in the beginning of the last century, and attained a high degree of excellence.

When New Granada became, on the dissolution of the Colombian republic, in 1832 an independent state, it retained the form of government which had been devised for the latter and which was a close copy of the constitution of the United States of North America. By the constitution of May 28th 1848 the executive power is placed in the hands of a president, elected for two years, and four ministers the legislative power is committed to a congress composed of three members for each state—(See, and Hist. Account of Colombia 1842 Mullien's *Travels* 1828 Hamilton's *Travels* 1837 J. Stewart's *Bogota* in 1837 Jonquim Acosta's *Compendio Hist. del Desembarcadero del Nuevo Granada* 1848 Almonacid de Gotia.)

GRANADELLA a in Spain, Catalonia, prov and 19 m. S.E. Lerida, with a church townhouse primary school hospital, several oil-mills, and an annual fair. Pop. 1714.

GRANADILLA a in Spain Extramuros, prov of and 70 m. N. Caceres, 7 bank Alagon on a bare, almost inaccessible, plateau. It is surrounded by ancient battlemented walls, and entered by two gates. The streets are paved, mostly radiate from the public square, in which is the public storehouse. There are also a parish church, townhouse, prison and primary school. Pop. 712 — 2 A in Canaries, Isl. Tenerife 80 m. W. S.W. Orotava, possessing a church, football ground, school and storehouse and a small manufactory of coarse cloth and linen. Pop. 1563.—(Madon.)

GRANAD a market in, and par Ireland on a Lough. The river is 15 m. E.N.E. Longford, has one main weir, about half a mile long, with several subordinate ones, all very indifferently kept. Houses stone, the greater part of them slated but many of them wretched hovels, and of late years decreasing in number. It has a parish church, a R. Catholic chapel three or four school-houses, a large market-house, and a barnack. Coarse linen was formerly but is no longer manufactured. Market day Monday. Pop. 1806.—Area of PARISH 18,038 ac. Pop. 6471.—(Local Correspondent.)

GRANATULA a in Spain, New Castle, prov of and 14 m. S.E. Ciudad-Real, in a small valley surrounded by lofty hills, near the *Jabón*. It is built on a considerable regularity and consists of two squares, and several level and well paved streets, has a handsome modern parish church, a townhouse, primary school and prison; manufactures of coarse, blonde, and beehamane, and a trade in corn, wheat, and dairy produce. Pop. 2035.

GRANBY par Eng Nottingham; 7430 ac. Pop. 516.
GRAND-BONNET [Lake, Government Dominion] a vil
 and com. Hardman Bay, div Faroy prov. Grenada, on
 the Le Bonnet, 15 m. E.N.E. of Amoy. It has an ancient
 parish church, a trade in horses, guinea, cattle, sheep, and
 goats, a weekly market, and five annual fairs. Pop. 2148.

GRAND-CHAPEL (La). See CHATELAIN.
GRAND GULF a vil. U States, Mississippi, on the
 Mississippi, 60 m. by road above Natchez. It has two churches,
 a townhall, market-house, hospital, theatre, and some mean
 structures. Pop. 1000.

GRAND HAVEN, a vil and port. U States Michigan
 159 m. W by N Detroit on Grand River about a quarter
 of a mile above its entrance into Lake Michigan. It has a
 courthouse, several mills, and an excellent harbour.

GRAND ISLAND an isl. U States, New York, Niagara
 Strait, and within 3 m. of Niagara falls. Length, 9 m.
 greatest breadth, 6 m. It has a level surface and an excel
 lent soil but is chiefly covered with a heavy growth of timber.

GRAND-LUC, a small but neat town. France dep. Sarthe
 16 m. S.E. Le Mans. It is regularly built, with a square in
 the centre, and has manufactures of linen and canvas. Close
 to it is a handsome chateau. Pop. 1126.

GRAND RIVER—1 U States, Michigan, the largest
 river running wholly within the peninsula. It pursues a
 N and W course, and falls into Lake Michigan. It is
 270 m. long, and admits vessels drawing 12 ft. water and is
 navigable for steamers 40 m. and for bargains, 240 m.—2
 Upper Canada, rises in the district of Gore flows
 N.E. and falls into the N.E. end of Lake Erie, at
 Toledo. It is very tortuous in its course making sudden
 turns to the E or W and as suddenly curving back again
 in opposite direction. It is navigable for large vessels as
 far as Erie about 13 m. from its mouth and for smaller
 craft further. In order to render the river navigable
 for the Erie, five locks have been built, the longest are
 24 ft. A large portion of the land on the banks of
 the river is well settled and cultivated.

GRAND-SALLES a vil. and par. Spain Asturias
 prov. of, and 50 m. W.S.W. Oviedo 1 bank Narva, here
 crossed by two bridges. It stands in a small valley enclosed
 by mountains, and is poorly built, has a parish church, a
 townhouse, slate-quarries, several mills, and a trade in wine
 and dairy produce. Pop. 1436.

GRANDEBOUGH two pars. Eng —1 Bucks
 1660 ac. Pop. 369 —2 Warwick 4100 ac. Pop. 610

GRANDE DE JARAU an isl. Brazil 70 m. W.S.W.
 Rio-de-Janeiro greatest length E. to W. 20 m. greatest
 breadth, 12 m. It is traversed longitudinally by a chain of
 lofty heights, on the slopes of which are extensive coffee
 plantations. In the lower grounds, the sugar-cane, mandioc,
 millet, and haricots, thrive well. It contains a parish church.
 The want of a harbour is a serious obstacle to its prosperity
 but vessels find good anchorage, and tolerable shelter in
 the bay of Palmar, on the N.E. and in those of Abrante and
 Zeredon on the N. Pop. above 2000.

GRANDE—1 a river Brazil which rises in the centre
 of the equator, in the E. of prov. Minas Geraes, near the front
 of Rio-de-Janeiro and proceeds E.W. then W.N.W.
 to Minas Geraes, constantly augmented in its course by
 the waters of small streams. On reaching the frontiers of
 Brazil, it receives, on the left, its first important tributary
 the Rio de São Francisco, and, turning round, pursues a W. course,
 forming the boundary between prov. São Paulo and Goiás, and
 rejoining again on the left another important tributary the
 Para. Proceeding still W. it reaches the confines of Mato
 Grosso, where it joins, or is joined by the Paranaíba. The
 united course from the Paranaíba. The direct course of the
 Grande, W. by N., is 600 m. During the greater part of its
 course it is large enough, and deep enough to be navigable
 but its channel is obstructed by numerous cataraets.—2, A
 river Brazil, which rises in the para Paranaíba, on the E.
 frontier of Goiás, and proceeding N.E. through prov. Bahia,
 joins L. bank São Francisco, at the town of Barra-de-Rio-
 Grande. Its whole course is about 250 m. of which no less
 than 130 m. may be navigated unimpededly. Its principal
 tributary is the Rio Paranaíba on the left, but it receives numerous
 minor streams, of which the most important are the Miquitoi,
 Fumacê, Ondes, and Brenco. It is well stocked with fish.

GRANDE (Rio), or Rio Bravo del Norte, a river N
 America, which rises in the U States, in the Sierra Verde,
 a branch of the Rocky Mountains, about lat. 40° 30' N. lon.
 107° 40' W. It flows S.E. and, at lat. 38° N., where it en
 ters New Mexico it is already a navigable stream; continu
 ing a S. course, it crosses New Mexico and, even lat. 32° N.
 where it leaves that state, it forms the boundary between
 Mexico proper and the U States, following a S. and S.E.
 course, and falls into the Gulf of Mexico at El Estero de
 la Piedad. It receives many tributaries, the most important
 are the Pecos, Conchos, Arriba, and San Juan.
 It traverses a rich fertile country frequented by the law
 less Indian tribes the Comanches and Apaches total course
 about 1600 m. Its mouth is 1500 feet wide, but is barred so
 as to admit only boats, which, however, can ascend to Paso
 del Norte, lat. 32° 30' N. where rapids and shoals commence
 but it is said these could, with little expense be overcome,
 and the river thus be rendered navigable to Santa Fe.
 The rains begin in April. The river is highest in May and lowest
 in August and September.

GRANDE-TERRA. See GUADELUPPE.

GRANDOLLA, a tn. and par. Portugal prov. Alentejo,
 com. of, and 29 m. S.E. Beiral in a plain W. of the Serra of
 same name. It has tile-works and an important annual fair
 in its vicinity are the ruins of an old castle. Pop. 3000.

GRANDISON (German Granzel) a small decayed
 Switzerland com. Vaud on the S.W. shore of the Lake of
 Neuchâtel 20 m. N. Lesclaux. It is built on a hill over
 looking the lake and has an antique church, and an old
 manor-house, formerly possessed by the barony of Grandison.
 Near it, March 3 1476, the Swiss defeated the Burgundians,
 under Charles the Rash, with great loss. Pop. 330.

GRANDE, GRAY or QUADRE [Arabic, Z. Kneel] a seaport,
 Arabia, dist. El Ahsa, on bay of same name, near the N. ex
 tremity of the Persian Gulf about 85 m. S. Basra, lat.
 29° 27' N. lon. 47° 57' E. (a). It lies on a peninsula jutting
 out into the bay is composed of clay-built houses, and badly
 supplied with water the country around being arid and al
 most destitute of verdure. It is inhabited by numerous rich
 merchants, who possess about 800 *ghazals* (native vessels
 in which they trade to the Red Sea, and to Soenda, Gujarat,
 and other parts of India, whence they import grain and other
 goods, with which, and with coffee they supply the interior
 of Arabia. The bay about 60 m. in circuit, is safe and well
 protected by the island Felus or Fulahe, and it has water
 for the largest vessels. The anchorage is good. Pop. above
 8000—(Chamney's *Empire*, *Europe*, *India* &c.)

GRANGEMOUTH, a small seaport in Scotland on
 Striding S. shore Forth about 13 m. above Queensferry and
 20 m. N.W. Edinburgh, at the E. entrance of the Forth and
 Clyde Canal lat. 56° 1' N. lon. 6° 43' W. It is regularly
 laid out, the houses generally neat and substantial, some of
 them handsome, in airy and cleanly and has a cheerful and
 thriving appearance. The only places of worship are a Free
 church and a Baptist meeting-house. The most important
 features of Grangemouth are its harbour, warehouse docks,
 and quays, all of which are spacious and commodious. The
 wet dock, which is large is capable of admitting vessels of the
 largest class the entrance lock being 65 ft. wide and 24 deep.
 The trade consists principally in the export of coal, glass,
 bricks, pig-iron, cast-iron, cotton manufactures, &c. and in
 the import of timber, corn, tallow, &c. Ship-building is carried on to a
 considerable extent, as are also the manufacture of rails and
 ropes. There is a custom-house here, the only public building
 in the place. Pop. 1436.

GRANICUS (modern *Karabur*) a small but celebrated river Asiatic Turkey pass. Anatolia, rises N W Mount Ida, and falls into the sea of Marmara, W side of the Gulf of Asia; after a course of about 45 m. On the banks of this stream, Alexander the Great gained his first decisive victory over Darius, a. c. 334.

GRANICZ, or **GRANOWICZA**, a market to. Hungary (Husz. Thebe, co. Zips, at the foot of the Carpathians, 14 m. W S.W. Leutschau, with a castle and a R. Catholic church. Pop. 1500.

GRANJA DE TORRENTOMORA a tn. Spain, Extremadura, prov. of and 70 m. from Badajoz. It is indifferently built, the houses being generally of only one story with a left above. It has a large and two small squares, a parish church town-house, prison, and primary school manufactures of woollen and linen cloth, and some trade in corn, wool, and cattle. Pop. 1780.

GRANJA (La) a royal palace, Spain. See LIDERONSO (St.) **GRANNOCH** (Loon) a lake, Scotland stewartry Kirkcubright, par. Gorthorn. It is about 3 m. long by half a mile broad, and abounds with excellent trout.

GRANOLLES—**DET. VALLES**, a tn. Spain, Catalonia, prov. of and 19 m. N by E. Barcelona, 1 bank Besos. It is indifferently built, has narrow and badly paved streets, four squares, a large parish church chapel, two schools, a town house, prison, hospital, and storehouse. Manufactures—linen, woollen and cotton fabrics, earthenware, and hampers stoves. Trade—grain, fruits, and manufactured goods. Two sunned cattle fairs. Pop. 3032.

GRANON a tn. Spain, prov. of and about 30 m. from Logroño on a height. It was once surrounded by a wall and defended by a castle, but of both only vestiges now remain. It has a parish church, primary school old hospital, several flour-mills, and a trade in corn and cattle. Pop. 1077.

GRANOZZO a vi. and town, kingdom of Italy, Piedmont, div. and 8 m. E. S. W. Novara near the Arona. It has a church, and a trade in rice and corn. Pop. 1309.

GRANDEN two par. Eng. —1 (*Great*) Huntingdon 3364 ac. P. 665. —2 (*Little*) Cambridge 1836 ac. P. 297.

GRANDJE a tn. France, prov. Brandenburg gov. of, and 42 m. N. Potsdam. It is walled, has two gates, two squares, in one of which is a bronze statue of Queen Louise of Prussia, two churches, a Gothic chapel, and two hospitals manufactures of woollen and linen cloth, a trade in cattle, and four annual fairs. Pop. 2626.

GRANTON par. Wales Pembroke 1639 ac. P. 186. **GRANTA** a river England See Cam. **GRANTCHESTER** par. Eng Cambridge 1591 ac. Pop. 685.

GRANTHAM a par. and municipal bor. market tn. and par. England on the ancient Ermine Street, co. and 2½ m. S.W. Lincoln a station on the Great Northern Railway. It is well built, principally of brick well paved lighted with gas, and supplied with water has a beautiful Gothic church of the 13th century with a lofty tower and spire of 33 ft. high two other churches and places of worship for Independents, Wesleyans, Calvinistic Methodists, and R. Catholics. At the free grammar-school of this town Sir Isaac Newton received his classical education, previous to entering Trinity College, Cambridge. There are, besides a large commercial academy a free national school for boys, another for girls and several other schools a philosophical and a literary institution, and a number of benevolent and charitable societies. About 24,000 quarters of malt are made here annually and there is a good general trade. Some corn is exported and coal imported. Market day Saturday several fairs annually. The borough has returned two members to the House of Commons since the 7th of Edward IV. Registered electors 1851: 763 P. 10 670. —(*Local Correspondent*) **GRANTY** **HARBOUR**, an inlet, Behring Strait, Russian America, about lat 60° 15' N., 10 m. long 2½ m. broad, and 2 to 3 fathoms deep.

GRANTON a vi. and seaport, Scotland, belonging to the Duke of Buccleugh & heirs of the Forth co. of, and 2 m. N W Edinburgh, and about the same distance W Leith, with both of which it is connected by railway. Being of but recent formation it has little yet to boast of but its fine pier and handsome hotel. The houses are mostly of brick, but there are also some elegant stone buildings forming, as

regard situations, very pleasant residences. Steamers of large class ply regularly between Granton and London, and the importance of the place, generally, is rapidly increasing. There is a good school in the village. Her Majesty's Queen Victoria landed and embarked here on the occasion of her visit to Scotland in 1843.

GRANTOWN a vi. Scotland co. of, and 25 m. S.E. Inverness, picturesquely situated within ½ m. of the Spey. It has some principal streets, with a large square in the centre, where the cattle markets are held, houses generally two stories, built of blue granite, slated, and with ½ ac. of ground attached to it. There are an Established and a Free church, and a Baptist meeting-house an orphan hospital, school, library jail and court-house. In the vicinity are several saw-mills, a carding, and two meal mills. Pop. (agricultural) upwards of 1000. —(*Local Correspondent*)

GRANVILLE (Latin *Grannomus*) a seaport tn. France, dep. Manche, 15 m. N W Avranches, at the mouth of the Rance in the English Channel lat. 48° 50' N. W. Lon. 1° 36' 45' W. It is built, in terraces, on the side of a promontory projecting into the sea, and crowned by a fort, and is surrounded with strong walls. It consists of houses of dark granite, roofed with black slate, and of steep, narrow streets, the whole having a very tall and unattractive appearance, aggravated by the abominable filthiness which prevails and, in hot weather becomes almost pestilential. It is the seat of a court of commerce, and of a hydrographical school of the third class contains a parish church of gray granite, with sculptured capitals, and in the late Roman style; and a hospital, and has a harbour with a noble pier so strongly built as to be capable of mounting cannon and in which, though it is left dry at low water the tide rises occasionally from 40 to 44 ft. The chief employments are, boat-building, and shipbuilding and the trade is in wine, brandy, salt provisions, rummet apples, iron, and pitch. There was an annual fair. Granville was attacked without success, by the Vendéens in 1793, and bombarded by the British in 1803. It is much frequented for bathing quarters. Pop. 5838.

GRAD (Владимирскъ) or **GRAD DE VALENTIN**, a seaport tn. Spain prov. of and 4 m. S. Valencia, of which it is the port, at the mouth of the Guadalquivir or Tago. It has a townhall parish church, prison and two schools. Inhabitants chiefly fishermen. Pop. 2730.

GRAPPE-NHAI 1. par. Eng. Chester 2550 ac. P. 3260. **GRASBY** par. Eng. Lincoln 1730 ac. Pop. 465.

GRABHOLM or **GRIMHOLM** an isl. S. Wales, co. Pembrokeshire, 1½ m. N W Milford Haven lat. 51° 48' 54" N. lon. 5° 29' 45" W. (a.) about 1 m. in circumference, and 146 ft. high; generally the first land seen on approaching Milford from the W. —2 An islet, Orkney, E. of Shapinsay.

GRASLITZ, **GRASLIZ**, or **GRASLIZKA**, a tn. Bohemia, circle Elbogen in a valley between high hills, at the confluence of the Silberbach with the Vroda 80 m. W N W Prague. It has a handsome church manufactures of musical instruments woollen and cotton cloth, lace, spoons, and various articles in wire and brass, and an extensive bleach-field. Near it are some mines. Pop. 3660.

GRANMERE, a par. vii. and lake, England, co. Westmorland. —The **VILLAGE**, picturesquely situated at the head of the lake, 5 m. N W Ambleside contains an ancient church in the church yard of which is the grave of Wordsworth the poet. —The **TAKE** is of an oval form about 1 m. long by ½ m. broad, and completely surrounded by mountains, presenting beautiful scenery. Area of par. 23 100 ac. P. 1139.

GRASMER FELL, a mountain England, co. Cumberland, near Crummock Water height 2756 ft.

GRAR an isl. Sweden at the entrance of the Gulf of Bothnia, and only separated from the mainland, on which the towns of Östergund stands, by a narrow channel in lat. 60° 20' N. It consists of a long narrow tract, stretching S.E. and N. W., and very much indented on the E. side. Greatest length about 18 m. and average breadth not more than 3 m.

GRASSANO —1 A tn. Naples, par. Baillano, 25 m. E. by R. Potenza, bank Calabrie. It has a church, a convent, and a benevolent association for endowing poor girls. Pop. 3370. —2, (or **GRASSANO**, A vi. and con. kingd. of Italy Piedmont, div. Alessandria, on the **Stella** about 8 m. from Cambré. It has an ancient parish, and several minor churches, a tannery and a trade in wine. Pop. 1566.

GRASSE, a tn France, dep. Var beautifully situated on the S. slope of a hill on which the town rises in the form of an amphitheatre, 95 m. E.N.E. Draguignan. The narrowness of the site makes the streets steep and winding, but, on the whole, it is well built, is abundantly supplied with water from several fine fountains is the seat of a court of first resort and commerce, possesses a communal college, a secondary ecclesiastical school, and an agricultural society contains a large Gothic church of ungainly appearance a handsome and well-served hospital, a public library and a theatre and has, next to Paris, the largest manufacture of perfumery in France. The materials are furnished by the flowers of roses, orange, lemon, heliotrope, &c., which are cultivated on so extensive a scale in the surrounding districts, that the nurseries of Cannes alone are said to be sold, on an average of years at 28000. Pop. 6700.

GRASSINGTON, a vill and township England co. York (W Riding) 6½ m. N.N.E. Skipton, with mines yielding nearly 1000 tons of lead annually. Pop. 1188

GRASSEVILLE L'Hermite or **GRASSEVILLE** a vill and com. France, dep. Seine-et-Oise, 8 m. E.N.E. Havre. It was originally situated on a height commanding a bay to which the Norman pirates used to resort, but the bay has been completely silted up, and the village is now about 3 m. from the sea. It contains two churches, finely situated on a plateau, but one of them a mere ruin. Pop. 8491

GRAETZ, a town, a tn Prussia, prov. and 22 m. E. of Berlin. It has a Protestant and a R. Catholic church, a

monastery manufactures of leather woolen and silk, a trade in cattle, and four annual fairs. P. 3321

GRATZ, [Latin *Gratum* Slavonic, *Gratzka Grad*]

a tn Austria, cap. duchy Styria on both sides of the Mur at

the end of a long but narrow plain, called the Grätzer Feld,

surrounded with gentle hills, covered with gardens and fine

villas, 90 m. S.W. Vienna, on the railway thence to Trieste.

It consists of the inner town, 1 bank of the river surrounded

by a wall with six gates and once defended by a Citadel,

formerly placed a hill over its centre but now demolished

and converted into a promenade and of three suburbs with

which a communication is maintained by three bridges. It

is irregularly built, and has generally dark, narrow and steep

streets, well paved, but by no means clean. The houses are,

for the most part, large and substantial and not a few are

remarkable for their elegance. The *Morgarten*, the widest

and finest street, is lined with good shops and other buildings

of a substantial and showy appearance and the principal

squares, the Hauptwachplätze, including a large space, of a

triangular form, and the *Frankenplatz* so called from con

taining a statue of the Emperor Francis I., are both regular

and handsome. The public edifices include no fewer than

25 churches, 4 monasteries, and 3 universities. The most

impressive of these are—the *Dome* or cathedral built in

the majestic Gothic structure, with a pavement of

marble, superb high altar and several fine frescoes,

and paintings; near the cathedral, the mausoleum of

the Emperor Ferdinand II., a neglected chapel, in the Italian

style, where, through an opening in the ceiling is shown a

the only mortal remains of that religious personage, the

Protestant, the Reformatory the largest building in

the town, now converted into a public school; the parish church,

commanding by its handsome, lofty tower the Burg, an old

palace of the Styrian dukes an irregular structure, now forming

the governor's residence, the *Landhaus*, in which the

Kaiser hold their meetings, and in one wing of which there

is an armory, with a curious collection of old armour; the

university, founded in 1668 possessed of an extensive li

brary and good botanical garden, and attended by about 800

students and the *Johnannus*, so called from its founder,

Amelrich John, a well educated, desirous to encourage

art and science generally and the manufacture of the *duchy*

in particular by the delivery of gratuitous lectures, and the

formation of a library and a collection of minerals and other

predominates. The educational establishments, in addition

to the university, include 15 superior schools for general

education 9 Sunday schools a normal high school gymna

sium, ecclesiastical secondary military school, swimming

school music school, and school of design, &c. The benevo

lent institutions include a general infirmary with a lying-in

asylum and a lunatic asylum attached; an Elizabeth, military

burgher and several other hospitals. The manufactures

consist of woollen, cotton, and silk tissues leather and

numerous articles of ironware. The trade is chiefly in iron,

timber, flax, hemp, and seeds. The two annual fairs are

unusually attended by dealers from distant quarters. Gratz

is the seat of a bishop, the seat of the superior courts and

offices of the *duchy* and possesses literary agricultural,

musical and other societies. The environs afford numerous

fine promenades but great devastation is often committed by

the flooding of the *Mur*. The celebrated orientalist, *Von*

Hammer is a native of Gratz. Pop. (1840) 51 843

—The *duchy* is for the most part hilly but is well wooded

contains much arable land, numerous orchards and vineyards,

and is rich in minerals, including some coal, and valuable

mines of argilliferous lime. Area, 1668 geo sq m. Pop

336 700

GRATZEN or **BÖHMISCH GRATZ** a tn Bohemia, circle

of and 19 m. S.E. Budweis on a height above r bank Denko.

It is surrounded with walls and ditches, contains an old castle,

seated on its highest point has two other castles, a church, and

Servite monastery and possesses three mills a weekly market,

and three annual fairs. Pop. 1578

GRAUBÜNDEN Switzerland. See *GRISONS*.

GRAUDENZ, or *GRUDZIĄZ*, a tn W Prussia gov. of

and 18 m. S.S.W. Marienwerder cap. circle of same name,

r bank Vistula, here crossed by a bridge of boats. It stands

on a fertile plain, and is a place of considerable strength,

being both surrounded by walls and ditches and otherwise

fortified contains a Protestant and five R. Catholic churches

a normal and superior burgher school, a nursery house of

correction and two hospitals and has manufactures of cloth

tobacco, and carriages breweries and distilleries a trade in

cloth and corn some shipping and four annual fairs. Pop.

8607 —The *duchy*, for the most part flat, is watered by the

Vistula and *Ossa*, and is fertile. Area, 253 geo sq m. P. 147 186

GRAU HET a tn France dep. Tarn, 14 m. S.W. Alby

agrainly situated, 1 bank Adon. It has manufactures of

linen hats and leather manufactures tanneries and bleacheries

and a considerable traffic in horses. Pop. 2684

GRAUN a vill and par. Austria, Tyrol circle and 80 m.

S.S.W. Inns, near a lake of same name, and more than 400 m.

above the sea. It contains two churches one of them adorned

with a fine altarpiece and a school. Pop. 186

GRAUPEN or *GRUPPEN* a tn Bohemia, circle Leitmeritz,

in a deep valley 2 m. N.E. Teplitz. It contains three

churches, a townhouse and remains of an ancient monastery

and manufactures of hosiery and two annual fairs. Tin is

worked in the vicinity and on an adjoining hill stand the

ruins of the old castle of Rosenberg. Pop. 1408.

GRAUS, a tn Spain, Aragon, prov. of, and 86 m. E.

Huesca, on a height, above r bank Ebro. It is well built

and well paved has lighted streets, and a large and handsome

square a large but somewhat ungainly parish church a

townhouse, with prison a Latin and a primary school ma

nufactures of paper and leather a trade in wine fruit and

silk and three large annual fairs. Pop. 1768

GRAVE or *GRAVE* [Latin *Gravell*] a tn Holland prov

N. Brabant, 7 m. S.W. Nijmegen on the Maas. It is walled,

and recently fortified anew and surrounded by a wide, deep

ditch, filled with water from the river. The land round about

is low and annually flooded so as to render the site of the

town, for the time being an island. It has three gates one

of which, the *Hampoort*, is a strong bomb-proof building,

possessed the finest of the kind in the kingdom and so large,

that, in time of siege, it will hold concealed two battalions

of infantry. Of twelve streets of which the town is composed,

four open out on a large open area or market-place, sur

rounded by good houses, and in which stand the townhouse,

an elegant building the watchhouse, and the R. Catholic

church founded in 1590. There are several charitable and

benevolent institutions, and several schools. Some women

stripes are woven, and there are cotton-spinning factories.

Lace is made; and there are several silver and gold smiths

hair breweries, and a gin distillery. Pop. 2478.

GRAVEDONA a tr. and par Italy Lombardy prov and 37 m. N N E. Como, on the Lario, near Lake Como. It is well built, and is terminated at one extremity by a beautiful parish church, and at the other by the palace of the Dukes of Avelto. It is the seat of a court of justice, and residence of many Italian nobility and has several alk mills. Pop. 2300.

GRAVELAND [Dutch, *S. Greenland*] a vil. Holland, prov. N. Holland 16 m. S.E. Amsterdam. It is a regularly built, neat place, with a Calvinistic church and a school. Near it are numerous linen bleacheries. Pop. 1207.

GRAVELINES, a seaport in France, dep. Nord, 11 m W Dunkirk. In a marshy country near the mouth of the Aa in the English Channel (lat. 50° 6' N lon. 1° 6' 45" E. \pm). It is tolerably well built, but has a desolate and deserted look, and is only deserving of notice for its fortification, which are themselves of great strength and may be rendered almost impregnable by opening the sluices, and laying the surround- ing country under water. It makes a considerable figure in the wars of Flanders. Pop. 1836.

GRAVELLIANA a tn. kind of Italy Piedmont, div of and 10 m S E Novara, 7 mi E Terdoppio It is the seat of a court of justice, has a parish church and two monasteries a weekly cattle market, and a trade in rice, corn, wine, and vegetables, particularly asparagus, which is sent as far as Milan. GREECE (Greek, *Ellas* (Ελλάς); Latin *Grecia* French

German, *Griechenland* Arabic *Roum*) a kingdom in

of Europe between lat. 36. 12' and 39. 13' N

and 26. 12' and 38. 12' E. separated from Turkey to the N. by

an isthmus line which stretches between the Gulf of Arta, on

the W. and the Gulf of Volo on the E. in the direction of

Mount Othrys and bounded on all other sides by the sea—the

Ionian Sea on the W. the Mediterranean proper on the

S. and the Aegean sea on the E. (asp. Athens). It consists

partly of mainland and partly of islands. The mainland

forms two peninsulas, united only by the narrow Isthmus of

Corinth a N. peninsula, called N. Greece or Livadia, and a

S. peninsula, called the Peloponnese or Moria. The islands

are chiefly on the E. and S.E. The far largest is Euboea,

only separated from the mainland of Livadia by the narrow

channel of Euripo. The other islands form three principal

groups:—The N. Sporades, on the N.E. of Nagropolis, includ-

ing Skiatto, Kiklodesmi Skopello, Polignos and Skyro the

W. Sporades, chiefly in the Gulf of Egina, or between it and

the Gulf of Nauplia, including Hydra, Spinalia, Poros, Egina,

and Kolari or Salamina; and the whole of the Cyclades

with exception of Chios, Samos, Lesbos, and some islands on

the coast of Asia Minor which still belong to Turkey. The

Cyclades are divided into three groups:—a N. middle, and a

S. E. middle, including Andros, Tinos, Mykonos, Syra, Paros,

Samos, and Paros the middle—Melia, Paros, Nio, Sikyros,

Poros, and the S.—Anargiro Samolaina, Anaphi and San

Moria, or S. Greece	Arund. Betules and Eucalypti. Cyclades.	Argolis. Parnassus. Sparta.

Physical Features.—On looking at the map of Greece, the first thing which strikes the eye is the comparatively vast extent of its coast line formed by numerous gulfs, which penetrate into it in all directions and give it a remarkably broken and ragged appearance. Proceeding round the coast, from the N.W. to the N.E. we are presented in succession with the gulfs of Arta, Patras, continuous inland by that of Corinth; Arundia, Koron, Kolokythia or Manthou, Nauplia, Egina, Melo or Zelemon and the channels of Pelopon and Triclar. Another characteristic feature is the mountainous character of the interior. The range of the Pindus, which as the N. is linked to the Dinaric Alps proceeds S. and, on reaching the N. frontiers of Greece divides into numerous minor chains, which with their ramifications, extend over the whole length and breadth of the country and cover the far greater part of its surface, leaving little intermediate space for valleys and plains. The principal branch, stretching E. and W. along the N. frontier attains, in Veleika near the sources of the Eliade and in Ohiadon, near Karpenisi, heights varying from 7000 to 8000 ft. Further E. in the chain of Oeta, in Mount Giona, 8240 ft. the culminating point of Greece. Another branch, stretching in an E.W. direction towards Attica, forms the celebrated range of Parnassus, which in Lakthra, its loftiest summit, exceeds 8000 ft.

Other summits continued in the same direction, though more distinguished for their chaotic celebrity than their elevation, attains, in Ohiadon, Parnassus, Pindus, and Hyetina, the respective heights of 4830 4840 8640, and 8270 ft. Another range, to the N. of the former and nearly parallel to it, stretches longitudinally through the island of Euboea and in the Delphi Mountains, not far from the N.E. coast, attains the height of 5400 ft. Several other summits of this range exceed 8000 ft. Quitting N. Greece, a branch from Mount Othrys proceeds across the Isthmus of Corinth into the Morea, and stretches over it in all directions. Many of the summits exceed 5000 ft. and Nagropolis, W. of the Morea, forming part of the range which proceeds S. to the extremity of the Morea, attains in its culminating point, Makryno or St. Elias, 7833 ft. The rocks most largely developed in the mountains of Greece is limestone, where it often assumes the form of the finest marble, and has been extensively used, both for building and statuary. To the E. of Attica mica slate occurs in connection with the limestone and also in the mountains, both of the S.E. and N.W. of the Morea. Granite and gneiss are found only in the N. in the E. ramifications of the Pindus. Tertiary formations prevail in the N.E. of the Morea, and in the N.W. along the shores of Euboea, are considerable tracts of alluvium. Volcanic rocks are not seen on the mainland, but form considerable masses in some of the islands one of which Santorin is indeed only a recently extinct volcano. In addition to marble and limestone, already mentioned, the minerals include traces of gold, argentiferous lead copper lignite sulphur saltpetre alum asbestos, millstones whetstones argentine, filices and porcelan earth.

Rivers &c.—Owing to the nature of the surface, the rivers are more remarkable for their number than for their importance. The largest is the Aspropotamos (anc. *Asoleios*) which, rising in Euboea, on the W. slope of the Pindus, enters Greece in lat. 39° 9' N.; flows S.E.W. through the W. part of N. Greece, and falls into the Ionian Sea opposite to the Isle of Ithaca. The only others deserving of notice—not so much on their own account, as of the interesting associations connected with them—are, the Eliade or Spercheus, the Gavria or Boetian Ophion, the Cephalos of Attica, the Ilissus, all Euboea, in N. Greece and the Rhodopis or Alpheus, and the Eurotas, in the Morea. The principal lakes are, in N. Greece, the Topolissia or Copeia, Vrachori, Ambrakia, and Ozero and in the Morea the lagoons of Agolizina, Kalkha, and Maria, famous for their fisheries.

Climate.—This is mild but variable. None of the mountains attain the limit of perpetual snow but several of them are so lofty as to retain a covering of it after the summer has far advanced. In general, the first snow falls in October and the last in April. In the lower grounds it often becomes six inches deep, but melts quickly away; and winter, properly so called, cannot be considered as lasting beyond two months. Summer is extremely warm. The thermometer often rises above 100° and the heat would become almost insupportable.

able, were it not greatly modified by breezes from the sea. At this season rain scarcely ever falls, and the channels of almost all the minor streams become dry. The air is then remarkably clear and a month will sometimes pass away without a cloud being seen. A midday breeze, however, takes place towards the end of harvest. Rain is much frequent and copious, and the streams which had been dried up not only fill their channels, but frequently overflow them, and lay considerable tracts under water. In this way stagnant pools and marshes are occasionally formed, and, as the heat increases, the vapours arising from them become almost pestilential and intermittent fevers prevail. Even the plague has sometimes made its appearance. But, on the whole, there cannot be a doubt that few countries in the world can boast of a climate better adapted for the vigorous development both of animal and vegetable life.

Vegetation, Agriculture, &c.—Beyond the height of 5500 ft. vegetation is almost confined to wild alpine plants. Below this height, magnificent forests principally of pine, with a considerable mixture of hard wood, including oak, clothe the sides and summits of the mountains, and notwithstanding the havoc which mismanagement and gross waste have made, are still capable of yielding large supplies of excellent timber. Still lower down both the chestnut and walnut are frequently met with. It is not, however, till we descend to a height not exceeding 1500 ft. that the full force of vegetation is displayed. The extensive zone reaching from this height to the level of the sea constitutes the proper agricultural range, and exhibits as great a variety of valuable cultivated trees, shrubs, and plants, as is to be found within the same limits on any other portion of the earth's surface. All the fruits of the latitude—figs, almonds, dates, oranges, citrons, melons, &c.—are grown in abundance and of excellent quality without receiving any great share of attention. The vine also grows vigorously and with a little more skill and care in the management of its produce, would not only suffice for the home consumption, so it even now does, but leave a valuable surplus for export. Another article the culture of which attracts considerable attention, is the currant. But, unquestionably the culture which in Greece takes precedence of all others is that of the olive. Both the soil and the climate are alike favourable to it, and send all the changes to which the country has been subjected, the favour with which the olive was regarded in the earliest times has never been withdrawn, and still continues unabated. It would seem, however, that the processes of pruning and raising the oil are susceptible of great improvement, since the greater part of it is of secondary quality and yields far below that of Provence. The culture of the mulberry for the production of silk, has recently been greatly extended, and already promises important results. Owing to the mountainous nature of the country, the arable land is of limited extent, and much of the soil of a thin, and by no means fertile nature. Even under a proper system of agriculture the produce, in such circumstances, could not be abundant and hence it is easy to understand how under a system so antiquated, that the plough in use differs in no respect from that which Herodotus described 3000 years ago, the grain must furnish sufficient for two-thirds of the consumption. The principal crops are wheat, barley, and maize. The domestic animals are neither numerous nor of good breeds. The raising of artificial grasses for their maintenance may be said to be unknown and the scanty herbage which nature bestows affords, in a country where the scorching heat of summer is seldom mitigated by a shower, must be alike incapable either of rearing good stock or of preventing it from degenerating when it may have been imported. Accordingly asses are almost the only beasts of burden employed, and the only animals from which dairy produce is obtained are the sheep and the goat. The latter manage to pick up a subsistence among the barest rocks and the fencer of which numerous flocks are often kept, are moved alternately to the mountains and the plains, so as always to be provided with a tolerable supply of food. No attention, however, is paid to the improvement, either of the carcass or the fleece, and though the quantity of wool produced is considerable, it is of a coarse description, and is chiefly worked up for domestic use. The only exceptions are in some parts of E. Greece, and in Arcadia, where a kind of Barbary sheep, and also merinos, are frequently kept, and

yield wool which is much admired, both for its length and its fineness. In the same districts, goats of a superior description are kept, and having long fine hair are regularly shorn.

Manufactures and Trade.—The former are extremely limited, and are chiefly confined to clothing and other articles of domestic use, which can be prepared at home by the female, or at spare hours by the male. In some of the large towns, however, the weaving of woollen, cotton and silk tissues, forms the regular employment of many of the inhabitants, and to them may be added embroidery in gold, silver silk, and cotton earthenware, leather harness making and firearms. But unquestionably the most important branch of manufacturing industry is shipbuilding, which is carried on to a considerable extent on various points of the coast and on various of the islands, particularly at Galaxidi, a town on the N. shore of the gulf of Corinth, at the islands of Hydra, Hydra, Spinali, and Skiatho. The Frigate, also, which was formerly famous for its ships, has again begun to distinguish itself, and at two building-yards recently established in it, a considerable number of merchant vessels, of large burden, have been built. Several of them built there and elsewhere, are from 600 to 700 tons register a much larger number between 300 and 400 tons, but the great majority are mere boats of from six to seven tons. The whole have been roughly estimated at 30,000 vessels, measuring 150,000 tons and employing 80,000 men. Much of the commerce of the country is a merely coasting, but the foreign trade is also of considerable extent, having advanced with wonderful rapidity since the independence of the country was established. It consists of three principal branches—the corn trade of the Black Sea and Alexandria, carried on to an extensive scale wherever open markets can be found, but chiefly by Turkey Italy Spain France, and England; the export trade of the countries bordering the Levant, principally to London, Trieste, and Marseilles; and the import of the cotton and woollen manufactures of England and Germany into Greece, Turkey and Persia. In regard to the last branch the peculiar advantages which the Greeks possess, in their knowledge of the language, and acquaintance with the habits and wants of the people of these countries, have given them almost a complete monopoly. Even the English, who have long tried to compete with them, have begun to find it hopeless. The principal exports of Greece are valonia, oil, emerystone, silk, dried figs, currants, raisins, honey wax madder &c. the imports cotton, woollen, and silk goods colonial produce, indigo and other dyes, iron and other metals hardware, earthenware, &c.

The Weights and Measures of Greece have for their basis the Pík, which is the standard linear measure and is very nearly $\frac{1}{2}$ of an English yard. For minor lengths, the *Palmo* = $\frac{1}{10}$ Pík, and for greater lengths, the *Stadion* = 1000 Píks are used. The principal square measure, forming a multiple of the square Pík, is the *Strema*, nearly equal to $\frac{1}{2}$ of an English acre. The principal weight is the *Oké* about 5 lb 5 oz. avoirdupois. 20 *Okés* make a *Kilo*, the common corn measure, and 44 *Okés* the *Centar* or *Quintal*. The money standard is the *Drachm*, consisting of nine parts silver and one part copper and having a value of about $\frac{1}{16}$ of English money. It is coined into pieces of five drachms, a half drachm, a quarter drachm. Gold drachms are also coined in pieces having the value of 10 20 40 and 50 silver drachms. The principal copper coin is the *Lepta*, so minute in value that 100 are contained in one silver drachm. It is coined in pieces of 1 2 5, and 10 *Lepta*.

Government and People.—The government is a hereditary monarchy established, in the line of Prince Otto of Bavaria, under the express condition that the crown can never be united with that of Bavaria or with any other. As first drawn up by the allied powers, the monarchy was nearly absolute, but, in 1844 important modifications were made, and a constitution granted in the framing of which those of Great Britain, and of France under Louis-Philippe, were taken as models. By this constitution the executive power belongs solely to the king, the legislative jointly to the king, a senate, and a representative chamber. The Greek church alone is established, and is governed by 10 bishops, but all other forms of religion enjoy toleration. Justice is administered, on the basis of the French civil code, by a supreme court (*Agou Teyes*) which has its seat at Athens, two royal courts (*Eparches*) one at Athens, and another at Nafplio. 10 courts

of primary resort (*Marasmatos*) one in each principal town and three courts of commerce (*Emporion*) one each at Syra, Patras, and Nauplia. The public revenue, derived chiefly from the rent of national property, the produce of forests, indirect and direct taxation, was estimated, in 1850, at 70,370,335 drachmas (\$722,000). Of this, 2303,000 were required to meet the interest of debt. The army is estimated at 9918 men, and the navy consists of a few armed sailing vessels, only two of which mount each 35 guns and two steamers one of which mounts six guns. The impoverished condition of the finances cripples all the powers of the state and is the great obstacle to the advance of the national prosperity. The Government obviously feeling paralyzed, and in capable of giving effect to many enlightened views which it is understood to entertain. The population, in 1846, estimated at 955,000 contains a considerable indeterminate of foreign blood among which the Albanians are the most numerous but the great majority though not without some taint in their blood, are of genuine Greek extraction and, both in physical and mental features, bear a marked resemblance to their celebrated forefathers. It is true that the degrading bondage, to which they were subjected for centuries has sunk them far below their natural level and too often substituted apathy and low cunning for the intellectual superiority which in earlier and better times, displayed itself in numerical predominance of the elite and the few. But that the original elements of greatness still exist, has been proved by the noble struggle which they made for independence and the readiness with which they have availed themselves of their altered circumstances, to form schemes of political measures of improvement. The national dress of the Greeks resembles the Albanian costume. In the males

PEOPLE OF THE NEIGHBOURHOOD OF ATHENS.
From *Starchilling*, *Comptes de la Grande Méditerranée*.

of a tight jacket, generally scarlet wide trousers and a turban as far as the knee, and embroidered gaiters in which it consists of a vest fitting close to the shape and a skirt flowing loosely behind. Such means of education as the limited resources of Government enabled it to afford have been generally embraced with the greatest eagerness, and not a few of the more wealthy Greeks have come liberally forward to assist in the establishment of schools both for ordinary and superior education. The language, too, named *Romance*, though somewhat encumbered with barbarisms, and deprived of several of its peculiar graces, makes a nearer approach than any other living language to its dead original, is still somewhat flexible, and rich; and, though no genius has yet arisen to test its powers, is obviously capable of conveying the loftiest conceptions in the most attractive form.

History.—The early history of Greece, like that of all ancient nations, is involved in great uncertainty notwithstanding the extraordinary ingenuity and learning that have been employed in attempting to unravel it. The original in-

habitants, consisting of various tribes now generally classed under the common name of Pelasgi, were gradually expelled or drawn into insupportable feuds by the Hellenes, apparently a people from the East, who are said to have first arrived in the year a.c. 1884. So little is known of them for two centuries after that the whole period extending to the war of Troy in 1184, is designated the Heroic Age, and the most authentic records relating to it must be sought for in the poems of Homer. Some centuries later Greece is found divided into a number of independent states, in all of which, with the important exception of Sparta, a republican form of government was established. The ambitious aims and mutual jealousies of these states led to incessant warfare, till the appearance of a foreign oppressor in the person of the King of Persia, obliged them to bury their animosities, and unite in one general league, as the only means of saving their independence. The first great battle, fought at Marathon, a.c. 490 was only the commencement of a series of glorious victories, which issued in the complete discomfiture of the Persians and left them no inclination to renew their aggressions. The epoch embracing the next century and a half (480-336 a.c.) is the most illustrious in Grecian annals. During this period all its greatest writers, orators, sculptors and architects appeared, and it was not only able to repel attacks on its own independence, but to assume the offensive, and enrich its treasury with foreign spoils. As usual, prosperity proved more trying than adversity had been. Wealth introduced luxury and the process of degeneration once begun advanced with fearful rapidity. Not only were the jealousies and animosities of the different states revived but each state became unscrupulous as to the means of its aggrandizement, and hesitated not to seek the oppression of its neighbours by selling in foreign aid. It was not necessary to go far to obtain it. Immediately on the outskirts of Greece a power had been gradually rising into importance. While the Greeks were wasting their energies in acts of mutual oppression, Philip of Macedonia was calmly maturing his plans, and, not death overtaken him, must shortly have made himself an absolute master of the destinies of Greece, as his celebrated son Alexander afterwards became. Notwithstanding Alexander's death, and the dissolution of his empire, the power of the Macedonian sovereigns continued paramount in Greece till the Roman conquest, a.c. 146. The early spirit of independence which had animated the Greeks appeared to be now completely broken, and they were ready to be handed over from master to master without even the semblance of a struggle. The crowning disaster commenced a.d. 1453, when the Turks first obtained a footing. A long series of exterminating wars ensued, during which the Venetians and Turks contended for the mastery. The latter ultimately prevailed, and, in 1718, the highest honour which Greece could claim was that of being a Turkish province. Nearly a century of the greatest miseries followed, but, in 1821 when degradation seemed to have reached its lowest possible limit, a strong reaction commenced, a new spirit began to appear and the Greeks, as if dropping off their lethargy, declared their determination to be free. A protracted struggle took place, but the issue was still doubtful, when the great European powers intervened, and compelled the Turks in 1829 to acknowledge Greece as an independent state. The constitution, framed in a spirit of absolutism in 1829 has since been greatly improved and Prince Otto of Bavaria, on whom the crown was bestowed, became a constitutional monarch.

GREEN BAY a bay U. States, E side of Wisconsin territory in the N.W. of Lake Michigan. It is 100 m. long, and 15 to 30 broad. receives the Fox and Menominee rivers, and is navigable throughout for vessels of any burden. At its entrance is a succession of islands extending for 80 m.

GREEN CASTLE two villages U. States.—1 Pennsylvania, 56 m. from Harrisburg. It contains five churches and several factories. Pop. 1500.—2 Indiana, 42 m. W. by S Indianapolis with a courthouse, jail, seminary and two churches. Pop. 500.

GREEN ISLAND—1 One of the Philippines lat. 17° 8' N. lon. 119° 49' E. It is of moderate height, may be seen 15 m. off and is covered with trees. A coral reef extending about one-third of a mile, surrounds the island.—2 An Isl. China Sea, lat. 0° 42' N. in a direct line between the Tamboran and easternmost St. Spirit Islands, rather

more than mid-channel to the latter. It is of a square form, with a sandy beach and covered with trees.—3 Two small is. China Sea, E. coast of China, called by the Chinese *Tsang-Chow* at the entrance to Bass Bay lat. 22° 32' N lon 114 40' E.—4 An. Isl. Australia, N.E. coast, Trinity Bay lat 10 40' S lon. 145 56' E. (u.)—5 A small Isl. N. America, on the St. Lawrence, 115 m. below Quebec lat 46° 34' N lon 69° 26' W (u.)—6 An. Isl. British N. America Hudson's Strait, near the E. entrance, N.E. point lat 61 2 N lon. 67 25 W (u.)

GREEN MOUNTAINS [see called from the forests of green trees with which they are covered] a mountain range, 1 State, commencing near New Haven, Connecticut, and extending N through Massachusetts and Vermont, between Lake Champlain and the Connecticut River. The highest summits are Mansfield Mountain and Lemoore's Knoll, both in Vermont respectively 4310 and 4188 ft. high.

GREEN RIVER, U. States, Kentucky flows generally W and N W., and enters the Ohio 200 m. below Louisville. It is 800 yards wide at the mouth, and is navigable for boats for about 300.

GREENBUSH A vil. and town in 1 State New York, 1 bank Hudson, nearly opposite Albany. It has two churches, a tannery a distillery two flour mills, and several stores. Pop. 301

GREENFIELD several places. 1 State—I A vil. and township, Massachusetts, 8 m W by N Boston. The village is mostly built has four churches, a seminary and considerable manufactures a t. dist. Pop 1706.—2 A township, New York 40 m S by W Albany with several mills and factories. Pop. 2903.—3 A vil. Ohio, W bank Paint Creek, 10 m S.W. Columbus. It contains four churches, and several manufacturing establishments. Pop. 600

GREENHILL, a hamlet, England co Kent, pleasantly situated on the Thames, 3 N E.N. Dartford. It has a small pier from which great quantities of lime and flint, procured in the neighbourhood are conveyed in barges to London and other places. Pop. 1056.

GREENLAND Danish and German, *Grönland* French, *Grönland* an extensive territory N. America belonging to Denmark, but from its inaccessible nature of much of its coast so imperfectly known that it still remains to be ascertained whether it is partly joined to the continent, and forms a large peninsula, or entirely separated from it and consists of one large and several smaller islands. Part of its boundaries are thus unknown. Its W coast, which has been most accurately examined, is washed by Davis Strait and Baffin's Bay and stretches from lat 59° 45' commencing at Cape Farewell to about 78° N. Its E. shore, commencing at the same cape, is washed by the N. Atlantic but from its immense quantities of drift ice which cover the whole of the adjoining sea, and render navigation impossible, it is only the E part of the coast that can be considered as explored. The Danish colony extends N on the W coast to the Bay of Disco in lat. 66° N where the sun remains below the horizon from November 20 to January 12 though the long darkness is much relieved by bright moonshine, the stars, and the N lights. In summer on the other hand, the light of the sun is continued with out interruption for a similar period. Farther S., where the sun regularly rises and sets throughout the year a short but warm summer during which the snow does not melt even to the valleys before July is followed by a long and dreary winter the cold of which, though very great, particularly in February and March is greatly modified on the coast by the sea, and therefore not so extreme as the latitude might seem to indicate. The interior is lofty and has the appearance of one vast glacier with occasional spots of a dark or grayish hue on which, from their smoothness and steepness snow and ice have not been able to accumulate, and some heaths and mosses succeed in maintaining an existence. The whole of this interior is uninhabitable, and all the villages, whether of natives or Europeans, are confined to the coast, which are generally rocky and precipitous but occasionally flattened down and open into low valleys, are lined with narrow islands, and deeply penetrated by fjords. In the low hills and valleys vegetation is confined, and amounts to nothing more than grass and stunted brushwood. In the most sheltered spots the birch and alder gain a height of about 5 ft., and a stem from 3 to 4 inches in thickness. The

although to raise oats and barley have failed, but potatoes have been grown towards the S. extremity. Turnips attain the size of a pigeon's egg and cabbages grow very small. The radish is the only vegetable which seems not to be affected in its growth. With the exception of about 250 the inhabitants, in 1851 stated to number 9480, are all Esquimaux (*whit nat*). The hardships endured by the missionaries who undertook their conversion and the success which suddenly overcame their labours after they had almost resolved to abandon them in despair form one of the most interesting chapters in the history of missionary enterprise. The number of native Christians is estimated at about 1100. For administrative purposes, Greenland or rather its coast, is divided into the two inspectorates of N Greenland and S. Greenland each subdivided into six colonies or districts. Godthaab, pop. 250 on the island of Disco, and Godthaab, pop. 740, where Hans Egede, the Norwegian clergyman, established the first European colony being the residences of the N and S. inspectors, may be regarded as the capitals; but the best inhabited district is that of Julianahab in S. Greenland. Its pop. is 3200.

GREENLAW a vil. and par. Scotland, Aberdeenshire. The town 17 m. W by S. Berwick is on the Blackadder between two rising grounds, is cap. of the co. has straight and tolerably well-kept streets and is well supplied with water. The county hall is an elegant Grecian edifice and there are a Jail Established, Free and U. Presbyterian churches; two schools and a public library. The manufacture of coarse woollen goods is carried on to a small extent, but the inhabitants, generally, are employed in agriculture. Pop. 514. Area of soil about 26 sq. m. Pop. (1851) 1378.

GREENOCK a port and seaport in Scotland. The town 17 m. S. of the shore of the estuary of the Clyde, which is 1 1/2 m. broad and 4 m. wide, about 70 m. W. N Glasgow lat 55 36' 54" N lon. 4 49' 10" W. It stands partly on a narrow level tract of land stretching to the margin of the sea, and partly on some fine commanding heights, which rise behind and to the W of the lower parts of the town. The view from these eminences is a very beautiful comprising the extensive bay in front, with the shores and hills of Argyll and Dunbarton shire in the distance, while the sea and maritime villages with which they are crowded impart to them a very pleasing and picturesque appearance, when viewed from the sea. A number of elegant residences, also line the shore to the W. The lower and older parts of the town are mean and crowded the lanes and streets narrow and crooked and have been recently drained and much improved, in the more modern portions the streets are spacious, airy and clean and the houses all of the better class; many of them remarkably handsome. The town is well lighted with gas, and supplied with water by the Glasgow Water Company from reservoirs situated on the high ground behind the town, and which also furnish water power to several mills and factories. The principal public buildings, exclusive of the churches—some of which are very beautiful structures—are the custom-house a handsome oblong Grecian edifice, with a fine portico, situated on the quay the tomb of the Watt monument, in the Elizabethan style occupied as a library and lecture-rooms, and containing a marble statue of Watt by Chantrey portraits of Henry Bell, John Galt, &c. Town Hall, Infirmary, Railway Station gas works &c. There are in Greenock six churches in connection with the Establishment, one of which has eight Free churches, one of which is also United Free Presbyterian two Reformed Presbyterian an Evangelical Union, an Episcopal, two R. Catholic, an Independent, two Baptist, a Methodist, and a Roman's chapel. The schools comprise the Greenock Academy Highlanders Academy School of Industry Charity School, Ragged School a number of mission schools in connection with different churches, a Government School of Art, and about twelve private schools. The principal charitable institutions are the Greenock Hospital and Infirmary (a fine addition to which in (1845) in progress) and the Maritime Asylum, an elegant Elizabethan building, endowed by the trustees of the late Sir Gabriel Wood, for nurses, matrons, and maids belonging to the counties bordering the Clyde; there are several others of less prominence. The library and scientific institutions comprise a public library; a mechanics institute, with library several libraries connected with churches, a philosophical society a Government

School of Navigation and Civil Engineering and a landing-rook. S.W. of the town, overlooking the Clyde, is a beautiful well-kept cemetery. The grounds of Well Park near the centre of Greenock laid out as public walks, and Warrington Park a place of ground towards the E. end of the town, for games for the working-classes have been presented by Sir M. R. Shaw Stewart. An esplanade 100 feet wide and 6300 linear feet long, constructed along the margin of the river at the west end, is a fine promenade.

The manufactures of Greenock include 16 sugar-refineries some of them on a large scale seven ship-building yards, nine iron foundries and machine establishments, for the construction of land and marine engines, locomotives and iron steamers two iron-works a cotton, a worsted a woollen, and a paper mill; three drydock five grain three saw and sundry other mills; two salt-works factories jute and bagging factories, seven roperies, and seven; and making establishments making an extensive bleach bakery a distillery two breweries, four breweries two soap and candle works, a pottery &c. There are, besides, chemical works where sulphate of zinc, sulphate of copper phosphate of soda, and saltpetre are made.

In addition to these manufactures, Greenock carries on a considerable foreign and coasting shipping trade; importing large quantities of sugar molasses lumber grain, and a more limited quantity of cotton and exporting coal pig-iron dry goods machinery beer &c. and numerous ships clear out for East and West India, America, and Australia. The following table exhibits the progress of the shipping trade—

	Total Tonnage	Total Tonnage
	Inward.	Outward.
1880	701,711	820,871
1881	686,098	624,818
1882	496,395	501,606
1883	578,537	694,656
1884	719,251	790,731
		1,440,972

During the tonnage of steamers or other craft trading in the Clyde, the total for 1885 was 8125,341.

The following tables exhibit the progressive increase in the exports of the principal articles, in the customs and in the revenue of the corporation—

	1830.	1840	1850	1860.	1867
Sugar tonne	16,300	18,741	26,998	89,911	123,747
Molasses, tons	1,837	19,261	19,261	45,810	48,800
Timber loads	21,465	47,046	51,141	89,999	99,999

	Output, &c. value.	1860	Output, &c. value.

1860	1,850.	1,850.	1,850.
617,653	2,265,128		2,265,128

The harbours of Greenock are spacious and possess every accommodation for shipping including dry docks, cranes &c. The E. quay is 580 ft. in extent, entrance to the harbour 108 ft. custom house quay 1085 ft. entrance to the harbour 108 ft. W. quay 425 ft. extreme length 2201 ft. entrance to the New Victoria Harbour, about 550 ft. entrance to the Albert Harbour, about 550 ft. The Albert Harbour when the new breakwater is completed will give 104 acres of water space 3,000 broad ft. and will be connected with the Caledonian and Glasgow and Ayrshire railways. The quays can be approached by steamers of any size of the title and vessels of any class enter the harbours.

Greenock is the birthplace of James Watt (born Jan. 19, 1736) and sends one member to parliament constituency (1866) 1879. Pop. (1851) 86,686 (1861) 45,307.

GREENORE—1 A headland and fishing station, Ireland on Lough, E. shore of Carlingford Bay 3 m. E.R.E. Carlingford. It has a lighthouse—2 A headland on Wexford, 7 m. S.E. E. the entrance to Wexford harbour.

GREENSPOND an lal. and maritime vil. N. America, off E. coast Newfoundland, 39 m. N.W. Bonaville. The island of granite formation is about 4 m. across, and the little harbour is formed by several other smaller islands. The village, a straggling place, has a decent church and some large stores; and the fishermen's houses are neat and clean. Fresh water has to be obtained from the mainland, about 3 m. off. A considerable trade in dried fish is carried on.

GREENSTAD par Eng. Essex; 1466 m. Pop. 186. **GREENWICH** a par bar and par England, on Kent, r bank Thames 28 m. E.R.E. London Bridge, the terminus of the Greenwich Railway lat. (Observatory) 51° 28' 38" N. lon 0° 0' 0" partly on an alluvial but chiefly on low marshy ground, a large portion of which is below the level of the Thames. The streets, 167 in number, are in general narrow and irregular and many of the houses seem in appearance though recently numerous handsome new houses have been built. The town is well lighted with gas and is supplied with water. It contains four handsome Episcopal churches one of which St. Alphonsus was one of the fifty churches appointed in the reign of Queen Anne, to be built in London and its suburbs from the proceeds of the tax on coal and culm. There are, also, places of worship for Baptists Independents Wesleyan Methodists, E. Catholics, and Scotch Presbyterians. The educational institutions, public, private, and charitable, are numerous as are also the benevolent and charitable institutions among the latter may be named Norfolk college, supporting 20 clerical tradesmen.

The object of by far the greatest interest in Greenwich is its magnificent Hospital for the maintenance of retaken, wounded, or unfortunate seamen. This noble structure originally a palace of Charles II. and erected on the site of the ancient Greenwich House, which, so far back as the year 1800 had been a favourite residence of royalty—in which Henry VIII. and his queen daughter Mary and Elizabeth, were born; and where, too Edward VI. breathed his last—was converted to its present purpose in the reign of William and Mary, although not opened for the reception of inmates until 1705 when 42 were admitted. Commenced at the Restoration by Webb, son-in-law of Inigo Jones it was carried on under the superintendence of Sir Christopher Wren and finished after his designs by his successor Sir John Vanbrugh. It stands on the bank of the river on an elevated terrace 865 ft. in length, and covers with the schools, civil offices lawns, and burial ground situated, a space of 40 ac. It consists of four quadrangular piles built principally of Portland stone each bearing the name of the sovereign in whose reign it was erected—namely King Charles Queen Anne King William, and Queen Mary. Two of the wings from the river and two the park. In the N.W. wing or that erected by Charles II. are the governor's residence, and the offices and chaplains' lodges. The N.E. or Queen Anne's, is appropriated as a residence for the officers and men. In the S.W., or King William's, is the Painted Hall a noble apartment 108 ft. long by 56 ft. broad and 50 ft. high painted by Sir James Thornhill, and containing a fine collection of pictures, consisting of portraits of naval heroes and representations of sea fights. The fourth, or S.E. wing commonly called Queen Mary's contains the chapel the interior of which, designed by Athanasius Stuart, is richly and elaborately ornamented. The complement of in-pensioners, or of those who reside in the hospital is about 2710 each of whom besides clothing, food, &c. receives a shilling a week, as tobacco-money. To a section of them, averaging about 400, an allowance is given in place of rations; this, which varies with the price of provisions, is at present (1852) £15 4s. 8d. a-week. Though many of the pensioners attain a great age, the annual mortality among them is 12 per cent. There are, besides, numerous out-pensioners, who receive each about £11 or £12 a-year. The whole revenue of the hospital from property, freightage charged on treasure conveyed by H.M. ships, &c. amounted, in 1849 to £143,781 6s. 6d. expenditure the same year £145,937 18s. 2d. The establishment is managed by a governor lieutenant-governor two chaplains, and numerous other officers. The office of governor (now filled by Captain Cook) is generally held by some eminent naval commander. Connected with the hospital is the royal hospital-school for the children of decayed non-communical officers seamen and marines, and for the sons of commuted and ward-room warrant officers of which last there must always be 106 in the school. It numbers, in its two sections of upper and lower 800 pupils and is now the first nautical seminary in the world. It is conducted by a chaplain, a staff of 18 masters, 16 youths brought up in the school who are being educated as seamen's schoolmasters and navigation teachers in the outposts, a lieutenant and eight sergeants of machines. In the upper

school, which sends every year at least eight officers to the naval service of the country the education is carried as far as practical astronomy and the theory of navigation while the principles of engineering and practical navigation form the limit of the instruction in the lower. These boys are instructed also, in gymnastics and naval tactics, and remain in the school four years. The mortality per cent. is 0.52 yearly. There are extensive iron-works, and steam-engine factories, ropewalks, silk-weaving, gold-lace, and chemical factories, and two good pleasure fairs.

Greenwich Park, an open, uninclosed piece of ground behind the town, some 180 ac. is finely wooded, well stocked with deer and, having a diversified surface, its appearance, altogether is exceedingly picturesque. The celebrated Observatory of Greenwich stands upon an eminence in the park, 160 ft. above the river. It was erected by Charles II. for Flamsteed, the well-known astronomer. The work here performed is principally dedicated to one branch of astronomy—namely that depending on meridional observations, and the calculations connected with them. Latterly however meteorology and magnetic phenomena have occupied a considerable share of attention. The longitude of all British maps and charts, and also of those issued by the government of the United States of America, is computed from this observatory, which is 2° 0' 28" W (N) from the Observatory of Paris and 18° E (N) from the meridian of Ferro. The bar and two members to Parliament constituency (1851) 634 P 105,794.

and cap. lordship Grein or Reuss-Grein, belonging to the

elder branch of the Reuss family is a valley r. bank Elster

16 m. S. Gera. It is the residence of the prince, and seat

of several courts and public offices is walled, and for the

most part well built; contains a castle finely situated on a

height church theological and normal seminary and lyceum

and has several tanneries, dye-works, and bleachfields a

woolled, paper and other mills. Pop. 6615.—The Lou-

island is richly wooded, and is watered by the Elster (Golds-

and Weide. Area, 64 sq. m. Pop. 23,000.

GRENADE (former Grenada) a tu Denmark Jutland,

lat. of, and 32 m. E. by S. Randers, 1 bank Grenaue, about

1 m. above its mouth in the Kattegat. It has a church, and

at the mouth of the river a winter haven of the fifth class,

with 6 ft. water. The chief employment is agriculture. P.

above 1000

GRENADA [French Grenade] one of the British

Indian islands lat. (S. point) 11 59' N. lon. 61 46' W.

It is of an oblong form 24½ m long N. and S. and 1 m.

broad area, 80,000 ac. There are several bays and creeks

on both sides of the island, affording good and safe anchorages.

The principal of these are—St. George's Bay near the S.W.

part, Egmont Harbour on the S. coast and Grenville Bay

on the N. Grenada is one of the most beautiful of the W

India islands, rugged and picturesque in the interior, being

traversed, N to S, by an irregular mass of volcanic moun-

table, which attains elevations of 8000 and 8500 ft. above sea level, and from which hills of less height branch off in lateral directions. Between these lies valleys, which contain some alluvial tracts of great fertility. On the S.E. coast there is a considerable extent of low swampy ground, rendering this locality extremely unhealthy, particularly in autumn. In the centre of the island, about 1700 ft. above sea-level there is a circular lake, $2\frac{1}{2}$ m. circumference, inclosed by lofty mountains. Rivers and rivulets are extremely numerous, and most of the former capable of working sugar-mills. The climate is oppressively hot on the low lands, though greatly tempered by the sea-breezes but cool and pleasant on the hills. The island is not much subject to hurricanes—those only having occurred since 1850 and these were by no means so violent as those that visit the more northerly islands. July, August, September and October are more sultry and rainy than the other months. There are no venomous reptiles excepting a few scorpions and centipedes, and the bite of these is not dangerous. But, in the latter part of the last century an ant, most destructive to the sugar-cane (*Proctos neohemorrhoea*) appeared in the islands, doing this island as to put a stop, for a time, to the cultivation of that vegetable. They also destroyed many domestic quadrupeds, and even birds until at length annihilated by torments of rain accompanied by a dreadful hurricane. The soil varies but consists principally of a rich black or reddish-coloured mould well adapted to every tropical production. Cotton was formerly the chief article of cultivation but at present sugar, rum, and molasses stand first in the exports, which amounted in 1893 to £287,801 and the imports to £113,519 in the same year. 10,993 tons of shipping entered, 9104 tons from Great Britain.

The island is divided into six districts and like the other small islands has a lieutenant-governor and a local legislature consisting of a council, and a house of assembly of 12 elected members. The common statute law of the island is in force, unless particular laws of the island interfere. The revenue for 1893 was £18,307 and the expenditure £17,500. The Established church has seven clergymen, six chaplains and two chapels, the R. Catholics six, and various Dissenters have seven ministers. The capital is St. George Town (which see). Grenada was discovered by Columbus in his third voyage in 1498 at which time it was inhabited by Caribs who were subsequently exterminated by the French by whom the island was colonized about the middle of the 17th century and in whose possession it remained till 1762 when it was taken by the British. It was

reconquered by the French in 1779 and restored to Britain in 1783. Pop. in 1892 32,924. In the same year the island contained 21 schools, with 1091 male and 491 female scholars.

GRENADE, two places, France.—1 (*par Garonne*) [anc. *Granatol*] A m. dep. Haute-Garonne, in a fertile district, on the R.ave, a little above its junction with the Garonne, on the R. N. W. Toulouse. It is a brisk, with great regularity, and has manufactures of serge, and four annual fairs. 12700.—2 (*sur l'Adour*) A m. dep. Gers, dep. Landes, 9 m. S.E. of Saint-Martin, on the bank of the Adour. It has manufactures of woollen stuffs, saddles, harness, oil and leather and three annual fairs, at which great numbers of swine are sold. P. 1600.

GRENADES, a chain of small islands and rocks, West Indies, between the islands of Grenada and St. Vincent; lat. 12° 30' N. lon. 61° 30' W. The two principal islands, Carriacou and Beccrey, are inhabited, and produce coffee, indigo, cotton and sugar. The islands contain a few springs, but no rivers. Pop., altogether about 8000.

GRFNAGH par Ind. Cork 15,558 ac. Pop. 2660. **GRNHEEN** (French *Gronche*) a vil. and par. Switzerland, cant. of and 7 m. W. S. W. Solothurn, beautifully situated near the S. foot of the Jura, in a valley traversed by a rapid torrent. It is well built, contains a church finely seated on a height and one of the handsomest village churches of Switzerland, a large schoolhouse, with two schools, and has a trade in wine. In a beautiful valley in the vicinity is the bathing establishment of Bächthal. Pop. 1438.

GRENDON five pars. Eng.—1 Northampton 5190 ac. Pop. 558.—2 Warwick 2360 ac. Pop. 505.—3, (Shalvey) Hereford 1689 ac. Pop. 252.—4, (under-Wood) Beke, 5670 ac. Pop. 427.—5 (Warm) Hereford. Pop. 88.

GRENNELLE, or BRAY GREENWICH, a vil. France, dep. Seine l. bank Seine, here crossed by a suspension-bridge, about 3 m. S. W. Paris. It is situated on an extensive plain contains a handsome modern church and a theatre, and has manufactures of glue, starch, pumice, wax-tapers varnished leather wax-cloth chemical products, &c. In 1793, extensive powder-mills which had been established here blew up with a fearful explosion and killed many persons. An arched wall, sunk in the plain of Grenelle yielded no water till the depth of 1800 ft. was attained, when a copious stream burst forth and continues still to flow. Pop. 3038.

GRENNA, a tn. Sweden l. kn. of and 20 m. N. N. E. Jönköping, picturesquely situated at the foot of a mountain, on the S.E. shore of Lake Vättern. It consists chiefly of one street, the houses of which have rows of cherry-trees in front of them and contains a handsome church. Inhabitants chiefly employed in agriculture. Pop. 688.

GRFNOLLE (Latin *Calery*) a tn. France, cat. dep. Isère, agreeably situated in a fertile well-watered and well wooded basin surrounded by lofty mountains on the Isère, near its confluence with the Drac, 60 m. S. E. Lyons lat. 45° 11' 57" N. lon. 5° 43' 43" E. p. It was regularly fortified by Vercus but the heights which commanded it made it impossible of standing out against any enemy who should obtain possession of them. Considerable improvements, however have recently been commenced and by extending the works and reducing some of the more commanding heights within them, it is expected to make Grenoble one of the strongest places in the country. It consists of two parts separated by the river. The part on the right bank, occupying a narrow space terminated by the heights, consists of a single street, of considerable width, but lined, generally by irregular and mean houses, though great improvements have been made, by the construction of this quay, and this forma

GRENOBLE.—From Voyageur des Alpes et des Pyrénées.

sloze of a fine walk along them. A chain-bridge leads to the left bank where the other part of the town is situated. It contains several good squares, and the houses are of three or four stories, with flat, tiled roofs; but the streets, though well paved and regular are far too narrow. The whole town

is lighted with gas. The public buildings are few and not possessed of much merit. Among objects deserving of notice may be mentioned the cathedral, a heavy massive structure, partly ancient, partly modern; the public library of 60,000 volumes, the college, with museum attached, the bishop's palace, the courthouse, an interesting old building, originally the palace of the ducalpin, the bronze statue erected in one of the squares to the Chevalier Bayard, the theatre, and arsenal. One of the finest features in the town is the public garden which is both extensive and well laid out. The manufactures consist of leather gloves, which may be considered the staple, from goods, and fine figures. There are also numerous tanneries, especially for the preparation of tanned leather, and a great number of hands are employed in the carding of hemp, which bears a high name, and is largely exported. The trade includes, in addition to it and the other articles of manufacture, iron, marble, and timber, and there are four annual fairs, each of which lasts four days. Grasseim is the seat of a bishop, and seat of a royal court for departments Lahn, Drusus, and Hauns-Alpes, and of courts of first resort and commerce, and possesses a consulting chamber of manufactures, court academy, a royal college with courses of medicine, surgery and history, a gradations school of design and societies of agriculture, science, and art. Its foundation is of ancient date. It existed in the time of Caesar but never acquired much importance under the Romans though Gratian who had improved it, withdrew its ancient name of 1st Alano, and called it, after himself Gratianopolis. Its subsequent history possesses no interest. During the last European war it was twice occupied by the Allies. 1 op. 23 227

GRESFORD par Wales, Denbigh 13,059 ac. 1 4161
GRESHAM par Eng. Norfolk 1808 ac. Pop. 390
GRESHOLM a small vil. off the coast of S. Wales co. Pembrokeshire, between St. Brides Bay and Milford Haven 19 m W W. S. Ann's Head. It is lushly precipitous, and nearly circular and is generally the first land seen on approaching Milford from the W.

GRESIK, in Java. See GRISSEN
GLESNEP-HALL, par Eng. Norfolk, 2541 ac. P 1141
GREY (Latin, *Grassensis*) in France, dep. Nord. 1 bank Lahn, 16 m P. Chambery. It has an ancient and a modern parish church, the latter very handsome, an old castle, a trade in corn, hemp and vegetable, and an annual fair. Pop. 1496.

GREY-SAY-AIX a vil. and com. France, dep. Savoye prov. Savoie Proprie, 1 bank Rhone, 11 m N. Chambery. It has a parish church, a trade in corn and wine, and a large annual fair chiefly for horses, mules, and cattle. Near it are quarries of black and variegated marble. Pop. 1441.

GRETA two small rivers, England.—1 Co. York (N. Riding) rising in Rainton Forest, and after an E. course of 15 m. falling into the Tees, 7½ m. E. by St. Bernard Castle.—2, (see Greta) Co. Cumberland, an affluent of the Derwent, which runs near Threlkirk, and passes Keswick.

GRETA or GRATTITY par Scotland, co. Dumfries 18 sq. m. Pop. 1761 with vil. of Greta Green 22 m. F.S.E. Dumfries, a station on the Caledonian Railway. The village lies on the bank here crossed by a bridge, near its junction with the Solway Firth, and 9 m. N.W. Carlisle. Its proximity to England rendered it, for many years, a favourite place of resort for runaway fugitives from the sister kingdom, by parties who wished to be united more conveniently than was practicable according to the law of England.

GRETTON par Eng. Northampton 4450 ac. Pop. 964
GREUSSEN a m. Germany Schwarzwald-Gebirgsbauern, 1 bank Helbe, 10 m. S.E.E. Schwarzenau. It is walled, and tolerably well built, has a church and a town, manufactures of flannel and fringes, a spinning, and several other mills, tile-works, and three annual fairs. Pop. 3165.

GREVE—1 A m. and com. Tamesey prov. of, and 11 m. S.E. Florence, 1 bank Greve near the E. base of a lofty hill. It is an ancient but well-built place, contains a fine square, the houses of which are supported on arcades, and a parish church as the seat of a court of justice and several public offices, and has a much-frequented weekly market, and some transit trade. Pop. ca. 1057, com. 10,143.—2, A river Tamesey which rises in the W. slope of a hill called St. Albans, flows N.W. and, after a course of about 2½ m. joins 1. bank Arno, 5 m. below Florence.

GREVEN a m. Rhodok-Franco, gov. and 31 m. E. Münster 1 bank Rhine, with a R. Catholic church, school, industry, posthouse, and a considerable transit trade. Pop. 1130.

GREVENBICHT a vil. Holland prov. Limburg 13 m. N. by E. Maasricht, with an old chapel. Inhabitants engaged in agriculture, and in shipping on the Maas. Pop. 942.

GREVENBROICH a m. in Rhodok-Franco, gov. of, and 15 m. S.W. Düsseldorf esp. circle of same name, on the Rhine, with a R. Catholic church, a castle, and manufactures of woollen, linen and cotton goods, and a spinning-mill. Pop. 864.—The circle, area, 60,000 sq. m. is fat, well watered, and tolerably fertile. Pop. 64,102.

GREVENMÄCHER, a m. Holland prov. Friesland, and 15 m. E.N.E. Looz, near the Prussian frontier and at the foot of a vine-planted hill. It has a R. Catholic church, a respectable townhouse, and a school; three societies of playing cards, a trade in cattle, wine, and grain and six annual fairs. A third part of the town was destroyed by fire in 1820. Pop. 2500.

GHEVISM (HLEN) a m. Mecklenburg-Schwedt, circle of, and 16 m. N.W. Schwedt, esp. bail of same name, on the Glucka and Weidisch Lahn. It is entered by two canals, contains a triangular market-place, an ancient church, town house, and courthouse, and has four annual fairs. The poet Theobald Knechtge was born here. Pop. 7660. Area of bail 86 sq. m. Pop. 5647.

GREWELL, par Eng. Hants 860 ac. Pop. 297

GREY—1 An island co. W. Australia, about 66 m. E. to W. its limits N. not yet defined. In the E. parts are some extensive open lands. It contains a large and beautiful sheet of water called Lake W. Derwent.—2 [Cape] A headland, Australia, W. coast Gulf of Carpentaria, forming the S. side of Caladen Bay lat. 15 S.; lon. 139° 42' E. (s.); remarkable for the round hammock on its extremity.

GREY ABBEY a vil. and par Ireland co. Down, 6 m. S.W. of, 6 m. N.E. Newtonards, has a neat church, and some interesting remains of the once-celebrated abbey from which it derives its name. The weaving of muslin is carried on. Area of par 7689 ac. Pop. 3424.

GREY TOWN or SAN JUAN DE NICARAGUA, a resort in Central America, Mosquito Territory on the river San Juan lat. 19° 55' N. lon. 83° 44' W. (s.). It has a considerable trade in the export of hides, indigo, and specie, and though its population is at present small it is rapidly increasing and many new houses and stores are in course of erection. Its inhabitants consist of emigrants from England, the U. States, Germany, France, and Spain, besides the native Indians and thousands rising further on their way to California by the San Juan River and the Lake of Nicaragua. Two steamers from New York, and two from New Orleans, arrive monthly with passengers, while a Bremen ship occasionally fetches a load of German goods. The harbor is one of the finest on the coast of Central America, and was declared a free port on January 1 1851. The communication with the Pacific Ocean is through a healthy and eminently picturesque country and by aid of steamers on the rivers and on Lake Nicaragua, the transit has been accomplished in 36 hours.

GREYSTOKE, par Eng. Cumberland 46,960 ac. P. 8066.

GREZ-DORCHEN, a vil. and com. Belgium, prov. Brabant, 16 m. S.E. Brussels. It has manufactures of shirtings, paper-mills, limestone quarries, and bookbinds, and a large salmon garden in the district. Pop. 3569.

GRILAWETTE, a m. Russia, gov. of and 35 m. S.W. Volodga, esp. circle of same name, in an open ample district, on the Ikhovets. It has a church, and manufactures of hosiery and iron and copper ware, dye-works, and three important annual fairs. Pop. 1011.—The circle, manufacturing and tolerably fertile, produces corn equal to the consumption, and good crops of flax, hemp, and hops. Area, 2432 sq. m. Pop. 67,700.

GRISBACH—1 A watering-place, Baden, circle Middle Rhine 23 m. S. Baden, in the valley of the Rhine, about 1500 ft. above sea level. The water is alkaline, temperature of 50°, and the bathing establishment which is large, is much frequented.—2 A market in Lower Bavaria, 15 m. W. S.W. Passau, with two churches, a castle, and a trade in horses and corn. Pop. 740.

GRISSEIM a m. Hesse-Darmstadt, prov. Starkenburg, 6 m. from Darmstadt. It contains a Protestant demony

church, and has a trade in corn and seeds. Great quantities of paste are cut here. Pop. 2859

GRIESKIRCHEN, a tn. Upper Austria, pleasantly situated N of a hill near the Trautschbach 37 m. W.S.W. Linz. It consists of the town proper and two suburbs, and has a church, three chapels, and a school. Pop. 1660

GRIFTH, a tn. Rhineland Prussia, gov. Düsseldorf circle of, and 5 m. E. Cleves, on the Rhine. It contains a R. Catholic church, and has a trade in corn and cattle, and an annual fair. Pop. 598

GRIFTH LAUSEN, a tn. Rhineland Prussia, gov. Düsseldorf, on an arm of the Rhine 3 m. N.N.E. Cleves. It is well built, has several public offices a R. Catholic church and a trade in corn and cattle. Pop. 667

GRIFFEN'S COVE, a small inlet, Lower Canada, Gulf of St. Lawrence, N. coast of Gaspé dist. N.W. Capa Roiler **GRIFT** (Dz) a river Holland, prov. Gelderland, flowing N.E., and joining L. bank IJssel, 3 m. S. Hattum. By deepening and sluices it has been rendered navigable for small vessels.

GRIGAN one of the Ladrone or Mariana Is. N. Pacific Ocean lat. 18° 48' N. lon. 145° 40' E. [n.] It is about 8 m. wide, has the form of a dome height supposed to be about 3300 ft. shores almost perpendicular. There is only one small village on the island, S.W. side.

GRIGNANO a vil. Austrian Italy gov. Venice, 8 m. S.W. Rovigo. It has a parish church and a trade in silk, which is produced extensively in the neighbourhood. P. 1900

GRIGNANO a vil. and com. kingd. of Italy Piedmont, and 21 m. N.W. Novara, L. bank Sesia. It has a R. Catholic church and a trade in wine. Koala cattle are found in the vicinity. Pop. 1785

GRIGNO or GRUNO a vil. Austria, Tyrol, circle of, and 1 m. S.E. Trent, in the Brenta, in the Val di Sigeana. It has a parish church, and a ruined castle. Much milk is produced in the district. Pop. 818.

GRIGORIOPOL a tn. Russia, gov. Kherson 1 bank Dnieper, 80 m. N.W. Odessa. It is regularly built: has two churches, manufactures of morocco leather and is inhabited chiefly by Armenians who have received large grants of the land of the surrounding district, yet neglect its cultivation and occupy themselves with trade. Pop. 3500

GRILJO, a tn. and par. Portugal prov. Douro, 14 m. S.S.E. Oporto. Pop. 2111

GRILJOTA a tn. Spain, Leon prov. of, and 4 m. N.W. Palencia, in a beautiful and well wooded district, on the canal of Campos, which encloses it on the N.W. and S. It is tolerably well built, has a parish church, townhouse, wit prison attached a primary school numerous flour-mills, and a trade in flour and grain. Pop. 1170

GRIPSKIRK a vil. Holland prov. of, and 9 m. W.N.W. Groningen. It consists of a single, broad, closely-built street has a Calvinistic church and a good transit trade to Friesland. Pop. 611

GRIM (Cape) the N.W. extremity of Van Diemen's Land, and the S. boundary of the W. entrance to Bass Strait lat. 40° 45' S. lon. 144° 45' E. a low steep, black head rising above two contiguous rocks of similar aspect, and forming the S. of Hunter Islands

GRIMALDI, a vil. and com. Naples, prov. Calabria circle of, and 6 m. S.W. Cosenza. It contains two churches and a school. Pop. 2719

GRIMAUD (Gulf of), an inlet of the Mediterranean S. coast of France, dep. Var called also the Gulf of St. Pierre. It is named from the small town and castle of Grimaud on its shore, 15 m. S.E. Draguignan. Here Napoleon embarked for Elba in 1814.

GRIMBERGHEN a vil. and com. Belgium prov. Brabant, 3 m. N.W. Brussels, on an affluent of the Senne. It has several mills. The inhabitants are chiefly employed in agriculture and rearing cattle. Pop. 3844

GRIMLEY see GORE, Worcester 2459 m. Pop. 762

GRIMLINGHAUSEN a vil. Rhineland Prussia, gov. of, and 4 m. S. Düsseldorf with a R. Catholic church, and several distilleries. Pop. 880

GRIMMA, a tn. Saxony, circle of, and 17 m. E.S.E. Leipzig, near hall of same name, in a deep valley 1 bank Mulde, here crossed by a long and massive bridge. It is surrounded by walls with five gates, and consists generally

Vol. I

of spacious streets, lined with wall-built houses. It contains five churches, the principal one a long and narrow structure without towers, in a kind of basket Gothic, with some tolerable sculptures a normal, and four other schools, one of them called the Landes or Pflanzenschule, with a library and some good collections and an old castle, once strongly fortified. It has manufactures of woollen and linen cloth, calico, flax and starch, and tobacco pipes a blacklead, two printworks, several dye-works and mills, a trade in wine, fruit, and cattle, and three annual fairs. Pop. 5034. Area of halt, 129 geo. sq m. Pop. 35 877

GRIMMAR, or GRIMMAR a tn. Prussia, prov. Pomerania, gov. of, and 15 m. S. by W. Stralsund, cap. circle of same name, on a kind of peninsula, on the Trebel. It contains a church and a castle. Pop. in 1864 circle, 22,384.

GRIMOLDREY par. Eng. Lincoln 1793 m. Pop. 300 **GRIMSEY** (GEMAR) a part. bor. market to aid support, England, co. of, and 80 m. N.E. Lincoln, the E. terminus of the Lincolnshire and of the Manchester Sheffield and Lincoln

Railways on a plain, S. shore, and near the mouth of the estuary of the Humber. The principal streets extend along the W. side of the old haven or dock which is well built, simply supplied with water and gas but are indifferently drained. The houses are of brick, and mostly tiled but across the opening of the railways by which slate are brought the latter are now preferred for covering. The church is an ancient, spacious stone building of light and elegant appearance.

The other places of worship are one Wesleyan one Primitive Methodist and one Baptist chapel. There are a grammar preparatory and girls school, the last for the gratuitous education of freemen's children a mechanics institute, and some benefit societies. The new dock works comprise an area of about 150 ac. of land reclaimed from the sea the dock itself having a water area of upwards of 2 ac. including a timber-pond. The works are now completed and the dock was opened on March 23, 1852 with entrance from the Humber by two spacious locks the larger being 70 ft. wide, 200 long between gates, and capable of admitting the largest war-ships average depth on all at half tide, 16 to 17 ft. at three-quarters 20 to 22 ft. Cais are maintained and there are flour and saw mills.

The principal trade is in timber, coal, and salt. In the vicinity of the town are some remarkable natural springs, called blow wells, consisting of deep, wide circular pits in some of which the water rises to the surface only while in others they overflow copiously. Great Grimby returns a member to the House of Commons registered electors (1851) 624. Area of par. 2748 ac. P. 8860.

GRIMSEI, a mountain Switzerland Bernese Alps, of which it is one of the prize peaks situated on the front of Bern and Valais, about 15 m. W. of Mount Gothard not far from the source of the Rhine, composed chiefly of granite. A pass across it leads from Oberland in Bern, to Obergrünthal in Valais. The summit of the pass is 9400 ft. (see ALPS, p. 104) and nearly 1000 ft. below in a rocky hollow one of the dreariest spots imaginable, is a hospice, converted into a regular inn with about 40 beds, all of which, during the summer months, are usually occupied. Below the hospice is a black tarn or lake, which never freezes, heatless supplied by a warm spring. In 1799 a corps of Austrians encamped on the Grimsel and could not be dislodged still, by the treachery of a peasant, a path, leading to a commanding position in their rear was shown to the French. The whole corps perished by the sword, or in the chains of the rocks, where bones, weapons, and tattered clothes are still seen. To the W. of the hospice, the Aar has its sources in two enormous glaciers called the Ober and the Unter Aar Gletscher. In the centre of the latter rises the lofty Flunster-Ahorn and near the Schreckhorn also is conspicuous.

GRIMSTAD or GRIMSTAD a seaport, Norway on the Skagerrak, lat. 60° 50' N. lon. 18° 15' E. Christianized, 11 m. S.W. Arendal. It has a church two schools, and a sailing-bank carries on ship-building, 10 to 15 of the larger class being built annually. About 6000 tons of shipping are engaged in the foreign trade—the principal exports consisting of iron and wood. Pop. (1845) 719 — (Kraft's Handb.)

GRIMSTEAD (Wm) par. Eng. Wilt 1463 m. P. 367 **GRIMSTONE** three par. Eng. — 1, Leicester 930 m. Pop. 183 — 2, Norfolk; 4240 m. Pop. 1242 — 3, (York) York (R. Riding) 1850 m. Pop. 167

GRINDELWALD, a vil. and par. Switzerland, can. of, and 66 m. S.E. Bern, in a valley of the same name, 2356 ft. above the sea, and in the vicinity of some of the most magnificent scenery. It consists of a large number of picturesque wooden cottages, scattered over the valley, the S. side of which is formed by three lofty mountains, the Elger (plain) Mettenberg (middle mountain), and Wetterhorn (weather or towered horn). Between these mountains, and on either side the Wetterhorn (the nearest mountain seen in the accompanying illustration), the Wetterhorn being the most distant, two immense glaciers, forming part of the great field

are built with raw brick, plastered with clay and cow-dung. Lime enters largely into the composition of the clay used, consequently the brick will not stand when burnt, but in the raw state it endures the weather well. The Grisons are a tribe of recent origin, descended from the Helvetians by Dutch fathers, inhabiting an undefined tract N. of the Oronce river about lat. 23° 51' lon. 24° E. They are indolent, apathetic, and content with little, but have made considerable progress in civilization and improvement. They are regular in their attendance at religious worship, and are distinguished by taste and skill in vocal music.

GRIS-NEZ (Gars) [anc. *Juncus promontorium*] a headland France, dep. Pas-de-Calais, being the nearest point of the French shore to that of Scheldt (S. Flanders). It has a revolving light, 195 ft. high; lat. 50° 52' 12" N. lon. 1° 35' 15" E. (n.)

GRISIGNANA a market in Austria, Myra, 34 m. S. Trieste, 1 bank Quatro. It stands in a district covered with vineyards, and contains a parish church. Pop. 1870.

GRISLEHAMN a small seaport, Sweden, 44 m. S. and 60 m. N. E. Stockholm, opposite to the island of Åland, to which there is here a regular ferry. The telegraph, communicating with Åland and Stockholm, has a station at Grislehamn.

GRISOLIA, a vil. Naples, prov. Calabria Citra, 28 m. N. W. Pae. Pop. 3000.

GRISOLLES a tn. France, Tarn-et-Garonne, 17 m. S.E. of Barrois, near the Garonne, on the site of an old Roman road. It has a small church of the 14th century and a saw-mill of entirely in the environs are several ancient farms. Pop. 1755.

GRISONS (Garmen, Grödenland or Bünden) the largest can. of Switzerland bounded N. by can. Glarus, St. Gall principally of Liechtenstein, and the Tyrol & the Tyrol & E. Lombardy & Lombardy and can. Tessin and W. can. Uri greatest length, E. to W. 50 m. greatest breadth, 50 m.; area, 2532 sq. m. Its limits are determined almost throughout by lofty mountain ranges, and a great part of the interior particularly toward the E. is covered by their ramifications, and reaching more than 90 peaks above 10000 ft. The valleys which lie between the ranges are generally narrow though in a few instances they attain a considerable breadth, as those of the upper and lower Rhodane. Only a small portion of the E. and S.E. of the canton belongs to the S. side of the great watershed of Europe and is delimited solely by the Inn, and by small affluents of the Adige and Adige. The boundary of this portion is determined, on the W. by a continuous mountain range, which runs from the S. a little E. of the Splügen, and stretches across the canton in a N. E. direction to the Tyrol. The rest of the Grisons W. of this range, amounting to at least two-thirds of the whole, belongs to the basin of the Rhine, whose head streams, the Vorder and the Hinter Rhine, which originate, with their affluents the Glarner, Albula, Pless, Langensart, &c. are the principal water-courses of the nation.

The lakes also are numerous, and many of them present scenery of the most magnificent description, but individually they are of limited extent. The most deserving of notice are those of the Sils, Silvaplana, St. Moritz, and Puschlav. The climate is much more diversified than is usual even in the Alpine districts of Switzerland. Often, after travelling for days over bleak and elevated tracts, where perpetual winter seems to reign, the traveller suddenly arrives at some deep valley where the air is not only mild, but may almost be said to be Italian. In the latter districts, situated at the height of nearly 6000 ft., the snow lasts to the end of May and in some years continues late into July, while in the lower valleys, situated on the S. slopes, the snow of the plough commences in the middle of February or beginning of March. In general, however, the plough has a very limited range, and the whole

THE GLACIERS OF GRINDELWALD.—From Hermann's Sketches in Switzerland

of ice which occupies a large portion of the highlands of the Bernese Alps, runs out and descends to the bottom of the valley below the level, and within a stone-throw of the village. In extent the Grindelwald glaciers are inferior only to the Mer-de-Glace of Chamouni; while in beauty they yield to none, being fringed by green pastures, and a graceful border of forest trees. The inhabitants are all employed in rearing cattle and making dairy produce. Pop. 2550.

GRINSTEAD.—1 (East), A market in and par. Eng. land, co. Essex. The town 36 m. S. London, on an embankment on the road to Brighton is a regularly built, but contains many good houses, and a handsome church, with a finely proportioned tower. Two chapels for Dissenters, a fine quadrangular building, called Sea-view College founded in 1816, by Rev. John Duke of Devon, for 24 aged persons, of both sexes, and a free grammar school. Market on Thursday and several fairs annually. Area of par. 15,071 m. Pop. 8350.—2 (West) A par. England, co. Essex 6656 ac. Pop. 1252

GRINTON, par. Eng. York (N. Riding) 49,961 ac. Pop. 3224

GRION a vil. and par. Switzerland, can. 1 and, on a height above the Grisons, 3900 ft. above the sea, 97 m. S.E. of Le Locle. There is much fine scenery in the district, and in the vicinity is a remarkable rock, bearing a considerable resemblance to the human form, and known by the name of La Pierre du Sauvage. It forms the subject of a romance by Bridel. Pop. 498.

GRIGUA or KLAARWATER, a tn. S. Africa, Griqua country N. from the Gariep or Orange river about 510 m. N. E. Cape Town lat. 28° 50' S. lon. 24° 30' E., on the edge of an extensive basaltic plain, and at the foot of a range of low hills of siliceous nature, producing yellow ochre. It contains the homes of the missionaries and teachers, with schools a chapel and other buildings. Many of the houses

in voluntary pastoral, feeding large numbers of cattle and sheep, and producing much of the cattle dairy produce. In some of the lower districts not only cattle, but oxen are grown. Horses and mares, too, are cultivated to some extent; and, though fags and almost stunted maturity only on part of the Italian side of the mountains, cherries, apples, and chestnuts abound in many quarters. In a few spots a little indifferent wheat is produced. On the mountains, particularly in the N., are dense forests, of pine and birch. The mountain on the E. side of the canton is chiefly composed of argillaceous limestone, and in some places in the S. and near the source chiefly of primitive rocks. Minerals of value, particularly iron, occur in extensive seams, but are not worked. Considerable quantities of gold have been gathered at different times and in 1818 about 190 gold pieces were counted with the arms of the canton while plough of excellent quality fit for stannary might be obtained. The canton is not a great exporter of any consequence, but a considerable transit trade in exports between Italy and Germany. The principal exports are cattle and wool. The constitution is very democratical; the legislative power being lodged in a council elected by a universal suffrage, which includes all citizens who have attained the age of 17. The election is the 15th in the constitution (*sup. Coire*) and is divided into three principal parts, the *Landsgemeinde* (the *Gottesacker-Bund* subdivided into seven districts and the *Zehnerheute Bund*, subdivided into eleven districts. Both the *Colvisiano* and the *R. Catholice*

GRISTON per Eng Norfolk 1940 ac Pop. 208
GRITA (L) a v Venezuela, on river of same name,

 on a height between two lakes, and partly on three small
 islands. It contains a Greek parish church and a synagogue,
 and is inhabited chiefly by German colonists, though a par-
 ticular quarter is allotted to the Jews, by whom a trade in
 flax is carried on. Pop. 3780. — 2 A market tn. circle of
 and 30 m. S.E. Czortkow at the confluence of the Seret
 with the Dniester. It contains a Russian church. P. 2800.

Waldmüller: Waldmüller's Alpine cornish $\text{E} = 8900$ m. The highest peaks are the Ebnau and the Knaus. The valleys of the Tyrol curls between about 15 m. E. Klaus. It stretches W. to E. about 13 m. and is hemmed in by mountains of dolomite which do not occur in any other part of the Alps and assume the most fantastic forms sometimes rising steeply starting up in promontories and needles like obelisks, and at others extending in serrated ridges, or opening into channelling toothed like the jaws of an alligator. Many well built villages are scattered over the valley occupied by about 3500 inhabitants, most of whom are employed in making the animal husbandry of the mountainous districts. All the products of maner age from the principal towns of Europe. The trade in them has been going steadily since 600 years ago.

[illegible]

ling and Narve. The climate is extremely rigorous in winter, and the snow is often deep and heavy. Horses, cattle, and sheep are raised in considerable numbers. The minerals, of which there are few examples of iron, limestone building stone, clay and saltpetre. The manufactures, not very extensive, consist chiefly of woollen stuffs, hats, and leather. The principal articles of exportation are grain cattle, wool, leather, hops honey and wax, sent chiefly to Memel Riga, and Koenigsberg. The inhabitants of the N. parts are of Lithuanian descent: the greater portion of the remainder are Esmanians, with about 74,000 Jews some Tartars, and German colonies. The prevailing religions are the Roman Catholic and Lutheran. Galesk and the R. of the Vistula is divided into eight dioceses. Principal towns, Grodno, the capital. Novogrodek, and Bismarck. Pop. 1,050,000. 925,000.

EIN WORT ZU DEN VERWANDTEN

GROEDE, a decayed vil Holland prov Zealand, 10 m. S.S.W. Middelburg. It has an old Calvinistic church, a small dissenting chapel, an Evangelical Lutheran and a R. Catholic church, and two schools. Limited manufacture of beer, and four corn-mills. Pop. 2469.

GROENVEDT, a vil Holland prov Zealand, 16 m. S.E. Goo, with a R. Catholic church. Pop. agricultural, 572.

GROENIA, shortened to *Grol* or *Grolle* (Latin, *Groen*) a m. Holland prov Gelderland, 19 m. S.E. N. Zutphen. It was formerly fortified, and a deep, broad ditch still surrounds it. It has a respectable townhouse standing in the marketplace, a Calvinistic and a R. Catholic church, and a synagogue. A Latin and a town school, and formerly there were two convents. Some cotton spinning and weaving are carried on, but the principal trade is in eggs, which is very extensive. There are six annual well-frequented cattle fairs. Pop. 1850.

GROENBEEK, a vil Holland prov Gelderland 6 m. S.E. Nijmegen, in a beautiful and elevated situation rendering the land in the immediate vicinity difficult to cultivate from want of water in dry seasons. It has a Calvinistic and a R. Catholic Church and a school. Pop. 758.

GROENDE, a m. Hanover prov Lauenburg cap. bail. of same name, 1 hank Weser over which there is here a ferry 7 m. S.E. Hameln. It contains a castle and has a custom-house and building-dock. A battle was fought here in 1421. A monument marks the spot. Pop. in., 835 bail. 6566.

GROIST a vil, near Fontenay, dep Haute Savoie, 7 m. from Annecy. It has a parish church an old castle, once the property of St. Francis de Sales a trade in corn and fat cattle, and three annual fairs. Pop. 1257.

GROIX **GROIX** or **GROIX**, an isl France, dep. Morbihan, about 3 m. off the coast, 87 m. W. Vannes. Lat. (light, which is 155 ft. high) 47° 55' 54" N. lon. 2° 59' 30" W. (s.) It is about 4 m. long, by 14 broad, rocky and mountainous, but with some fertile spots, on which wheat and lentils are grown. The population is mostly seafaring, and their chief occupation is fishing. Pop. 51,3.

GROMITZ, a small seaport, Denmark, Holsten, bail. of same on the shores of the Baltic, 24 m. N.E. Lubeck. It has a parish church, situated on a considerable height, and some coasting trade, but the inhabitants live chiefly by fishing and agriculture. Pop. 1000.

GROMA, a vil and com Italy Lombardy prov of, and 20 m. N.E. Bergamo on an isolated height above 1 hank Berio, in the Val Seriana. It contains a parish church, and the remains of two strong castles, which figure in the early history of Italy and has steel works, and manufacture of cutlery. The sword-blades of Groma once competed with the best of those of Spain, but the manufacture has been extinct for more than a century. Pop. 769.

GRONAU—1 A m. Hanover prov Hildesheim cap. bail. of same name on a small mt. of the Leine opposite to the confluence of the Dep, 20 m. K. Hanover. It contains a Protestant and a R. Catholic church, a synagogue, and old Dominican monastery now used as a prison. Pop. 1919. Area of bail. 40 gen. ac. Pop. 2842.—2 A m. Rhineish Prussia, gov. of and 29 m. N.W. Münster r. bank Rhine with a Protestant and a R. Catholic church, manufactures of linen a trade in cattle and horses, and two annual fairs. Pop. 993.

GROENVELD, a vil Holland, prov Limburg, 5 m. S.E. Maastricht, with a church and school, and an annual fair. Pop. 607.

GRONE, a m. Hanover prov Hildesheim, on a small stream of same name, at its confluence with the Leine, near Göttingen. It contains a parish church, and an old castle, formerly an imperial palace. Pop. 936.

GRONE, a river France, formed in the S. of dep. Seine-et-Lore by the union of two torrents which descend from the mountains of Banjoie. It flows westerly N. E., through a mountainous district, and joins r. bank Seine, about 5 m. below Chateau, after a course of about 40 m. A great number of paper-mills have been erected on its banks.

GROENBACH a market m. Hesse, circle Swabia, on the Aach 46 m. S.W. Augsburg. It has a Protestant and a R. Catholic church, a chapel, castle and hospital near

manufactures of flannel and calico, tile-works, an oil and other mills. The Kleverer baths are in the vicinity. Pop. 1712.

GRONINGEN the most N. E. prov of Holland; bounded, N. and N. E. by the North Sea and the estuary of the Ems, E. by Hanover, S. and S. W. by prov Drenthe, and W. by Friesland; extensive length, N. W. to S. E. about 50 m.; extreme breadth, in its N. part, S. W. to N. E. 84 m. area, 683 gen. ac. m. It is generally flat, and in some parts marshy; and is watered by the Emsa and the Aa, which enter it from Drenthe, and unite at the town of Groningen, and by other small streams, flowing to the Dollart, the Ems, and the North Sea; and it has numerous canals, among which are the Damsdierp, Hoensdorp, Boterdiep, &c. The soil is, in general, of clay and is very fertile so much so that the N. parts, where meadow and arable land alternate, are among the most densely populated in the kingdom. In the S. W. parts, considerable tracts have been cleared of turf and now are excellent arable and meadow lands. The horses of Groningen are of the Frisian race, and are somewhat sought after outside are extensively reared, and exported to the other provinces; and sheep and pigs are bred in considerable numbers. The principal crops are cereals and flaxseed, and the usual cereals and legumes, and potatoes various kinds of fruit are likewise successfully grown. The principal trade of the province is in horses, cattle, sheep, wool, pigs, pork, honey, wax, seeds, &c. Butter is imported from the Dutch islands, and mixed with Groningen butter and afterwards sent, by Brevoort, to Friesland. There are several extensive ship-building yards, and there are also distilleries of various kinds, tanneries, and saw oil falling and other mills manufactures of white linen &c. The inhabitants nearly all belong to the Calvinistic church. In 1849 there were 200 public schools in the province, attended by 22 216 pupils. Pop. (1850) 188,806.

GRONINGEN (Latin, *Gronovum* French *Gronde*) in Holland, cap. above prov., 92 m. N.E. Amsterdam, the junction of the Aa with the Houte, flowing here in a meandering, which is navigable for tolerably large vessels, and enables the town to carry on a direct maritime trade with various parts of Europe other canals communicate with Leeuwarden, Delfzijl, Wamchoten &c. It is pear-shaped, the broad end being E. and consists of the old town, within the lines of the former walls, now planted with trees and the new town, which forms extensive and well built suburbs. It has eight gates, a wall and regularly but not closely built; the town being bounded with numerous gardens and open spaces. It has straight, broad streets, traversed as usual by canals, whose banks are planted with trees, and which are crossed by elegant bridges. Nineteen of the seventy streets of which the town is composed, terminate in the two principal markets—the Great Market, called also *Breedmarkt* and the Fish-market, which lie close to each other and the former of which laid off in 1447 is the largest in the kingdom. Besides these markets the *Ossenmarkt* [Oxen market] is also very large and is surrounded by well-built houses; among which are conspicuous the academy printing-office and the deaf and dumb institution, of whose founder—Hend Daniel Groot, a French clergyman—it contains a noble statue, erected in 1829. The most important public building is the college in the townhall (Stadhuys) in the Brede-market, a large Gothic edifice, completed in 1610. The province-house (provincie-huis) used for the meetings of the provincial assembly, is a very old building besides which the stemp-house, courts of justice, civil and military prison, arsenal, work-house, butter-house, and corn exchange are all noteworthy of their kind. The Calvinists have five churches of which St. Martin's, a Gothic structure, with elegant lofty tower, is the finest in the town. There are also French, Baptist, Evangelical Lutheran, and R. Catholic churches, and a synagogue; and, prior to the Reformation, there were several monasteries and nunneries. The charitable and benevolent institutions are exceedingly numerous, and include the deaf and dumb institution, already alluded to, and founded in 1760; town and military hospital, and a large number of hospitals for the poor and for orphans, both under the local authorities, and under the different religious bodies. The principal educational institutions is the academy or high school, founded in 1614, and in 1849 attended by 216 students, of whom 109 were studying law 65 divinity, and 45 medicine connected with it are a botanical and an anatomical garden, school of anatomy,

hospital library museum of natural history earliest of agricultural implements and riding school. There are also a Latin school, an academy of art, architecture, mechanics, and naval tactics two towns, two more and numerous common schools and societies of natural history and of art. The manufactures of Groningen include wool-combing blue dyeing, small-shot founding, flax spinning and weaving tanning, brush, hat, rope, and cord making, printing, brewing, wine, gun-making, comp-bolling etc. Besides which, there are six ship-building yards, and all falling saw and other mills, in considerable numbers, driven both by wind and by steam. The grain trade is extensive; in some years Groningen being the greatest corn market in the kingdom. About 600 vessels arrive and leave the port annually. Pop. (1850) 33,683.

GROINGEVY a vil. in Prussia, prov. Silesia gov. of, and 90 m. S.E. Magdeburg on the Elbe. It is entered by three gates has two Protestant parish churches, two schools, a synagogue and hospital manufactures of paper two distilleries, numerous breweries, and two annual fairs. Pop. 2364.

GROINGUND a channel Denmark, separating the island of Falster on the E. from that of Moen, on the W. and giving a communication between the Baltic and the Great Belt. Its length is about 6 m., and its average breadth little more than 1 m. Two sandbanks at its E. end divide it into three channels, which, in their shallowest places will not float vessels drawing more than 12 ft. Owing to the strong current which runs through the Groingund, it very seldom freezes.

GROINGSPORT a fishing vil. and boat-guard station, Groningen, Down, at the S. side of the entrance to Helfort Bay, 10 m. N.W. Donaghadee. It has a good harbor for small craft and a small pier where the Duke of Schomberg landed with his army in 1690. Pop. 568.

GROINGE ET LA VIE (Great Island) anal. N. Ausier, a vil. of Carpentras, lat. (Central Hill) 18° 57' S. lon. 4° 45' E. (N.). Greatest length, N. to S. 45 m. average breadth, 25 to 30 m. It is of irregular form, its N. end terminating in three distinct peninsulas, while other two project E. and W. respectively from its S. extremity the latter terminating in a high rock, the former in a sandy hill. The coast at this end of the island is lined with sandy sterile hills. At many other points particularly N. and E. it is beset with craggy and rocky islands.

GROINGEBOEK a vil. Holland, prov. N. Holland 3 m. W. Enkhuizen. It has a Calvinistic and a E. Catholic church, an orphan hospital and a school. Inhabitants chiefly engaged in cheese and butter making. Pop. 1046.

GROINGEAST a vil. Holland, prov. of, and 12 m. W. Groningen. It is a scattered place, but shaded with trees, and agreeable, and has a Calvinistic church a school and an annual fair. Pop. 765.

GROINGELLO a vil. and com. Italy Piedmont, div. Novara, about 8 m. from Mortara, with two churches and an almshouse and a trade in corn, wine and silk. P. 2672.

GROINGELAND a vil. France dep. Moselle near Sarreguemines, with manufactures of cigar cases places and from furniture. Pop. 2124.

GROINGIO a vil. and com. Italy Lombardy in the Val Sesia, prov. of, and 30 m. E.N.E. Sondrio l. bank Adda, crossed by a bridge. It stands in a narrow hollow in a mountainous country, and contains a parish and an auxiliary church and has numerous mills and an annual fair. Pop. 2127.

GROINGMONT a vil. and par. England co. Monmouth The Glamorg. 10 m. N. by W. Monmouth, consists of some scattered cottages, but was formerly a town of great importance. It contains a fine transept church and the remains of an old castle. Fairs are held several times annually. Area of par. 6833 ac. Pop. 684.

GROINGOTTO or **GROINGOTTO**, a vil. and com. Italy Lombardy in the Val Sesia, prov. Sondrio l. bank Adda, about 3 m. below Groate and 6 m. N.N.E. Tirano. It has a parish and four auxiliary churches, and an annual fair. A wholesale market of 600 Italian Protestants was perpetrated here in 1680. Pop. 1651.

GROINGOUPA a vil. Bohemia, circle and 54 m. N.E. by W. Kladsko, in a mountainous district on the river in a deep valley of its own name. It has a parish church a school, four mills, and a limestone quarry. Near it are mines of copper and arsenic. Pop. 2446.

GROINGHEIM, a market in Hesse-Darmstadt, prov. Starkenburg circle Dieburg, with a Protestant parish church parsonage, and townships tile-works, two mills, and four annual fairs. Pop. 1493.

GROINGHREVEN, a m. in Maravia, circle and 18 m. W. N.W. Berlin. It is walled, has a parish church, a court-house, an hospital and six annual fairs. Pop. 3200.

GROINGHROCK, a peak North Alps. See ALPS, p. 102.

GROINGROTZWAR, a m. in Wurtemberg, circle Neckar bail. of and 5 m. from Marbach in the valley of the Bottwar. It contains a church and a Latin school. Pop. 2481.

GROINGISLE, an isl. U. States, Michigan, in Detroit river near its embouchure in Lake Erie. Length 6 m. breadth 1½ m. The soil is alluvial and remarkably fertile.

GROUVE two par. England.—1. Bucks 210 ac. P. 88.—2. Herts 1797 ac. Pop. 92.

GRUB two places, Switzerland.—1. A vil and par. com. of, and 10 m. N. E. Appenzel in a level and fertile valley with a parish church and parsonage, finely situated on a height, and has manufactures of linen. Pop. 934.—2. A vil and par., near St. Gallen, but near the former the two parishes forming the frontier of the two cantons. Pop. 606.

GRUBER a vil. duchy of Holstein, bail. Countess on the S. shore of the lake of same name, 83 m. N.E. Lübeck. It was once a place of more importance than at present, and had a castle, in which Count Gerard of Holstein resided. It contains a parish church and an hospital. Pop. 00.—The lake of Grube is about 4 m. long and varies much in breadth. It is very shallow and contains several small islands. It discharges itself into the Baltic by two outlets.

GRUBENHAGEN a principality Hanover landroter Hildesheim. It consists of three distinct parts—one on the W. enclosed between principality Göttingen, and the duchy of Brunswick another in the E. enclosed between the same duchy and Prussia a third and the third and largest, bounded N. by territory Kassel and Brunswick, E. Brunswick and Prussia Saxony S. Prussia Saxony and W. Göttingen area of the whole about 378 sq. m. The surface is generally mountainous. In particular the second and third parts are covered by the Harz mountains, which have here, in the Achtermann one of their loftiest summits. The first, or

several considerable lakes are embraced among the extensive forests of the Harz. In one or two valleys, open to the E., and protected by lofty hills from the northern blasts, hops and tobacco are extensively grown, and in some other districts apples and cherries are so abundant as to be exported. Still on the whole, the quantity of good arable land is small and the quantity of corn grown is very limited. The minerals are valuable, and the working of them, and the cutting of timber in the forest, are the great sources of employment. Among the metals are gold silver copper lead, tin, and iron, and the quarries furnish in abundance, marble, alabaster and roofing slate. The principal manufactures are woollens, linens, and lace and, in addition to these articles, and the produce of the mines and forests, a considerable trade is carried on in cattle and dairy produce. The capital is Einbeck. Pop. 77,008.

GRUDEK, or **GRUDEK** a tn. Russia, gov. Polesia circle and 84 m. N. W. Kowno, on the Smocina. Pop. 3172. **GRUGLIANCO** a vil. and com. kingd. of Italy Piedmont div. and 5 m. W. Turin. It contains a number of beautiful villas, adorned with gardens, irrigated by a canal from the Dora Riparia a handsome parish church with some fine paintings a monastery with a church an old square tower and an hospital and has a trade in excellent silk produced within the district. Gruglianco was once strongly walled, and was considered as a kind of outer defence of Turin. Pop. 2074.

GRUBISAN a vil. France, dep. Aude, 6 m. S.E. Narbonne, on a small lake, about a mile from the sea-shore with some cottages and fishing trade. Pop. 2510.

GRULICH a tn. Bohemia, circle of and 41 m. E.S.E. Königgrätz, on an elevated plain not far from the Schönbach in which the March has its source. It has a parish church, a courthouse, manufactures of woollen cloth, two mills, a weekly market, and four annual fairs. On the Muttitzberg in the vicinity there is a Servite monastery with a church, to which numerous pilgrimages are made. P. 3898.

GRUMBACH numerous places, Germany particularly—1. (Ober- und Nieder) a vil. Saxony circle Dresden, bail. Gröbischau. It has ironworks, and several stone quarries. Pop. 1462.—2. A vil. Rhineland Prussia, gov. Treves, bail. Wenden, on the Graa. It is the seat of a local court, and contains a Protestant and a R. Catholic church. In the vicinity are mines of iron copper and quartz silver. P. 587.

GRUMFELD-DEL-MORRA a vil. and com. Italy Lucania prov. of and 12 m. S.E. Bergamo on the S. slope of a hill covered with vineyards. It consists of a number of well-built, but somewhat scattered houses contains a large and handsome parish church, an hospital, and two old castles, and is famous for its wine. Pop. 1660.

GRUMO two tns. Naples.—1. Prov. of and 6 m. N. Naples with a church and two convents. Pop. 3000.—2. Prov. of and 12 m. S.W. Bari. Pop. 1186.

GRUNA a vil. Saxony circle Zwilckau bail. Chemnitz. It contains several well-built houses, roofed with slates, and provided with lightning conductors, and a handsome turreted school-house, and has manufactures of silk and cotton hosiery, several large blacksmiths, quarries, saw and other mills. Pop. 2240.

GRUNAU-CAMPER, a vil. Prussia, prov. Silesia, gov. Breslau, circle Frankenstein, 7 bank Fouchsburg. It is a large and handsome church, built in the form of a cross, several mills, and a trade in corn and cattle. Pop. 966.

GRUNBACH a vil. Württemberg, circle Jura, on the Rems, 50 m. S.W. Ellwangen. It contains a parish church. Much wine is grown in the district. Pop. 1898.

GRUNBERG a tn. Hesse-Darmstadt, prov. Oberhessen, cap. circle of same name, 85 m. N.N.E. Frankfurt. It is walled, has two suburbs, an old castle, church, an hospital, and manufactures of woollen goods a nursery the works, dyeworks, a trade in cattle and wool mills, and six annual fairs. Pop. 2439 circle 84,708.

GRUNBERG, a tn. Prussia, prov. Silesia, gov. and 59 m. N. W. Liegnitz, cap. circle of same name, on the golden Lanza. It is walled, has four suburbs, several courts and public offices, a Protestant and a R. Catholic parish church, several schools, a townhouse, poor-house, house of correction infirmary hospital, and apothecary; important manu-

four annual fairs, chiefly for wool and cattle. Some indifferent wine is made, used chiefly for making vinegar. Pop. 40,682.

Area of abetal, 555 geo. sq. m. Pop. (1846) 49,579.

GRUND, a tn. Hanover principality Grubenhagen, dist. Hildesheim, at the foot of the Hildesheim and Dörmaggen. Near it are extensive mines. Pop. 1,416.

GRUNDINBURGH par Eng. Suffolk. 1897 sq. P. 801.

GRUNHAIN a tn. Saxony circle of, and 16 m. S.E. E. Zwickau, cap. bell. of same name, in a wooded district. It has a fine forest house, and some brewing, turf-cutting, and mining three annual fairs and a little trade. Pop. 1,666.

Area of bell. 64 geo. sq. m. Pop. 28,841.

GRUNHAINROSEN a tn. Saxony circle Zwickau, bell. Angersburg, on the Elbe, here crossed by a bridge. It has several mills, and extensive manufactures of wooden articles, many of which are exported to N. America. P. 1,076.

GRUNINGEN a tn. and par Switzerland, cant. of, and 19 m. S.E. Zürich, cap. bell. of same name. It was once surrounded by walls, though now open and is well built. It has a new parish church, and a castle situated on a command up height, but now converted into the persons' manufacture of cotton, and three large annual fairs. Pop. 1,598.

GRUNSFELD, a tn. Baden, circle Lower Rhine, on a small affluent of the Moselle 10 m. S.W. Würzburg. It contains a parish church, and has fine large annual fairs. Much wine is grown in the district. Pop. 1,165.

GRUNSTADT a tn. Bavaria, Palatinat cap. can. of same name, r. bank Rhine, 10 m. S.W. Wiesbaden. It is the seat of the justice-of-peace court; contains a R. Catholic and two Protestant parish churches, a Latin school and two old houses, once the residence of the counts of Leiningen-Westerburg, and has manufactures of felt and stone-ware, and a corn wine, and cattle. Pop. tn. 3,523. can. 28,745.

GRUBACH or **GRUBACHAU** a market in Austria, Moravia, circle of, and 16 m. S.E. of Graz, with a parish church, a mill and four annual fairs. Pop. 1,117.

GRUBENIA, *See* GROMBIA.

GRUTLI [properly *Grutli*, a little meadow] a meadow Switzerland can Uri, about 2,000 ft. above sea-level on the E. slope of mount Seel, W. shore of upper lake Luzern, 7 m. N.W. Altorf. Here it is alleged the first three Swiss confederates, Walter Fürst of Uri, Werner Stammacher of Schwyz, and Arnold am der Halden of Unterwalden, met in 1307 and formed the first compact for the deliverance of their country from Austrian thridion. The compact was renewed in the same place in 1519, and again in 1718, by 860 deputies of the three original cantons.

GRUYERRE [German, *Greyer*] a vil. and par Switzerland, cant. of, and 16 m. S. Fribourg on a hill crowned by one of the oldest and best preserved feudal castles in the country. It contains a church and an hospital and gives its name to the well-known cheese, of which about 40,000 cwt. annually are made in the surrounding districts. Pop. 964.

GRYBOW a tn. Austria, Galizia, circle of, and 12 m. E.N.E. of Haidos, on the Raba. It contains a fine castle, and has 12 annual fairs. Pop. 1,400.

GREYF, a rapid streamlet Scotland, so Rendrew falling into the Black Cart near Paisley.

GRIG two vils. Switzerland can Bern.—1. A vil. about 22 m. S.E. Bern, near Interlaken, close under the lower precipitous Mithaghorn. Pop. par., 5,622.—2. A vil. in the upper Gsteig valley 89 m. S. Bern, with a manse, and so close under Mount Retschach, that the sun is seen for six weeks during winter.

GRIGALEIRA a small tn. La Plata, prov. of, and 95 m. N.W. Salta, near r. bank Jujuy.

GUACARA, a tn. Yucatan, prov. Carabobo, 10 m. E. Valencia, near W. end of Lake Tacarigua. Pop. 4,000.

GUACHINANGO a tn. Mexico, dep. Puebla, 103 m. N.E. Mexico, in the vicinity of which a large quantity of excellent vanilla is raised. Pop. about 8,000.

GUACHIPAS, or **GUACERRA**, a river La Plata, prov. Salta, rising in the Andes, near lat. 24° 30' S.; by 87° W. flows N. then E.N.E. and is joined by the Araya, 83 m. S. by E. Salta, and forms the main head stream of the Salado (salad sea). Course about 225 m. principal affluents, San Carlos and the Negro.

GUACUBA, or **EXOX**, a river New Granada, rising in the Sierra de Venetia, and, after a N.W. course of about 150 m., falling into Choco Bay Gulf of Darien.

GUADAJAZO, a river Spain, Andalucia. It is formed near Baza prov. Cordova, by a number of small streams proceeding from the sierras of Alcala-la-Real and Frigero, traverses the E. and central part of the prov. and about 8 m. S.W. the town of Cordova, joins L. bank Guadalquivir after a course of about 59 m. It abounds with fish, particularly eels.

GUADALAJARA, a prov. Spain, New Castile, bounded N. by provs. Segovia, Sorra, and Saragosa. E. Saragosa and Teruel, S. Caenno, and W. Madrid area, 7912 sq. m. The surface in the N. is mountainous and contains, particularly in the district of Atienza, some of the loftiest summits of the peninsula, and have their culminating point in the Pena de la Bodega. In the E. also, part of the province is covered by mountains belonging to the Iberian system. The greater part of the remaining surface consists of elevated plains. The principal rivers are the Tago in the E.E. the Tago and Hozar in the centre, and the Jarama in the W. The soil which is generally of good quality varies considerably in different districts. In those of Tamajon, it is well adapted for cereals, but not so well for the vine and olive. In the higher districts, covered by serras, pasture necessarily occupies the larger portion, and furnishes only occasional tracts for the plough. The district of Alcorra, the most fertile of all, contains, in abundance, all kinds of crops common to the latitude. Amongst cereals iron is particularly abundant, and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—1. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—2. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—3. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

the Sierra de Venetia, and, after a N.W. course of about 150 m., falling into Choco Bay Gulf of Darien.

GUADAJAZO, a river Spain, Andalucia. It is formed near Baza prov. Cordova, by a number of small streams proceeding from the sierras of Alcala-la-Real and Frigero, traverses the E. and central part of the prov. and about 8 m. S.W. the town of Cordova, joins L. bank Guadalquivir after a course of about 59 m. It abounds with fish, particularly eels.

GUADALAJARA, a prov. Spain, New Castile, bounded N. by provs. Segovia, Sorra, and Saragosa. E. Saragosa and Teruel, S. Caenno, and W. Madrid area, 7912 sq. m. The surface in the N. is mountainous and contains, particularly in the district of Atienza, some of the loftiest summits of the peninsula, and have their culminating point in the Pena de la Bodega. In the E. also, part of the province is covered by mountains belonging to the Iberian system. The greater part of the remaining surface consists of elevated plains. The principal rivers are the Tago in the E.E. the Tago and Hozar in the centre, and the Jarama in the W. The soil which is generally of good quality varies considerably in different districts. In those of Tamajon, it is well adapted for cereals, but not so well for the vine and olive. In the higher districts, covered by serras, pasture necessarily occupies the larger portion, and furnishes only occasional tracts for the plough. The district of Alcorra, the most fertile of all, contains, in abundance, all kinds of crops common to the latitude. Amongst cereals iron is particularly abundant, and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—1. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—2. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—3. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—4. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—5. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—6. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—7. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—8. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—9. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—10. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—11. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—12. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—13. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

GUADALAJARA—14. A city Spain New Castile cap. above prov., 44 m. N.W. by E. Madrid. It has a large and has been worked from the earliest periods, as indicated by the extensive galleries left by the Romans in several quarters. Lead occurs in small quantities and there are some indications of coal. Both manufactures and trade, at one time of considerable importance, have much declined. For administrative purposes the province is divided into nine districts, of which Guadalajara is the capital. Pop. 199,746.

stream of water all round. Various trades are carried on here with success, particularly those of blacksmith, carpenter and silversmith. There are also manufacturers of shawls of striped calico, of paper and of a particular description of earthen-

N.E., and joins the bank Elvo, at Carpe, after a course of about 70 m. Its chief affluents are the Miraflores, Colorado, and Galles. GUADALOUPE-CALVO, a m. Mexico, prov. of, and 178 m. S.S.W. Chihuahua, in a mountainous district. It

derives its importance from the silver mines in its vicinity. The houses are covered with shingles, and the windows glazed in the English manner. Pop. 10,000.

GUADALQUIVIE (ana. Bética) one of the principal rivers of Spain. It drains all the N. portion of Andalusia, which it intersects N.E. to S.W. It originates in an offshoot of the Sierra Nevada, on the frontier of Murcia, and is rapidly increased by the accession of numerous streams from both sides. Its general course is N.E. to S.W. passing Andújar, Villafraña, Córdoba, and Sevilla where, becoming encumbered with alluvial deposits, and dividing into three branches, it forms the two islands of Isla Mayor and Isla Mayor covered with rich pastures, on which great numbers of horses and cattle are fed. The branches form a junction at the S. extremity of

PLAZA MAYOR, GUADALAXARA.—From Nishit, Voyage Pittoresque du Mexique.

ware, and great skill is displayed in leather working. The foreign trade of the place, now very trifling was formerly carried on through the port of San Blas, on the Pacific, but is now recovered to the superior harbours of Manzanillo and Acapulco. Guadalajara was founded in 1551, and in 1670 was created an episcopal city. Pop. estimated at 70,000.

GUADALAJARA dep., Mexico. See Jalisco.

GUADALCANAL, a m. Spain, Andalusia, prov. of, and 46 m. N. Sevilla. It is, in general well built, has regular streets, and a spacious public square; three church as seven chapels, four convents, a hospital, storehouses, cemetery and some primary schools. Manufactures—leather, soap, hats, brandy wine and oil. Trade—gran, cattle, and fruits. In the environs, mines of silver were once wrought. Pop. 5486.

GUADALCANAL, an isl., one of the Solomon group at the N. entrance to Indispensable Strait. lat. 9° 59' S. lon. 160° 54' E. It is low and bordered with cocon trees, but the interior is mountainous.

GUADALETE, a river Spain, Andalusia. It rises in the Sierra del Pinar or San Cristobal, prov. Cadix, flows S. S.W. near the town of Bormes, and past that of Arcos, and falls into the Atlantic near Matagorda, 8 m. E. Cadix, after a course of about 90 m. Its affluents are, on the right, the Palado Gato and Tabañales and, on the left, the Comares, Magacena, and Alamillo. It is well supplied with fish. The famous battle which gave the Moors the ascendancy in Spain was fought on the banks, and bears the name of this river.

GUADALHORE, a river Spain, Andalusia, prov. Malaga. It rises on the frontier of prov. Granada, about 10 m. E. Antequera, flows S.W. and then S.E. and falls into the Mediterranean 6 m. S. by W. Malaga, after receiving numerous affluents. It propels numerous mills, is well stocked with fish and is much used for irrigation. Total course, about 80 m.

GUADALINAR, a river Spain, formed by the union of several small streams, near Villavieja, prov. Almería, New Castile, in the Sierra de Almería. It flows S.W., and joins the bank Guadalquivir about 15 m. N. Jaén, after a course of nearly 80 m. It is generally shallow and abounds with fish. Principal affluents, the Guadarrama and the Guadalema.

GUADALMEZ, a river Spain, which rises on the N. slope of the Sierra Morena, in the N.E. of prov. Córdoba, flows W., forming, for some time, the boundary between that prov. and Ciudad Real, and, after a course of about 50 m., joins the bank Jula. Its principal affluents are, on the right, the Algodor and Valdegonzales and on the left, the Pedro Moro, Manchilla, Ojoceros, St. María, and Cereceda.

GUADALUPA, a river Spain, Aragon which rises near Villapalme de Pineros, prov. Teruel, flows first W., then

Isla Mayor and the united streams flowing S.S.W., falls into the Atlantic by a broad estuary at the town of Huelva de Barrameda. Its whole course is 250 m. of which above 70 m. are navigable, commencing at Sevilla, to which, and occasionally for several miles beyond it, is the source of the tide in full. Its principal affluents are, on the R. bank the Guadalquivir Grande, Embalar, Escobar, Andalus, and Yegua and on the left, the Guadiana menor, Jandilla, Guadalupe, and Jaén and the Peñal de Porrena. The basin of the Guadalquivir about 800 m. long N.E. to S.W. by 125 m. broad is bounded E. by the Sierra of Huescar, Segura, and Alcaraz S. by the Sierras of the Alpujarras, including the Sierra Nevada and N. by the Sierra Morena, and the ocean continued W. from it, and forming on its N. side, the watershed of the Guadiana. In the upper part of its course the Guadalquivir flows through some very rugged and almost uninhabited districts; but, at Córdoba, begins to traverse a flat and fertile, though thinly peopled country. S. of Sevilla, where it forms the islands already mentioned the left branch flows along a strip of land called the Marisma, about 27 m. long, and 5 m. broad, a saline, noxious spot, almost abandoned as uninhabitable; the right branch strikes an equally desolate tract, extending over an area of 150 m. At certain seasons, swollen by melting snows and retarded in its course by high tides, this river often commits great ravages by inundation. It abounds with fish the taking of which gives employment to a considerable proportion of the persons who live on its banks.

GUADALUPE, an isl. Pacific Ocean, off the N. part of the peninsula of Lower California lat. 26° 54' N. lon. 118° 20' W. It is of volcanic origin, high, with steep shores on the Y and W. sides, and may be seen from a distance of 45 m. At N. S. and it is very barren but in the N. part, there are several fertile valleys. Wood and water may be obtained here, and goats are numerous.

GUADALUPE, a mountain-range, Spain, New Castile, belonging, according to Bruguiera's classification to the Cretaceous chain. It commences with the termination of the Sierra de Montaña and stretches first in a N.E. and then in an E. direction to the source of the Guadarrama, where it is succeeded by the mountains of Toledo. It forms part of the watershed between the basins of the Guadiana and the Tago. Its culminant point has a height of 5354 ft. and retains the snow for nine months. In certain exposures there is frost every night throughout the year.

GUADALUPE, a m. Spain, New Castile, prov. of, and 26 m. W. Toledo, on the E. slope of Monte Almaraz. It is poorly built; streets very irregular and so damp, as to render the ground floor of the houses uninhabitable. It has

a fine church belonging to the famous monastery of Geronimo, a grammar and a primary school, a townhouse, and prison, a few manufactures of linen leather and copper-ware several oil and flour mills, a weekly market, and an annual fair Pop. 8384.

GUADARRAMA, a river Spain, which rises in the sierra of same name, New Castile, prov. Madrid, flows S. through that prov. enters that of Toledo turns S.W. and joins r. bank Tago, 12 m. below the town of Toledo, after a course of above 70 m.

GUADARRAMA, a mountain-chain, Spain, forming part of the great central chain which separates Old from New Castile and is continued W. nearly to the coast. It stretches generally between N.E. and S.W., commencing where the Summo Sierra Iberica meets near a gorge traversed by the great road from Madrid to Burgos. Its culminating point has a height of 8943 ft. It is almost wholly composed of granite. Through a pass in it, called the Lion's Throat (4598 ft.), a road from Madrid to Burgos by way of Valladolid, passes.

GUADARRANQUE, a river Spain, which rises in a deep valley of the mountains of Alguazas a ramification of the Villanueva, New Castile, prov. Toledo, flows N. to S. and joins r. bank Guadiana, after a course of about 45 m. It has a shallow stream, which is often dry in summer.

GUADASUAR, a m. Spain prov. of and 20 m. S.W. Valencia. It is well built, has an ancient but large and handsome parish church, a primary school and a prison. Some trade in oil, fruit, and vegetable, and an annual fair. Pop. 993.

GUADELOUPE [Spanish *Guadalupe*] a gov. of the French W. Indies, including the isle of Guadeloupe, Marie Galante, les Saintes, Deslades or Deslades, and about two-thirds of Martinique. The island of Guadeloupe lies between 16° 47' and 16° 50' N. and 61° 10' and 61° 45' W. composed of two portions or distinct islands, separated by a strait of the sea called Riviere Salée (salt river) from 90 to 100 yards broad and navigable for small vessels. The W.

Lamentin, and Lesards, which are navigable for canoes. Grande-terre has only a few springs of brackish, undrinkable water. The climate is hot and unhealthy the mean temperature being 79° the ordinary extremes 71 and 91 and the greatest heat 160°, accompanied with a remarkably humid atmosphere. Hurricanes are frequent and destructive, but the earthquake of 1843 which completely destroyed the town of Point-à-Pitre, and partly ruined the colony was the first severe one known since the discovery of the island. The soil is fertile and well cultivated, covered with dense forests in the mountainous untilled parts, and with mangroves and mangrove trees on the marshy coast of Basse-terre. The produce is similar to that of the other W. Indian islands the Tahiti sugar-cane is the only kind cultivated. The chief articles of export, sent almost all to France, are sugar coffee, dye and cabinet woods, rum, tafia, cotton wool, muslin, hides, wreath-moss and preserves, copper tobacco &c. Imports, cotton manufactures hides, wheatmeal, salted butter cod fish olive oil wax candles, pottery glassware, salted meat, medicines, &c. The principal anchorages of Guadeloupe are the Bay of Mahaut and the roads of Basse-terre the latter in the S.W. part of the island, with the town of same name the capital and seat of government on the island. The anchorage here, however is unsuited and inconvenient, with a constant swell while the bottom at the edge is so steep, that at two cables length from the shore, there are from 80 to 100 fathoms water with mud-flooding holding ground. Grande-terre possesses two anchorages, that of Moule and Point-à-Pitre the latter at the S. entrance to the Riviere Salée, is esteemed one of the best in the Antilles and on it was situated the important town of St. Louis or Point-à-Pitre, which was destroyed by an earthquake February 5, 1843 on which occasion 4000 of the inhabitants perished.

Guadeloupe was first discovered by Columbus in 1493, and was thus named by him in honour of Sainte Marie de la Guadeloupe. It was taken possession of by the French in 1635 who kept it till 1759 when it was taken by the English.

It was subsequently captured and re-captured several times by these nations, and finally ceded to the French at the general peace in 1814. Pop. (1841) 131,163.

GUADIANA [ancient, *Guad*] a river Spain which rises in the tri-platano, New Castile, in the lagoons of Badajoz, in La Mancha, on the N. side of the sierra Alcornaca and flowing N.W. through a marshy country for about 10 m. is lost in Tameles among reeds and flags. About 13 m. further on it reappears at a place called Los Ojos [The Eyes] of Guadalupe, where it gushes forth in large boiling jets, and immediately forms a magnificent stream. It flows first N.W. and then circuitously S.W. till it reaches a point 7 m. S.W. of Ciudad-Real when it turns W.N.W. then S.W. into Extremadura and afterwards circuitously but directly almost due W. across that province, past the town of Merida, to that of Badajoz. Here it turns S.S.W. forming part of the boundary between Spain and Portugal, and passing the strong town of Jurmacha, proceeds in the same direction through Portugal, past Mourao,

and larger portion is Guadeloupe Proper divided into Basse-terre, and Capes-terre and is 27 m. long by about 16 m. broad. The E. portion, called Grande-terre, is nearly 30 m. long by 10 to 13 m. broad. Guadeloupe Proper is of volcanic formation, and is traversed N. to S. by a ridge of hills having a medium height of 2296 ft. The culminating points are La Bouffiere, an active volcano, 5108 ft. high. La Grande-Montagne, les Deux-Montagnes and le Pion-de-Bouillants, extinct volcanoes. Grande-terre, on the other hand, is generally flat, composed of sandstone and marine detritus, and nowhere rises higher than 116 ft. above the sea. Guadeloupe is watered by a number of small streams, running in deeply cut beds, but being dry in summer, the principal the Goyaves, Vol. I.

Mourao Mourao and Serpa till it reaches Merida in province Alentejo, when it turns first S.E. to Alentejo then almost due S. again forming the boundary between Spain and Portugal and falls into the Atlantic between the Portuguese town of Castro Marim and the Spanish town of Ayamonte. Its whole course is above 400 m. of which only 85 m. commencing at Merida, are navigable further progress being stopped by a cascade in a narrow channel, not many yards in width. The principal affluents are, on the right, the Gijgila, Bullana Valdehorros, and Rufael and on the W., the Assel, and Jahalon. Its basin, about 575 m. long, W.E. to S.W. and 125 m. broad lies between that of the Tago on the N., from which it is separated by the chain of moun-

tain which stretches across New Cattle and Entrepuente, and is then continued N.W. through Portugal, and from the banks of the Guadalupe to the S., by another mountain chain, in which the sierra Morana is most conspicuous. The upper part of its course is through a thinly peopled, mountainous, nearly desert, and the country in the lower part of its course, though greatly increased in fertility is generally flat, causing the current to be both sluggish and speedy. The water is said not to be drinkable, but it abounds with fish of large size, though often not of the finest quality.—*E. J. Moore*: A small affluent of the Guadalupe which it joins 25 m. N.E. of Jacon.

GUADIAIRO a river Spain, Andalusia, prov. Malaga, which rises on a slope of the sierra de Tolon flows S. passing through the town of Ronda, where it rushes impetuously along in a chasm, more than 800 ft. deep; and falls into the Mediterranean, about 10 m. N. Gibraltar after a course of about 60 m. Its chief affluents are the Jimena, on the right and the Gfual, on the left.

GUADIATO a river Spain, Andalusia, which rises to the N. of the hill of Caravaca, belonging to the sierra Morana, prov. Cordova flows through that province, in a stream remarkable for its tortuosity though generally in a S.E. direction, and joins the bank Guadalupe 2 m. E. Posadas, after a course of nearly 100 m.

GUADILLA, a river Spain which rises in the N.W. slope of the sierra de Albarracin, on the confines of New Castile in the N. of prov. Cuenca; flows S.E. past Priego and joins the bank Tago, after a course of 70 m. Its chief affluents, all on the left, are the Casera, and Hueta.

GUADIX [anc. Gec] a town Spain, Andalusia prov. of and 31 m. N.E. Granada, on the N. slope of the sierra Nevada, above a bank river of its own name. It is an ancient walled place, containing generally of indifferent houses, many of these lighted only by the door, and of ill-paved and ill-cleaned streets. It is surrounded by ancient walls, in the center of a bishop, said to have been the first erected in Spain, contains a cathedral a handsome structure partly Doric, and partly Corinthian, and other parish churches, one of them with three naves, a fine portal, and a tower a good coat house, a very indifferent prison, a duodecim seminary four primary schools, two universities, four suppressed monasteries, an hospital, occupying the buildings of a Jewish college; and an ancient castle, finely situated on a height, but almost in ruins and has manufactures of hamper goods, hats, earthenware, and salt-petre a trade in silk, wool, wax, cotton, corn, liquors, &c. two weekly markets, and a much-frequented fair which lasts eight days. Pop. 10,129

GUADUANA, a town New Granada, dep. Condummar, 50 m. N.W. Bogota, in a fertile valley near the bank Magdalena. Some of the streets are paved and in the public square are a church, some handsome buildings, and a fountain. It has some trade in the produce of its vicinity—rice, sugar coffee, and fruit. Coffee prevails here.

GUAHAN or GUAYAN an isl. Pacific, being the largest and most S. of the Mariana Archipelago. lat. (S. point) 13° 14' N. lon. 144° 45' E. (S. E.) It is about 100 m. in circumference, has several safe and commodious harbours, and contains the capital of the archipelago.

GUAHIRE, or SANTO AMANO an isl. Brazil off E. coast of prov. Rio Paulo, from which it is separated by a narrow channel. It forms one side of the bay of Santos, on which the town of that name stands—the island of Enguaca, or Rio Vreosa, forming the other. It is about 16 m. long, by 12 m. broad, has some fertile land, but cultivation is much neglected. It contains no town, and has very few inhabitants.

GUANACACHE an isl. group, W. coast Patagonia lat. 47° 41' S. lon. 74° 56' W. (N.) composed of two principal islands, and many smaller islets—the watermarked called Byron Island, and the easternmost Wager Island. The trees are not of large growth in these islands, neither is the land thickly wooded but above the beach, and almost round the coast, there is a breastwork of jungle and underwood, from 50 to 100 yds. broad, and nearly impenetrable; beyond which is a great extent of clear but low and swampy ground. The two larger islands are separated from each other by Baudie's Passage about 3 m. wide, perfectly clear throughout its whole extent, but having some detached rocks at its N. entrance.

GUAILAS, or HUALLA, a prov. Peru, on the W. side of the Andes, about lat. 7° 30' S. length 120 m., breadth 90 m. watered by the Baita and other rivers, and yielding grain, fruit, and sugar; and pasture for sheep. The rich gold and copper mines are wrought but those of gold and silver appear to be exhausted. Pop. 40,822

GUATZABA an isl. off the N.E. coast Cuba; lat. 21° 55' N. lon. 77° 28' W. (N.) It is about 10 m. long, and about 3 m. to 4 m. broad.

GUAYAN a m. Central America, state of, and 98 m. N.E. E. Guatemala. Pop. 3000.

GUAYATIERI or GUAYAN a volcanic summit, in the W. Cordillera of the Peruvian Andes, 80 m. S.E. Arica elevation, 22,000 ft. above the sea.

GUAYCHOS, a vil. Spain, Andalusia, prov. of, and 46 m. N.E. by E. Granada, tolerably well built, having two squares, clean and well-paved, though steep streets a parish church townhouse, prison, storehouse, cemetery and two public fountains. Manufactures:—linen, coarse cloth, soap, earthenware, hardware, wine, oil, and brandy Trade—grain, fruits, sugar, silk, and cattle. A large proportion of the people are engaged in fishing and curing fish. Pop. 2938.

GUALDO, a town Italy 22 m. N.E. of Perugia.

GUALLILLAS PASS, a passage of the W. chain of the Peruvian Andes 30 m. N.E. Tarma, crossed by the great commercial road leading from the port of Arica to La Paz, and the interior of Bolivia; elevation, 14,880 ft. above the sea.

GUALTIERI, a town Modena r bank Po, near the confluence of the Crostolo, 16 m. N.E. Parma. It has two annual fairs. Pop. 4150.

GUAMA, a river Brazil, which rises S.E. in prov. Para; flows first N. and then W. receives the Capim on its left bank, and about 40 m. below falls into the bay of Guajara, the town of Belém or Para.

GUAMACHUCCO, or GUAMACHUCCO a town Peru, sup. prov. same name, dep. of, and 66 m. N.E. Tumbaco, amidst the Andes, with a cold, disagreeable climate.—The province, 90 m. by 75 m., is traversed by the main chain of the Andes; sends its waters to the Marañon has a cold climate but yields maize, wheat, and cacao and pastures sheep, from whose wool domestic cloth is manufactured. P. 88,150

GUAMALIES, or HUAMALIES, a prov. Peru, W. side of the central ridge of the Andes, r bank Tanguayacu; length, 120 m. breadth, about 30 m. It yields grain, cacao, dyewoods, quinquina, pastures cattle and sheep has mercury and silver mines and the ruins of ancient Peruvian fortresses, temples, and palaces. Pop. 14,234

GUAMANGA or HUAMANGA a city Peru dep. Ayacucho sup. prov. of same name, is an extensive and beautiful plain 230 m. S.E. Lima. The houses are of stone with gardens attached and there are numerous avenues, adorned with rows of trees. The squares and public places are spacious and handsome. It has a splendid cathedral, two parochial churches, and a number of convents. It is the residence of an intendant, the seat of a bishop, and the seat of a university. Guamanga was founded by Pizarro, on the site of an Indian village of the same name. It is sometimes called San Juan de la Vittoria. Pop. 26,000.—The province, 279 m. N. to S. by 105 m. broad, is intersected by a ridge of the Andes, which divides it into two portions; one of which sends its waters to the Pacific, and the other through Amazon, to the Atlantic. It yields wheat, dragon's blood, and cinnamon; pastures numerous flocks of sheep; and has silver, lead, and salt mines. Pop. 111,600.

GUAMOX, a town New Granada, dep. Condummar, 30 m. N.E. Arequipa, on the Altiplano, much decayed, since the silver mines in the vicinity were exhausted.

GUAMOTE, a vil. Ecuador dep. of, and near Guayaquil, on an island formed by two rivers and surrounded by lofty mountains. In 1808 it was the scene of a terrible insurrection of the Indians against the Whites.

GUANABACOA, a town Cuba, jurisdiction of same name, 3 m. S.E. Havana, on the bay of Guanabacoa, which forms a part of the harbour of Havana. Pop. 6684.

GUANACACHE (Lagos de), an extensive and irregularly-shaped lake, La Plata, prov. San Juan, interspersed by lat. 61° 50' S., and by lon. 69° 40' W.; length, 28 m.; mean breadth, 15 m. It receives several rivers; of which the San

June and the Mondays are the most considerable. It is connected, on the E. side, by the Rio Cruces, with a large morass.

GUANACAS (PARANOME) a mountain-peak, S. American River Granada, at the sources of the Magdalena and Cauca, and at the junction of the E. W. and central Cordilleras of the Andes.

GUANAHANI or **CAY ISLAND** one of the Bahamas. See BAHAMAS (32).

GUANAJA, a Isl. Caribbean Sea. See BONAICO.

GUANAPAO a large river Venezuela, which rises S. Truxillo, under the name of Bocono flows S. then tortuously E. and joins the Portuguesa, on the r. bank; lat. 8° 19' N; lon. 68° 3' W.

GUANAPE, a port, Peru, prov. of and 30 m. S. Truxillo. It is unsafe, but little frequented. Off the port are several barren islets of same name.

GUANARE, a tn Venezuela, 45 m. S. E. Truxillo, on the Guzanaro. It has broad and straight streets well-built houses, a hospital, and a large parish church to which numerous pilgrims resort. A considerable trade is carried on in cattle and mules. Pop. 12,500.

GUANARITO a river Venezuela, which rises in the Sierra Moxas flows S. and then E. and joins the Portuguesa 153 m. S. W. Caracas.

GUANAXUATO or **GUAXUATO** a dep. Mexico (cap. same name) between lat. 20° 20' and 21° 44' N., lon. 98° 59' and 101° 47' W. bounded N. by the states of San Luis, Potosi, and Zacatecas W. by Jalisco S. Michoacan, and E. Queretaro. Area, 4118 sq. m. It is mountainous, and traversed S. E. to N. W. by the Cordillera of Anahuac, whose elevating point is 9711 ft. high. The only important river is the Rio Grande. Climate mild, and soil fertile but not easily cultivated, from scarcity of water. The mines of this dep. were once the richest in the world, yielding gold, silver, lead, iron, antimony, sulphur, cobalt, ochre, salts, crystals, borax, &c. From 1794 to 1815 the gold and silver mines produced on the average, 73 lbs. gold, and 29,369 lbs. silver annually. A falling-off took place after 1810, and in 1821 the produce was at the lowest. They subsequently increased rapidly and in 1833 the amount obtained was 80 lbs. gold, and 11,547 lbs. silver. The precious metals and spices form the chief exports of the state. Guanaxuato is the best peopled state in the Confederation. Pop. (1837) 500,000.

GUANAXUATO or **GUANAXUATO** a city Mexican Confederation cap. above dep. lat. 21° N. lon. 101° W. 160 m. N. W. Mexico singularly situated in a deep, narrow mountain

gorge, that no idea can be formed of the extent of the town but by ascending the heights by which it is overlooked. The houses, however, are in general well built particularly those belonging to the proprietors of the neighbouring mines, most of which are extremely handsome. But, though of hewn stone, a practice prevails of painting their fronts with the gayest colours—light green being the favourite—producing on effect more satisfactory than agreeable. It contains several elegant churches, numerous chapels, and other religious edifices. The Alhondra, a large square building, used as a public granary is a remarkable edifice.

Guanaxuato owes its existence and importance to the gold and silver mines in its vicinity the richest in Mexico. These mines yielded between the years 1779 and 1803, \$40,000,000 (\$9,000,000) in gold and silver or nearly \$5,000,000 (\$1,125,000) annually. The gold and silver comage of the mint of Guanaxuato in 1844 amounted to \$4,835,740 (\$1,048,041) being the highest of all the mints of the Mexican republic. There are some manufactures in the town of soap, woollen cloth, linen powder and tobacco also some tanneries. Guanaxuato was founded by the Spaniards in 1545 constituted a town in 1619 and invested with the privileges of a city in 1741. P. (1805) 70,800; (1835) 84,000.

GUANABAMBRA, a tn Ecuador near the frontier of Peru, 163 m. S. Cuenca, on the river of same name, near its source between 7000 ft. and 8000 ft. above the sea.—The river, rising in the E. slopes of the Andes flows S. then E. N. E. and after a course of 108 m. interrupted by numerous falls, joins the Morona 29 m. S. W. Juan de Bracamoros.

GUACABELICA, or **GUACABERICA** a tn. Peru dep. Ayacucho, cap. prov. of same name, 163 m. S. E. Lima, in a valley of the Andes. It is surrounded with rich mines of gold and silver situated at a high elevation the air is always extremely cold and penetrating. Pop. 5165.—The province, 144 m. by 102 m. is watered by the Janga and its affluents, and has several lakes. The climate is cold and the produce, maize, wheat and potatoes and excellent pastures, on which numerous cattle and sheep are fed—the latter yielding fine wool. There are mines of gold, silver mercury and copper. Pop. 80,900.

GUANDACOL, a fertile valley La Plata, dep. Rioja, between the Famatina mountains at the Andes lat. 29° 23' lon. 69° W.—A **VILLAGE** of same name lies in the centre of the valley.

GUANAYTO a river Venezuela dep. Apure. It rises on the E. side of the Sierra de Merida, 75 m. W. by S. Yaracay and joins the Apure, on the l. bank, after a S. E. course of about 160 m.

GUANO a tn Ecuador on a small river of same name to the right of the Andes 80 m. N. E. Guayaquil. Woollen stockings are extensively manufactured here.

GUANTA or **GUANTA** a tn Peru, dep. Ayacucho, cap. prov. of same name, 21 m. N. Guamanga, near the source of the Rio de San

The province 180 m. by 54 m. is mountainous has a mild climate and yields sugar, fruits timber and medicinal plants. Salt and silver are mined. Pop. 27,837.

GUANTAJAYA a rich mining district of S. Peru in prov. Tarapaca (which see).

GUANTANAMO or **CUMBERLAND HARBOUR**, a spacious harbour S. coast Isl. Cuba 46 m. E. Santiago lat. (E. head) 19° 53' N. lon. 75° 12' W. It is wide at the entrance completely sheltered from all winds, and has within it numerous islands, affording safe and excellent harbours. It abounds in fish; but other provisions cannot be readily obtained.

GUANUCO or **GUANUCO**, a tn. Peru, 165 m. N. E. Lima, l. bank Huallaga formerly large and handsome, but now fallen into decay. There are here the ruins of some fine edifices, which belonged to the Incas.—The province, 80 m. by 80 m. has a mild and healthy climate & fertile, and yields in abundance grain, fruit, cotton, and cane. Pop. 16,836.

GUANZATE, a well-built vil. Austrian Italy prov. and 8 m. S. S. W. Cuneo with manufactures of silk. Pop. 1799.

PLAZA MAYOR, GUANAXUATO.—From Kuhn, Voyage Pittoresque au Mexique.

delta, 6017 ft. above the sea. It is formed of a number of villages, placed round the mines and being built on extremely uneven ground, the streets are very steep and so

GUAYEY or **RIO-GRANDE-DE-LA-PLATA** a river Bolivia which rises in the slopes of the Andes of Cochabamba about 30 m. N. W. Concepcion, flows S. E. till reaching the E. extremity of the mountain range, it turns N. and then flows N. W. receiving in its course numerous affluents, chiefly on its l. bank, and from the N. slopes of the Andes of Cochabamba, and ultimately joins the Mamore, in lat. 18° 30' S. lon. 64° 10' W. after a course of about 600 m.

GUAYEY means a vill. Brazil, prov. Rio-de-Janeiro, between the bay of Niteroi and the Serra das Orgas. It has a parish church, numerous distilleries of rum, and the works, and an important trade in timber which is floated down the smaller streams into the Graça-Morim, and thence transported in large barges to Rio-de-Janeiro. Pop. 3000.

GUAYEY means **AGUAYE**, or **GUAYE**, a river Brazil prov. Rio-de-Janeiro, which rises in the Serra das Orgas, flows S. S. W., and after a course of about 28 m. falls into the bay of Niteroi, or Rio-de-Janeiro, between the mouths of the Magé and Meteco. Its mouth is unobscured by shoals, so that large barges can enter and quit it at all times of the tide, or sail up it without interruption. For about 4 m.

GUAYEY, or **GUAYEY**, a river Brazil which rises in the Serra Agupé, a continuation of the Cordillera of Parana, between the sources of the Jaraca and the Jarra, prov. Mato Grosso. In lat. 16° 42' S., and commencing to a series of cascades, which follow in succession for nearly 30 m. first flows E. in a course nearly parallel to that of the Jarra, and then turning gradually round to the W., reaches the l. bank of Mato-Grosso, or Villa Bella. Here it turns N. N. W. and keeps the direction till it reaches lat. 18° 00' S. when it proceeds first almost due W., and then W. N. W., forming part of the boundary between Brazil and Bolivia, and finally merges with the Mamore, in lat. 11° 54' S. in forming the Madeira. Its whole course is about 1000 m. and is much interrupted by numerous obstacles, several of which occur immediately before its junction with the Mamore. Its principal affluents on the left are the Yurda, Parana, Bauré, or Bauré, Itanema, or Tumbuco, and Ushu. On the right the affluents, though numerous, are individually insignificant. **GUAYEY** a river, La Plata, state Paraguay which rises in a branch of the Sierra Amambé, flows S. W. and joins the Parana 75 m. N. W. Concepcion, after a course of about 150 m.

GUAYEY a tn. and seaport, Brazil, prov. Espirito-Santo on river of the same name, where it falls into the Atlantic, 30 m. S. Victoria. It is very poorly built, contains a parish church, and has a small port, much frequented by coasting vessels. Its principal trade is in cotton thread, timber and balsam of Peru, which are shipped for Rio-de-Janeiro. Both the town and district are rendered extremely unhealthy by extensive swamps and standing pools. Intermittent fevers annually carry off numbers of the inhabitants. The river rises in the Cordillera of Amoreira about 20 m. N. E. Remonte, takes an E. direction, forms in its course a number of lakes. Its mouth is narrow but deep and easily entered by coasters. Lacos proceed as far up as the Cordillera. The country on its banks is remarkably beautiful.

GUAYEY a tn. and seaport, Brazil, prov. Espirito-Santo about 30 m. W. of the town of its name, in the Cordillera of Amoreira. On its slopes Peruvian balsam is gathered.

GUAYEY, a river Venezuela, dep. Cumana, formed by the union of several streams, which descend from the E. side of the Margarita mountains. It flows first S. E. and then N. E. and falls into the gulf of Paria, 98 m. S. E. Cumana, after a course of about 120 m. It receives several tributaries, and is navigable 50 m. from its mouth where the upper part of its course is obstructed by banks of mud.

GUAYEY, a tn. Brazil, prov. of and 300 m. S. W. São-Paulo, in the extensive plains of the same name, near the Iguaçu, and on the road from São-Paulo to prov. São-Paulo-de-Rio-Grande. It contains a parish church. The inhabitants cultivate the ground and rear cattle, but are much annoyed by the wild Indians in the neighbourhood.

GUAYEY, a vill and par. Brazil, prov. of and 80 m. S. S. W. Rio-de-Janeiro, near the bar of Guaratia, which forms the E. side of the bay of Angra-de-Rio. It contains a parish church, and a small harbour on the sea-coast, at which some export trade is carried on with Rio-de-Janeiro in the ordinary produce of the country. Pop. 4000.

GUARATINGUETA a tn. Brazil, prov. of, and 120 m. N. W. São-Paulo, r. bank Paraíba. It is very poorly built of mud, but contains a parish church, and two chapels, and is the residence of a justice of the peace. Its situation on the road from São-Paulo to Rio-de-Janeiro, enables it to carry on a considerable trade in its cattle and swine and the ordinary agricultural produce. The district is fertile, and well adapted for the cultivation of tobacco, sugar-cane, and coffee. At a short distance from the town is a chapel to which numerous pilgrimages are made. Pop. of dist. 7000.

GUARATINGUETA or **VITAMORA** de São Lázaro, a tn. Brazil, prov. and 212 m. S. W. São-Paulo, near r. bank river or creek of same name, about 4 m. from the sea. It contains a parish church and has a port, which only wants good roads to it from the interior to become of considerable importance. Many of the inhabitants are employed in building boats and sawing timber. Much rice is grown in the district.

The river rises in a Serra lying parallel to the sea-coast, in the S. E. of the province, flows E. and falls into the Atlantic, about 4 m. below the town, after a course of about 30 m. of which about 8 m. are navigable for small vessels, and several more for canoes. The Guaratingueta is sometimes improperly called a bay.

GUARDA [anc. *Laevus Oppidum*] a tn. Portugal, prov. Beira-Rio, on an elevated plain on the bank of the Serra-da-Estrela, near the sources of the Mondego, 53 m. E. N. E. Coimbra. It is walled, and defended by a castle is a bishop's see, and has a handsome cathedral four parish churches, a college, a diocesan seminary, an episcopal palace of great size but inferior architecture, two convents, two hospitals, and an annual fair. Several severe struggles took place here between the English and French, in 1311-11. Pop. 3894.

GUARDIA MOTA a vill Italy Lombardy prov. of and 17 m. S. E. Lodi, near l. bank Po. The scene of a sanguinary battle in 1796. Pop. 2008.

GUARDIA VERDE a vill Italy Lombardy prov. Polesine l. bank Po 7 m. S. E. Rovigo with a parish church. P. 1700.

GUARDAFUI (Gara) or **RAJ JERADAFU** [anc. *Aradum-Fradafu*] the most E. point of Africa, at the entrance of the Arabian Gulf lat. 11° 50' N. lon. 41° 31' E. (e.) the extremity of the coast of Asia and Aden.

GUARDAMAR, a tn. Spain, Valencia, prov. of and 18 m. S. S. W. Alicante, near r. bank Segura, 14 m. from the sea. It is surrounded by a stone wall, and overlooked by a hill on the summit of which stand the remains of a once strong and extensive castle. Most of the streets are wide and clean though unpaved, the houses tolerably well built, and the two squares spacious. It has a large church, two chapels, two schools, a townhouse, prison, 1 capital and store-house. Manufactures—linen, coarse cloth, woolen and oil. Trade—grain, fruit, cattle, and tanning and curing fish. Pop. 2237.

GUARDAVALE, a tn. Naples, prov. Calabria Ultra, 27 m. S. Catanzaro. Pop. 3320.

GUARDIA, several places, Spain, particularly—1 (*Guarda la*) a tn. New Castile prov. of and 28 m. S. E. Toledo, near l. bank Tago; tolerably well built, and surrounded by old walls, flanked by towers. It has wide, clean paved, though steep streets, two principal and smaller squares, a parish church, four chapels, Latin and primary schools, a townhouse, prison, and two storehouses. Manufactures—linen, cloth, hats and serge, silk, tapestry, wax, wine, and oil. Trade—hemp, cattle, and agricultural produce. Pop. 3118.—2 a tn. Andalusia, prov. of, and 5 m. S. by E. Jaen, near l. bank Jaen, on a rock, surrounded by the remains of an old fortress. It has clean, wide, well paved though in some cases steep streets; two squares a spacious and elegant church, a townhouse, prison, two schools, an hospital, and extensive storehouses. Linen, pottery, wax, and shoes, are manufactured, and there is some trade in grain, silk, and cattle. Pop. 1443.—3 a tn. and port, Galicia, prov. of, and 57 m. S. by W. Pontevedra, on the Atlantic. It is tolerably well built; has a church, several chapels, a townhall, prison, two schools, a custom-house, and convent. Woollen and pottery are manufactured. Pop. 2000.

GUARDIA, numerous places, Naples, particularly—1 (*Guarda*) a tn. prov. Basilicata, 6 m. W. Larino on a slope, above l. bank Effento. It contains the ruins of a bishop and a gymnasium, a mineral spring, and a fair which lasts two days. Pop. 1900.—2 (*Grado*) a tn. and com., prov.

Abasco-Olita, 12 m. S S.E. Olinda. It contains four parish churches and three convents. Pop 6388—S (Lombardi) A to prov Principado Uta, 3 m N.E. San Angelo-de Lombardi r bank Lombardi. Pop 3519.—A, (Bogio) A to prov Amato, 30 m S.E. Isera, a, on a slope of Mount Maiz. It contains a parish church, an abbey and an hospital. Pop 1418.—A, (San-Juan), or *Pala-Sol* A to prov. prov Toron 12 E. Laveron, 13 m E. Piedmonte cap, a considerable of same name. It contains several churches a convent and an hospital and has tanneries. Pop 4000

GUARDISTALLO a vil and con. 12000000. It is a mountainous country about 55 m. S Pisa. Its houses were much injured by an earthquake in 1846. It contains an old castle and has a trade in wine oil and cattle. Pop 1385

GUAREMA a to Spain, Estremadura, prov. of and about 40 m. S.E. Badajoz, in a plain at some distance from the Guadiana. It contains a parish church townhouse, prison school and old masonry and has several mills and distilleries, a trade in corn, a weekly market, and an annual fair which lasts three days. Pop 5278.

GUAREMA a vil and con. king of Italy Piedmont div. of, and 41 m. E Com on a hill 1 bank Tanaro. It has a handsome parish church, two monasteries with churches and a large and splendid palace several oilmills, a trade in corn and milk and a weekly market. Pop 2368

GUARICO a river Venezuela, dep. Caracas which runs S.E. Lake Valencia, flows chiefly S. and joins a branch of the Apure 12 m. E San Fernando after a course of about 240 m. Its principal affluent is the Urimao, which it receives on the left.

GUARISAMEY a mining in Mexico dep. and 70 m. Durango, situated in a deep warm valley in one of the best mining districts in Mexico. Pop. about 4000

GUARMEY a desert Peru, 150 m. N.W. Lima lat. 12° 5' S lon. 78° 15' W (n). The river lies about 3 m. N.E. from the anchorage, 1 bank, and near the mouth of river of some name but is nearly hidden by trees, which grow to the height of 30 ft. It has only one street, and contains about 500 or 600 inhabitants. The MARQUE is tolerable having good anchorages everywhere, in from 3½ to 10 fathoms over a fine sandy bottom. Fire-wood is the principal commodity here. Fresh provisions, vegetables and fruit, are also plentiful and abundant, but water is not to be depended on.

GUARO a to Spain, Andalusia, prov. of and 20 m. W Malaga, in an exposed situation on a mountain slope, near the Grande. It is indifferently built has many unpaved streets, a parish church townhouse, prison and two primary schools a distillery several oil and flour mills, and a trade in sugar and agricultural produce. Pop 1189

GUARUCHIRI or **HUANCURIRI**, a to Peru, cap. prov. of same name, at the foot of the Andes 60 m. F Lima, the supplying of which with snow forms its principal trade. — The river, 153 m. by 42 m. slopes to the Pacific Ocean and is watered by the Rios, Caraballo, and Pasamayo climate rather cold, but in the valleys temperate soil good, and well cultivated—yielding grain and fruits. Silver antimony cobalt, and coal are found but not extensively wrought, from the difficulty of transport. Pop 14 024

GUACAMA a vil and con. New Granada, dep. Cacha, 128 m. W Popayan lat. 2° 30' N lon 78° 30' W

GUABE, an isl. Persian Gulf. See KERS

GUABILA or **San Juan** a vil. lat. 24° 15' N lon 101° 15' W, on a small height sloping down into a marshy plain. It has a parish church, adorned with marble and sculpture several minor churches, a monastery a handsome rectory and primary school; has a trade in corn wine, wool and cattle; and an annual fair. Pop 1807

GUANTALIA a to Italy, duchy of and 17 m. N.E. Parma, r bank Po. It has a castle, a cathedral eight other churches several charitable institutions, a number of schools, a public library containing 12 000 volumes and a printing establishment. In the place there is a good theatre, the town of Don Ferrante Gonzales is the only work of art in the town. Silk spinning is carried on here and silk stuffs and shawls are manufactured. There are three fairs during the year. It is a very primitive place, in which two physicians, two surgeons, and one midwife are paid out of the public funds to do all that is needful for all the members of the com-

munity —(Murray's *Handbook*) Rice is grown in the vicinity in great quantities. Pop 3000 to 3500

GUATAVITA, a small tn. and a lake New Granada, dep. Cundinamarca. The river 21 m. N.E. Bogota, before the Spanish conquest in 1587 was one of the richest and best fortified towns in America but since that period its importance has greatly declined. Pop. about 1200 —The lake, near the town, is about 9 m. long, very deep, extremely transparent, and surrounded on all sides by lofty mountains. The Indians had one of their most celebrated temples on its banks and it is reported, that in honour of the god who was worshipped here treasures of immense value were regularly thrown into the lake. Attempts have repeatedly been made to drain it and a considerable amount of valuable articles has been found from time to time recovered from it.

GUATEMALA or **GUATEMALA** one of the states of the federal republic of Central America, having Yucatan and British Honduras, the Bay or Gulf of Honduras N the Pacific Ocean S. Honduras and Salvador E. and Mexico W lat. 13° 45' to 17° 45' N and lon 88° 10' to 93° 15' W greatest length, N.W. to S.E. about 300 m. breadth, about 180 m. area, 4490 geo sq m. The name was formerly applied to the whole confederation but is now restricted as above. It is divided into seven departments, each presided over by a corregidor—namely Guatemala, Retalhuleu, Quetzaltenango, Sacatepequez, Totonicapán, Vera Paz and Chiquimula.

The country is a branch of Central America, and is distinguished by a luxuriant and varied vegetation. The change of scene on entering the state of Guatemala, says Mr Dunlop, is very remarkable indeed it is a singular circumstance that nature, not man appears to have separated the different states of Central America, each of which is entirely of a different geological and physical character from the rest and the change from the great undulating hills of San Salvador to the wild precipitous mountains and rocks of Guatemala is most striking.

Guatemala is wholly mountainous the main chain of the continuation of the Andes traversing it S.E. to N.W. at no great distance from the Pacific, and sending off numerous branches towards the Atlantic thus forming a great many valleys, but including few plains. Along the main chain are a considerable number of volcanoes. All of them are near the Pacific and none of them are found in the interior. Six are said to be active—namely Amilpe 18 100 ft. Sapitlan 13,050 ft. Atitlan 12,500 ft. Agua, which sends forth torrents of water 15 000 ft.; Fuego and Pacaya. The state is well watered by numerous streams of which the Lacantun flows N.W. and forming part of the Mexican boundary and the Melaguna, and the Polochuc continued by the Dulce, both flowing E to the Bay of Honduras, and their tributaries, are the largest. But besides these there are many streams of comparatively short courses falling into the Pacific. There are, likewise, several lakes, the most important being Dulce, through which the greater part of the foreign trade is carried on Amatitlan and Atitlan (which see) and Peten near the frontiers of Yucatan in the little-known province of Vera Paz and about 30 m. long by 9 m. broad. On the table-land of which a considerable portion of the state is formed, the climate is mild and said greatly to resemble that of Yalenda, in Spain but in more elevated situations, the cold is intense. The soil generally is of great fertility producing maize and wheat of superior quality excellent rice, legumes, and vegetables and tropical fruits in great variety. But the want of enterprise in the people and the want of roads through the country are great drawbacks to agriculture. The most important produce, in a commercial view is cochineal the cultivation of which has of late years been rapidly increasing. The total amount of this article produced in the state was, for 1846, calculated to be 20 000 bales—a quantity greater than the entire annual consumption at that date. Cacao tobacco, sugar coffee vanilla, and cotton, are grown to a greater or less extent and also considerable quantities of indigo the silk-worm is cultivated and cotton-wool is obtained.

In the alto or N parts of the state considerable flocks of sheep are raised, the wool of which is manufactured by the natives into coarse twilled fabric, called geros, which, again,

is made into various articles of clothing including large plaids, called ponchos in which considerable taste is displayed.

The population of the state has been estimated at about 1,000,000 of which 800,000 are Indians, 150,000 mestizos, and between 7000 and 8000 whites. Other estimates make the total number only 600,000. The natives, of negro blood, are principally found on the N. E. coast, and in Amatlán. With exception of certain portions of the indigenous Indians, particularly those inhabiting the slope, or N. parts of Guatemala, the inhabitants of this state are characterized by all the vices that distinguish the general population of Central America—Indolence, gross immorality and an utter absence of all principle.—(Dunlop's Central America Daily's Central America Jour. Rep. Gen. Sec.)

GUATEMALA (SANTIAGO DE) or **NEW GUATEMALA**, a city Central America, cap. state of Guatemala. lat. 14° 36' N. lon. 90° 15' W. finally situated at the extremity of a plain, 20 m. in length, by 6 m. in breadth with a deep ravine on three sides. It lies 4572 ft. above the sea in the form of a quadrangle measuring about 1 m. each way and the streets are wide, straight, and clean, cross each other at right angles, and are all paved, and many have flagged footpaths. The houses have a mean appearance, being only one story in height, on account of the frequent earthquakes, with small grated windows. The city is amply supplied with water of excellent quality brought, by means of an aqueduct, from a distance of 12 m. The plaza, or market-place, in the centre of the city is a square of 150 yds on each side on one of which is the cathedral and archbishop's palace on the opposite side, the government-house, and some of the law courts on the third are the greenhouse, barracks, and some shops on the fourth a corridor full of shops, where the principal business of the city is done, and in the centre is an ornamental fountain. There are several other squares, each with its central fountain. The churches 24 in number are, some of them, good and massive buildings the cathedral already mentioned, being a neat, substantial structure, with a handsome facade, and a well proportioned, chaste interior. Other public buildings are—the University of San Carlos the Tridentine College the Hospital of San Juan, outside the city near the cemetery for public lavatories or washing-places, a circus for bull fights, &c., and a slaughter-house. At the S. end of the city a fort, mounting about 20 guns, has been erected but more for the purpose of overawing the inhabitants than of defense for it is commanded by a height, at no great distance. There are several private schools, and four or five printing offices and two weekly newspapers are published, and three almanacs are issued.

Provisions, vegetables, fruits, and all articles of ordinary consumption, are abundant and moderate while many descriptions of British manufactures can be had as cheap as in England. The number of shops exceed 300 but the principal trade of the place is carried on by 20 or 30 persons, called importing merchants who have correspondents in England, and various other countries of Europe.

In 1867 the imports were in value £218,914 and the exports £517,831. Among the exports were 40 tons, cochineal 8.5 tons, coffee and 47,064 hols. The cultivation of coffee is extending, and that of cotton has been attempted.

The inhabitants are represented as courteous, affable, and hospitable to strangers but are not much given to visiting each other. They have little desire for public amusements of any kind—almost their only recreation being their religious processions, which are frequent. On these occasions, the streets through which the processions pass are strewed with pine-leaves, and adorned with arches, decorated with evergreens and flowers. The building of the present city was commenced in the year 1778; three years after the earthquake of 1773, which nearly destroyed old Guatemala, the former capital. Pop. 35,000 to 40,000.—(Daily's Central America; Dunlop's Central America, &c.)

GUATEMALA (Old) [Spanish, *Antigua Guatemala*] a city Central America, the former cap. of the state of Guatemala, 10 m. S.W. the new city of same name, dep. Sacatepequez, close by the Volcane de Fuego and the Volcane de

Agua, in a valley, open to the S.W. but on all other sides enclosed by high mountains. It was founded by the Spanish conquerors in 1527 and continued to be the capital of the country till 1773 when it was nearly wholly destroyed by an earthquake being left, with exception of a few of the more substantial edifices, little better than a pile of rubbish. It covered an extent of 2000 yds. N. to S. and 2500 yds. E. to W. and had spacious regular, and generally parallel streets. A new town is now rising upon the site, on the plan, and built of the materials of the old. Prior to the earthquake, the population is alleged to have been 60,000. It is now about 3000.—(Daily's Central America.)

GUATULCO a sea-port, Mexico, dep. of and 110 m. S. E. Oaxaca, on the Pacific lat. 15° 44' 34" N. lon. 95° 10' W. (n.)

GUAURA, or **HUAURA**, a tn. Peru, interdependency of, and 73 m. N. N. W. Lima, on the Pacific, near a bank river of same name. It consists of one very long street, terminated by a bridge over the river and by a large tower defended by a redoubt. It has a church, a convent, and an hospital. The harbour is safe and commodious. In the environs are extensive salt-works, and some remains of ancient edifices.—The river runs on the W. side of the provincial chain of the Andes, flows S.W. and falls into the Pacific near the town, after a course of about 90 m.

GUAVERA, or **GUARIARA**, a large and navigable river New Granada, formed of several streams, which, rising in the mountains of Bogota, flow S.E. and unite about lat. 3° 47' N. lon. 73° 30' W. thence the united stream flows S.N.E. traversing the plains of San Juan, and after receiving numerous tributaries, joins the Orinoco, in lat. 4° N. lon. 65° 15' W.

GUAYAMA a tn. and port, Isl. Porto Rico, S. coast. In 1845 106 vessels, tonns. 12,692 entered and 110 vessels, tonns. 14,266, cleared. Exports—tobacco coffee, and sugar. Pop. 5400.

GUAYANA S. America. See **GUIANA**.

GUAYANILLA a seaport, Isl. Porto Rico, S. coast. In 1845, four vessels, tonns. 724, entered and 11 vessels, tonns. 1784, cleared.

GUAYAQUIL, a city and seaport, Ecuador dep. same name, on the Guayaquil here, about 2 m. wide lat. 3° 9' S. lon. 79° 58' W. It is divided into the old and new towns the former higher up the river than the latter and entirely occupied by the poorer classes. The framework of the houses is of wood they are generally of one story excepting in the principal street, where they are mostly of two; the ground-floor being divided into small shops, occupied by tradesmen of

GUAYAQUIL, ECUADORAL.—From Valdivia, Voyage around the Straits.

different kinds. Some of the buildings are rather handsome, particularly the custom-house. There are also a cathedral, three convents, a college, and an hospital, all respectable edifices. In hot weather the old town is filled with a pestilential effluvia, proceeding from the mud exposed to the action of the sun by the receding tide. This exhalation is the cause of malignant fevers, which render the city a terror to strangers,

and seriously affect the prosperity of the port. In the rainy season the streets are rendered impassable by accumulations of mud and water there being no drainage, as the town stands on a dead level. The unhealthiness of the place from these causes is increased by an extensive marsh situated behind it, and, to add to the discomfort attending on a residence in it, the houses are filled with noxious vapors, and the supply of potable water very deficient. Guayaquil is the only port in Ecuador. Its principal exports are cane and cotton. The number of vessels that entered in 1844 was 167 ton 14 718; value, \$209 108 64;—cleared, 167 value, \$196 194. 2a. European goods are imported in considerable quantities particularly liquors, and articles of consumption for the table, chiefly Spanish. Pop. 22,000.—The next structure, overlooking the province of Guayaquil and Manabí, area, 14,400 sq m, is for the most part level and has the Andes for its E. boundary. It is unhealthy but extremely fertile, and produces in abundance cane, cereals fruit, rice, cotton, and tobacco, while the forests furnish a variety of useful kinds of timber. Principal cities, Guayaquil and Puna. Pop. 80,000. GUAYAYULI (GULF OF) an inlet Ecuador part of its S. coast being the N.W. extremity of Peru Entrance about lat. 8° 10' S. lon. 80° 10' W. It is the largest inlet on the W. coast line of S. America Y of lat. 43° E. and extends inland upwards of 50 m. and is 12 m. wide at the principal entrance. At lat N. and S. divides into two narrow branches, which penetrate several miles into the land, being in part the estuaries of several united streams on one of which stands the city of Guayaquil. At the entrance of the gulf is the island of Puna, 800 m. long and about 8 m. wide.

GUAYMAS, a seaport Mexico, state Sonora and Cinaloa, S. shore Gulf of California, at the mouth of river of same name; lat. 27° 54' N. lon. 110° 59' W. (a). The harbor is one of the finest on the coast, being sheltered from all winds exceptable of accommodating 300 vessels. It is one of the principal depots for the commerce between Mexico and China. The houses of the town are mostly of mud but many of those of recent erection are of more durable materials, large and well built. Pop. 3000.

GUAYRA (LA) [French *La Guyre*] a tn and seaport, Venezuela, on the Caribbean Sea; lat. 10° 38' 42" N. lon. 68° 56' 30" W. (a). 10 m. N. Caracas, closely surrounded by high mountains and rocks. The streets are narrow tortuous, and ill-paved, and the houses ill built. For nine months in the year the heat is excessive all day long to malignant and putrid fevers which render a residence here infinitely dangerous to strangers. It contains no public buildings worthy of notice. Being the principal port of the republic, its trade is extensive. Its chief exports are coffee cane, indigo, and hides, acaparrilla, &c. imports, British manufactured goods, provisions, wines, &c.

La Guayra is visited annually by about 180 vessels having an aggregate tonnage of 24 000 to 30 000 tons. Its merchants are chiefly representatives of houses in Caracas to which place the goods are despatched as soon as landed. Formerly this trade was carried on exclusively on the backs of mules by a road leading up the slopes of the Cordillera to a height of above 4000 feet above sea-level, where a plateau was reached on which cold and thick mist always prevail. The ascent required two hours and the descent one. Now the greater part of the transport is carried on in wheeled vehicles, which follow a longer route along a gentle slope to the capital.

The port is not a very good one being unsheltered from N. to E. and W. winds, and the continued E. breeze keeping the sea in a state of constant agitation. The holding ground however is good anchorage, from 6 to 30 fathoms, according to distance from the land. The town is defended by a fort, and several batteries judiciously planted along the shore. La Guayra was nearly destroyed, in 1812 by an earthquake. Pop. 3000.

GUAYTARA a river in the N. of Ecuador an affluent of the frontier river Puta, which it joins after a generally N.W. course of about 75 m.

GUAYTECAR a bay and group of isls off W. coast Patagonia. lat. 44° S. The islands which form the N. part of the Chonos Archipelago, are much frequented by seals.

GUBBIO (anc. *Agrynum*) a tn. Papal States, deleg. Urbino and Pesaro, 50 m. W. S.W. Ancona. It is a bishop's seat, has

a cathedral, six parish churches, 21 convents, and manufactures of silk and woollen stuffs. Pop. 4339.

GUBEN a tn. Prussia, prov. Brandenburg gov. of and 78 m. S.S.E. Frankfurt-on-the-Oder cap. circle of same name, at the confluence of the Lahn with the Moselle. It is walled has three suburbs four churches, a court-house, and gymnastic manufactures of woollen and linen cloth tobacco leather, iron, and earthenware; a building yard, walled mill some shipping trade, and a trade in wool, wine, fruit, and cattle, and three annual fairs. Pop. (1848) 11 683.—The climate is flat wood wooded and watered, and produces much corn, and dispatches large numbers of cattle, sheep, and swine. Area, 327 sq m. Pop. 45 801.

GUCHILAQUE, a small tn. Mexico, dep. of and 90 m. S. Mexico 7000 ft. above the sea, on a mountain range of same name, forming a portion of the Cordillera of Anahuac.

GUIDEN or GUERARA a river Denmark W. Jutland formed by the junction of the Hammermølle-aa and the Steengard-aa, near Tørring ball Aarhus. It flows N.E. falls into the N.W. corner of Lake Mos. on issuing from which with its original volume much increased, it passes through a number of small lakes, flows N. and then N.E. passes Randers, and falls into the Randers-fjord after a course of about 80 m. Vessels drawing 7 f. come up to Randers, and large barges can proceed up much farther.

GUIDENSBURG a tn. Hesse-Cassel prov. Niederhessen 11 m. S.W. Cassel. It is walled contains a church hospital synagogue, and industrial school and has a trade in yarn. There is a colliery in the neighbourhood. Pop. 2097.

GLDOOK, a pass, Panama, 80 m. E. by N. Tehuacan one of the greatest leading into Mazandaran from the S. It is supposed by Barrow to be the *Pylas Caspas*, or the Caspian gates, through which Alexander the Great passed Darius.

GUEBWITZER a tn. France, dep. Haut Rhin 13 m. S.W. Colmar on the Lahn at the foot of the round topped mountain called the *balcon of Guebwiller*. It is well built, has two remarkable churches, one of which is of the 11th century manufactures of cloths woollens, ribbons cottons, plain and printed fine cotton yarn, sewing silk, enamels, and machines slate cherries, and a sugar refinery. Near it are coal mines and slate quarries. Pop. 3860.

GULGUETE VANGO a tn. Central America, Guatemala, dep. Totonicapan, 114 m. W.N.W. Guatemala in a valley near the source of the Selagua with a parish church. Pop. chiefly Indians, 1300.

GUENDERLAND a prov. Holland. See GUENDERLAND.

GUELDERS, a tn. Prussia. See GELDERN.

GULEA a tn. Algerian Sahara, 125 m. W.S.W. Gardania consisting of 200 well-built houses inclosed by a wall situated on a conical hill, and supposed to be constructed of stones hewn for a Roman city that occupied the same site. It has some trade and manufactures, and near it are rich date plantations.

GULLE a vil. W. Africa, Fouta-Djallon, 1 bank Senegal lat. 16° 18' N. lon. 12° 45' W. It is an extensive mart for millet.

GUELPH a tn and township, Upper Canada, Wellington dist. The town finely situated on the Space 38 m. N.W. Hamilton has a handsome jail and court house, and places of worship for Presbyterians, Episcopians British Wesleyans, Congregationalists and E. Catholics. Pop. 1240 chiefly English and Scotch township, 8400.

GUERANDE a tn. France, dep. Loire-Inférieure, 42 m. W.N.W. Nantes on a vine covered slope. Though now 8 m. from the sea it once had a harbour and was a place of importance and strength. It has lofty walls, many towers, and a gloomy aspect and near it is a massive castle, formerly an other defence. It likewise has two well-manned hospitals, manufactures of linen cottons, and serge, and wool and cotton appliances. In the environs are salines, whence much fine salt is extracted. Pop. 2202.

GUERARA, a tn. Algerian Sahara, Oude of Wady Mech, 42 m. E. E. Gerdania. It is surrounded by a very high wall and entered by three gates. The gardens are remarkable for their extent and fertility. All the tribes of the desert frequent this place either to buy or sell horses, asses, sheep, ivory gold dust ostrich feathers, cotton silk, ordinary &c. brought chiefly from Tunis and Algiers. Pop. very considerable, said to be little inferior to that of Gardania.

GUERCHE (La) a tn. France, dep. Ille-et-Vilaine, 24 m. E.S.E. Rennes, with a manufacture of bone-black, and a trade in electricity. Pop. 1984.

GUERMINO a vil. Italy, deleg. of, and 12 m. N. Francosca, r. ha Costa. Pop. 1160.

GUÉRET (France) a tn. France, dep. Creuse, 40 m. N.E. Limoges. It is tolerably well built, is the seat of a court of primary resort, possesses a communal college, and acquires of agriculture, natural history and antiquities; contains a handsome townhouse, a courthouse, library, prison, and hospital, and has a considerable trade in cattle and butter and numerous annual fairs. Pop. 3274.

GUERIGUY a vil. France, dep. Nivernais, 8 m. N.N.E. Nevers, on the Nivernais. Here are some State ironworks, for the manufacture of chain-ropes, &c. Pop. 1357.

GUERNSEY the second largest and most W. of the Channel Islands, lying off the N coast of France, from which it is about 25 m. distant, and from England about 68 m. lat. (S.W. point) 49° 27' N. lon. 2° 41' W. (N. It is of a triangular form, about 9 m. long and 8 to 4 m. broad. The N. part of the island is level, the S. more elevated, and intersected by numerous deep and narrow valleys, coast both and abrupt, some of the cliffs attaining a height of 370 ft. The island is almost entirely of granitic formation, the rocks are chiefly granite, granite, and scoria. The climate, though subject to frequent variations, is extremely healthy, snow is rare and frosts light, and of short continuance, mean winter temperature, about 41° 62° of summer 60°. During the spring E. winds prevail and W. during the rest of the year. The soil is fertile but, from the minute subdivision of property—almost every farmer being proprietor of the patch he cultivates, commonly varying from 5 to 12 acres—little improvement has been made in agriculture. Though the land under tillage is rapidly increasing and wheat is the crop most generally grown, yet the annual growth of wheat and of barley is far short of the consumption, and oats, beans, and rye are seldom raised. Many of the small proprietors who live near the coast combine the pursuits of fishermen and farmers, three or four clubbing in the ownership of a boat, and, while the husband on his return cultivates his ground, the wife carries the fish to market. But in most cases, the breeding of cattle and the dairy are the principal objects of attention and the butter made is highly esteemed. Flocks of good breeds and pigs are also reared, the latter attaining a great size. Long leaved trees are unknown, but a great part of the land is heavily burdened with a species of irremovable mortgage peculiar to the Channel Islands. The value of land is extremely high, a rent averaging from £5 to £7 per ac. The houses and cottages of the country people are generally neat and comfortable. The garden produce, including flowers, is remarkable for its variety and excellence; many beautiful plants, which require artificial heat in England, growing here in the open air. Pigs and peaches are abundant, melons also plentiful, but considered inferior to those of Jersey, and there are also extensive orchards, from the produce of which considerable quantities of cider are made, both for home consumption and for exportation. The principal articles of export are cider apples, potatoes, wine, and building-stones or granite, hardly a day passing without a vessel being despatched to London, laden with granite in a broken state for the repair of roads &c. while so many as 15 to 20 vessels are seen here have arrived in London in one day. The imports are wheat, flour, British manufactures, wine, sugar, coffee, &c.

The government of Guernsey as of the other islands, is in the hands of States; some members of which are named by the crown while others are chosen by the people, and others sit ex officio. Chances are determined by their own officers, but an appeal may be made to the sovereign in council. Neither parliament nor council however interferes on ordinary occasions with the internal regulations of the island. The legal institutions are a mixture of English with Norman law precedent, and custom. The language spoken in court is French. Juries are unknown. The States vote money for ordinary public expenses but new taxes must be sanctioned by the crown. The military government of the island is vested in a Lieutenant Governor who represents the sovereign in the Assembly of the States. The effective strength of the militia is about 2680 men, from 18 to 45

years of age, and is divided into four regiments and an artillery battalion.

The natives of Guernsey are a thrifty and saving people. The dialect of the island is the pure Norman of some centuries ago, but among the upper classes a knowledge of English is general. The principal place of education is Elizabeth College, at St. Peter's Fort, the capital, and only towns in the island. There is also a school in each of the ten parishes into which the island is divided. Pop. 29,767.

GUESTLING par Eng. Saxony, 8564 ac. Pop. 860.

GUESTWICK par Eng. Norfolk, 1648 ac. Pop. 323.

GUETARIA a tn and port, Spain, Biscay prov. Guipuzcoa, 15 m. N.W. Tolosa, on the Atlantic. It is indifferently built, partly surrounded by decayed walls, and has a Gothic church, municipal-house, prison, hospital, and school. Laborers are usually employed in fishing, and in weaving flannels and woollens. Pop. 1374.

GUFVO UFAS (VALLEY OF POISON) See JAVA, sec. Folsome.

GUGGIBERG a vil. and par. Switzerland, cant. of and S.S.W. Bern, r. bank, Kalte Botten. It consists of the small village of Guggiberg containing the church and parsonage, and a great number of single houses, scattered over a very hilly district. In one of its valleys, on the N. side of the Gutzwiller where the Kalte Botten has its source, there is a sulphur spring, in high repute among the inhabitants. P. 3605.

GUGLIONE a tn. Württemberg, circle Neckar, lat. of, and 1 m. S.W. Bruchsal, 1. bank, Zaber. It has a court-house, and a trade in corn, wine, and fruit. Pop. 1440.

GUGLIONESE a tn. Naples, prov. Salerno 7 m. N. Larino. Pop. 2000.

GUAN an isl. N. Pacific Ocean, one of the Ladrones, or Marianne group, lat. 17° 35' N. lon. 145° 53' E. It lies N. and S. 2½ m. long and is one of the highest in the group. There are two peaks on it, one of which is estimated at 3000 ft. To the S. and E. the slopes of the hills are extremely rapid, and the rock, which descends to the sea, is composed of lava. The high est point on the N. side is a vast crater whence smoke has been seen to issue. (Findlay's Directory for the Pacific Ocean.)

GUINIAU or GONIA, a tn. PRIMA, prov. Silesia, gov. of and 42 m. N.W. Breslau, cap. circle of same name on a height. It is surrounded by walls, is the seat of a court, and several public offices, contains two churches, and two chapels, several schools, an hospital, and infirmary, and has manufactures of linen and tobacco, numerous mills, a distillery, a trade in corn, garden produce and cattle, and three annual fairs. Pop. 3779.—The district area 204 geo. sq. m. flat throughout, is watered by the Oder and Hartzsch, and has good arable and pasture land. Pop. 127.

GUIA a tn. Canary Islands, isl. Gran Canaria, 11 m. W. by W. Palma. It is well built, and possesses a church, several chapels, two schools, a town-hall, prison and cemetery. Manufactures—linen, cloth, basins, hats, and wine. Trade—grain, fruits and domestic cattle. Pop. 2294.

GUAGUAILA a vil. Buenos Aires, r. bank, San José, opposite Montevideo; lat. 14° 15' N.; lon. 32° 30' W. It is picturesquely situated on a mass of quartz rock, and its central part is surrounded by an earthen wall. The environs are adorned with trees, and with fine plantations of miller.

GUIANA GUYANA or **GUAYANA** a large territory S. America, extending between lat. 8° 40' N. and 5° 30' S.; and lon. 50° and 68° W. having the Atlantic and E. coasts of the Orinoco, N.; the rivers Negro and Amazon S.; the N. course of the Orinoco and the natural canal of Casiquiare W. and the Atlantic, E. This territory was divided into Brazilian or Portuguese Guiana, Venezuelan British, Dutch, and French Guiana; but the last three alone are now recognised under this name and so distinguished on our maps—the other two being absorbed by their respective countries. The three Guianas just alluded to are maritime territories lying contiguous to each other N.W. to S.E. in the order in which they are named.

GUIANA (BRITISH) one of the three portions of the above territory about 560 m. long, E. to N.W. and about 200 m. broad, having E. Dutch Guiana, W. Venezuela and Brazil N. and N.E. the Atlantic, and S. Brazil lat. 40° to 5° 40' N.; and lon. 57° to 61° W. Neither its W. nor S. limits, however, have been defined. Estimated area,

75,000 sq. m. Its coast line is about 200 m., extending from the river Courmay to the Punta Barina, about 100° W. It is divided into two countries—namely Berbice, and the united colonies of Demerara and Essequibo. The whole surface of the coast lands is on a level with the high-water of the sea. When drained, baked, and cultivated, they are useless and sink fully a foot below it in consequence of which, it becomes necessary to pay unending attention to the same and, to keep out the sea, otherwise great destruction and damage to the land ensues. Shallow, or muddy banks, stretch along the whole line of coast, and run several miles into the sea; they are in some parts dry in others covered with not more than from 8 to 4 ft. water. The entire absence of all landmarks on these flat and monotonous shores, renders it difficult for strange vessels to ascertain at what particular point of the coast they are. The level country extends from 10 m. to 40 m. inland when it is crossed by a range of sand hills, of low elevation, the highest not exceeding 200 ft. Behind these hills, the high land stretches out in level or undulating plains, rising here and there into eminences. Notwithstanding the general flatness of the country towards the coast, the interior is traversed, in various directions, by chains of mountains; few of them however of any great height. Of these mountains the Pacaraima range nearly in the centre of the country is the most remarkable and exhibits the loftiest elevations—the culminating point, called Roraima by the Indians, rising to a height of 7500 ft. above sea-level. This group extends about 25 m. N.W. and S.E., is composed in part, of sandstone, and presents a singular castellated appearance—the upper portions consisting of a perpendicular mural precipice 1500 ft. high down which magnificent cascades, of equal height, are seen descending. The other principal ranges are the Sierra Imatoca, in the N. part of the country, running also N.W. and S.E., parallel to the coast, at an average distance of 50 m. to 60 m., the Canaan or Conoon, and the Sierra Arenal—the last occupying the extreme S.E. corner of the territory forming its boundary in this direction. They are densely wooded, but do not reach a greater elevation than 4000 ft. The geological composition of the mountains of British Guiana is various. Some of them consist of granite, gneiss, and trappean rocks, and their different modifications; others, as mentioned above are of sandstone and others, again appear to be of white quartz which, from the quantity of the particles of silica they contain, shines like gold. Granite, however, is probably the prevailing formation particularly in the interior, many huge mountains, several thousand feet high, being wholly composed of this substance, frequently traversed by veins of quartz, and consequently almost destitute of vegetation. Some of the detached masses of granite present the most extraordinary forms; they are generally of a conical figure, and often of great height—others resemble of both cones and pyramids. Amongst the more remarkable of these is an isolated rock, called Arawak—(which see)—rising 1200 ft. above the sea. Another natural curiosity of this kind occurs at the outskirts of the Pacaraima mountains, about lat. 4° N. being a column of granite, in the form of the trunk of a decayed tree, about 50 ft. high. Rock crystals and red agate are met with; and very pure white clay is found in the Essequibo. The extensive flats along the shore are composed of alluvial soil and clay, resting upon granite. These alluvial flats are, in many instances, covered with a black vegetable matter the debris of numerous rivers.

Rivers.—The principal rivers are—the Essequibo, Demerara, and Berbice the Courmay forming the boundary between British and Dutch Guiana. The first is situated about 10 m. W. from the Courmay river and is about 15 to 20 m. wide at its embouchure which is studded with several low beautifully-wooded islands. The Demerara is about 1½ m. wide at the mouth, and has a course of about 200 m. It is navigable by ships of burden for 100 m. up when the navigation is interrupted by obstacles and rapids. The Berbice river 75 m. S.E. the Demerara, is about 3 m. wide at the mouth. Moderately-sized ships can ascend as far as Fort Rouseau a distance of about 50 m., in a straight line, but vessels drawing not more than 13 or 14 ft. draught, it is said, sail 200 m. up. Above this, dangerous obstacles occur.

Climate.—Guiana has two dry and two wet seasons, each continuing for three months; the wet embraces the months of Oct. 2.

December, January and February—and then June, July and August; the dry the other months. The mean annual temperature is nearly 81° F. Violent thunder-storms occur at the change of the seasons, but hurricanes, so destructive in the W. Indies are unknown. In the dry seasons the climate is agreeable, and in the interior more healthy than in many parts of the W. Indies.

Soil, Agriculture, Vegetable Products, &c.—The soil is, in general, very fertile and that of Demerara, in particular, well adapted for the cultivation of the sugar-cane; but, in consequence of the numerous large open drains with which the land is intersected, and which have been rendered necessary by its being below the level of the sea, the plough cannot be used. Vegetation however is singularly vigorous and luxuriant in its forest trees, which cover about one-half its surface are of the most magnificent description, especially the mir-tree (*Mimosa excelsa*) described in attaining the height of 180 to 150 ft. and as appearing, at a distance, from its immense size, like hillsides clothed with vegetation. The timber of this tree is said to be equal to the oak of the E. Indies. Among the other principal trees are—the green heart (belonging to the family of the *Lawsonia*) the sawy (*Potes tuberculosa*) the bull-tree (*Licium balaia*) the so-called crab-wood (*Crotopha Gossweilii*) and purple-heart. Fruit-trees of various kinds also abound. Amongst the hardy exotics fruits are—the pineapple guava, the marmalade fruit, the anone, the sapotilla, and the Brazil and Scurviera nuts. The cabbage-tree is common and there are several varieties of palms. Medicinal plants also abound including ginseng, a species of *Ipomoea*, gentian and many others. Cultivation is chiefly limited to sugar coffee, yams, cassava, plantains, bananas, sweet potatoes, maize &c. There are many fibrous vegetables which afford substitutes for hemp and flax and in the forests drying woods, contained gum copal, and a multitude of other valuable and unknown vegetable products also abound. The flora is rich and varied, and includes the Victoria Regia, the largest of the water-lilies whose immense bright green leaves, and enormous white and pink flowers are to be seen floating on the reaches of some of the rivers.

Zoology.—The animals are those of tropical S. America generally—the jaguar, tapir, armadillo, agouti and bear sloth deer a great variety of monkeys, iguana large alligators, and turtles several kinds of parrots, macaws, and humming birds the flamingo, Manocory duck, toucan and spoonbill in the forests the vampire bat abounds. Snakes are numerous, and many of them poisonous and troublesome insects are almost intolerably plentiful as might be expected from the swampy nature of the coast districts. The rivers abound with a great variety of kinds of fish many of them highly prized for the table they include the allures, which often measure 12 ft. in length and weigh upwards of 2 cwt. The domestic animals are—horses, mules, dogs, goats, and fowls. Black cattle and horses are reared on the savannahs, but are little attended to.

Inhabitants.—The population of British Guiana is composed of aboriginal tribes, and of foreign settlers—Dutch, English, Europeans, Africans and their descendants. The principal tribes of the aborigines, now greatly reduced in numbers, are—the Arawaks, Accawals, Caribbees, Warrawos or Warraws, Mamunna, and Wapishanas the last are tall, fine-looking men with regular features, and large noses. The Arawaks living within the immediate vicinity of the plantations are the most civilized of all the tribes. They are of small stature, seldom exceeding 5 feet 4 inches in height, are stout and plump in proportion but not muscular. The Accawals are also of low stature and their skin of a deeper red than the Arawaks. They paint themselves with arecibo are quarrelsome warlike, capable of enduring considerable fatigue, and are said to be superior in courage to all the other nations, but are accused of being slothfully idle in their habits. They are, however, hospitable, and determined hunters. The Caribbees, who are rapidly decreasing, occupy the upper part of the rivers Essequibo and Courmay. They are brave, credulous, simple, and obstinate. Nothing seems to them in the way of food rats, frogs, toads, lizards, and insects being devoured indiscriminately. The Warrawos or Warraws inhabit the Pomeroon coast, and are mostly sailors and boat-builders, as which they excel. They

are said to be temperate, quarrelsome, improvident, and shifty in their persons they are only about 700 in number. The Maroons are a kind and amiable tribe and appear to be less indolent than the Indians generally they inhabit the

INDIANS OF GUIANA
From Selousburgh & Schomburgk's *Guiana*

vicinity of Parama, a village far into the interior. There are several other tribes in the interior of which little is known. None of those inhabiting the upper regions of the Essequibo are said to be cannibals. The accompanying illustration represents three young natives who were taken to England by Sir R. H. Schomburgk after his first journey through Guiana, and there educated for a time. They were quiet docile and obedient to their instructors, exhibiting different tastes and different degrees of aptitude. No 1 is a Marooning a Mousni the most intelligent of the three No 2 is a Marooning a Parviano, once a powerful chief, inhabiting the banks of the Rio Branco, and No 3 is a Marooning a Waran. One of them died, but the other two returned to Guiana and serving were afterwards very useful to Sir R. H. Schomburgk and his brother Richard on a subsequent journey from his knowledge of English Creole-Dutch and sundry native dialects.

Products, Commerce &c.—Sugar rum, coffee molasses, and hardwood form the principal articles of export. The exports for 1867 amounted to £1,365,946 and the imports to £1,107,161 both of them showing a decrease on preceding years. Cotton was also cultivated formerly to a great extent especially in Demerara, but is now nearly extinct in consequence of the paucity of labour. The cultivation of coffee has likewise shrunk greatly of late years molasses, rum, and sugar being now the principal articles exported. In 1867 899 vessels (of 1,40,014 tons) entered and 690 vessels (133,653 tons) cleared; being in each case a somewhat smaller number than in preceding years.

Government.—British Guiana has no legislative assembly or executive council but a court of policy consisting of 6 official members—namely, the governor the chief justice the attorney general the collector of customs the government secretary and five non-official members. The expenditure of the colony in 1862 amounted to £310,505 while the revenue produced only £282,584, the public debt, amounting to £263,700 paying £16,611 interest per annum.

Towns.—The principal towns are Georgetown, Demerara, and New Amsterdam, Berbice (both of which see).

History.—Guiana is said by some to have been discovered by Columbus on his third voyage, in 1498, others attribute the discovery to Vasco Nunes, in 1504. The first settlement was formed by the Dutch in 1680 on the river Pomeroon and called New Zealand whence they spread E. to the Essequibo and Demerara. In 1781 the colony was taken by Sir George Rodney but it was restored to the Dutch in 1785. In 1796 it surrendered to the British, and was again restored to the Dutch by the peace of Amiens 1801.

It was again taken by the British on the breaking out of the war in 1803, and has since remained in their possession. Pop. (1861), 155,026.

GUIANA (Dutch), or SURINAM, a Dutch colony S. America situated between English and French Guiana, having the former on the E., and the latter on the W., between lat. 1° 30' and 6° N. lon. 53° 30' and 67° 30' W. Its coast line extends from the river Corantia to the river Maroni. The length of the territory N to S, is 300 m., breadth, at the widest part, about 250 m.; but does not generally exceed 225 or 230 m. area about 38,500 sq. m. The general aspect of the country is the same with that of British Guiana above described—flat and swampy on the coast, and mountainous in the interior well watered by numerous streams, flowing generally S. to N. and of which the Surinam and its affluents, and the Paramaribo with its affluents, and the Coppename, are the chief. It has also a similarly warm moist climate, is very fertile and well cultivated resembling an extensive garden and yields similar products. On the E. bank of the Surinam river and about 10 m. from its mouth, is situated the capital of the settlement, Paramaribo a little N. from which is the fort of Zeelandia, where the governor resides and where also most of the government establishments are situated. The principal exports of the colony are sugar coffee, cotton molasses, and rum. Their value in the years 1808–1860 was as follows—

	1808.	1860.	1861.
Sugar	£210,430	£203,510	£230,838
C. 10m.	2,068	1,525	14,622
Coffee	3,123	13,440	1,211
Rum	77,397	8,300	12,404
Molasses	3,014	36,150	91,479

During the same years the value of the imports amounted to—

1808.	1860.	1861.
£264,068.	£237,317	£261,115

The Dutch government have recently emancipated their slaves in this territory but instead of compensation for the proprietors, the slaves remain under government labourers for a period of 12 years, and work without pay. The pop. amounted in 1863 to 49,132 besides about 1000 Indians, and 7000 Maroons fugitive slaves and their descendants. The government is vested in a governor-general and council **GUIANA (Fasson)** (French *Guyane Française*) a French colony S. America, the most E. division of Guiana, its coast line extending from the river Maroni, on the W. to the river Oyapock on the E. which separates it from Brazil a distance, in a straight line, of about 200 m. between lat. 2° and 6° N. and lon. 69° 35' and 64° 30' W. The greatest length of the colony N to S, is about 240 m. its greatest breadth about 220 m. area, 37,660 sq. m. This territory also resembles that of British Guiana in its physical features, climate and vegetable productions, with the addition, in the latter case, of pepper cloves cinnamon, nutmeg &c. The coast is low consisting of a flat alluvial tract, of great fertility in some places marshy and covered with thick forests of mangroves. The highlands in the interior—the soil consisting of clay mixed with granite sand—are also fertile, and the whole country is exceedingly well watered—the principal streams being the Mana, Surinam, Oyak and Approuague. The territory comprises the island of Cayenne (which see) celebrated for the description of pepper bearing that name. On this island is situated Cayenne (which see) the capital of the colony. The colony is divided into two districts Cayenne and Sinnamary and 14 communes or townships. The government is vested in a governor assisted by a privy council and colonial council of 16 members, elected by the colonists. The imports and exports in the years 1858–1861 were as follows—

	1858.	1860.	1861.
Imports.	£228,100	£260,020	£267,134
Exports.	— 51,519	— 75,621	— 51,976

The French first settled in Cayenne in the year 1763. In 1763 the French government, with the view of improving and otherwise increasing the importance of the colony sent out 19,000 emigrants but no arrangements having been made for their reception or subsequent disposal, they nearly

all perished from exposure to the climate, which was then extremely insalubrious. In 1809 the colony was captured by the united forces of the British and Portuguese, and restored to France at the peace of Paris, in 1814. Pop. (1861) 19,559.

GUANTIA, a river S America. See *Nasau* (Rio).
GUICOWAR, *Grawat*, or *BARODA* DOMINION, a state, *Zimboanga*, in its W portion, subsidiary to the British, and subordinate to the presidency of Bombay consisting of most part of the peninsula, and of some other detached portions of the province of Gujarat the whole between lat. 20° 40' and 24° N. and lon. 69° and 74° E. bounded, on the S.W., by the ocean N by the Gulf and Rann of Cutch and the territories of Odeypore &c. E. by some minor Rajpoot states and a part of the Bombay presidency which last surrounds the districts on the E. and N. of the Gulf of Cambay area of the Baroda territory or that immediately subject to the Guicowar 4400 sq m., but of the whole, including the dominions of the Kattywar and other tributary chiefs 29,400 sq m. The Sabarmaty Mithy, and Nerbada rivers, intersect it, flowing S. or W. to the Gulf of Cambay. It is one of the richest parts of India, and its salubrious position, with a long line of coast, is highly advantageous to its commerce. Cotton sugar-cane, indigo, tobacco, oil pulses, flax, are principal crops in some parts are fine pasture lands and the E. districts in particular are productive of various kinds of grain, more of which is produced than required for home consumption. The inhabitants are chiefly Hindoos; but include many Mahomedans, and Parsees, with wild, aboriginal tribes the Jains a religious sect of W India, are here very numerous. Almost all the Hindoo castes are partially occupied in weaving and cotton fabric form, with corn and raw cotton the principal exports. *Cambray* and *Surat* Baruch, &c. in the British territories around its Gulf monopolize most of the foreign trade. The dynasty is Mahabati and the rise of the Guicowar was coincident with that of the Peshwa, in the Deccan a treaty was first entered into between him and the British in 1780 and in 1817 the Guicowar's dominions were enlarged, in consequence of the Peshwa's cession of his previous rights in Gujarat. In the same year the Guicowar agreed to maintain an armed force, subsidiary to the Anglo-Indian army and consisting of 4000 native infantry two regiments of cavalry and a company of European artillery and in 1829 his tribute to the British was fixed at eight lakhs of rupees (£80,000) annually Baroda is the capital and the seat of the British resident, who conducts all the foreign relations of the state. Other principal towns are Jeonagher Poorbunder Jafferabad Mallia, &c. in the peninsula of Gujarat. Pop. of the Baroda district 825,536 of the entire territory 3,182,900—(*Thyagomestras Survey of India Parliamentary Reports &c.*)

GUIDAKAR a vil W Africa, Walla, L bank Senegal lat. 16° 37' N. lon. 12° 43' W. It is inundated annually and, after the retreat of the waters, millet, sweet potatoes, and melons are successfully cultivated.

GUIDIZOLO a to Italy Lombardy prov of and 18 m N W by N Mantua, with manufactures of silk and bombazine. Pop. 3938.

GUIENNE, or *GUYENNE*, an anc prov France, cap. Bordeaux, comprising the Bordelais or Guienne proper, Bergerac, Quercy Bourgeois, Gasconne, Pays-de-Lauds, duchy of Albret, Basque country Armagnac, and Comminges. It belonged to the kings of England from 1152 till 1200 and from 1205 till 1453. From 1458 till 1472 it was an independent duchy but, at the latter date, it was incorporated with France. It is now partitioned among depts. Ariège Haute-Garonne, Gers, Haute-Pyrénées, Lot-et-Garonne, Tarn-et-Garonne, Landes, Basses Pyrénées, Arveyres, Lot-et-Garonne, Gironde and Lot.

GUIERS, a small river France, formerly forming part of the boundary between France and Savoy, and now separating in part the French départements of Isère and Savoie. It is formed, near Les Echelles, by the union of the Guiers Vif and the Guiers Mort, which descend from the Grande-Charrière, flows N W past Pont-de-Beaufort and St Genix and after a course of about 50 m joins r bank Rhone, near St Didier.

GUILDFORD a tow and market in England, co. Surrey. The town stands on a declivity which slopes to the Wey, 39 m. S.W. London, at the junction of a branch of the S. Western with the Guildford and Reigate Railway. It is large, well built, and has altogether a substantial and thriving appearance. The streets, of which the principal one is very steep, are well paved and well lighted with gas supply of water abundant. The principal public buildings are the churches, of which there are three; an elegant county hall, guildhall, council chamber and corn market a county jail, with a house of correction, and extensive barracks a hospital theatre, and several schools and chapels. The churches are old, and one of them St Mary's, is a rude structure of chalk and flints. The other places of worship belong to Baptists, Independents, Wesleyans, and Society of Friends. There are several excellent free schools here, the principal of which is the grammar school, an ancient collegiate establishment, founded in 1609. There is also a blue coat school, and national and infant schools several almshouses, and other charities. An institution called the Guildford Institute, was formed, in 1844, by the junction of two literary and scientific societies previously existing. There is an iron foundry, and on the Wey are several corn and paper mills. The retail trade of the place is very considerable and steady. It has also some trade with London in corn, timber malt, &c. sent by the Wey. Near the town there is a good race-course, where a Queen's plate of 100 guineas is annually run by Guildford returns two members to the House of Commons Registered electors (1861), 356 Pop. (1841) 4074 (1851) 5740.

GUILDFORD a in W Australia, on the Swan River 7 m. N.E. Perth and 4 m. from the foot of the mountains on a high part of the alluvial flat fringing the river. **GUILDLUMFS** Latin *W. Guelm* a to France, dep. Alpes Maritimes 33 m. N.W. Nice, L bank here are crossed both by a stone and a wooden bridge. It contains two squares, one of them finely planted almshouse and the remains of an ancient fort and has a trade in corn, wine, and wool, and four annual fairs. There are some remarkable caves and cascades in the neighbourhood. Pop. 1851.

GUILLOTRE (L) a com. France, dep. Rhone L bank Rhone properly a suburb of Lyon and cap. of one of the six cantons into which it is town has been divided. It consists of one principal street, which is very long and as at minor streets, and is the seat of important manufactures. Pop. 9,843.

GUIMAR a in Canary Islands, Isl. Tenerife 20 m. S.W. Santa Cruz, in a fertile valley. It has a church four chapels a school, prison, four tan tannery manufactures of woollen linen, and cotton fabrics and a trade in grain, wine, fruit, and cattle. Pop. 2048.

GUIMARAE (S) (anc. *Gussumarus*) — 1 A fortified city Portugal prov. Minho, between the r. ar Vela and Sella 36 m. N.E. Oporto lat. 41° 24' N. lon. 8° 14' W. It stands on a gentle declivity is well built, has several good streets and public squares, a fine collegiate church and several other churches chapels, and hospitals; with many features of antiquity iron mines, paper cottons, then leather combings, &c. Guimarães has not sulphurous springs (temperature 164°) frequented from the excellent water. It is said to have been first founded about a.d. 500. In 1107 Henry of Burgundy made it the capital of the kingdom. At phones I and Pope St. Donatus were born here. Pop. 7210 — 2 A in Brazil prov. Maranhão N shore of the bay of Cama, 50 m. N.W. São Luis with a parish church, and a harbour which admits large vessels. Pop. 4100.

GUIMARAS, an Isl. Philippines, Sooloo Sea, between Iala, Pannay and Negros lat. (S. point) 10° 30' N. lon. 127° 20' E. about 80 m. long N.E. to S.W. and 11 m. broad.

GUINEA, a geographical division of W Africa the limits of which have not been precisely fixed. It may be taken, however as including the coast line between the

frontiers of Senegambia, at Cape Verde, lat. 10° 20' N., and Cape Negro, lat. 15° 41' S., or Cape Frio, lat. 18° 33' S. It is divided into two districts, lying N. and S. of Cape Lopez, lat. 0° 30' S., the former called N. or Upper Guinea, includes Sierra Leone, Liberia, the Gambia, Ivory Coast, and Sierra Leone, the latter called S. or Lower Guinea, includes Congo, Angola, and Benguela.

GUINEA (GULF OF), that portion of the Atlantic Ocean which washes the shores of Upper Guinea, between Cape Palmas, lat. 4° 22' N. lon. 7° 45' 15' W. and Cape Lopez, lat. 0° 30' S. lon. 8° 45' E. and including the Bights of Benue and Biafra. The Guinea current flows into this gulf from Cape Palmas, almost of which, and near the land it has a velocity of 2 m. an hour. It is lost in the Bight of Biafra, near Prince's Island lon. 7° E. The islands of Fernando Po, Principe, and St. Thomas, are the only ones of consequence within this gulf.

GUINEA (New) Isl. Pacific Ocean. See **PAPUA GUINEA COMPANY**.—A N. to. W. Africa, Old Calendar. River about lat. 6° 50' N. lon. 8° 50' E. Pop. about 5000.—3. (Liberia) A N. to. W. Africa, Old Calendar. River about lat. 5° 45' N. lon. 8° 50' E. Pop. about 1500.

GUINES (Lath. Guinea) in France, dep. Pas-de-Calais, in a marshy district, 6 m. S. by W. Calais on the coast which terminates at this town. It is an ancient place, and was once strongly fortified. It has manufactures of lace, earthenware, and refined wax. Some tanneries, breweries, and saltworks; a trade in corn, fax, cattle, poultry, timber and the coal which is worked in the vicinity and four annual fairs. Pop. 3744.

GUINIGAMA in France, dep. Côte du Nord, pretty regularly situated on the Treux, in the midst of fertile meadows 19 m. W. N. W. St. Bréneux. It is an ancient place and was once surrounded by walls, of which part still exists. It has a court of primary resort, and an agricultural society a parish church, partly Gothic, with a tower and spire and a handsome trades hall with a fine fountain in front of it. Manufactures of linen thread and hats, several tanneries, a trade in these articles of manufacture, and in wine and spirits and numerous fairs. Pop. 5787.

GUIONA mountains. See **GUINEA** page 1125.

GUINÉ, COCOT, one of the three Bauges prov. in Spain bounded, N. by the Bay of Biscay N. E. Navarre, from which it is separated by the Bidasoa E. and S. E. Navarre, S. Alava, and W. Biscay area, about 800 sq. m. The coast is bold and rocky but so much indented that it counts no fewer than nine harbours, though none of them are important. The interior is generally mountainous, the Cantabrian Mountains, a continuation of the Pyrenees, bounding it on the N., and covering it with its ramifications. The streams are numerous, but not one of them is navigable. They all fall into the Bay of Biscay. The climate, though moist, is mild, pleasant, and healthy and the inhabitants often live to a great age. From the nature of the surface, agricultural labours are carried on with considerable difficulty but the soil particularly in the lower valleys, is very fertile, and is cultivated with much industry. The produce in grain however falls considerably short of the consumption. The chief riches of the province are in its minerals particularly iron of excellent quality and its woods, which are largely used in smelting it. The other minerals of value are argilliferous lead, copper, marble and gypsum. Fish abound on the coast, and the fisheries supply a considerable number of the inhabitants. The principal manufactures are iron, and the articles made from it. These also, with extracts of home growth, and wool derived from the neighbouring provinces, constitute almost the only exports. The inhabitants possess the fine physical forms, simplicity of manners, and bold manly spirit, for which the Bauges are generally distinguished. It is divided into four districts—Aspe, San Sebastian, Tolosa (the capital) and Vergara. Pop. 141,755.

GUJARA a maritime N. W. coast, prov. of, and 124 m. E. by N. Candia, on the Gulf of Persia. It is inhabited by French and Spanish refugees from the island of Trinidad, and is a place of considerable trade. 267 vessels, tonn. 4212 entered and 617 tons 3790 cleared in 1847.

GUJERAT (Lath. a market N. and par. England, on York, N. Riding). The town 40 m. N. York, is beautifully

situated in a narrow but fertile valley, extending along the town. It is chiefly of one broad main street, houses generally neat and substantial and many of them of two stories. It has a handsome townhall, a church, and places of worship for Independents, Methodists, and Friends; a free grammar and endowed school, and an hospital for old men and women. The first almshouse in the kingdom were established here in the reign of Queen Elizabeth, by Sir Thomas Chaloner. Area of par. 10,867 ac. Pop. 1206.

GUIRE, a to. France, dep. Aisne beautifully situated, 1 bank Oise, and traversed by a canal 13 m. W. N. W. Vermin. It is nearly in the form of a triangle, and as walled, and otherwise defended to us to rank as a fortress of the third class. It contains two churches, an hospital and the remains of an old castle and has manufactures of linen, brickwork, tanneries, oil and cotton mills, a trade in spun hemp, fax, and brandy weekly markets and eight annual fairs. Guise figures much in the early wars of France. P. n. 9347.

GUISELEY par. Eng. York (W. Riding) 8719 ac. Pop. 14,017.

GUISENA (anc. Guesu) in Spain, Catalonia, prov. and 30 m. N. E. Barcelona regularly built and having an ancient collegiate church an episcopal palace, and a seat for public offices, and two primary schools. a trade in corn, wax, and fruit, and several annual fairs. Pop. 1559.

GUIST par. F. g. Norfolk 1674 ac. Pop. 368.

GUIXAR a lake, Central America San Salvador between the villages Metajia and Ometza. It receives the Millan and several other rivers and discharges its surplus water by the Lempita into the Pacific. It is about 60 m. in circuit and in the middle is a large island, abounding in game, and containing the ruins of a considerable town.

GUIXOLS (Lath. EXARON) a to. Spain, Spain Catalonia prov. and 18 m. S. E. Girona, on the Mediterranean, with wide and straight streets. It has a parish church, several schools, a town-hall, prison, hospital, cemetery and various convents manufactures of linen, woolen and hempen fabrics, soap, coars, earthenware, glass, wine, and oil and a trade in grain and corn, much reduced of late years. Pop. 5487.

GUJAN a vil. France, dep. Gironde, 80 m. S. W. Bordeaux, near the Basins d'Arachon on the railway from Bordeaux to Yonne de Buch. It contains a large and handsome church of three naves surmounted by a lofty spire, which forms a conspicuous object at a great distance. Pop. 1866.

GUJERAT (GUJARAT GUJARAT or GUJARAT) (Gujarat) a large prov. W. Hindostan Bombay Presidency bounded lat. 20° 45' and 24° N. and lon. 69° and 74° E. The S. W. portion is in the form of an extensive peninsula, with the Gulf of Cutch on the N. W. side, and the Gulf of Cambay on the S. E. The central districts form so extensive plain, generally well watered open, and fertile, but the N. and E. districts are mountainous, rugged and jungly and numerous deep ravines intersect many of the flattest portions of the country. Gujerat is traversed by several large rivers, of which the Narmada, Mhye, and Sabarmaty are the most important; but in particular tracks, water is so scarce that wells of 100 ft. in depth must be dug to obtain it. The climate is hot in summer but mild in winter and not unhealthy even for Europeans. The highest point to which the thermometer has been observed to rise is 102°; in January it sinks as low as 45°. In December and January E. and N. winds prevail, accompanied by thick fogs during the night. Dry and hot winds from the W. are general in May and June. At the most S. point of Gujerat, the Portuguese are in possession of the small island of Diu, where there is a good harbour and a fort. During the hot and dry months, the surface of the country mostly appears sand or desert, and in the rainy season a thick mire but it is extremely fertile. The fields, in general except for particular crops do not require much manure. The natural productions are the same as those of other tropical countries, including cotton sugar, indigo, tobacco, saltpetre, hemp, and opium the latter however is grown to a limited extent only. Cotton occupies half the cultivated land the utmost proportion usually given to that plant in India. Horses and bullocks of a superior description are reared on the rich pasture lands of the province. Gujerat is miserably deficient in roads, which has hitherto formed a serious obstacle to the extension of its trade. There was not, in 1850 a single mile of continuous road in the

whole province; a circumstance that entails an amount of labour and expense, in transferring the produce from the interior which is ruinous to all concerned, besides the damage sustained by property in the transit. The greater portion of this province, including nearly the whole of the particular part in the Gulewara's dominions, the central portions are British, and the E. in Hindia and in Britisha's dominions. The population of this portion of India is much diversified, presenting an extraordinary assemblage of sects and castes. The number of inhabitants in the province has been estimated at 6,000,000, in the proportion of one Mahometan to 10 Hindus.

GUJURU WALLA, or **GUREKAWALLA**, a tn. and fort, Punjab, 43 m. N Lahore lat. 33° 30' N lon. 74° 20' E. The fort is a large square structure with mud walls, and surrounded by a ditch. The interior is highly decorated, and the garden is one of the finest in India, abounding in fruit-trees, especially orange-trees. It contains, also, numerous ornamental buildings, and a fountain.

GULANE, or **GOOLAKE NAGA**, a promontory Scotland, co. Haddington, at the entrance of the Firth of Forth, 13 m. S.W. the Isle of May. The ancient village of Gulane on the S. side of the promontory has a pop. of 270.

GULDERA AND DAL, a valley Norway belt. Christendom. It commences at Lillemor where the Lofoten falls into the lake of Milsen, and continues upwards, along the course of the stream in a N.W. direction, to the foot of the Dovrefield mountains. Its length is about 163 m. its breadth nowhere more than 6 m. or 7 m. and generally less than 2 m. Its scenery is of the most magnificent description, towering mountains generally cultivated on their lower parts and well-wooded far up to their ascent, including it on both sides, while the river and the numerous torrents which join it form a succession of rapid and lofty cascades.

GULF STREAM, *See* ATLANTIC, p. 344.

GULGULA, an ancient ruined city of great extent, Afghanistan, in the valley of Boman, r. bank Koonduan lat. 34° 45' N lon. 67° 46' E. The ruins are scattered over and around a conical hill, on the summit of which is a ruined citadel, of great height and skilful construction. Numerous excavations everywhere penetrate the hill and some contain the remains of reservoirs.

GULLEGHEM, a vil. and som. Belgium, prov. W. Flanders, about 60 m. W. Courtrai, near the Hamme. It has manufactures of linen and cotton goods, several breweries, and oil and flour mills. Pop. 3921.

GULMI, a tn. Nepal 80 m. W. Goorkha lat. 28° 11' N lon. 82° 17' E.; on a hill. It formerly contained 500 houses, mostly thatched, and a castle, built of bricks and covered with tiles.

GULNAR, port, Asiatic Turkey. *See* CHALKIDICE. **GULPEN** [French *Golpepe*] a vil. Holland prov. Limburg 10 m. E. by S. Maastricht, in a pleasant valley traversed by the Gulp, surrounded by lofty hills. It is composed of neatly-built houses and has a R. Catholic and a Calvinistic church, and a school. Inhabitants engaged in agriculture, cattle-rearing and paper-making. There are also two tanneries, and many breweries and corn-mills—the last propelled by water-power. Pop. 992.

§ **GULVAL**, a Eng. Cornwall 4547 ac. Pop. 1859.

GUMBINNEN, a gov. E. Prussia bounded, N. by Russia, E. and S. by Poland, and W. by the Baltic. Area, 4771 sq. m. It is the richest throughout a manubious flat extensively covered with lakes the principal of which are—the Spirding, Mauer Löwenitz, Tölter Rhamisch, Rosche, Ray god and Wyssden and watered by numerous streams, particularly the Nissen or Memel and the Pregel with its affluents the Inter and Plewa. Much of the surface is densely wooded, and other parts are occupied by meadows and heath leaving only a comparatively small number of good arable lands. The pastures though not very rich feed great numbers of horses and sheep. Of the latter a considerable number are exported, and yield excellent wool. Neither manufactures nor trade have made much progress. For administrative purposes the government is divided into 16 circles—Heldburg Niederung Tiltit, Ragolt, Palkallen, Staluphosen, Gumbinnen (the capital) Interburg Darkehmen, Angerburg Goldapp, Olschke, Lyk, Löben, Sensburg, and Jolan nebarg. Pop. (1846), chiefly Protestants 652,366.

GUMBINNEN, a tn. E. Prussia, esp. gov. of same name, agreeably situated on both sides of the Elbe, 60 m. E. Königsberg. It is regularly built contains a Lutheran, a German, and French Reformed church; a gymnasium, public library, infirmary, lunger hospital, and several elementary schools; is the seat of superior courts and government offices and has manufactures of woollen and linen cloth, a distillery and brewery a trade in corn, wool, cattle, and horses and three annual fairs. Gumbinnen was only a parish village in 1783 and is the youngest town in the Prussian monarchy. Its rise and prosperity are owing in a great measure to the kindly reception given to Protestants, particularly inhabitants of Balchug when great persecutions had driven from their homes. Pop. (1846) 6808.

GUMBUT, a tn. Solide 12 m. S. Khyrpoor and 10 m. E. from the Indus lat. 27° 24' N lon. 68° 23' E. It is one of the principal places in the country for the manufacture of cotton, but the process is rude, and the quantity produced small. Pop. about 2000.

GUMPRESTON par Wales, Pembrokeshire 1644 ac. P. 147. **GUMHA**, a small tn. in the N.E. of the Punjab, on the S. slope of the Mori mountains, 22 m. S.W. Sultanpoor lat. 31° 56' N lon. 76° 58' E. The houses are built of stone, cemented with mud and strengthened with timbers of fir laid horizontally. The roofs are of fir spars, covered with slates, but as these are laid loose, they form a very imperfect protection against the weather. There is here a mine of rock salt, which is worked to a considerable extent but in a very rude manner. The salt is of a reddish colour and is very compact and heavy.

GUMIEL, two places, Spain — 1 (*Gumiel-de-Ison*) A to Old Castile, prov. of, and 45 m. S. Burgos, on the slopes of two steep hills. It has narrow, dirty and ill-paved streets; a beautiful parish church, of the composite order with three nave a townhouse a Latin and a primary school; a trade in wine, and two annual fairs. Pop. 1417. — 2 (*Gumiel-de-Mercado*) A to Old Castile, prov. of and about 47 m. Burgos, near Gumiel-de-Ison, on a slope. It contains two parish churches, a handsome townhouse and prison a primary school, and Material castle, m ruins and has several flour mills, and a trade in wine. Pop. 1171.

GUMISH KIANER [Siberian work] a tn. Asiatic Turkey on the Karabook, peak and 100 m. W. N. Erzerum. The whole district abounds in copper and argentiferous lead ore. Though few of the mines are now worked yet those of lead formerly supplied ore for forty furnaces.

GUMLEY par Eng. Lancashire; 1550 ac. Pop. 210. **GUMMERSBACH**, a tn. Rhenish Prussia, gov. of, and 28 m. E. Cologne, esp. circle and on a small stream of same name. It has a Protestant parish church, a superior burgher school, and a courthouse manufactures of woollen and coarse cotton goods, and tobacco; and two annual fairs. Pop. 1031. — The stream is mountainous, being covered by lofty ridges of the Sauerland, and is generally unfordable. Area, 63 sq. m. Pop. 29180.

GUMFOLDEMBIRCHEN, a market in Lower Austria, in a valley 12 m. S.W. Vienna. It has a handsome townhouse, parish church, and hospital manufactures of silk, game, craps, buttocks, paper and fancy articles in wire a silk, and other mills. Pop. 1608.

GUMRI, a frontier tn. Russian Armenia, on the high road to, and 31 m. N.W. Erzurum lat. 40° 45' N lon. 43° 58' E. Extensive fortifications have been erected by the Russians, on the heights N.W. of the town consisting of bomb-proof buildings, barracks and field-works. Pop. (1842) 9810.

GUNABAD or **GOONABAD**, a tn. of E. Persia, prov. Khurasan, 185 m. S. by W. Meshed lat. 34° 30' N lon. 59° 20' E. It has no regular wall, but is surrounded by numerous earthen walls, and its pomogranates are remarkable for their goodness. It has no produce or manufactures of consequence, except that of painted tiles, dices, bowls, &c., which are in some estimation. Its population, with that of the dependent villages, is estimated at 80,000 to 40,000.

GUNBY two parcs. England, Lincoln — 1 (*St. Nicholas*); 666 ac. Pop. 173. — 2 (*St. Peter*); 600 ac. Pop. 50.

GUNDAGAT, a tn. New S. Wales, district of Lachlan on the river Murrumbidgee, 244 m. S.W. Sydney. Pop. 87. **GUNDAMUK**, a walled vil. Afghanistan 80 m. E. by N. Cabool; lat. 34° 17' N lon. 70° 6' E. 4516 ft. above

entire. Here, during the disastrous attempt to retreat from Ochoi, made by the British army in the beginning of 1849, the last surviving force, about 100 soldiers and 300 camp followers were finally overpowered, one man only escaping.

GUNDAYA a m. Belocoblen, cap. prov. Gunt-Gundava lat. 29° 29' N lon. 67° 32' E. It is a small place, surrounded by a high mud wall, and built with some degree of regularity. It is a trade route.

GUNDELINGEN a tn. in Bavaria, circle Swabia, L bank Rhine, here crossed by a bridge, 63 m. N W Augsburg. It consists of the town proper and a suburb contains a church, chapel, castle and hospital, and has two annual fairs. P. 2779.

GUNDELSHEIM a tn. W. dt. in Bavaria, circle Neckar, bank Neckar 7 m. N N W Weckersheim. It is surrounded with walls, and contains a castle. Pop. 1111.

GUNDELSHAUSEN, a vil. Home-Darmstadt, prov. Hesse-Nassau, circle Dieburg with a Protestant church, and school, tile-works, and a mill. Pop. 723.

GUNDUK, a large river, Hindoostan, an affluent of the Ganges, rises in Tibet on the N side of the celebrated peak of the Himalayas, Dhaulagiri lat. 29° 30' N lon. 83° 45' E. whence it flows round the E. side of the mountain, and, entering through the Himalayan chain, proceeds S.E. to Hajipur near Patna lat. 25° 40' N lon. 85° 20' E. where it falls into the Ganges after a course of about 350 m. In the bed of the river in its earlier course the remains of animals are found, and carried to all parts of India, where they are worshipped under the name of Salspema. — 2 (Little Ganges) A river W from the former having a E. course of about 90 m., and falling into the Ganges about 85 m. W W Hajipur. — 3 A dit. Hindoostan, Hajipur S of the Katna, and principally between the forks of the Malpuria river.

GUNDWANA a former large province, Hindoostan, in the Deccan, extending between lat. 18° and 25° N and lon. 71° 30' and 80° E bounded N by Allahabad and Malwah, E. by Hyderabad and the N. Circars, E. by Bahar and Orissa and W. by Bender, Benar and Caudah, between 400 m. and 600 m. long and about 300 m. broad. It is now partitioned into the states of Nagpore and Rewah and some of the N.W. districts of the Bengal presidency. It is one of the least civilized portions of India, the E. and S.E. portions being inhabited by Gonds. See NAGPORE.

GUNGA RAI a small lake, Cashmere, on the Haramuk mountain lat. 34° 25' N lon. 74° 35' E. regarded with the deepest veneration by the Hindoos, who perform pilgrimages to its banks, and throw into its waters such fragments of bones as remain undecayed by the fire in which bodies are consumed. This venerated lake is not more than 1½ m. long, and 200 or 300 yds. wide.

GUNGIOFRI Hindoostan. See GANES.

GUNNUM, as lat. at the entrance of the Persian Gulf about 4 m. long and 1 m. broad. It is very rugged, increasing in height towards the S. extremely near which stands a high conical hill between 600 and 700 ft. high on a small beach at the S. point are a few families of fishermen.

GUNN, or Kien, a tn. Hungary cap. co. Szomburg, finely situated on an uneven slope, above a small stream of same name, 67 m. S.E. Vienna. It has a very central position, being nearly equidistant from Vienna, Presburg, Raab and Ofen, consists of the town proper surrounded by a wall but of small extent, and of a very large suburb contains a Protestant and two E. Catholic churches, one of them a very handsome building formerly belonging to the Jesuits an old castle, a Friar's college and gymnasium, a Protestant high school a Benedictine monastery and two hospitals and has manufactures of woollen cloth, largely exported to Vienna and Silesia, wine, a considerable trade in furs and furs particularly extensive of remarkable size and several two weekly markets, and six annual fairs. Güns acquired great renown in 1532 by the successful defense of its citizens, aided by a portion of only 800 men, against a powerful army of Turks, headed by Sultan Solyman, the Magnificent. Pop. 6000.

GUNSTADT a vil. Prussia, prov. Saxony gov. and 6 m. W by E. Erfurt with a Protestant church and an hospital several mills and a much-frequented annual fair. Pop. 1019.

GUNTERSHUM a market tn. Home-Darmstadt, prov. Hesse-Nassau, circle Kassel, S. of the Rhine, 11 m. N. Worms. It has a 1. Protestant and a E. Catholic parish church,

a synagogue, castle, townhouse, three schools, and a poor-house several distilleries, a gymnasium, and two oil mills, and two annual fairs. Pop. 2593.

GUNTERSDORF, a tn. Lower Austria, 34 m. N W Korneuburg. It is entered by four gates; has a large public square, an old church a castle, and two annual fairs. P. 1600.

GUNTHERSBURG, a tn. Germany Aschaffenburg, in a narrow valley 17 m. S.S.W. Hildesheim. It is the seat of a court of justice has a church, castle, townhouse, and hospital, and several mills, a trade in wood and cattle, and two annual fairs. Pop. 843.

GUNTHERF, par. Eng. Norfolk 1087 ac. Pop. 281.

GUNTUN two par. England.—1 Norfolk 845 ac.

Pop. 73.—2 Suffolk 1073 ac. Pop. 77.

GUNTOOR, a tn. Hindoostan prelat. Madras, cap. dist. of same name, one of the N. rivers, 150 m. E S.E. Hyderabad; lat. 16° 30' N lon. 80° 35' E. It is large but irregularly built, and composed of mean-looking mud houses.—The river bounded N. by the Kistna, E. the bay of Bengal, S. the Pennar and W. the Nizams' dominions, area, 4900 sq. m. is mountainous towards the interior but low and muddy towards the sea, yields rice, Indian corn, cotton, and has mines which once produced diam. etc. Pop. 483,831.

GUNTRAMSDORF a market tn. Lower Austria, on the Schwabach, and on the Vienna railway 18 m. S. Vienna. It has a castle, manufactures of paper and printed cloth a bleachfield, tile-works, and stone quarries. Pop. 1150.

GUNZELBERG,—1 (Guns) [anc. Gens] A market in Bavaria, Swabia, cap. dist. of same name, at the source of the Günz, 40 m. S.S.W. Augsburg. It is an ancient place supposed to be of Roman origin contains two churches and a chapel and has manufactures of linen and hosiery a trade in horses and cattle, and five annual fairs. Pop. of tn. 1334 dist. area 600 sq. m. 10,275.—2 A tn. Bavaria, circle Swabia, cap. dist. of same name, at the confluence of the Günz with the Danube, with a bridge over each river 30 m. W by N Augsburg. It has old walls, five churches an ancient castle, an English female academy, a Latin school, and hospital manufactures of carriages, a bleachfield and active shipping trade. Pop. in 1803; dist. area 95 sq. m. in 34,412.

GUNZENHAUSEN a tn. Bavaria, circle Middle Franconia, cap. dist. of same name on the Altmühl here crossed by a bridge, 28 m. S W Nürnberg. It is walled has three churches, a castle, Latin school and hospital manufactures of red leather stoneware, several mills, and a trade in horses and cattle. It was the site of a Roman camp, known by the name of Teufelsmuer. The reformer Osiander was born here. Pop. tn. 2845 dist. 13,197.

GUN (Lough) a small lake Ireland, co. of and 10 m. S. by E. Limerick, about 4 m. in circumference and enclosed by lofty hills. It has one island containing about 60 acres, and three or four islets but is chiefly remarkable for the extensive Druidical remains with which it is surrounded.

GLRAN DEWAR, a vil. Afghanistan near the source of the Helmand lat. 35° 32' N lon. 69° 12' E. Elevation 10,978 ft.

GURDAU or KURDAU a vil. Moravia, circle Brann with a church a chapel, and school. P. 670.

GURDCHII a vil. W Asia, Khanat of and 65 m. N N E Khiva, near L bank Amu Daria. It is supposed to have been founded the latter and of the last century by a people who gave it their name, but is now inhabited by Uzbeks, Uigurs and Sarts.

GUREIN (Moravian, Kurwin) a tn. Moravia, circle of and 9 m. N. Brann with a church, a castle, and four annual fairs. Pop. 1003.

GURGUEA a river Brazil which rises in a series of same name, on the S. frontiers of prov. Fluminense proceeds N through the W portion of that province, forming in its course lake Paragvay, passes the town of Jurumenia, and about 16 m. below joins r. bank Paranaíba, after a course of about 180 m. Its current is rapid, and at its junction with the Paranaíba much obstructed with rocks. Its water is said to be unwholesome and the inhabitants who live upon its banks suffer during the greater part of the year from intermittent fever. Its principal affluent is the Paranaíba.

GURHWAL, GURWAL, or GAWWAL, a British Himalayan prov. N Hindoostan having S.E. the R. prov. of Oudh and Dehli N.W. the Sutlej and S.E. the Himalayas between

lat. 30° and 32° N; lon 77 and 80° E. The entire province consists of an assemblage of hills, some covered with trees and verdure, others perfectly bare and stony. The valleys are all narrow often little more than mere water-courses between the hills. Only a small portion of the country is either inhabited or cultivated. In this and the adjoining provinces of Khaman some of the loftiest peaks of the Himalayas occur. These are not found on a continuous ridge, but are grouped together in masses that are separated from one another by deep depressions, through which flow the streams that drain those parts of the mountains immediately adjacent to the N. Five or six of these peaks are above 24,000 ft. high and the number that exceeds 20,000 ft. is very great. They are covered with perpetual snow and present an inconceivably magnificent appearance, especially in November and December when the perfect serenity of the autumnal air displays the splendid light and shadows thrown by the setting sun on the wonderful scene. Glaciers also abound amongst them, some of which are of great magnitude.

The climate, in this elevated region, is extremely various passing from the intense heat of the plains of Hindoostan to the rigors of an unending winter. The rainy months are June, July, August, and the first half of September. In November and December the weather is usually perfectly serene but as the cold increases the sky again becomes covered with clouds; and the winter rains which begin about Christmas, have their maximum in February as in the plains below. The power of the sun rays, at great elevations, is intense in the extreme, forming one of the chief discomforts of the stranger who visits these regions.

The vegetation of Gurkhal and of the entire region to which it belongs, is of course influenced by altitude. The almost entire absence of palms greatly detracts from the beauty of the forests but this is compensated by the exquisitely cut foliage of the acacias and moringas the gracefully drooping clumps of bamboo the small (saccol) with its tall, erect trunk and brilliant, dark-green leaves, a number of others equally beautiful and striking. The larger trees are almost entirely restricted to the plains and more level valleys. Tropical vegetation prevails to a height of about 4000 ft. and in the deep sheltered ravines is carried into the heart of the mountains. In the outer part of the latter one of the great features of the landscape is the *Ficus longifolia*, which clothes the slopes of almost every hill. Above the height of 4000 ft. oaks and rhododendrons gradually increase in number. In the upper forest region the trees are oaks, pines, yew elm, horse-chestnut, walnut, several maples, hazel &c.

These, again, cease rather suddenly at an elevation of 11,500 ft., and are succeeded by shrubs, including the mountain-sab, rose, barberry lilac, willow juniper &c. Higher up, the most luxuriant herbaceous vegetation prevails. In this and the adjoining provinces of Khaman and others the tea plant has been cultivated with great success, flourishing even in situations where it is occasionally covered with snow. The quantity of tea grown in these provinces is yearly increasing, but comparatively little has reached this country as it sells at a very high price on the spot where it is produced and the inferior qualities are carried across the British frontier into Tibet, where they meet with the tea of China. The population of Gurkhal and of the adjoining province of Khaman, mainly consists of Hindus the most important tribe being the Khasiyas who constitute about nine-tenths of the whole. They are a strictly agricultural people speaking a Hindoo dialect. Besides the Khasiyas, tribes of Tibetan origin and others of mixed Tibetan and Hindoo race, are found in the N. parts of these provinces. (Mont. Strachey in *Jour. Roy. Geog. Soc. Official Catalogue of the Great Exhibition. Oriental Interpreter &c.*)

GURIA, or GURIA, a prov. Asia, one-half of which belongs to Russia, and the other to Turkey on the E. shore of the Black Sea having Mingrelia and Imeretia N. Akhalzik and path. of Trabzon S. and E. and the Black Sea W.; area about 800 sq. m. chiefly forest soil very fertile. The inhabitants are chiefly Georgian, with a few Armenians. Pop. about 87,000.

GURK, a river Georgia, which rises in a deep chasm in Ithya, 9 m. S.E. Laybach flows S.E. then almost due E. past Nusseldt and Landstrasse and joins r. bank Sava, opposite the town of Baum, after a course of about 50 m.

GURKFEI D or KESKO, a tn. Austria, Thyrn, on the Sava, 49 m. S. Laybach in a mountainous district. It has a parish church a Capuchin monastery and thermal baths. It is supposed to occupy the site of the Roman Noviodunum. Much wine is grown in the district. Pop. 800.

GURILAN, a tn. of W. Asia, Khanat of and 36 m. N. N. E. Khiva, on a canal led off from the Amoo Daria. It is surrounded by dilapidated walls and lies so low as to suffer much from inundations. It contains three mosques, and is inhabited by Uzbeks and Kirgiz, or Tadshiks, who cultivate the ground and carry on some trade. The soil in the environs is fertile, and chiefly laid out in excellent gardens.

GURACOTTA, a tn. and fortress, Hindoostan presid. Bengal, on the Sonar 109 m. E. N. E. Bhogpal, formerly capital of a petty state, tributary to Benaul.

GURAH, a tn. Hindoostan presid. Bengal, dist. Gurrah Muzillah in a singular pass 150 m. N. N. E. Nagpur and extending for 2 m. along the r. bank of the Nerbudda.

The narrator was seized to Britain in 1818. GURK, a hamlet, Denmark id. Seeland, bail Frederiksberg, on a lake of same name 1 m. W. Eleonor. The lake which is about 2 m. long, and is rather less than 3 m. broad has finely wooded banks, on which stand the remains of an old castle, which in the 14th century was the favorite residence of King Wlademar IV. who, according to a popular legend still burns every night in the surrounding forests.

GURK, an rd. off W. coast of Norway lat. 62° 35' N. and lon. 5° 55' E. It is of a tolerably compact, and somewhat circular shape and is about 13 m. long by 9 m. broad.

GURUN, a tn. Asiatic Turkey pash. Karamania, 84 m. E. Kalesiyrak lat. 38° 42' N. lon 37° E. picturesque situated on r. bank Tokmak Su, in a narrow glen of fossil limestone, from 400 to 500 ft. deep. The houses are whitewashed and clean and there is much appearance of comfort and prosperity. Its merchants trade with Aleppo, Marash, Syvas, and Constantinople.

GURUBA, a tn. Brazil prov. of, and 305 m. W. Para. r. bank Amazon. It is pleasantly situated, contains a parish church an hospital and an old fort, built by the Dutch when in possession of the province; and has brick and tile works and a trade in cacao sarsaparilla, and cloves, which are extensively grown in the district.

GURULATUBA, a river Brazil prov. Para, called by the Indians Inguiriqui. It rises in the N. part of the province, in the Serra Imaunemque, flows S. and joins the bank Amazon at the town of Monteagudo after a course of about 240 m. The alluvium deposited on the flats along its banks is extremely fertile and produces a great quantity of rice of superior quality.

GURUPI (formerly Para Crux) a tn. Brazil prov. Para, 160 m. E. N. E. I. on a bay and at the mouth of a river of same name. It is a poor miserable place.—The bay bounded on the E. by a cape of its own name lat. 1° 2' S. lon. 48° 58' W. (n.) is 20 m. wide at the entrance, and stretches about 10 m. inland, with pretty equal throughout. It is gradually silting up.—The river rises in the Vicentin about lat. 4° S. flows N. and falls into the bay after a course of about 250 m.

GURUTUBA, a river Brazil which rises in the Serra Branco prov. Minas-Geraes about lat. 16° 10' S. lon. 48° 10' W. flows N. W. in a valley formed by a series of its own name; and after a course of 140 m. joins r. bank Verde, an affluent of the Rio Francisco. Its sands are tolerably rich in gold.

GUSPINI, a vil. in Sardina div. of, and 88 m. N. W. Cagliari, on a mountain slope, at the W. extremity of a large valley. The gardens both within and around it, give it a very pleasing appearance; houses, for the most part, commodious and well built. It has a large parish and two minor churches a primary school, excellent manufactures of woollen and linen cloth fire-arms, and various articles in iron and a trade in corn, cattle, and dairy produce. Pop. 3808.

GUSSEAGE, two par. England Dorset.—(1) *Alt. Summit* 2907 m. Pop. 477.—(2) *St. Michael* 2882 m. Pop. 802.

GUSSAGO a vil. and com. Italy Lombardy prov. of, and 4 m. N. W. Brescia, at the foot of the hills which separate the lake of Isco, from the Val Trompia. It is well built contains a parish and two auxiliary churches, and has manufactures of linen and cotton. and a monthly fair. Pop. 2890.

GUSSENG or **HEVENLY LYAN**, a village in Hungary on Elbenburg, cap. dist. of same name, on the Danube, 13 m. E. Szekesbely. It is walled, has a dilapidated old castle, with a conspicuous tower. A R. Catholic parish church, a synagogue, and a Franciscan monastery in which is the burying-place of Count Batthyany, and has an annual fair. Pop. 3000.

GUSSENA, a vil. and com. Italy Lombardy prov. of, and 18 m. E.S.E. Cremona, in a very fertile district. It contains two parish churches and two chapels, and has a trade in wine. It once stood close to the Po, but the collection of silviculture caused a change of channel in 1702. Pop. 3524.

GUSTAVIA, a tn. W. India, cap. Swedish Isl. of St. Bartholomew on its S.W. coast. It has a safe and well-protected harbor, a castle, and 860 houses.

GUSTEV, a tn. Germany Anhalt-Köthen, 1 bank Wip-per 26 m. N.W. Halle. It is entered by two gates, contains a church, townhouse, school, and hospital and has a mill, brewery, silk-works, and three annual fairs. Pop. 1665.

GUSTENDIL, a village in Turkey. See GUSSENKART.

GUSTON, par. Eng. Kent 421 sq. Pop. 400.

GUSTROW, a tn. Germany Mecklenburg-Schwerin, circle Werd, cap. hall. of same name, 1 bank Nebel, 20 m. S. Rostock. It is surrounded by walls, with four gates, and is well built, having many handsome houses. It is the seat of a law court, with extensive jurisdiction, contains a cathedral, with numerous monuments, a fine altar and good paintings, two other churches, a palace, an ancient and beautiful structure, a townhouse, townhouse, school, theatre, and infirmary and has manufactures of tallow and wax, candles, soap, and tobacco. Numerous, machine-works, iron-foundry, numerous mills, and several important annual fairs. Pop. 9004. Area of hall. 154 geo. sq. m. pop. 12,646.

GUTENSTEIN, two vils. Austria.—1 Illyria, duchy Carinthia, circle and 23 m. E.S.E. Klagenfurt, with a church. Pop. 1200.—2, Lower Austria, 59 m. S.S.W. Vienna, in a picturesque country with the ruins of a church built of tuff. It has a market, and near it are several farms where shovels, axes, nails, chains, &c. are made. Pop. 500.

GUTENLOH, a vil. Rhineland Prussia, gov. of and 85 m. S.S.W. Minden, near the Delft. It contains a Protestant and a R. Catholic parish church and has a considerable trade in fine yarn, hams, and a kind of rye-bread, known in Westphalia by the name of *pumpernickel*. The annual fairs, three in number are very important. Pop. 5114.

GUTHRIE, par. Scot. Forfar 4000 ac. P. 469.

GUTSTADT, or **DOMUS MARIÆ**, a tn. of E. Prussia, gov. of, and 50 m. S. Königsberg on the Aik. It has a Protestant and two R. Catholic churches, manufactures of woollen and linen cloth, a distillery, brewery, a trade in linen, yarn, and feathers and six annual fairs. Pop. 3058.

GUTTENFAG, a tn. Prussia, prov. Rhine, gov. and 19 m. E. Oppeln. It has a castle, R. Catholic parish church, synagogues, townhouse, school, and hospital, three distilleries, two dye-works, a weekly market, and an annual fair. Pop. 2222.

GUTZOW, a tn. Prussia, prov. Pomerania, gov. of, and 27 m. S.E.E. Stettin, on a small lake, near the Pome, over which there is a ferry. It has a church, a trade in corn, horses, and cattle and three annual fairs. Pop. 124.

GUUTA, a vil. W. Africa, Bechuanaland, 1 bank Faldut; lat. 14° 24' N; lon. 12° 18' W. It has a mission, erected by the sovereigns of Bechuanaland, as a palace and retreat to Bambele, king of Katsa.

GUYANA, region, S. America. See GUYANA.

GUYANDUT, a river U. States, Virginia, W. port rising in the Frying Mountains, flowing N.W. and emptying into the Ohio, at the village of the same, 28 m. S.S.W. Gallipolis; total course, about 100 m.

GUYANE FRANÇAISE. See GUYANA (FRENCH).

GUYENNE, prov. France. See GUYENNE.

GUYTING, two par. England, Gloucester.—1, (Power or Lower), 2380 ac. P. 690.—2 (Upper), 6180 ac. P. 235.

GÜZEL-HAMAR, a tn. Asiatic Turkey See ADRIK.

GÜZELHAT, Hindostan. See GUYERAT.

GWA, a tn. Goa, on Isl. Barroch, W. coast. lat. 17° 55' N lon. 94° 34' E. 1½ m. from the shore. It is of moderate

height; and there is, N.E. of it, a harbor for small vessels, at the S. part of which is the entrance of the small river of same name, on which is Gwa Town, built with bamboo and mats; with a cultivated sugar-croft.

GWADAI (Gara, or Kas Noo) a headland or peninsula, Beloochistan; lat. 35° 4' N; lon. 68° 15' E. (s.) It is of moderate height, and 6 m. in length. On the W. side of this promontory is an inlet, called West Bay—the promontory of Kas Pakh forming its W. boundary; it is about 9 m. wide, and nearly the same length inland, with regular soundings of 3 to 7 fathoms at the entrance, and 5 to 4 fathoms inside. On the E. side of Cape Gwadal is another inlet, sometimes called Gravel Bay in which there is a small town of the same name. **GWALYER**, par. Wales, Flint 794 ac. Pop. 578.

GWALIOR, a state, Hindostan. See GUJARAT'S DOMINIONS.

GWALIOR, or **GWALIOR**, a city and fortress Hindostan, cap. Gwalior or Gwalior's dominions, 68 m. S. Agra lat. 26° 15' N; lon. 75° 5' E. The city stands at the foot of the lofty mass of rock on which the fortress is situated. It is not walled, but at the entrance of the parallel streets, which run up to the side of the rocky hill, are stone entrenchments, with strong gates, affording a short means of defence against an irregular attack. The houses are built with stone, of which the neighbourhood affords an abundant supply. The general appearance of the streets is somewhat mean and the public buildings are not distinguished for architectural beauty. Trees are intermixed among the houses and minarets, as is usual in Indian towns.—The fortifications is the largest, the

THE FORTRESS OF GWALIOR, seen from the N.W.—From Hodgkin's India.

strongest, and the most magnificent in India. It stands high above the city on the summit of a rocky hill, which rises precipitously from the plain, and is perfectly isolated. The entire base is about 550 ft. and the upper part, which is about 200 ft. high, is nearly perpendicular. The area at the top is nearly level, and is covered with numerous buildings, and with cultivated ground. It contains walls and reservoirs of water and is inaccessible, excepting by steps up the side of the rock. Formidable, and all but impracticable, as this fortress is, it was taken, in 1780 by a British officer, Major Bruce, at the head of a small party of sepoys who scaled the rock at night, by means of ladders, and leapt the walls and it was stormed again by Sir H. Raeb's force in 1858, when held by southern sepoys.

GWEEDORE, or **GWEEDORE**, a district and bay N.W. coast of Ireland co. Donegal, the latter in lat. 55° 5' N lon. 8° 22' W. The district extends for some miles along the coast, and the scenery is of the wildest description. The coast is studded with numerous little islands, and lined with bold headlands and precipitous cliffs, against which, in stormy weather, the sea breaks with tremendous violence. In 1855, a considerable portion of this district, however, by purchase, the property of Lord George A. Hill. Previous to this period, the condition of the peasantry was most deplorable. They were clothed in rag; most of them without either shoes

or stockings; and whole families had but one bed, generally of straw or dried rushes, amongst them. Their houses, furniture, agricultural implements, modes of working, stock, &c., were of the most miserable and rude description. All this is now changed, through the benevolent exertions of Lord Hill. The land has been more equally and judiciously divided, improved agricultural implements and breeds of cattle introduced, roads have been formed, bridges, mills, and stone built, and markets for corn established. The miserable hovels of former times have given place to neat and substantial cottages, with whitewashed walls and well-finished roofs, clean and orderly within, with comfortable beds and bedding and other suitable furniture and the rugs of the peasant have been replaced by decent clothing. The socks, stockings, blankets, fannels, and bed ticking made in Gweedore, are now amongst the best manufactured in Ireland, while the quantity produced is most creditable to the industry of the female population of that district. According to the report (1848) of the judges appointed to award the premiums given by the Irish penitentiary society the latter made in the district has been also greatly improved, being now equal to any to be seen in the neighborhood market towns. — (*Facts from Gweedore, &c.*)

GWEEK, a maritime vil England co Cornwall, near Helston. The plowshare fishery is carried on, and copper ore, corn, and potatoes, are exported.

Aachen in a Chapelle with a parish church, an annual fair and lead mines. 1 1071.

HAARLEM, or **HAARUM** (Latin, *Harlemum*) a town in Holland, prov. N. Holland, 10 m. W. Amsterdam, on the railway thence to Rotterdam and intersected by the Spaarne,

which flows from Lake Haarlem to the IJ and along which a considerable traffic is maintained. The town is well and regularly built, neat clean, and lighted with gas. Part of its old fortifications, and some of the canals it formerly had, are still to be seen and the ramparts, being well planted, afford agreeable walks. It has broad streets, traversed by canals, crossed by numerous bridges. The principal streets open into the Groote Markt [Great market] the largest of the numerous market-places of the town, and in which stand the townhall, an old edifice containing a collection of good portraits of the counts of Holland, the church of St. Bavo, the finest in Haarlem—containing the celebrated organ long reputed the largest and finest in existence but now succeeded in tone by the organ of Birmingham and York, and rivalled, if not excelled, in tone and power by Moore's organ at Fribourg—and the house and statue of Laurens Janszoon Coen, whose Dutchmen claim to be the inventor of movable type. The Prinsenhof, in which the Estates of N. Holland meet, is an old building behind the townhall but neither it nor any of the other buildings of Haarlem present peculiar architectural features. There are four Calvinistic, six R. Catholic, and five Baptist churches, a Synagogue, an Evangelical Lutheran, and a synagogue. The hospitals for the aged, the poor the infirm, and the sick, and other benevolent institutions are numerous and there are a gymnasium, Latin school, normal school for teachers, commercial industrial, charity town, and other schools; several literary and scientific societies, with associations for music and art Taylor's institution for the promotion of learning, with a museum of natural history, and a collection of works of art a town library and a gallery of the works of modern artists.

Haarlem was at one time famous for its cotton manufacture and for its bleaching; but from various causes, and even from filaments being sent here to be bleached, and subsequently sold under the name of Holland. Along with its population, now not much more than half what it once was, the manufacture have greatly fallen off. Still there are here some flourishing cotton factories, several ribbon factories and

bleacheries, a letter foundry somewhat celebrated for its Hebrew and Greek types; and ship-building, rope-making and the manufacture of salt, soap, bear vinegar, Brunswick, &c., are carried on, and there are saw, mustard, malt, and corn-mills. Haarlem is also the great mart for bulbous roots, especially hyacinths, tulips, and crocuses, which are extensively cultivated in the outskirts, and sent to all parts of Europe. There are six annual fairs—chiefly for horses and pigs.

In 1573 it capitulated, after a seven months siege, to the Spaniards, under Alva, who, in the contest, lost 10,000 men. Contrary to the terms of the surrender Alva caused upwards of 2000 persons—including the Protestant ministers, the garrison, and many of the citizens to be put to death. It is the birth-place of the landscape painter Dirk Hals (Halsveldt) and the painters Ostade, Jan Weenix, the Wouvermans, E. Van der Velde, Burdman, Van der Meer (Huisde) Pieter van Lee, &c. Pop. (1850) 25,778.—[Van der Aa].

HAARLEM (Lake of) [Dutch, *Haarlemmermeer*] an extensive shallow sheet of water, Holland, adjoining and communicating with the IJ between Haarlem and Amsterdam, about 12 m. long by 7 m. broad. Previously to the 15th century it can scarcely be said to have existed, excepting that the spot now in its centre, was then a marsh of considerable extent. Towards the end of the 16th century it greatly increased in size, by the sudden union of four small lakes, previously at some distance from each other. It subsequently increased still more and its further encroachment was only restrained by strong dykes, maintained at great expense. Its shores are studded with villas and its waters with boats. It is only 14 ft. deep—8 ft. of water and 8 ft. of mud—the alluvial debris of the Swiss mountains brought down by the Rhine, whence durable bricks, called alabaster, are made. The States-General of Holland having sanctioned a plan for draining the lake three large steam-engines were made in England, and erected, for the purpose of pumping out the water and so sufficiently dry the work, that the Lake of Haarlem may soon be expected to be reduced to its original limits and upwards of 45,000 acres of excellent arable and pasture land thus be added to the country.

HAARLE, or **HAAR** (Latin *Haar*) a river Germany which rises in the Teutoburger forest, in the S. of Hanover 10 m. S.E. Osnabrück, passes that town, and flows N. to Quakenbrück, near the frontiers of Oldenburg, where it turns W. and joins the bank Ems, at the town of Meppen after a course of about 100 m. A canal, cut from Quakenbrück to Hamburg, has cut off a very circuitous part of its course, and considerably improved its navigation.

HAARFRETCHT a vill. Holland, prov. S. Holland, on the IJssel, 2 m. S. Gouda, with an elegant townhall a Calvinistic and a R. Catholic church, a school, and a noted horse fair. Pop. 784.

HABA (La) a tn. Spain, Extremadura, prov. of, and about 55 m. from Badajoz, on a height. It is poorly built; and has very irregular winding, and ill-paved streets a parish church and townhouse, manufacture of linen and hats; and numerous flour-mills. Pop. 2598.

HABAY two places, Belgium.—1 (de Hoes) A vill. and comm. prov. Luxembourg, on the Sambre, 10 m. W. Arlon. It has black-furnaces and other iron-works, two breweries, a weekly market, and two annual fairs. Pop. 1965.—2 (de Vichy) A vill. and comm. near the former, with a black-furnace and two flour-mills. Pop. 1080.

HABERLEY, par. Eng. Halesp. 790 sq. l. op. 144.

HABLSCHWERDT a tn. Prussia, prov. Silesia, gov. of, and 60 m. S.W. Breslau, cap. circle of same name, on a height, between the Neise and Weisitz, at their confluence. It is walled, defended by three forts, and entered by three gates. It has a court of law and several public offices: a Protestant and a R. Catholic church, an hospital and a court-house; manufactures of tobacco and starch, the works, several mills, stone quarries, a trade in flax, a weekly market, and four annual fairs. Pop. 8094.—The circle area, 380 sq. m. Pop. 48,169.

HABERHAM HAYES, a manufacturing township, England, co. Lancaster 2 m. S.W. Burnley containing numerous cotton-mills, several extensive print-works and valuable coal-mines. Pop. 12,386.

HABERN, or **HARN** [Latin *Mons Papi*] a tn. Bohemia, circle and 10 m. S.E.E. Opatowitz, on the Little Sazawa with a castle, public school, synagogue, townhouse, school, and hospital three miles a trade in cattle and monthly fairs P 1956

HABERN. See **AMERICA**
HABROUGH, par. Eng. Lincoln 2750 ac. Pop. 368
HABROWA (Ukrain) a vil. Bohemia, circle Koeniggratz, on the small river Kudeima with manufactures of cloth, a saw and a flour mill. Pop. 1093.

HABSA, or **HAYSA**, a seaport in Russia gov. Etschaka, cap. circle of same name on the Baltic, 54 m. S.W. Revel it consists of wooden houses has a Lutheran church, two schools and the ruins of an ancient cathedral two large annual fairs and a harbour at which the principal exports are corn, flax, wax and juniper berries imports salt, wine, colonial produce, &c. Pop. (1851) 2043.—The circles is flat throughout and grows considerable quantities of corn, flax, flax, and hops Area, 1089 sq. m. Pop. 86,000

HABSBURG or **HABENBURG** a vil. Switzerland can. Argau dist. of, and 4 m. S.W. Brugg remarkable as possessing in its old castle, the cradle of the house of Austria. The only part of the original building now remaining is a square keep, about 70 ft. high. It stands on a hill and commands a picturesque and interesting view not very extensive but large enough to take in more than all the original domains of a family destined to occupy so conspicuous a place among the dynasties of Europe.

HACCOMBE, par. Eng. Devon 868 ac. Pop. 17
HACCOMBY or **HACKNEY** par. Eng. Lincoln 3790 ac. Pop. 154

HACCOURT a vil. and com. Belgium, prov. of and 7 m. N.N.W. Leige, on the great Ais with a brewery and flour-mill. Pop. (agricultural) 1409

HACHEY, par. Eng. Lincoln 705 ac. Pop. 79.
HACHA (La) or **RIO-DE-LA-HACHA**, a tn. and small seaport, New Granada, dep. Magdalena, cap. prov. Itacah and at the embouchure of river of same name, 50 m. E.N.E. Santa Martha lat. 11° 55' N. lon. 72° 59' W. The town situated on the open coast, lies low and requires to be approached with caution, on account of sandbanks. It has some trade, chiefly with France, in exporting red-wood and furze.—The river, at one time celebrated for its pearl fisheries, rises in the Sierra-de-Santa-Marta, and enters the Caribbean Sea at the above town after a course of about 100 m.

HACHENBURG a tn. Germany Nassau cap. hall of same name, on the Westerwald 24 m. W.N.W. Weilburg It is walled has a castle, a Protestant and a R. Catholic church, a superior school and manufacture of linen, red leather pipe tops and tobacco. Pop. 1463. Area of hall 57 geo. sq. m. Pop. 11,754.

HACHESTON par. Eng. Suffolk 1736 ac. Pop. 510
HACHEY a vil. and com. Belgium, prov. Luxembourg, 7 m. W. Arlon. It has a limestone quarry and limekilns on soil and a flour mill. Pop. 1859

HACKENBAOK, a vil. U. States New Jersey on river of same name, 12 m. N. by New York. It has a court-house, county offices, three churches and two academies. Pop. about 1000.—The river, after a S. course of about 40 m., falls into Newark bay.

HACKETTSTOWN a small market tn. and par. Ireland, co. Carlow and Wicklow The town on an elevated position, 16 m. E. by New Curlew, has a seat parish church, R. Catholic chapel, Methodist meeting-house, two free schools and a trade in corn and potatoes. Market on Thursday. Pop. 1021 Area of par. 11 618 ac. Pop. 3572

HACKFORD two par. Eng. Norfolk —1 754 ac. Pop. 256.—2 (4y-Angling) 754 ac. Pop. 712

HACKNESS (CAPE) a headland Scotland, on Orkney on the S.E. coast of Is. Shapinsay

HACKNEY a tn. and par. England co. Middlesex 2½ m. N. by E. London, of which it forms a suburb. The streets are in general straight, well paved, clean and lighted with gas and houses substantial and commodious supply of water plentiful. There are two Episcopalian churches, several chapels of ease, and places of worship belonging to various denominations of Dissenters—the greater part of which are large and handsome. The churchyard is spacious and so tastefully laid out as to form one of the most pleasing parochial cemeteries near London. There are several parochial British and infant schools a Church of England school in connection with King's College, London a theological seminary and a literary and scientific institution at which lectures are delivered by the most eminent professors. The London orphan asylum, instituted 1813, and erected 1833 contains about 400 children of both sexes. There are also numerous almshouses and other useful charities. The extensive silk-mills, formerly existing here, have long been discontinued and the place is not so much the seat of manufactures of any kind as the residence of gentlemen engaged in business in London. The environs of Hackney are extremely pleasant being chiefly occupied by well-laid-out nursery grounds and market gardens. Sir Ralph Seidler a distinguished statesman of the 16th century and Howard, the philanthropist, are said to have been natives of the parish Area, 2390 ac. Pop. 55,589.—(Local Correspondent.)

HACTHORN par. Eng. Lincoln 2990 ac. Pop. 256
HAD (RAE) or **RABALGETT** a prominent headland or cape, Arabia S.E. coast lat. 22° 38' N. lon. 56° 55' E. (s) The mountains overlooking this promontory called Jebel Huthir or Green Mountains, are uneven, about 6000 ft. high and may be seen 60 m. in clear weather

HADAMAR a tn. Germany Nassau, cap. hall of same name, on the Elz, 6 m. N.W. Limburg. It is walled has a Protestant and a R. Catholic parish church a pedagogue and lying-in-hospital; manufactures of tobacco, and an iron-mill. Pop. 2184. Area of hall 48 geo. sq. m. Pop. 15,197
HADDAM a vil. and township, U. States Connecticut 23 m. S.E. Hartford with a courthouse, a jail a Congregational church, and an academy. Pop. 2699

HADDEBY Erikslev or Hannev, a vil. Denmark, Schleswig on the Schlei, opposite the town of Schleswig its original church was the earliest founded in Denmark the archbishop Ansgarius, surnamed the Apostle of the N. having here had a small chapel in the beginning of the ninth century. The present church, composed of unhewn field stones or boulders, was built early in the 13th century

HADDENHAM two par. Eng. —1 Bexley 6160 ac. Pop. 1703.—2 Cambridge 8912 ac. Pop. 2113

HADDINGTON or **RAE** Lonsdale a maritime co. Scotland bounded N. and N.W. by the Firth of Forth, N.E. and E. by the North Sea, S. by Berwick, and S.W. by Edinburghshire about 37 m. long R. to W. greatest breadth 15 m. area, 174,080 ac. of which about four-fifths are arable or fit for cultivation. The surface rises gently though not uniformly, from the coast, towards the Lammermuir hills, which form its S. boundary. It is watered by the Tyne, which divides the county S.W. to N.E. into two nearly equal portions; there are several other streams of less note. The old red sandstone forms a considerable portion of this county generally resting upon transition rocks, covered by the coal formation. The Lammermuir range, 600 to 1700 ft. high is composed chiefly of granwacks, with nearly vertical strata. Coal, limestone, clay-ironstone, clay and sandstone—the former suitable for brick-making, and the latter for building—abound; and there are several with quarries, producing excellent material for road-making. The climate, though healthy is so extremely variable, that harvest is some-

three nearly a month later in one part of the county than another. Haddingshire is an entirely agricultural district, in the strictest sense of the word; and has been long celebrated for the skill and success with which its husbandry has been conducted. Along the coast, the soil is a rich, light, reddish loam; it gradually varies in clay towards the upper districts and its general character is that of a clay bottom. The lower grounds are not surpassed, in point of productive power, by many places in the kingdom. The principal crop is wheat. Potatoes also, are extensively cultivated and turnips attain a perfection here which they reach nowhere else in the United Kingdom. Sheep are bred, but not to any great extent, particularly on the Lammernur hills the greater proportion being Cheviots. Few cattle are reared; but fattening stock of all descriptions constitutes a regular part of the economy of every well-conducted farm. Farm buildings, generally extensive and commodious, and implements of the most improved description. The average size of farms is about 250 ac. almost universally let on lease for 19 and 21 years. With exception of some considerable distilleries, there are few manufactures of any importance. The county sends a member to Parliament. Registered electors (1851), 776. Pop. (1841), 37,890 (1851) 36,896.

HADDINGTON a pari and royal bur and market tn. Scotland, cap. of above co. on a branch of the N British railway 17 m. E. by N Edinburgh, on the Tyne, by which it is separated from the suburbs of Yungate, the communication being maintained by a bridge of four arches. The town consists of four streets, which intersect each other nearly at right angles, lighted with gas and lined with handsome and well-stocked shops. It has a townhouse, a fine structure, with a spire 150 ft. high and handsome county buildings, a venerable Gothic parish church of the 12th or 14th century surmounted by a square tower 90 ft. high a new parish church, called St. John's, an elegant Gothic edifice a Free and two U Presbyterian churches, an Episcopal chapel a congregation of Old Light Seceders, an Independent, and a Methodist chapel. The educational institutions are a grammar school a large, a mercantile, and several private and Sunday schools. There are other four public libraries, several religious and benevolent societies, and an agricultural and horticultural society.

The chief trade of Haddington arises from its corn-market, held on Fridays—the most important in Scotland, with exception of Dalkeith. There is also some trade in wool. Near it are three distilleries, and three breweries some considerable iron foundries, tanneries, corn-mills, &c.

Haddington was the birth-place of Alexander II., King of Scotland. It unites with N Berwick, Dunbar, Leith and Jeddburgh, in sending a member to the House of Commons. Pop. (1841) 3786 (1851) 3887 at pop 5525

HADERSLEIGH (Danish, *Haderlev*) a tn. Denmark duchy of and 62 m. N. Copenhagen, cap. town of same name in a valley where the Haderslev River communicates by a small stream with the Haderslev Fjord, in the Little Belt. It consists of an old and a new town contains a parish church in which Danish, and another handsome church in which German is preached a courthouse, normal school and well endowed hospital and has several breweries and distilleries and a trade in turn sprits, and cheese. The harbour at present, is only a winter haven, of the 6th class, with 7 ft. water but operations have been commenced to deepen both it and the fjord. The outer harbour is at the custom-house of Haderslev. Pop. 6100.—The hall is the largest and most in the district. Area, 624 sq. m. Pop. 48,500.

HADHAM two pars Eng Bedford —1, (Little) 3068 ac. Pop. 676.—2 (Buck) 4457 ac. Pop. 1264.

HADHAE, a tn. Hungary, Thäher Thein, co. Szabolcs, 11 m. N. Debreczin. It is a privileged town of the Haidnaks stands in a district which, though mostly wooded, is fertile, producing much corn and rearing many cattle; and contains both a Protestant and a R. Catholic church. Pop. 8700.

HADIRAH, or **HADIR**, an tal Asiatic Turkey, prob. of and 180 m. N. W. of Beirut, in the Ephraim. It contains a town, composed of about 400 houses, built on the ruins of

the ancient Hadith. The river is here about 300 yards wide, and 18 ft. deep. In the season of floods, the current runs at the rate of 4 m. an hour.—(Cheaney)

HADJYPOOR, or **HARTWOOD**.—1, A tn. Hindostan, proad Bengal prov Bahar L bank Ganges, at the confluence of the Ghudak with the latter river and nearly opposite Patna lat. 25° 41' N lon. 85° 51' E. Salt-petre is manufactured in the vicinity in large quantities. Hadjypoor is noted also for its annual horse fair on which sometimes thousands of Hindoo wauk away their due at the junction of the waters.—2 A vil Punjab, L bank Cheneh, 16 m. from its confluence with the Gura, and 43 m. W. Multan lat. 30° 38' N lon. 71° 12' E.

HADLEIGH a market tn and par England, co. Suffolk The town on the Brett, 8 m. W. Ipswich, is a station on the Hadleigh branch of the Eastern Counties railway. It consists of one principal street, and a number of smaller ones diverging from it; lighted with gas, and well supplied with water houses mostly of an antique appearance many of them presenting curious specimens of old domestic architecture though several modern houses have recently been built. It has a large and handsome church chiefly in the later English style, with an elegant tower and spire; a chapel for Baptists, Independents, and Primitive Methodists a national and British, and several other schools. The woollen trade formerly carried on to a considerable extent, has long since declined. There is a large still-dockery and a considerable business is done in malt but the inhabitants, generally are employed in agricultural labour. Market day Monday three fairs annually. On Oldham common in the vicinity of the town, is a neat monument to the memory of Dr Rowland Taylor the martyr formerly rector of Hadleuf who was burned in 1555. Area of par 4868 ac. Pop. 5718.

HADRAMAUT a division of S. Arabia, bounded W. by Yemen, N. by the great desert of El Akahf or the billows of sand, N. E. by Oman, and S. E. by the coast. It is evidently the Hadramaut of Scripture (Gen. x. 28) peopled by the posterity of Joktan (Yoktan or Kahtan). The name, Hadramaut, is an ancient territorial appellation—the connection of which with the political divisions of the country has long since passed away; and, at the present day its application is confined to narrower limits than those which on the authority of Arab geographers, have been stated above. Mahab, or the country of the Madri, extending from Kadsin, N. E. along the coast, is no longer included in it, and the limits of modern Hadramaut, along the coast, though limits in Arabia are nowhere fixed with precision, may be said to be W. the Bay of Ghubbet-Ain, lon 48° E. and E. S. S. S. S. lon. 51° 20' Thus limited Hadramaut has, on the seashore, a length of about 200 m.; but there are some who restrict the name to a tract extending only about 80 m. in length from Makalleh E. The interior extent of the country is not so easily defined; but there is reason to believe that the elevated tract, embracing the habitable valleys, and separating the desert of Akahf from the sea, has a breadth of about 120 m. Immediately behind the coast rises a chain of mountains which reaches a height of from 2000 to 5000 ft. The hills near the sea are of limestone, but the main range is probably granitic further in the interior probably from 60 to 70 m. in a straight line from the coast, commences a table-land, 6000 ft. in height, and covered with fine sandstone. It is in the valleys and glens of this plateau that the fertile spots are to be found, which may be presumed to have given rise to the early celebrity of Hadramaut. The Baron von Wrede, thus describes the prospect which here met his eyes:

The sudden appearance of the Wadi Doan took me by surprise, and impressed me much with the grandeur of the scene. The ravine, 500 ft. wide, and 600 ft. in depth is inclosed between perpendicular rocks—the debris of which form, in one part, a slope reaching to half their height. On this slope, towns and villages rise conspicuously in form of an amphitheatre; while below the steeply sloping, covered with a forest of trees, the river about 20 ft. broad, and inclosed by high and walled embankments is seen first winding through fields laid out in terraces, then pursuing its course in the open plain, which is irrigated by small canals branching from it. The place here indicated has probably 80 m. N.W. Makallah. Several other valleys or wadies open into it intersecting the elevated land in many directions, and all containing villages and cultivated fields. As all these valleys support a comparatively numerous population the discovery of their existence fully explains the ancient importance of Hadramut. The only place of any note on the coast of Hadramut, is Makallah which is indeed the chief commercial depot of the S. coast of Arabia.

The inhabitants, Hadramut, of the present day retain many traces of their ancient industry and civilization. Like their ancestors, the Chhatramutis, or Chhatramutis of Greek and Roman writers they are still renowned for courage, as well as for commercial enterprise. Hadramut exports to India frankincense, myrrh, aloes and dragon's blood to Yemen carpets silk shawls, linen and yambas or giricallines. About 70 vessels are employed in the Indian trade. —Nebuk's *Deer* *le l'Arabe* Baron von Wrede, in *Jour Roy Gen.* See vol. xiv. Capt. Hannes, in do., vol. xv.

HADRES, a vil Lower Austria, on the Pulkau on the frontiers of Moravia. It has a castle and a poorhouse. *hms same quarter, and a trade in wine.* Pop. 1500.

HAGUE (The) [Dutch *De Graevche*, *de Conste* *Hedge*, *Hage*, or *den Haag* German, *Haag* French *La Haye* Italian *Apr. Latin*, *Hage* common] one of the chief towns of Holland, cap. prov S. Holl., 33 m. S.W. Amsterdam, 24 m. N.W. Rotterdam on the railway thence to Leyden within 3 m. of the sea lat. (St. James's Church) 52° 43' N. lon. 4° 18' 48" E. (n.) It is the residence of the King and of the foreign ambassadors, and the seat of the States-General of the Netherlands, and of the principal part of the central administration of the kingdom. It is pleasantly situated defended from the sea-winds on the one side by lofty dunes, and on the others surrounded by the fertile or meadow-land or by a thick shady wood. It is in the form of an irregular quadrangle and, for width and straightness of streets, and general elegance of public buildings, will stand comparison with most continental towns. All of its suburban houses, in particular have a fine appearance those of an inferior kind being found more towards the centre of the town. It is kept clean but the water in its numerous canals, being very stagnant, emits an offensive smell. One of its finest buildings in the Hague is the palace of King William, Count of Nassau, containing a collection of paintings. Other important structures are the Royal Palace, the palace of the Prince of Orange the palace of Prince Frederick of the Netherlands, a plan next house the Binnenhof or the court of Holland, a large irregular building, in various styles on the Vijverberg, founded in 1249 and containing the hall of assembly of the States-General, and various government offices also the provincial government-house a large roomy edifice, the townhall museum, royal library with collections of coins a cannon foundry one of the largest and most conspicuous buildings in the town &c. The museum formerly Prince Mauritsboud, contains a picture-gallery chiefly confined to Dutch masters, some of whose finest works are here. It also contains a fine collection of curiosities from China, Japan, and the Dutch colonies; those from Japan being particularly interesting and varied. There are also an arsenal, prisons, theatre (a respectable building) flesh-hall two butter-houses, and a weigh-house. The churches, 12 in number are three Calvinistic, St. James's, one of the largest churches in Holland, and, at the same time,

a very fine building of the 18th century. The Prince's and the new church. A French Reformed, English Presbyterian, Evangelical Lutheran, Romanist, and five R. Catholic, with two synagogues. Many of these churches, besides those specified, are large and elegant buildings. The benevolent institutions, including infirmaries, hospitals for the aged, the

modder, cotton, and hemp mills; a trade in timber, wool, madder, and hops and four annual fairs. Pop. 7748.

HAGWORTHINGHAM, par. Rag. Lincoln; 2480 ac.

HAILSHAM, a market tn. and par. England, co. Sussex. The town, 16 m. E. Brighton, near Pevensey marsh, about 54 m. from the sea, has a handsome church, with a lofty castellated tower; places of worship for Baptists and Calvinists, a free, and three other daily schools, harvest and mutual improvement societies, and several small societies. Taverns, coffee, music, and home half-stalls for drays have been made here to a considerable extent and there is also a large

THE ROYAL PALACE AT THE HAGUE.

infirma, and the young, are numerous there are likewise many religious and missionary associations, societies for the promotion of the natural and physical sciences, literature, music, the fine arts, &c. and several excellent private collections of paintings. The Hague, in like manner is well provided with educational institutions besides the town gymnasium, the school of anatomy and the royal music and commercial schools, there are a great number of other schools for the higher and elementary branches, and several charity schools. There are six squares, three of which are planted with trees, and have pleasant promenades and several markets, including two fish markets, one of which is well supplied with five sea-fish from Schevring. In the other river-fish chiefly are sold. Many of the inhabitants abstain from the traffic created by the presence of the court and the States-General; but considerable manufactures are likewise carried on. The Hague is the chief book mart in Holland; and has 10 printers, and six lithographers. There are seven ship-building yards, six brandy distilleries, and three breweries with vinegar works, and ten works, hat, button, and carriage-makers, paper oil trees, veneer mills, and iron mills.

The origin of the Hague may be traced to the building of a hunting seat here of the Counts of Holland in 1250 but it has risen into importance chiefly since the passing of the present century and mainly through being made the residence of the court and the foreign ministers, and the seat of the States-General and the Government. It is the birth-place of William II. Prince of Orange, and William III. Prince of Orange and King of England; of Huygens, the mathematician Boerhaave, the physician Bilsdorp, the poetess; and it was the residence and death-place of Naumwaldt and the De Witts. Pop. (1849, 60,414) (1850, 73,457).—(Van der Aa, Woordenboek der Nederlanden Amsterdam 1850, 1851)

HAGUE (La), a cape, France, often improperly called La Hague, N.W. extremity of Ave. Honn, 16 m. W W Cherbourg, crossed by a canal. It has a light 180 ft. above the sea, and visible at a distance of 14 m.

HAGUEVAU or HAGUEVAU, a tn. France, dep. Bas-Rhin, 18 m. N Strasbourg, in the forest of Now on the Moselle which here divides into two branches, one of which traverses the town, while the other branches it on the E. It is walled, fortified with towers, and ranks as a military place of the frontier zone; contains five churches, a synagogue, commercial college, cavalry barracks, and civil and military hospitals, has extensive manufactures of iron and copper goods, glass, soap the earthenware, and starch; tineries, breweries,

brewery, but the great body of the inhabitants are employed in agricultural labour. Area of par., 6283 ac. Pop. 1835.

HAIN or **GHANSHYAM** a tn. Saxony circle of, and 20 m. W Wittenberg. A hill of same name, in a fertile valley. It is enclosed by four gates. It has three churches one of them almost of a triangular shape. A tower-house, with a lofty tower, two hospitals, and the picturesque ruins of an old monastery; manufactures of calico and muslin, paper, starch, vinegar and leather; a printfield, several dye-works, a large woollen and other mills; and three annual fairs, chiefly for cattle. Pop. tn. 6394 hill. 31,349.

HAIN or **DEHN**, or **DEHNKIRCHENHAIN** a tn. Hesse-Darmstadt prov. Starkenburg circle and near Offenbach. It is well built, has two gates, a Lutheran and a Calvinistic church the remains of an old castle, manufactures of woollen and several mills. Birth-place of the author Ewald. Pop. 944.

HAINA a vil. Hesse-Cassel, Oberhessen circle of, and 9 m. from Frunckenburg. A bank Wehra, near its confluence with the Eder. It contains a Gothic church an old monastery now used partly as an hospital, and partly as a deaf and dumb and blind asylum and has four mills. The painter Tautsch was born here. Pop. 177.

HAINAN a large isl. China prov. Quangdong of peninsula Indochina from which it is separated by channel of same name, 15 m broad and difficult of navigation even for junka, being filled with shoals and coral reefs. It separates the China Sea from the Gulf of Tonquin, lies between lat. 16 10' and 20 N lon 108° 20' and 111 E. and is 180 m. S W to N. E., by 90 m. broad. The E. coast is steep and rocky on the S. coast are commodious and safe bays, with good anchorage, during the N. E. monsoons; the N. W. coast is low and bordered with sandbanks. The wild animals are the tiger rhinoceros deers of various kinds and venomous serpents. Inland gold and layle land have been met with and in some parts of the coast are salt-pans. The interior is occupied by an extensive mountain range, which forms the source of several considerable rivers and some of the highest peaks of which rise above the limit of perpetual snow. Hainan is on the whole barren but the level lands along the coast are fertile and well-cultivated, producing rice, sugar, coconuts, and other tropical fruits, but the mountain productions are rice sweet potatoes, sugar tobacco, fruits, medicinal plants, timber including sandal wood banyan, ebony and rosewood besides a variety of dye-woods, and wax the last obtained from an insect, called pek-ah-ah or white wax insect, which deposits it when laying its eggs.

The fisheries of the island are considerable and thousands of junka come annually from Canton to fetch cargoes of dried and salted fish. The inhabitants on the coast are mostly Chinese from the mainland but those in the interior are of different and distinct race, supposed to be the aborigines they claim an entire independence of the Chinese government; and are described as a friendly cheerful, and kind people, cleanly and industrious in their habits, and very persevering.

The island is subdivided into 18 districts, the respective towns of which are all on the coast. Some of these are very populous having from 60,000 to 90,000 inhabitants. Capital Kiang-shan-fu. Pop. estimated at 1,500,000.

HAINAUT or **HAINAUT** an old prov., now forming part of the N. E. of France and S. W. of Belgium. In the time of Caesar it was inhabited by the Nervii, a warlike people, of German origin and did not till the 7th century take the name of Hainaut supposed to be derived from the small river Haine which waters it. It was then governed by counts, who however were not regarded as hereditary till the time of one of them, called Regnier Long Neck, who died in 918.

The succcession continued unbroken till 1466, when Isabella, the heiress of William IV. was forced to cede her territory to Philip the Good Duke of Burgundy. Through his successors it passed to the House of Austria, and afterwards became divided into two parts—Anstrian-Hainaut or Hainaut proper nearly corresponding with the Belgian prov. of that name and French-Hainaut, ceded to the French by the treaty of the Pyrenees in 1659, and of Namur in 1678 and now included in the department du Nord.

HAINAUT or **HAINAUT**, (Dutch, *Houwen* German, *Hannau*), a prov. Belgium, bounded N. by Brabant and provs. H. and W. Flanders, E. Namur and S. and W. France.

Area, 1406 sq. m. Though nowhere properly mountainous, it is very hilly in the S. E., where it is covered by the W. Ardennes. In other districts it is generally flat, though well diversified. It belongs partly to the basin of the Scheldt, and partly to that of the Meuse—the former traversing the W. corner, and also receiving some of its drainage through the Dender; and the latter draining a considerable portion of the E. by its tributary Sambre. About three-fourths of the whole surface is arable and rather more than one-sixth under wood. Scarcely 7½ is waste. The soil is generally fertile and produces in abundance cereal and leguminous crops fruit of various kinds, flax hemp, hops, oleaginous seeds, tobacco, alchory hay and green food. The meadows and pastures contain great numbers of horses and cattle—the former much valued for draught, and the latter for dairy produce. The forests, situated chiefly in the S., furnish large quantities of timber and fuel. The latter however is better furnished by the coal mines, which are very productive, and extensively worked, both for home consumption and export, chiefly to France. The other minerals include iron marble, millstones, building stone, and pavement. Manufactures are carried on to a great extent. Among others may be mentioned calico and all kinds of articles in iron, woollen and linen goods, honary glass leather doll-ware and porcelain bricks, and also alchory oil soap, tobacco, beer, vinegar, spirits, &c. For administrative purposes, Hainaut is divided into six arrondissements—Mons, the capital, Tournai, Charleroi, Ath, Solignies, and Thulin, subdivided into 83 cantons. Pop. (1846) 714,709.

HAINBURG or **HAINBURG** a tn. Lower Austria, beautifully situated on the Danube, surrounded by vine-covered hills, 10 m. S. E. Vienna. It is well built, contains an old and also a fine new castle, to which Napoleon's sister the wife of Murat, was permitted to retire, after she had lost the crown of Naples and an ancient townhouse, with a Roman altar and has very extensive manufactures of tobacco and some shipping trade, two weekly markets, and three annual fairs. Hainburg was nearly all burned down in 1897 and has since been rebuilt on an improved form. Pop. 8944.

HAINDORF a vil. Bohemia circle Buzan, about 8 m. from Austerlitz, on the Wistula at the foot of the Krapitz has a large and handsome church six of apple, a Franciscan monastery, a school a flour and two saw mills. Pop. 1258.

HAINÉ a river Belgium and France, rising in the Belgian prov. of Hainaut, and entering the Scheldt at Coudé in France, after a W. course of about 45 m. It is navigable, by means of sluices from Mons to Condé. Principal affluents, the Lionnelle and the Frontine.

HAINÉ, two places, Belg. com.—1. (*Saint-Pierre*) A vil. and com. prov. Hainaut, on the Haine 10 m. E. Mons. Agriculturists and the working of coal are the chief employments. Pop. 1059.—2. (*Saint-Pierre*) A vil. and com. near the former with an important glass-works, a copper foundry and two flour-mills. Pop. 1148.

HAINÉWALDE, a tn. Saxony circle Bautzen, near Lötzen with a castle, a church, two schools and an hospital a fishery manufactures of linen and woollen cloth several mills and bleachfields. Pop. 2571.

HAINFORD par. Eng. Hereford 1600 ac. Pop. 631. **HAINICHEN** a tn. Saxony circle of, and 41 m. S. E. Leipzig on the Little Striegitz. It is an old but stirring place has a church manufactures of woollen, linen and cotton cloths and articles of dress in metal a woollen and other mills two bleachfields, and two annual fairs. The poet Gellert was born here. Pop. 5680.

HAINSPÜCH a tn. Bohemia circle of, and 37 m. N. Leitmaritz. It contains a castle, parish church, and hospital and has manufactures of linen and ribbons, a bleachfield, silk works, and five mills. Pop. 5261.

HAINTON par. Eng. Lincoln 2306 ac. Pop. 323. **HAITERBACH**, a tn. Württemberg, circle Schwarzwald 20 m. S. W. Stuttgart. A great deal of wool is prepared and hand-loom here. Pop. 1935.

HAITI, isl. W. Indies. See **HAITI**.

HAKARI or **HAKARI** a mountain dist. Turkish Mooristan, occupied by 50,000 families of Nestorian Christians, of which Ghilman's, 65 m. S. E. Van is the capital.

HAKIN-KHAN a small tn. Asiatic Turkey, prov. Sivas r. bank Euphrates, 100 m. N. W. Diarbekir. It is extremely

poor and contains an old castle. The country around is unproductive and arid, the rocks are all basaltic.

HALE, or **HALLE**, a ls. Belgium prov. Brabant, on the Rhine, 80 m. S.W. Brussels. It contains a fine old church, built in the 14th century in the ogival style, with three naves, a majestic and well-proportioned choir, and an elegant tower and a large and lofty townhouse, built in 1816 and has manufactures of articles in wood and silver-work, braverie, distilleries, tanneries, soap-works, a corn, and several oil mills. It is a station on the railway to Brussels, and communications, by the canal from Charleroi to Brussels, with the Sambre, Elbe, and Scheldt. Pop. 6290.

HALA MOUNTAINS, an extensive and lofty range, Heloetia, stretching N. to S. and terminating in the latter direction, at Cape Muzin, in the Arabian Sea lat. 24° 45' N. lon. 68° 50' E. Little is known, with certainty, of the heights of these mountains, but they are believed to attain in some places, an elevation of upwards of 11,000 ft. above sea-level. One ascentment peak rises to 6000 ft. Two main passes intersect this lofty range of mountains—the Bolan and Kibee passes, with the aid of considerable torrents, from each affording a tedious, but very difficult ascent, from the plains on the E. to the W. highlands. The Bolan Pass is about 50 m. long, with an ascent of 5000 ft. the Kibee Pass, 100 m. long, ascent, 4500 ft.

HALAM par Eng. Notts 1310 ac. Pop. 290

HALAS, a market to. Hungary dist. Little Cumania, among low hills, on a lake of same name, 80 m. S.W. Pesth. It is a poorly built and straggling place, contains a Protestant and a R. Catholic church, and has a trade in cattle and wine and three annual fairs. In the lake is an island which was once fortified, and was used by the inhabitants as a place of refuge from the incursions of the Turks. 1 op. 10 330

HALBAU, a to. Prussia, prov. Silesia, gov. of 45 m. N.W. Liegnitz, 1 bank Tschirch, and on the railway from Berlin to Breslau. It has an elegant castle, a Protestant and a R. Catholic church, manufactures of cotton cloth and nails, a gristmill, and dyework. Pop. 539

HALBERSTADT, a to. Prussia, prov. Saxony, gov. of 22 m. S.W. Magdeburg, cap. circle of same name, in a fertile district, bank Havelmünd, and on a branch railway to Magdeburg. It is a very ancient place, and remains of the town proper surrounded by walls with seven gates, and of the suburb of Gröbenstadt. A number of the houses are timber framed, and ornately ornamented. The principal buildings are the Dom or cathedral, an ancient and interesting Gothic structure, chiefly in the pointed style, with numerous monuments, and a fine open the church of Our Lady built in the Byzantine style in the 11th century with curious bas-reliefs and wall paintings, and recently restored. Several other churches, two synagogues, an old episcopal palace, a townhouse, custom-house, theatre, gymnasium, normal and other schools, a humane asylum infirmary and a number of other charitable endowments. The manufactures consist chiefly of woollen cloth, gloves, carpets refined sugar common and white leather tobacco, silks, and chemical products and there are numerous breweries and distilleries, a walk, and a walled mill. Pop. (1849), 19,244. It is situated on the S.W. the seat of a bishop, and because the capital of a principality which continued till 1807; had an area of 536 sq. m. and pop. 119,418.—The citadel of Halberstadt consists of a plain much broken by hills, m. fertile, produces much corn, and rears many cattle. Area, 135 sq. m. Pop. 50,284.

HALESOWEN a market to. and par England, in a detached portion of Worcestershire. The town 7 m. S.W. Birmingham, is pleasantly situated in a valley on the Stour; streets tolerably straight, clean, well paved, and lighted with gas, and the supply of water abundant many of the houses handsome. It has an ancient parish church with a beautiful spire, and a mansement to Halesowen, who was educated, and has lived here places of worship for Independents, Wesleyan Methodists, and Baptists; the remains of an extensive abbey erected by king John a free grammar-school founded in 1653 and several other schools. Mills, chains and pearl and horn buttons, are manufactured here in a considerable extent and in the vicinity of coal mines, and several corn-mills. Market-day Monday two fairs annually Pop. 2055. Arms of par., 12,245 ac. Pop. 23,830.

HALESWORTH, a market to. and par England, co. Suffolk, 26 m. N.E. Ipswich, in a valley 1 bank Blyth, which is navigable for small craft to the town. The town is irregularly laid out the church is a handsome Gothic building, with a fine tower and there are places of worship for Baptists, Independents, Unitarians and Wesleyan Methodists; several daily schools, and a set of almshouses. A good business is done in mulling and corn, and there is one iron foundry, but the spinning of linen yarn forms the chief occupation of the inhabitants. Arms of par. 1445 ac. Pop. 2662

HAIFAY or **HALFAY** a to. Nubia, r bank Nile, about 155 m. N.W. Sennar; lat 19° 57' N lon 32° 46' E Pop. 4000.

HALFORD par Eng. Warwick 1010 ac. Pop. 545.

HALBURT or **HALBURT ISLAND** N. Pacific near the S.W. extremity of the peninsula of Alaska, lat. 54. 32' N lon. 162° 50' W. (n.) 22 or 24 m. in circuit, low and barren. It contains many lakes, the rivers with flow from them abounding in fish. Foxes, sea-otters, and birds of all species are numerous. It was named by Captain Cook from the great quantity of Halibut fish taken in the vicinity.

HALICZ, a to. Austria, Galizia, circle Stanislaw r bank Danaster 40 m. E.B.E. Bity It has a Greek church and two synagogues, manufactures of soap and candles, and silk springs. Near it, on a steep hill, stand the ruins of an old castle, once the residence of the lords of the kingdom of Halicia, now called Galicia. Pop. 1830

HALIFAX a market to., par and port to. England so York (W. Riding). The town stands on a declivity rising gently from the Hebble, 36 m. W. S.W. York, on the railway from Bradford to Manchester and has a very picturesque appearance. It is built almost wholly of stone, which abounds in the vicinity. Some of the streets are narrow and irregular but there are two or three handsome and spacious, while nearly all are well paved, and well lighted with gas. There are many excellent buildings, especially amongst these of modern date. Water abundant. The principal public buildings are the three Established churches all of them handsome; the theatre, a neat structure; new assembly rooms, the place hall, a magnificent quadrangular office of freestone; the halls, and the infirmary. There are also places of public worship for Independents, Baptists, Methodists, Unitarians, and Friends. The schools, which are numerous, include the free grammar-school, national school, and the British school, established as a charity school for the poor of all religious denominations; the blind school, and some smaller school charities. There are several charitable institutions, including a set of almshouses. The literary institutions of the town are a literary and philosophical society, with an extensive museum; a mechanics' institution, with a library; three newspapers, and two subscription libraries. Halifax is favourably situated for manufactures and commerce, and to this circumstance its prosperity is attributable. It commands abundant supplies of coal and water, and an extensive inland navigation, which connects it with Leeds, Hull, Liverpool, The staple articles of manufacture are woollen goods, includ-

long broad and narrow woollen cloths, and a great many other kinds of woollen fabrics, kerseys, etc. The manufacture of cotton is also carried on to a considerable extent; dyeing is carried on, and mill machinery and wool and cotton cards, are likewise extensively made. The town is rapidly increasing in extent and population. Halifax sends two members to the House of Commons. Registered electors (1861) 1084. Pop. township (1841) 15 853 (1861) 26,077 but 48,663. The parish is one of the largest in England and is divided into three parochial districts. Area, 75,740 ac. Pop. 149,357.

HALIFAX a city and seaport, cap. of colony Nova Scotia, N. coast, and near the centre of that peninsula on a declivity on the W side of a deep inlet of the sea, called Halifax harbour, which extends several miles inland. Lat. (Dook-ward table) 44 35' 42" N. lon. 63 55' 30" W (n). Including its suburbs, it is 2½ m long, and about ½ m wide. The

streets are spacious, and cross each other at right angles. Many of the houses are of wood plastered and stuccoed but many also are handsomely built of stone. There are three or four churches, a large E. Catholic cathedral and places of worship for various bodies of Dissenters. The other public edifices are substantial structures the principal of which is Province Building containing the chief government offices, the public library &c. It is built of freestone, and is a remarkably fine edifice. The others are Dalhousie college, military hospital, workhouse, prison exchange, assembly room, theatre, and several public schools. The dock yard, covering 14 ac. is one of the finest in the British colonies. The harbour in front of the town, where ships usually anchor is 1 m broad further up, the inlet expands into a wide basin called Bedford Basin, comprising an area of 10 sq m and capable of accommodating the whole British navy. Along the water's edge, in front of the town, are numerous wharves close to which ships can lie for the discharge of their cargoes, and above these are the warehouses. Halifax is the principal naval station for our N. American colonies, and is defended by strong forts and batteries. It owns about 100 large square rigged vessels as many schooners, and a host of small craft. Its exports consist of dried and pickled fish, lumber, coal, corn flour, cattle, butter, cheese, whale and seal oil and furs. Imports, the native products of the W. Indies and U. States and British manufactured goods. There are some manufactures of soap, leather, paper and soap; also breweries, distilleries, and a considerable fishery. It has an extensive steam communication with various parts of N. America and the W. Indies, and, at stated periods, with Liverpool and it is expected soon to be connected by railway with Canada and the U. States. Pop. estimated from 19 000 to 25 000

VOL. L

HALIFAX BAY, Australia, N. E. coast, between lat. 18 30' and 19 10' S. and lon. 145° 30' and 147 30' E. It contains several islands, including the Palm Islands.

HALL E (Latin *Hala*) a tn Prussia, prov. Saxony on the Saale, here crossed by a wooden bridge, 20 m N W Leipzig on the railway thence to Magdeburg. It is surrounded by a row of hills and consists of the town proper and 8 s. suburbs. It is built in the form of an irregular square, surrounded by walls with six gates, and defended by two forts. It is not very well built, but possesses several large squares, and for the most part broad and well-formed streets. It contains seven churches, of which the most deserving of notice are the Markt-kirche an elegant Gothic structure with four towers, and the Moritz-kirche also Gothic, with a fine vaulted roof and richly-carved altar-piece; a university to which the names of Gessius and Tholuck have given celebrity; a library and other good collections, and attended by about 730 students an old palace once the residence of an archbishop a town-house, theatre, hospital, and infirmary an orphan asylum, with a fine statue, by Rauch, of Tholuck its founder a lunatic asylum, and several charitable endowments. The manufactures include woollen, linen, and mixed goods; hosiery leather starch and chemical products,

147

but the most important of all is salt, obtained from springs, which have been known from a very early period and are supposed to have given the town its name—Halls being derived from the Greek *hals* signifying salt. The annual production is about 11,000 tons. Outside the walls, an elegant monument has been erected to the soldiers who died here of wounds received at the battle of Lützen in 1813. Trench and entrenchment are largely cultivated in the vicinity; and the greater part of the larch, much used as dealum for the tables at Lützen, are caught here. Pop. (1846), 35,842.

HALLÉ, a town, Prussia, gov. of, and 85 m. S.W. Minden, esp. circle of same name, with a Protestant church, manufactures of linen and tobacco a trade in linen, hemp, flax, buckwheat, horses, cattle, and swine and four annual fairs. Pop. 1482.—**CHATEAU** here, 68 ges. sq. m. Pop. 22 152.

HALLÉIN (Latin, *Halle*) a town, Upper Austria, on a height above L. bank Salza, near the foot of the Ditturburg, 9 m. S. Salzburg. It is the seat of a salt directory and several other public offices contains five churches, a townhouse, courthouse, hospital, and boys and girls school; and has manufactures of cotton hosiery and articles in wood, and extensive salt-works. Its salt mines, which have been worked for above six centuries, have a depth of above 350 ft., and yield annually about 15,000 tons of salt. Pop. 3500.

HALLÉNBURG a town, Rhineland-Prussia, gov. of, and 31 m. S.E. Arnsberg on a small stream of same name. It has a slate quarry and several annual fairs. Pop. 1548.

HALLGARTH a township, England, co. of, and 24 m. E. N.E. Darlington, containing extensive coal mines. P. 2250.

HALLIGEN (Tut) an isl. group, Denmark, off S.W. coast Schleswig, inhabited, but not being protected by bombards, flooded at high water except a portion, which, by means of warping has been raised above sea-level. On this the houses are built but in stormy weather the sea frequently gains access to them. The chief islands are—

HALLSTATT, or **HALLSTATT** a market town, Upper Austria, circle Tyrol, postemporally situated on the W. shore of the lake of Hallstatt, 60 m. S.W. Linz, on a mountain slope. There are property no streets, but a succession of terraces, to which access is obtained by flights of steps. The church is very ancient, has a Gothic portal; and on a projecting height, 1000 ft. above the houses, is a conspicuous tower originally built for defence, but now occupied by the manager of the neighbouring salt mines. Pop. 1080.—**THE LAKE** of Hallstatt, which is about 6 m. long, with an average breadth of less than 2 m. and has a shape somewhat resembling the letter S is remarkable for its wild and gloomy character of its scenery.

HALLUIN a town in France, dep. Nord, 10 m. N.N.E. Lille, r. bank Lys. It was once famous for its cloth, and has still manufactures of linen, calicoes, and bed-ticks with a cotton and several oil mills, blackfields, brick-works, breweries, &c. Pop. 2535.

HALLUM a vil. Holland, prov. Friesland, 10 m. S.W. W. Dordrecht. It has a handsome Calvinistic and a Baptist church a school and an excellent posthouse six distillery factories, and a distillery but the inhabitants are chiefly agricultural. Pop. 1178.

HALLWEIL a lake, Switzerland, chiefly in can Argau, some with the E. extremity touching that of Lucerne, length, N to S. about 7 m. breadth, 2 m. The lake, shortly after quitting the lake of Waldsee, enters the S. side of this lake and issues from its N. side, close to the old castle of Hallweil a large, massive and walled structure.

HALMAHERA an island, See GILLOLO.

HALMI a market town, Hungary, co. Ugocsa, in a plain, near the morass of Eger 11 m. S. Nagy-Szolnok. It has a castle a Protestant church, and five large annual fairs, chiefly for cattle and swine. Pop. 702.

HALMSTADT a town, Denmark, co. of, and 31 m. S.E. Copenhagen, lat. (ford) 56° 40' 24" N. lon. 12° 15' 45" E. (s.). It is well situated, and tolerably well built is the seat of a governor and of several public offices has a parish church, and a house of correction manufactures of common woollens, an important salmon fishery and a harbor which is naturally good, but very much silted up. In the vicinity are both mineral springs and sea-baths. Halstead is celebrated in Swedish history as the place where the Swedish, Danish, and Norwegian commissioners, under the Kalmar union, met to choose their king. Pop. 2251.—**THE LAKE** sometimes called Halland is bounded N. by Göteborg and Bohus, N.E. Elfsborg E. Jönköping and Kronsberg, S. Christianstad and W. the Kattegat area about 3000 sq. m. The coast is sandy in some parts, but in others bold and rocky and much indented, forming several considerable bays. The interior gradually ascends from the coast. The principal streams are—the Laga, Næsa, Äthra or Falkenberg and Ynke, which all flow S.W. into the Kattegat. The soil is, in general by no means fertile and the corn raised falls short of the consumption, woods neither extensive nor valuable for timber, but extensively employed in making specious saloon articles, in which the inhabitants display considerable dexterity. These constitute the principal manufactures. Pop. 68 689.

HALS, a vil. Denmark, Jutland N. side of the mouth of the Limfjord bay of 18 m. S.E. Esbørg, which was its haven as a shipping place. Pop. 400.

HALSAL a par. Eng. Lancashire 16,866 ac. P. 4510.

HALSBRÜCKE a town, vil. Saxony circle of, and 18 m. W.W. Dresden on the Mulde, here crossed by a bridge. It has a silver furnace, sawmills, and is one of the most important in existence and much-frequented mineral baths. Pop. 1304.

HALSE, par. Eng. Somerset 1801 ac. Pop. 412.

HALSHAM par. England, York (S. Riding) 2877 ac. Pop. 364.

HALSTEAD par. Eng. Kent, 918 ac. Pop. 369.

HALSTEAD a market town, and par. England, on Essex. The town is pleasantly situated on both sides of the valley of the Colne, 45 m. N.E. London, is irregularly built, but has a neat appearance; and, of late years, has undergone great improvement. It has two Establishments, churches, one of them a large antique building; a Friends meeting-house, an Independent and a Baptist chapel a free grammar school, library and

mechanics institution, and various charities. There are three large silk and crêpe factories, and many of the females and children are employed in the making of straw-plait. Weekly market, Tuesday. Area of par. 5638 ac. Pop. 6982

HALT KERN a vil. Holland, prov N Brabant about 2 m N Begijnendijk, with a R. Catholic and a Calvinistic church, and a school. Pop. 688

HALYS, river Asiatic Turkey. See **KIZIL-IRMAK**.

HAM a to. France, dep. Summe, 15 m S S E Peronne surrounded by a marshy plain. It is an ancient place, and contains a church, with fine bas-reliefs and a curious crypt; but is chiefly deserving of notice for its citadel, which has been much strengthened by modern works and serves as a state-prison, in which were confined Prince Polignac, and three other ministers of Charles X. who signed the ordinances for the coup-d'état of 1830 and Louis Napoleon Bonaparte, for an alleged and premature attempt to seize the government of France, of which a more fortunate coup-d'état has recently (1851) given him possession. Ham has manufactures of cotton goods, beet-root sugar and cloths, and two annual fairs. Pop. 2447

HAM—1 A hamlet, England, co. Surrey on the Thames, 10 m S. W. by W London, and containing several handsome villas, with Ham House, erected for Henry Prince of Wales, son of James I. Pop. 1824.—2 W 40 A large vil and par. England, co. Essex. The former 4 m E. by N London has a spacious church and two dissenting places of worship

an endowed girls school several distilleries printing-works and flour-mills. Area of par. 5890 ac. Pop. 18317

HAM-ON-BRECK a vil and com. Belgium, prov Brabant, on the Meuse, 21 m. E. Maa. It contains an ancient castle and has manufactures of mule, linen, and lace. Iron works, oil and flour mills a trade in corn bar-soon, timber, horses, and cattle and three annual fairs. Pop. 1775

HAM (nuz) a vil. Holland, prov Overijssel 23 m. N E Deventer with a Calvinistic church and school. In August 1848, 48 houses were burned down. Pop. 748.

HAMADAN a city Persia, prov Irak Ajemi, 260 m. N W Ispahan lat. 34° 45' N; lon. 48° 28' E. agreeably situated near the base of a great range of mountains, and overlooked by the lofty peak of Elvand. It looks like an old town heaps of ruins presenting themselves on all sides and is without any architectural objects of interest the only large mosque being the Masjid-i-Jumeh, which has been recently renovated or rebuilt. The streets are narrow and dirty; still the city has a lively and bustling air about it. Its banners and caravanserais are numerous and extensive—some of them handsome; the former well furnished, and thronged with

Graduates of all sorts—shoemakers, saddlers, blacksmiths, silversmiths, and workers in cotton—who all occupy separate parts, and maintain great order in their arrangements. There are a vast number of tanneries in the city; the leather manufactured here supplying a large portion of all that is used in Persia. There are also considerable manufactures of coarse carpets, woollens, and cotton stuffs. Wine and rakes—the latter a liquor distilled from the juice of the grape—are made by the Armenians. The trade which passes through the city is large. Hamadan being the great centre where the routes of traffic between Persia, Mesopotamia, and Syria converge. During eight months in the year the climate is delightful; but in winter the cold is excessive, and fuel with difficulty procured. This city is supposed to stand on the site of the ancient Ecbatana built by Darius the first king of the Medes, for his imperial residence. The principal remains of the ancient city are the fragments of sculptured stone, to be seen in the foundations of walls and houses and ancient coins and medallions 1 cp. estimated at 30,000

HAMAH (Hammath of Scripture Greek, *Emathia*) a city Syria, east of, and 110 m N by E Damascus, pleasantly situated on both banks of the Orontes or Assy here crossed by several bridges. It is built partly on a declivity and partly on a plain. The streets are tolerably wide the houses with exception of a few of the best and largest have mud walls, but are said to be richly and elegantly fitted-up within. The principal buildings are the palace of the Mutasallim and 15 mosques one of which has a very ancient minaret. In the middle of the city is a square mound, on which formerly stood the castle. There are several banians baths, and many fine residences, with spacious gardens attached. The principal trade of the city is with the Arabs of the Desert who come to buy their tent-furniture and wool-

HAMATH, or HAMAH.—From London. Viewed on Orontes.

len ables and a considerable trade is also earned on with Aleppo, in European and colonial merchandise. One of the greatest curiosities here is the hydraulic wheels (*sa'ia* or *na'ara*) which supply the upper town with water. They are about a dozen in number the largest about 70 ft. in diameter. By means of these wheels buckets of water are raised, which empty themselves into stone aqueducts, supported by lofty arches on a level with the hill. Hamah is supposed to occupy the site of the Ephraim of the Greeks, and is, probably the capital of the kingdom of Hamath the king of which sent presents to David and entered into an alliance with him, after he had conquered the kingdom of Zobah. Pop. about 80,000

HAMBACH (Mitteln, Oden and Uffern) a vil. Bavaria, Palatinat 8 m. N W Amberg, with a R. Catholic church ruins of an old castle, and a trade in wine. Pop. 3065

HAMBATO a to. Ecuador. See **ACAPATO**.

HAMBIE or **HANBY** (anc. *Hamme*) a vil. and com. France, dep. Manche, 12 m S. E. Coutances, with manufactures of thread, a trade in cattle, and two annual fairs. Near it are the picturesque ruins of the old abbey of Hambye. P. 6554

HAMBURTON per Eng. Entail: 1154 ac. Pop. 290.
HAMBURG (Latin *Hamburgen*, French, *Hambourg*;
 Italian, *Ambrigo*) a free tn. Germany, cap. of a small republic
 of same name. A member of the Germanic confederation, and

and a R. Catholic; an elegant new Jewish temple, and several
 synagogues; an academy, a noble edifice, only completed
 before the confederation, and, though situated in the very heart
 of it saved unharmed, containing chiefly of a magnificent hall

the greatest commercial port on the coasts of Europe, r
 bank Elbe, about 50 m. from its mouth, and at the confluence
 of the Elbe and Alster lat. 53° 22' 48" N; lon 9° 56' 50"
 E (a). Its shape is not far from that of a semicircle, the
 diameter of which is formed by the Elbe, while its eastern
 frontier is marked by the Alster, which in the W. forms
 two considerable lakes—an outer called the Grosser Alster
 and an inner called the Binnen Alster. The latter surrounded
 by broad planted walks lined by magnificent houses, is justly
 considered as the principal ornament of the place. Hamburg
 was, up to the termination of the last European war, sur-
 rounded by strong walls, but these, and all the fortifications
 connected with them, have been thrown down and levelled,
 and the space which they occupied converted into spacious
 roads and gardens. From the number of canals which later
 cut the streets, partly from the Elbe, and partly from the
 Alster and the trees planted along them the resemblance to
 some of the larger Dutch towns is very striking, but the
 general appearance is by no means attractive, the houses
 being, for the most part, of brick, antiquated and indif-
 ferently built. Great improvements, however have taken place
 since 1842, when a dreadful fire broke out, and raged, almost
 unchecked, for four successive days, destroying 61 streets
 with 1749 houses. In repairing the damage, both taste and
 magnificence have been displayed, many mans houses, nar-
 row lanes, and elegant dwellings have disappeared, and splen-
 did edifices, admirably designed and constructed at enormous
 cost, have suddenly risen up in whole streets, of which any
 city in Europe might be proud. Hamburg was never very
 rich in public buildings, and as several, which perished in
 the conflagration, have not been replaced, the edifice deserv-
 ing of notice are neither numerous nor very remarkable.
 The most important are the church of St. Nicholas, a noble
 Gothic structure, with a lofty tower and spire, built since
 1542 and so called after the venerable church which it has
 replaced. St. Peter's church, another lofty Gothic edifice, in
 its manner rebuilt; St. Michael's, which merged unaltered,
 with a beautiful porch, a finely vaulted ceiling, and a spire
 450 ft. high, one of the loveliest in Europe; St. Catherine's,
 also an ancient edifice, with a spire of 300 ft., and an excellent
 organ. St. James' erected in 1554, but surmounted by a
 modern tower of 229 ft. various other churches, including
 three Lutheran temples thus already mentioned, a German
 and a French Reformed, a Congregational an Episcopal,

ments, &c. The trade is very extensive, including, to a
 greater or less extent, almost every article which Germany
 is able to sell or requires to buy and is greatly facilitated

TOWER OF THE CHURCH OF ST. JAMES, AND HOUSE OF THE
 VON AND VON GERTZEN, HAMBURG.—From Hamburg.

by the extensive means of communication both with foreign
 countries and with the interior. By the Elbe, vessels draw-
 ing 18 ft. can ascend at high water and deliver their

ergoes directly in the warehouses, which line the bank, or send them by lighters into the very heart of the town. By the same means, also, a free and uninterrupted communication is given to the interior and greatly extended by means of

station is a curious and not very intelligible combination of the aristocratic and democratic principles. Very important modifications were proposed in 1848, and apparently sanctioned, but do not seem to have been yet carried into full effect. The fundamental principle of the constitution is, that the executive power is lodged in a senate or Raths, and the legislative power with a general council of the administration in the body of the burghers, represented by three colleges. The debt of Hamburg in 1863, was £5 407 408; the receipts, £875 889 and the expenditure, £809 046. Pop. in 175,083; of whole territory 239 911.

THE INNER HAVEN WITH SPIRE OF THE CHURCH OF ST. NIKOLAI HAMBURG
From Brundage's Excursion Photographs on Board, &c.

canals, which branch off to the Baltic, or penetrate into the basin of the Oder and through it into that of the Vistula. Railways connect Hamburg with Rendsburg and Kiel, Schwerin and Mottow, and with Berlin and all E. and S. Germany. A great drawback to the trade is the want of a sufficient harbour or rather of anything that can be called a harbour, the vessels being obliged to lie in the river within a space ruled off from the fair-way and protected from the current by means of piles. The imports consist of sugar, coffee, tea, tobacco, cotton, indigo, dye-woods, wine, spirits, opium, hides, fish, coal, British manufactured goods, &c.; and the exports, of grain, steel, butter, wool, salt provisions, cattle, bark, madder, &c. German manufactures of all kinds, and Rhinish wines. The following table shows the number of vessels that entered and cleared at the port in the years 1859 to 1867 with the value of the imports; since the export duty was abolished in 1857 no account of exports has been kept.

Year	Vessels Entered.	Tonnage Clear.	V. in Imports.
1859	4566	4504	
1860	5029	5045	
1861	5219	5184	646,981 100
1862	5081	5064	45,065 142
1863	5515	5549	55,999 012

Accounts are kept in marks of 16 schillings—about 1s 2½d; the mark hence, an imaginary money is equal to 1s 2½d. The principal weights and measures are the Foss (foot) = 0.94021 ft.; the Elle = 0.52581 yard; the Fass = 0.18135 quarter; the Kanne = 0.87727 gallon; and the Pfund = 1.06367 lb. avoirdupois.

The territory of Hamburg has an area of about 114 geo. sq. m. It consists of several detached portions, but the more important and central part, including that on which the town stands, is enclosed by Denmark, on all sides except the E. and S. W. where its boundary is the Elbe. It comprises, likewise, the bailiwick of Bergedorf, and the little territory of Wischhafen 18 m. from Hamburg, the sovereignty of both of which it enjoys, in common with Lübeck several islands, a small space on the E. bank of the Elbe, opposite the town and, at the mouth of the Elbe, the bailiwick of Elmshorn, in which is the harbour of Cuxhaven. As a member of the German confederation it has a full vote in the plenipotentiary and shares a vote, in the minor diet, with the other free towns, Frankfurt, Lübeck, and Bremen. Its con-

1857 m long commences at Chacleston, and has its terminus here. Pay about \$500.

HAMILTON is a N. Hanover Calanburg, cap. full of same name, beautifully situated on the Weiser here crossed by a suspension bridge, 816 ft. long resting on a pier which rises from an island in the middle of the river 25 m S W Hancock. It is surrounded by dilapidated walls with four gates, and derives considerable interest from the mitigated form of its buildings, many of the houses being of wood, in the old German style. It contains a fine old Stufkreutz two other churches four towns a burgh school library and several hospitals and poorhouses in the east of several courts and public offices, and has extensive breweries and distilleries vinegar works, a tobacco factory a salmon fishery and a considerable trade. Pop. in 1811; 10,171.

HAMERINGHAM par Eng Lincoln 1370 ac. P 291

HAMID to Asiatic Turkey See ISMARA.

HAMILTON numerous places, U States, including—

1 A vt and township, New York, 94 m. W by N Albany on the Chemung, with three churches, an academy and a Baptist literary and theological institution. Pop. 8736—
2 A vt Ohio, 85 m. S W Columbus, L bank Great Miami a bridge over which connects it with Rossville. It contains five churches, a female academy and several mills. Pop. 1800.—3. A township, New Jersey 80 m. S E Woodbury Pop. 1666.—4. A township Pennsylvania, 13 m. N L Gettysburg. Pop. 1069.

HAMILTON a thriving town Upper Canada, cap. Gore dist., S. side of Burlington Bay Lake Ontario, the principal part being built about 1 m. from the bay. The public buildings, many of which are handsome, include jail and court-house, two market-houses, custom house, theatre, and 16 churches and chapels. It is the seat of an active and increasing trade. Pop. (1856) about 22 000.

HAMILTON a parl. bor and market in Scotland, co. Lanark, 10 m. S.E. Glasgow with which it is connected by railway. It lies on a rising ground, sloping E. near the confluence of the Avon with the Clyde, in a rich country and close by the palace of the Duke of Hamilton. It is a very scattered place, almost every house having a piece of garden-ground attached, giving to the town a very rural and pleasing aspect. The houses, all of stone, in the lower part of the town are chiefly of one story and of an inferior description but in the upper and more modern portions, which are rapidly extending, in consequence of the easy ac-

boats from Glasgow there are many good, and some elegant boats; but the vessels are indifferently lighted with gas, still more indifferently cleaned, and the supply of water is defective. The country has a conspicuous Grecian edifice, and the extensive cavalry barracks, are the most important public buildings. There are 10 churches—one Established one Free, four I. Presbyterian one Episcopal, one Congregationalist, one Unconnected and one R. Catholic a goodly number of excellent schools, of which the Hamilton academy and St. John's grammar-school are the most important. The several mills, brack, and the weaving of machine, galls, &c. are the principal manufactures carried on. The former occupy in the town and environs, about 4000 hands, and the latter about 800. Hamilton palace, the seat of the Duke of Hamilton and Brandon, is so close upon the town as almost to form part of it. It is a large building, with an elegant N.W. front, adorned with a fine portico of Corinthian columns, and seated in very extensive and well laid off pleasure-grounds, on the river Clyde. It contains a good collection of paintings, and the grounds are accessible to the public. In the vicinity are the ruins of Colinton castle, and a few remarkable old castles, the remains of Colinton tower, in which a herd of the original breed of wild cattle are kept. Dr. William Calton was born at Hamilton in 1710. Pop. (1841) 8876 (1851) 9630. Area of par. 14 240 ac. Pop. (1851) 11,410.

HAMM a vil. republic of 8 in N.E. Hamburg, near R. bank Rube. It consists of three parts—Hamm, Ha-norndorf, and Peterwerder on Rosenberg and contains numerous villas of the citizens of Hamburg a church, poorhouse, and infant and several private schools and has two annual fairs, chiefly for cattle. The inhabitants raise fruit and vegetables for Hamburg. Pop. 1339.

HAMM, a tn. Rhinisch Prussia, gov. of, and 23 m. N.W. Arnberg, cap. circle of same name, at the confluence of the Ahr with the Leppe which is here crossed by a bridge. It was once fortified, and is still entered by four gates contains a castle, one R. Catholic and three Protestant churches, a gymnasium, Franciscan monastery, barracks, and military hospital in the seat of a court of law and several public offices, and has manufactures of linen and leather a blacksmith a trades in linen and cattle, and four annual fairs. Pop. 5689.—*Chr.*, area, 132 sq. m. Pop. 43 204.

HAMMAMET a modern outpost to, on a wide gulf of the same name, regency of, and 40 m. N.E. Tunis; lat. 36° 50' N. lon. 10° 40' E. Near it are many ancient ruins it carries on a considerable trade with Tunis, to which it sends grain, oil, and wool. Pop. 8000.

HAMME a vil. and com. Belgium, prov. E. Flanders, 24 m. N.E. Yverdonde, R. bank Durme. It contains two churches, two castles, a courthouse, an orphan and ordinary hospital, and several primary schools, and has manufactures of linen and woolen cloth ribbons, cordage, starch, soap, and chocolate several breweries, salt refineries, dyeworks, and oil, beer, malt, and mustard mills. Pop. 2662.

HAMMELBURG a tn. Bavaria, Lower Franconia, cap. dist. of same name, at the confluence of the Thulbe with the Saale, here crossed by a bridge, 26 m. N. Würzburg. It is walled, has a parish church, chapel castle, townhouse, Franciscan monastery, poorhouse, and hospital manufactures of linen, raw bark, wall, gypsum, and flour mills a trade in wine, fruit, and cattle and six annual fairs. Pop. 2630. Area of dist. 45 sq. m. Pop. 11 771.

HAMMERFEST a maritime tn. Norway, bail Finmarken, on Hvaloe (White Island), a barren, treeless, barren spot lat. (church) 70° 40' N.; lon. 25° 45' E. (n.) It is the most N. town in the world, lies in a fine secure bay and consists of about 100 scattered wooden houses, with a church, and several stores and is defended by three small batteries. It carries on a lively trade with Britain, Holland, Germany Denmark, and Sweden, and more especially with Russia, in the skin of the bear, walrus, goat, deer, walrus; and in walrus teeth, and sea-otter, oil, and fish. About 400 to 250 fishing boats annually frequent the bay and 100 large vessels and several vessels are sent each year to Spitzbergen, to hunt the white bear and walrus, and procure skins and down. Though within the Arctic circle, the winter is comparatively mild, and the surrounding waters seldom freeze, so that the inhabitants are enabled to fish in boats the whole year round. Pop. (1845), 416; (1848) 1125.

HAMMERBROE, a posttown and par. Newbury hall, Road laid, on the West Road about lat. 50° 10' N. Pop. 1921.

HAMMERBROOK a vil. England, co. Middlesex, about 2½ m. W. London, on the Great-western Road, along which the principal street extends. The other streets are, in general, narrow and irregular but have, of late years, been much improved. Many of the older houses are of an inferior description, but most of those of modern erection are handsome. The latter include a number of elegant villas towards the Thames. The village is well paved lighted with gas, and amply supplied with water. There are two Established churches, two Independent chapels, one Wesleyan Methodist, one Baptist, a Friends meeting-house, and a R. Catholic chapel; several charitable foundations, most of them associated with educational objects a school of industry for girls, and a number of day Sunday and boarding schools. The Thames is here crossed by a magnificent suspension bridge. The vicinity is occupied chiefly by nurseries and market gardens. Pop. 17 760.

HAMMERSTEN a tn. Prussia, prov. W. Prussia, gov. of and 81 m. W. Marienwerder on the Zehn. It has a Protestant, and a R. Catholic church, and a synagogue; manufactures of woolen and linen cloth, brewery and distillery a trade in cattle, and five annual fairs. Pop. 1644.

HAMMERTON KIRK, par. Eng. York (W. Riding); 2018 ac. Pop. 873.

HAMMOON par. Eng. Dorset 677 ac. Pop. 73.

HAMMOA or HAMOI ISLANDS. See NAVIGATOR'S ISLANDS.

HAMMOON a shallow lake, or rather extensive muddy morass, in S.W. Afghanistan, prov. Baskan, extending between lat. 30° 42' and 31° 54' N. lon. 61° 57' and 63° 10' E. It has sometimes been confounded with Lake Karrah, a little further S. but the latter is now nearly if not entirely dried up. It is about 70 m. long N.E. to S.W. breadth 15 m. to 20 m. has rarely a depth of more than from 3 ft. to 4 ft., and is, to a great extent, though not wholly covered with rushes and reeds, which covers out with grasses, and on which they readily fatten. Its water is salt, and its surface is supposed to be on the increase. Innumerable wild geese harbour in the reeds, and commit great havoc on the cultivated grounds. Geese, ducks, and other water-fowl, are numerous. The pelican is common. Fish do not seem to abound. The Hamoon receives the Helmand, Ardrucand, the Furrah Rood and several other minor streams.

HAMPSHIRE (New) See SOUTHAMPTON.

HAMPSHIRE (New) one of the U. States of N. America (see Connecticut), bounded N. by Lower Canada, E. by Maine, S.E. by the Atlantic, S. by Massachusetts, and W. by Vermont—from which it is separated by the River Connecticut between lat. 42° 40' and 45° 12' N.; lon. 70° 50' and 72° 40' W. It is 100 m. long N. to S. and varies from 19 m. to 90 m. in breadth, E. to W. area, 5280 sq. m., or 5,535,200 ac. This state has a sea-coast of only 18 m. and the shore is generally a sandy beach, bordered by salt marshes and indented with creeks, admitting only small vessels. There are only two bluffs along the coast, called Grind and Little Bear's Heads. For the distance of 50 m. or 30 m. from the sea, the land is almost level, but thereafter rises; and in its N. part is traversed, S.W. to N.E., by a continuation of the Alleghenies, culminating in Mount Washington, 6234 ft. high—the loftiest summit E. of the Rocky Mountains—and having various other peaks, 4000 ft. to 6000 ft. high among which are Mount Adams, Jefferson, and Franklin. N. of these mountains, the country is hilly, rocky and barren; but to the S. on the declivities of the lower hills, and in the valleys between them, the soil is good, and along the banks of the rivers it is excellent. The principal rivers are the Connecticut, the Merimac—both navigable for a considerable distance—and the Piscataqua. There are also several lakes—of which Lake Winnepesaukee, 50 m. long, and 1 m. to 10 m. broad, is the largest. The climate is subject to great extremes. The principal crops are wheat, rye, flax, and hemp; barley, oats, pease, and beans are also raised. Apple and pear trees are abundant in the cultivated districts.

and the hilly and mountainous regions are still covered with extensive forests of pine, oak, cedar, hawthorn, beech, maple, poplar &c. In the forests, black bears, wolves, foxes, wild cats, raccoons, and gray striped, and flying squirrels are still common; but the moose-deer the beaver and black squirrel have become rare. Of domestic animals, cattle, sheep, and pigs are numerous and large but horses are both few and small. The manufactures consist of woollen cotton, iron, leather, furniture &c. The commerce is considerable. Exports (1848), \$1785 Imports, \$18 282

The legislative consists of a senate and house of representatives and the executive power is vested in a governor and a council of five members—all of whom are elected annually by the people. The judiciary power is vested in a supreme court and a court of common pleas—the judges in which are appointed by the governor and council, and hold their offices during good behaviour, but not beyond the age of 70.

New Hampshire was first settled in 1623, at Dover and Portsmouth. It was for some time under the jurisdiction of Massachusetts, but since 1741 it has constituted a separate state. Pop. (1840), 384,574 (1850) 317,969

HAMPSTEAD a vil and par England co Middlesex. 4 m. N.W. London The village occupies the slope of a hill has narrow crooked, and inconvenient streets houses exceedingly irregular a neat brick Established church, and several dissenting chapels; national and Sunday schools and a institution for educating clothing and apprentices poor children. The medicinal springs of Hampstead were formerly held in high estimation, but are not now so popular although the place itself continues to be much resorted to for the salubrity of its air and the beauty of its situation. The house, formerly the Upper Flask Inn, in High Street, and now a private residence, was the resort of the famous Kit-Kat Club. The health which crowns the summit of the hill on the face of which Hampstead stands, comprises about 280 ac. and is sprinkled over with handsome villas. Area of par which includes part of the hamlet of Kilburn, 2553 ac. P. 11 1868

HAMPSTEAD par. Eng. Lond. W. Riding 9600 ac. Pop. 2404

HAMPSTEAD a vil and par England co Middlesex The village, pleasantly situated 1 bank Thames 15 m W 8 W London has narrow streets, and generally irregular buildings, though there are also some excellent houses and around it are many beautiful villas and noble mansions. The church is an elegant structure, with a square tower at the W end, and there is an independent chapel, and several boarding and other schools, including a free grammar school. Area of par, 3190 ac. Pop. 4802

The royal palace of Hampton Court is about 1 m. from the village—the grounds extending to the margin of the Thames. The original palace, which consisted of five quadrangles of which two only now remain was built by Cardinal Wolsey who presented it to Henry VIII. by whom it was subsequently enlarged and who formed around it a royal park or chase, which he inclosed and stocked with deer. A third quadrangle was added by Sir G. Wren, for William III. who laid out the gardens and park in the Dutch taste. The palace, with two stands, consists of three courts, the first of the age of Wolsey the second of Henry VIII. after Wolsey's death and the third, as above-mentioned, of the age of William III. Hampton Court contains, amongst a great deal of rubbish, many valuable pictures by Holbein, Ley, Kneller, West, &c., and also seven marvellous cartoons by Raphael. The gardens comprise about 44 ac. The private garden is a curious specimen of the old style presenting a series of raised terraces, formal flower-plots and long shady avenues. Hampton Court has been inhabited successively by Henry VIII. and his children James I. and his son, Charles I. Cromwell; William III. and his queen, Queen Anne and, lastly George II. Part of it is now occupied by deserv'd gentlemen and gentlemen, with their servants. In November 1888, the palace, gardens, and grounds, were thrown open to the public, without any charge.

HAMPTON par Eng. Dorset 1011 ac. P. 361
HAN KANG—1 A river Corea, which, rising near Nagan enters the strait of Corea near Chum-hai, after a S course of about 200 m.—2 A river China, prov. Shensi and Houpe, which after a tortuous S.E. course of about 700 m falls into the Yang-tse-kiang; at Han kang after receiving numerous tributaries and passing several considerable towns.

HAN KANG a city China, prov. Shensi 1 bank Han-kiang lat. 33° 59' N. lon. 107° 13' E. in a mountainous country with some trade in honey wax mink, and sinabar
HAN KANG HAN-TSUNG or KIN-KI-TAO—1 The cap. city of Corea, about the middle of which it is situated lat. 37° 40' N. lon. 127° 20' E. It is the residence of the sovereign but is very little known to Europeans.—2 A city China, prov. Houpe, at the confluence of the Han kang with the Yu-gi-kiang lat. 30° 59' N. lon. 114° 18' E. It is surrounded with marshes and possesses a considerable trade and population

HAN-KANG a vil Belgium, prov. of, and 88 m. S.E. Namur on the Leze which here is lost in the stream of a calcareous hill and after pursuing its subterranean course for nearly a mile reappears. Leze has a remarkable and much-valued grotto, called Trou-de-Han, scarcely surpassed by any other in Europe

HANAU a tn. Hesse-Cassel cap. prov. of same name, in a fertile district at the confluence of the Kinzig with the Main 18 m. E. Frankfurt, with which it is connected by railway. It consists of an old and a new town is entered by six gates and communicates with the different quarters, and the opposite shore of the river, by ten bridges. It is regularly built, very much after the manner of a Dutch town; and consists of straight, well-paved, and well lighted streets, and of several handsome squares. It contains an electoral castle, three churches, two townhouses a burgher and grammar school, a school of design a gymnasium a custom-house house of correction, infirmary and several hospitals. It has several important courts and offices and has manufactures of jewellery carpets and tapestry silk and woollen goods run-wax stained paper wax and tallow candles hats, duff-wax, &c. and a considerable trade in wood, drugs, dye-wares, and the above articles of manufactures. It has also numerous worked mills, tanneries, and distilleries. In 1593 many persons driven by persecution from the Low Countries, took up their residence in Hanau, and supply rewarded its hospitality by giving it the benefit of their industry and skill. Manufactures, accordingly, then began, and have scarcely ever since ceased to flourish. During the Thirty Years War Ramey a Scotchman, held the town for nine months against the Imperials. In 1813 a battle was fought between the French and Bavarians, to the advantage

of the factory, and part of a suburb was burned down. Pop. 15,265.—The province of Hanau is situated in the S. of the electorate, and is the smallest of the four provinces into which it is divided. It is mostly covered by the Spessart mountains, but has several large and fertile plains, particularly towards the Main, which forms its S.W. boundary and receives all its waters. Area, 333 sq. m. Pop. 140,855.

HANAU a vil. and par. Switzerland, on N. and about 18 m. from St. Gallen, on the Thur. It is well built, has a parish church, used both by Protestants and Catholics; and some trade in hemp, flax and dairy produce. Pop. 1963.

HANBURY—1 A vil. and par. England, co. of, and 2½ m. N.E. Worcester. The village consists of a few scattered houses, mostly of brick and remarkable for the monotony of their appearance. It has a parish church a Wesleyan chapel, a charity school founded in 1637 and several other churches. Area of par. 533 ac. Pop. 1009.—2 A par. England, co. Stafford 12 112 m. Pop. 2535.

HANDA an isl. Scotland, about 1 m. square off W coast of Scotland, from which it is separated by a narrow channel lat. (centred) 58° 28' N. lon. 5° 11' 45" W (N.) and affording pasture for a few sheep. Pop. (1841) 65 principally engaged in fishing and fishing.

HANDBORN GH par. Eng. Oxford 2280 ac. 1 114. **HANDFORD** with Broom, a township, England, co. Chester 5 m. S.W. Stockport, a station on the Manchester and Crues Railway. It has a national school and print works. Pop. 261.

HANDLEY two par. England.—1 Chester 1976 ac. Pop. 381.—2 Dorset, 6976 ac. Pop. 1279.

HANDELHUEHEIM a vil. Baden, circle Lower Rhine, bail. of, and 3 m. N.W. Heidelberg, a bank Main, with a parish church, two castles, and manufactures of soap—ware a brewery and eight mills. Pop. 7143.

HANDSWORTH two par. England.—1 York 1½ Kings' 3510 ac. Pop. 364.—2 (with Sals) Stafford 760 ac. Pop. 7879.

HANDZAFM a vil. and com. Belgium, prov. W. Flanders, 10 m. S.W. Brugge. It has manufactures of starch, a distillery a tannery and two breweries. Pop. 2876.

HANERAI a vil. Denmark, in the N.W. of H. lsten, on the Esder, with a handsome manor house, and the remains of an old castle, which in the 12th century was the principal seat of H. lsten, towards the Dnieper. Pop. 2920.

HANG-CHOW river, or HANG-TSUNG river, a large city China, cap. of prov. Che-Kiang, on a plain at the S. terminus of the Imperial canal, and within 2 m. of the river Telen-tung-Kiang about 40 m. or 50 m. from its mouth 90 m. S.W. Shanghai lat. 30° 20' 20" N. lon. 120° 7' 57" E. (L.) It is of oblong form, and is surrounded with high, well built walls, about 8 m. in circuit enclosing many large vacant spaces.

The streets are narrow but well paved and clean and throughout the town are numerous triumphal arches, many used to grant men, and gorgeous Buddhist temples. The shops and warehouses are said to be equal to the best in London, both as regards their size and the quantity and beauty of the goods displayed in them—silk, gold and silver ornaments, jade stones, and curiosities of all kinds, being leading articles. The houses are generally of but one story high. A large portion of the inhabitants reside in the suburbs, and in boats on the waters around them. A part of the space within the walls is divided off for the accommodation of the Manchoo garrison, which consists of 7000 troops. The governor-general of Che-Kiang and Yehien resides in this city and also the governor of the province who, with their courts and troops, in addition to the great trade passing through, render it one of the most important and richest cities in China. Hang-Chow too is famous for its silk manufactures—particularly for its flowered silks, and different kinds of satin. It is said to produce more silk than all the other districts of the empire—there being 60,000 persons employed in this branch of industry alone within the walls of the city. The river opposite the city is about 4 m. broad at high water and is crowded with vessels of all descriptions—being the channel by which vast quantities of merchandise are received from, and exported to, the southern provinces. Hang-Chow too is the celebrated *Kiang of Marco Polo*—the capital, in his time of Southern China. Pop. estimated at 740,000. [Middle Kingdom. Fortune's The Districts of China, 1852.]

HANGLETON par. Eng. Sussex 1518 ac. Pop. 67. **HANGOOD** or HANG-UD, a cape, Russia, S.W. extremity of Finland to the N. of the entrance of the Gulf of Finland lat. 66° 45' 58" N. lon. 27° 57' 58" E. (L.) with a lighthouse upon it, and near it a good harbour. Hard by this cape, the Swedish was signally defeated by the Russian fleet, in 1714.

HANGOO or HANGU a small in Afghanistan, 16 m. N. Kohat, in a pleasant and fruitful country well watered by numerous fine springs. It contains a small bazaar and stone-built fort. Lat. 33° 31' N.; lon. 71° 15' E. Pop. 1500.

HANKERTON par. Eng. Wilts 2160 ac. Pop. 871.

HANLEY two par. England Worcester.—1 (Castle) 5880 ac. Pop. 1686.—2 (Wicham, or Upper) 1165 ac. Pop. 125.

HANLEY and BARNES two townships, forming a large and improving market in England, co. Bedford, in the centre of the Fotheries, pleasantly situated on rising ground, near the Trent, 1 m. N. Stoke within the par. and part of for of which it is comprised, 16 m. N. by W. Bedford. The streets are generally spacious, well paved and lighted with gas; and the inhabitants amply supplied with water houses, for the most part, neat, and many of them elegant and spacious. There are several inclosed and commodious market-places, a handsome townhall, five churches, and twelve chapels, belonging to various Dissenting bodies. Several of these churches and chapels are elegant structures. The town also contains British and National Schools, summarily attended a museum, and mechanics institution library subscription library newsmen, and other useful institutions. Weekly markets on Wednesday and Saturday an important cattle market every alternate Tuesday; inhabitants are chiefly occupied in the potteries. Pop. 20,360.

HANMER, par. Wales, Flintshire 4,718 ac. Pop. 2570.

HANNLEY two par. England.—1 Lincoln 1010 ac. Pop. 114.—2 (West) Berks 800 ac. Pop. 1184.

HANNEDORF (OBER and NIEDER) two nearly contiguous vils. Prussia, prov. of, and 60 m. S.W. Breslau. They contain a R. Catholic church and a castle and have tile-works, and several mills. Pop. 2097.

HANNUT a vil. and com. Belgium prov. of and 22 m. W. Liège. It is poorly built, but has a modern castle a salt-rebbery, two breweries, a flour and two oil mills. Pop. 1167.

HANOVER, numerous vils. and townships, U. States, particularly—1 A vil. and township, New Hampshire, pleasantly situated near the Connecticut, 46 m. N. W. Concord with a Congregational church Dartmouth college, a medical institution and a library of 16,500 vols. Pop. 2612.

HANOVEL, or HANOVER [FRENCH, *Hannovre* Latin, *Hannover*] a kingdom in the N. W. of Germany holding the fifth rank in the Germanic Confederation, and bounded off by the German Ocean, and the duchies of Holstein and Lauenburg from which it is separated by the Elbe N.E. by Mecklenburg-Schwartz R., Prussia and Brunswick; S. Prussia Saxony Hesse-Cassel, and the duchy of Prussia; and W. Holland lat. 57° 18' to 58° 52' N. lon. 6° 40' to 11° 55' E. It is of very irregular shape and by the interjection of the duchy of Oldenburg, in the N., and of a long irregular belt of Brunswick, in the S., is divided into three distinct portions—the first, and far largest, forming Hanover proper situated on the E., and tolerably compact; the second on the W. and separated from the former by Oldenburg and Rhenish Prussia, except at one spot, where the continuity is maintained by a narrow tract, not more than 6 m. wide and the third in the S., completely isolated from the other two. Besides these three principal parts, there are three small portions, all in the S. and so small, as not to require separate notice; and a range of sandy islands lying the coast. Total area, 11,106 sq. m. sq. m.; capital Hanover. Within the territory are included part of Brunswick, and the free town of Bremen. It is

divided into the following seven landraces, or provinces, which are again subdivided into principalities:—

Landrace.	Area in sq. m.	Pop. 1864.	Chief Town.
Hannover	9,828	361,380	Hannover
Wilschheim	1,780	87,214	Wilschheim
Isenburg	1,168	57,540	Isenburg
Made	4,531	209,985	Made
Geesthede	9,611	366,925	Geesthede
Arnsberg	1,164	188,077	Arnsberg
Minster	846	82,121	Minster
Total	14,912	1,379,499	

Physical Features.—The surface in the S. is covered by the Harz Mountains, some of whose summits there attain a height of more than 8000 ft., but all the rest of the country belongs to the W. part of the great plain which stretches N. across Prussia and Saxony, and only terminates at the foot of the central plateau of Asia. In Hannover this plain, after first of the N. slopes of the Harz, slides into an extensive and often dreary monotonous flat, with a gentle slope to the North Sea—to the basin of which it wholly belongs. The only exception to the general flatness is caused by branches of the Harz, of moderate height—one of which stretches in a N. N. W. direction, and forms the water-shed between the Elbe and the Weser. In addition to these two rivers—the former of which traverses the W. portion of the kingdom, S. to N. while the latter traverses the W. of the E. portion, and drains the greater part of it either directly or by its combined tributaries, Lüne and Aller—the only other river of consequence is the Elbe, which skirts the N. E. and bounds a considerable portion of the N. but is not augmented within it by any important tributary. The Harz are rich in minerals, which have long been worked to a great extent, partly in common with Brunswick and still form one of the chief sources both of wealth and employment. They produce a little gold, a considerable amount of silver some iron, from 100 to 150 tons of copper, and about 4000 tons of iron annually. A branch of the Harz, between the Lüne and Weser produces both coal and lignite and in several quarters, rock salt is found in large quantities. The other minerals are of no consequence.

Climate.—Considering the N. exposure of the country the climate is remarkably mild, except in the higher districts of the S. The mean annual temperature is 48°. The greatest cold seldom exceeds 31° and the greatest heat 64°. The prevailing wind is the W. the air on the whole healthy, but the sudden changes of temperature, particularly near the coast, are trying to weak constitutions and in the low flats, where the rivers become sluggish and numerous stagnant pools are formed, dysentery, ague, and other intermittent fevers often prevail.

Agriculture.—In the low alluvial flats the soil is remarkably rich, but usually so overcharged with moisture, that it cannot be safely brought under the plough and is much more profitably employed by being allowed to remain in natural or formed into artificial meadows, which yield heavy crops of hay or feed large numbers of cattle, of a very superior description. When the ground attains a higher elevation, the soil often consists either of a thin vegetable mould on a substratum of sand—so poor as often to be left in a state of nature, with its covering of heath, or of damp beds of peat. But, after deducting these two classes of soil there remain extensive tracts of fertile land, amounting to one-fourth of the whole surface, of good medium fertility, and so industriously cultivated, as to produce more corn than required by the home consumption. Flax also, for which much of the soil is admirably adapted, is extensively cultivated, and forms an important article of export not so much however in its raw state, as in the form of yarn. The domestic animals generally of superior breeds, have been estimated at 250,000 horses, 900,000 horned cattle, 1,630,000 sheep, 30,000 goats, and 700,000 swine. Poultry also, particularly geese, are reared in vast numbers in the marshes; and the rearing of bees is so generally practised among the masses as to form no contemptible branch of national economy. Forestry occupies nearly one-sixth of the whole surface. They consist of hardwood and pine, in nearly equal quantities, and are extensively used in building.

Vol. I.

Manufactures and Trade.—The extent to which mining operations are carried on in the Harz have been already mentioned. They unquestionably form, next to agriculture, the most important branches of national industry. Indeed, other manufactures are comparatively of limited extent. The most important are those of flax and hemp. These, however are chiefly domestic. The only other articles deserving of notice are—hosiery, ribbons, leather, sherry, tobacco, oil, chemical products, beer and brandy. The trade has the advantage of three navigable rivers, and a considerable extent of sea-coast and the government has been as forward as any other in Germany in availing itself of railway, which already connects, both E. and W. with the great continental trunk, and are in course of being still further extended. Hannover however has not much of its own produce to export, and is consequently very much restricted as to imports on its own account. The greater part of its trade, accordingly is transit; which, in recent times, has made considerable progress. It possesses several ports, among which the first is Emden.

People.—Taken as a whole, Hannover is very thinly populated, and, in proportion to its extent of surface has much fewer towns of importance than any other country in Germany. The great majority of the inhabitants are engaged in agricultural pursuits and the land being often so unfruitful, that a considerable tract is required to form a proper farm, a few hands are sufficient to give it all the cultivation which it requires. Hence, the proprietor or tenant lives in the midst of his land, surrounded by a few cotters, forming a small village and a journey of miles will often be made before another similar village is met with. The population, indeed, looks much better on the map than in reality the greater part of the places which figure as towns being mere villages, of very humble pretensions. The inhabitants are generally of Saxon origin except in the W. where they have a common origin with the Dutch and are of Frisian extraction. They are simple, temperate industrious, and patient submitting, almost without a murmur to live on the barest fare, and give themselves little concern with political arrangements. The educated classes of course, speak the ordinary written language, but the lower orders generally speak Low German. The great majority of them are Protestants, of the Lutheran persuasion. The E. Catholics do not exceed one-eighth of the whole, and are almost entirely confined to the districts of Hildesheim and Osnabrück.

Government.—This is a hereditary monarchy in which the Salic law excluding females from the crown, is still in force. In form the monarchy is constitutional, having been framed, in 1819, on the model of that of England, but with very considerable modifications. An important infusion of the popular principle took place in 1833 during the reign of William IV. of England, but the late Ernest Augustus, who had protested against it at the time immediately on his accession replaced matters on the footing of 1819; but, since the European troubles of 1848-9 more of the popular element has been introduced into the government. As a member of the Germanic Confederation Hannover has four votes in the plenary, and one full vote in the minor diet. Its contingent of troops is 13,000. Its actual army amounts to about 31,000 men. Though it possesses a considerable extent of sea-coast, it has no navy. Debt (1861) £4,705,260 public income (1861-2) £1,180,326 expenditure, £1,156,717. Money and weights the same as in Prussia. The principal measures are:—the fath—11½ in.; the klafter of 6 fms—6 ft. 9 in. against the morgen—2 roots 32½ perches gross, the hundert—6659 pints; the ohm—41½ pints.

History.—The countries of which the kingdom of Hannover is now composed were, in early times, the theatre of protracted combats between the Saxons and the Romans. The N. parts were inhabited by Longobardi and Chandi; the centre by Fusi and Oberrasi; and the S. by Chatti, who, at a later period, advanced as far as the Aller. After the Romans lost their footing in the country and the Longobardi were expelled from it, the Saxons became sole possessors, and divided it into three principal parts—Ostphalia, Engern, and Westphalia. The first great steps in civilisation were taken by Charlemagne; who, having subdued the Saxons, introduced Christianity and founded several bishoprics. With this, the Saxon leader by becoming a Christian, lost much of his influence with the great body of his countrymen, who still con-

shared Paganus, but was allowed to possess his hereditary states. In 961 the chief power was in the hands of Hermann Billung. This Hermann has been the subject of much local discussion, and his history is still imperfectly known. The fourth in succession from him was Wiprecht, who succeeded in 1106 was almost constantly engaged in war and having provoked the hostility of the successive emperors, Henry IV and Henry V., lost the greater part of his possessions, and was himself made prisoner. Some time after Henry the Black, Duke of Bavaria, having married a princess of the House of Billung, resolved the duchy of Lüneburg as her dowry and subsequently greatly extended his possessions, by the addition of the principalities of Brunswick, Osnabrück, &c. His son, Henry the Lion, made many new conquests and became so powerful as to excite the jealousy of the emperor who placed him under the ban of the empire, and succeeded in stripping him of the greater part of his dominions. On his death shortly after in 1193, the possessions left to him were shared by his three sons: the sons of his marriage with a daughter of Henry II of England. William, the third of the sons, was the only one who had male heirs. Through them the House of Brunswick-Wolfenbüttel and of Brunswick-Lüneburg were ultimately formed. Ernest Augustus, one of the princes of the latter branch after making several important additions to his territories, was raised to the dignity of Elector of Hanover in 1692, and married the daughter of the Elector Palatine, granddaughter of James I. and niece of Charles I of England. He was succeeded, in 1696, by his son, George Lewis, who, in accordance with the revolution settlement of 1698, became sovereign of England, under the name of George I., on the death of Queen Anne in 1714. The successor, they formed with the crown of England continued during four succeeding reigns, in which considerable additions of territory were made. In 1714, the Congress of Vienna raised Hanover to the rank of a kingdom. Two independent crowns were thus worn both by George IV and William IV but on the accession of her Majesty Victoria, to the crown of England, the *Selle law* carried off the other crown, and placed it on the head of the nearest male heir Ernest Augustus, better known as Great Britain as the Duke of Cumberland. Contrary to general expectation, his reign not only passed peacefully but continues favorably with that of several of his contemporaries. Hanover having remained almost profoundly tranquil, while nearly all the other states of Germany were furiously convulsed. He died in November 1851 and was succeeded by his son, George V. who is hopelessly blind.

HANOVER, a in Germany cap. kingdom of same name. lat. (market tower) 52° 22' 25" N. lon. 6° 44' 23" E. (N.) in an extensive plain N.E. of Mount Linden, at the confluence of the Ilme with the Leine, and at the junction of railways which communicate with Bremen and L. bank Elbe, opposite to Hamburg, on the R. Berlin on the E., Cologne on the W., and Frankfurt on the S. It consists of an old and new town separated by the Leine, and communicating by 11 bridges, and of the suburbs Gartengasse and Linden. It is entered by five gates, and is by no means attractive. The old town, situated on the right bank of the river contains 40 streets irregularly built, dull, and dirty. The new town, though of much less extent, is, in every other respect, superior consisting generally of handsome houses, arranged in regular spacious streets. Since 1837 when Hanover again became a royal residence, many changes have taken place, and an enormous improvement continues to be made. The principal buildings and objects deserving of notice are the Markt (market) church, built in 1550 and of very unique appearance; the Karm (jewish) church, built in 1533; the *Alte Kirche* (St. Giles) church, of ancient date, but restored in 1827; the *Heidese* (palace) church, a handsome structure, with an altar-piece by Lucas Cranach, some curious relics collected by Henry the Lion, and an extraordinary vault, in which George I. of England and his mother grandmother of James I are buried; the royal palace, of considerable architectural merit, faced up with white splendor and containing several valuable and interesting collections: the royal library of 40,000

volumes, the ducal palace, the *Firstenpalais* or prince's residence, the *Landeshof* (the House, where the Estates of the kingdom meet: the townhouse, law courts, and government offices; new theatre, said to be one of the most striking ma-

CHURCH OF ST. GILES, HANOVER.—From Lange, *Ansichten von Deutschland*.

lorn buildings in Germany: the Waterloo monument, 142 ft. surmounted with the names of the Hanoverians who fell in the battle of Waterloo, the normal polytechnic, and several other superior schools: several hospitals and public offices. The manufactures consist chiefly of chocolate, sherry buttons, wafers, salicloth, mirrors tobacco, playing cards, hosiery wax and waxcloth sugar dyes, &c. and there are several breweries, and numerous distilleries. The trade chiefly transits, having the advantage both of water communication by the Leine, which is here navigable, and of a system of railways, already referred to, is important, and continues to make rapid progress. The principal articles are wood coen and colonial produce.

Hanover as the seat of the government, contains many important courts and public offices. It also possesses various societies for the encouragement of literature, science, and art. Its foundation is of ancient date. It joined the Hanse league in 1461 and received the Reformation in 1538. It suffered much during the Thirty Years War but had again nearly recovered, when, by the removal of the elector George to England, a check was given to its prosperity. It again suffered much during the Seven Years War and more during the continental wars but it has recovered much since their successful termination, and more especially since 1837 when it became the residence of a royal court. Hanovered the astronomer the two Schlegels, and Händel, were born in Hanover. Both Zimmermann and Lelwein died in it. 20 fine avenues of lime-trees, above 1 m. long leads to the palace of Herrenhausen, a low building, of no architectural merit, but containing some royal portraits connected with English history. Pop. of Hanover without suburbs, 28,065; with suburbs, 42,484.

HANOVER, an ad. off W coast Patagonia, separated from the mainland and Chatham Id. by the E. channel; lat. 51° S. lon. 74° 50' W.

HANSEBEEK, a vil. and com. Belgian prov E. Flanders, on the Brussels canal, and the railway from Ghent to Bruges, 4 m. W. Ghent. Lizen is the staple manufacture and it has also a brewery and a flour and oil mill. Pop. 5776.

HANSE TOWNS (German, *Hanse Städte*) those towns, chiefly in Germany and Holland, that joined the Hanseatic league, now restricted to Hamburg, Bremen, and Lübeck, though, when most flourishing, in the 14th and 15th centuries, it included 65 towns. The name is derived from *Hansa*, which, in old Teutonic, signifies a league for mutual defence. The Hanseatic league was commenced, in 1259, between

Hamburg and the Dalmatians, and had for its object the protection of commerce from the robbers, who then swarmed both on sea and land, and from the arbitrary exactions of governments who under the pretence of furnishing a convoy subjected merchants to the greatest extortion.

HANBI, a tn. Hinkoonan prov. of and 92 m W by N Delhi lat. 28° 54' N lon. 75° 39' E. On the summit of a small hill near it is a strong fort, surrounded by a ditch. The walls include a much larger area than is occupied by houses.

HANBLOUGH, a vil. and par. England, co. Buckingham. **THE VILLAGE**, 4 m. N. E. Stoney Stratford has a handsome parish church Baptist and Wesleyan chapels, and a national school. Inhabitants chiefly agricultural. Area of par., 5390 ac. Pop. 1604.

HANDE, co. England. See **SOUTHAMPTON**. **HANUFALYA**, two places, Hungary.—1 or *Zimand* market in. Hither Thud, on Baro, 19 m W Esperes with a Protestant, and a E. Catholic church, and an annual fair. Pop. 1800.—2 or *Hanukon*, a vil. Hither Thud, on Zips, about 80 m from Litzschau with a E. Catholic church and a handsome manor-house. Pop. 700.

HANWELL, two parts Eng.—1 Middlesex 1042 ac. Pop. 1547.—2 Oxford; 1249 ac. Pop. 501. **HANWOOD** (Gazet) par. Eng. Salop 550 ac. P. 287. **HANWORTH** three parts Eng.—1 Middlesex 1890 ac. Pop. 790.—2 Norfolk 1347 ac. Pop. 287.—3 (Cold Lincoln 707 ac. Pop. 80).

HANZABEK or *Kan*, a market in Hungary, co. Stuhlweisensberg, r. bank Danube, half crossed by a large stone bridge, 11 m. S. W. Pesth. It has a castle, a Turkish tower of beira stone and a trade in wine and corn. P. 1281. **HAPAI HAPPA**, or *HAVAI* an isl. group S. Pacific, Group Arolophago, consisting of four larger and numerous smaller islands connected by coral reefs so as to be considered by the inhabitants only one island lat. 8° 5' S lon. 174° 41' W (U). This group has no less is deficient in fresh water but produces coconuts, bananas, and bread fruit in abundance, and its inhabitants are very crafty. It was discovered by Cook in his third voyage, who named the four larger islands Hapae Eoa, Leleko, and Heoliva.

HAPARANDA a small seaport, Sweden, on the frontiers of Finland, and the shores of a large bay in the estuary of the Torne, near Tornio, and the most N. town in Sweden. It was founded after the cession of Finland to Russia in 1809 and, though still very small is well and regularly built, and gradually rising into importance. The trade is chiefly in fish, furs, iron, timber and tar. The steamers between St. Petersburg and Tornio usually call at Haparanda. Pop. 400. **HAPI (HURUGU)** par. Eng. Norfolk 2165 ac. P. 621.

HAPRAL. See **HAWAL**. **HAPRUBURG**. See **HAWRUBURG**.

HAPTON par. Eng. Norfolk 695 ac. Pop. 207. **HARA** or *KARA* a tn. and lake, Chinese empire the former in Mongolia very near the great wall, 21 m N. W. Tophin; the latter in the desert of Gobi 228 m S. E. K. Lob Nor lat. 39° 50' N lon. 93° E. It receives, on the E. the waters of the Soule Ho, but has no visible outlet.

HARAMUK co. HAWK, a lake, isolated, summit in the mountains bounding Cashmere on the N. lat. 34° 26' N lon. 74° 43' E. Height above sea-level estimated at 15 000 ft. It appears to consist principally of lamina amygdaloid. In a depression in the N. declivity is a small lake, called Ganga held in high veneration by the Hindus.

HARAPA a vil. Punjab l. bank Ravi, 85 m. N. E. Multan lat. 30° 8' N lon. 73° 49' E. It is remarkable only for the very extensive ruins with which it is surrounded the most striking being the walls of a large brick fortress. **HARBERTON** par. Eng. Devon 3755 ac. Pop. 1334 containing vil. *Harbertonford*, in which almshouses and reading books are made. Pop. 408.

HARLESDOWN par. Eng. Kent 1670 ac. Pop. 643. **HARLONTHERRS**, a tn. France, dep. Somme, 14 m. N. E. Mondidier with cotton spinning and manufacture of cotton caps and flannel. Pop. 2550.

HARBORNE par. Eng. Stafford 2395 ac. P. 10 729. **HARBOROUGH** (MANN) a market in and chapelry England, l. bank Walsall, 18 m. S. E. Leicester and a station on the N. and E. Stafford Railway. It is neat and well built, amply supplied with water, and well lighted with gas.

It has a large and handsome townhall, erected by a former earl of Harborough in 1788; a magnificent church with a fine tower and spire Wesleyan, Baptist, and Independent chapels a free grammar and several other schools; a dispensary and several charities; likewise a silk factory several malt-houses, two breweries, and a brush manufactory but the inhabitants are principally employed in agriculture. Market-day Tuesday Harborough gives the titles of baron and earl to the family of Sherard. It was the head-quarters of the royal army prior to the battle of Ramey in 1645. Pop. 2325.—(Local Correspondent.)

HARBOROUGH two parts Eng. Warwick.—1 (Magna) 1680 ac. Pop. 247.—2 (or *Harley*) 2060 ac. Pop. 1195.

HARBOROUGH-GRACE, a maritime tn. Merfiumland, W side of Conception Bay 20 m N. W. St. Johns. It is a pretty looking town consisting of a single long straggling street along the N. side of the harbour or inlet and is the seat of an important fishery. 1 up about 8000.

HARBURD par. Eng. Hants 4093 ac. Pop. 842.

HARBURG—1 A. tn. Hanover gov. Lüneburg capital of same name on a small wharf, leaving the S. E. towards the S. Elbe about 1300 yards below opposite to Hamburg and Altona. It is a place of some strength, being both walled and defended by a moat. It is the seat of a court of justice, and several public offices contains two churches and an hospital has manufactures of linen, hosiery soap, starch refined wax, and tobacco and has an important trade chiefly transit, between Hamburg and the countries S. of the Elbe. A steam-boat ply daily to Hamburg and the Hanover and Hamburg Railway has its terminus on the S. side of the Elbe, at Harburg. Pop. to 5065 built, 16 268.—2 A market tn. Bavaria, Swabia, r. bank Werra, 38 m. S. Anspach with a Protestant church a synagogue, a castle, a Jewish school, and a marble quarry. Pop. 1459.

HARBUTOWITZ, a vil. Austrian Silesia, circle Teschen near Skotschau on the Vistula with a castle. P. 2500.

HARBY par. Eng. Leicester 2900 ac. Pop. 640. **HARBY**, a vil. and par. England, co. Hereford, on the canal of Pannermant 12 m N. W. Mon. It has a flour mill a brewery and a trade in agricultural produce and cattle. Pop. 1444.

HARDANGER Fjord an inlet, W coast Norway bet. S. Bergen about 33 m. S. E. Bergen. It is approached through channels between numerous islands, extends S. W. to N. E. about 37 m., then N. to S. about 34 m. general breadth, 1 to 2 m. embosomed with several islets, and having numerous diverging arms. It is deep, is filled with lofty hills, and is the most beautiful and picturesque of the Norwegian fjords.—2 (Fjord) a mountain ridge on the borders of bell. S. Bergenhus and Bukerod, about lat. 60° 10' N. uniting N. with the Langfjeld, and S. with the Dovrefjeld. Its highest point is 5906 ft.

HARDEGEN a tn. to Hanover prov. Hildesheim principality and 9 m. N. W. Göttingen. It is walled and has a church, conthouse, and four mills. Pop. 1261.

HARDENBERG a tn. Holland prov. Overijssel 80 m. N. E. Deventer l. bank Vecht here crossed by a bridge. It has an old Calvinistic church a synagogue, elegant town house and a school. Pop. (agricultural) 810.

HARDENHUISE, par. Eng. Wilt 477 ac. Pop. 127. **HARDEWIJK** (Latin *Hardevolcum*) a tn. Holland, prov. Gelderland on the Zuidre Zee, 80 m. E. Amsterdam, surrounded by pleasure-gardens, arable, and meadow land. It is fortified towards the land, has several gates and two large market places, in one of which is the townhall and the wagh house in the other is held the fish and the cattle market, and, being planted with trees, it likewise forms a promenade. There are a Calvinistic, and a E. Catholic church a barracks, two orphan hospitals, gymnasium, a high, and several other schools. Its harbour is suitable only for fishing vessels. Scaffolding fishing and herring smoking, are the principal occupations. Pop. 4382.

HARDHAM, par. Eng. Sussex 680 ac. Pop. 66.

HARDHEIM, a market tn. Baden, circle Lower Rhine, bet. of and 5 m. E. Waldkirch, on the Rhr. with a church a castle, and an hospital. Pop. 1691.

HARDINGHAM, par. Eng. Norfolk 2415 ac. P. 561.

HARDINGSTONE, par. Eng. Northampton; 3060 ac. Pop. 1196.

HARDINGTON two par. Eng. Somerset—1, 621 ac. Pop. 19.—2, (Hawthill) 2631 ac. Pop. 719.

HARDINGSBURG a vil. U States, Kentucky, 116 m. W. S.W. Frankfort with two churches, a masonry a court-house, and a jail. Pop. 624.

HARDINGFIELD a vil. Holland, prov. N. Holland, 9 m. E. Denburch, on the Humber. It is a long and scattered place, and has two churches and a school. Smuggling, fishing, basket weaving, and hoop-making, are the chief employments. Pop. 2396.

HARDLEY par. Eng. Norfolk 1469 ac. Pop. 255.

HARTINGTON par. Eng. Derby 24,110 ac. P. 2098.

HARTLAND a market tn. and par. England co. Devon. The town 19 m. S.E.E. Hartlepool lies in a black district, and has a very mean appearance. Area of par. 187,000 ac. Pop. 1198. On the coast here two canals, the following frequenting Hartland quay about 3 1/2 m. W. on the Bristol channel. Harland Port (near Hartlepool) is connected by railway lat. 54 41 48" N. lon. 4 21 50" W. (n.).

HARTLEBURY par. Eng. Worcester 5493 ac. P. 2047.

HARTLEPOOL, a seaport tn. England, co. of, and 17 m. S.E. Durham, with which and with Stockton, it is connected by railway lat. 54 41 48" N. lon. 1 10 45" W. (n.) on a promontory nearly surrounded by the sea. It consists of several spacious and well-furnished streets, and contains many beautiful houses and shops. It is abundantly supplied with water, and is well lighted with gas, has a guildhall and public baths, both fine structures, an established church, an imposing office, in various styles of architecture; several Dissenting places of worship, and a women's Bathing chapel; a mechanical institution, a new-work, a national and two free schools, and some other charities. Ship-building is carried on to some extent, and there are also two small iron-foundries, an iron and brass foundry, a cement manufactory, and an amber and chain works. The trade of Hartlepool, which had been falling into decay, is rapidly reviving, it results, in great part, attributable to its two spacious docks, its excellent pier and the recent improvements in its harbour. The registered shipowners belonging to the port are 170, and the number is increasing; the tonnage of the ships in many instances, 340 or 800 tons. In 1840 the number of ships that entered was 9625 tons. 1179,538. These ships took from the port exports of 1,000,000 tons of coal to all parts of the world.

Hartlepool is much resorted to in the summer season for sea-bathing, and for its medicinal springs. Around the town there is a famous promenade, which had been falling into decay, is rapidly reviving, it results, in great part, attributable to its two spacious docks, its excellent pier and the recent improvements in its harbour. The registered shipowners belonging to the port are 170, and the number is increasing; the tonnage of the ships in many instances, 340 or 800 tons. a gross portion of the population. A number are employed also in dredging, outside the harbor for common-stone, which is afterwards manufactured in the town. In the summer season, Harwich is much frequented by sea-bathers. Harwich returns two members to the House of Commons registered electors (1851) 273. It is of Saxon origin. In 1818, it was incorporated by Edward II.; and, in 1847 it supplied 14 ships to the fleet of Edward III. Pop. 4481.

HARWORTH par Eng Kotts; 4330 ac. Pop. 506. **HARZ**, or **HARZ** (anc. *Harzgebirge*) a range of mountains, Germany N of the Thüringwald with which it is connected by the Hildesheim mountains. It has no proper central axis, but consists of a great number of single mountains, mostly separated by narrow valleys, which are almost all transverse. The length of the range, S.E. to N.W. from Mansfeld, in Prussian Saxony to Saxe, in Brunswick, is about 60 m., and its breadth nearly 30 m. It covers portions of Prussia, Anhalt-Bernburg, Brunswick, and Hanover. The water-shed between the basins of the Weser and the Elbe, traversing the range from S.E. to N.W. divides it into two unequal parts—a N.W. and a S.E. The former though it covers less space, is the more elevated of the two, and takes the name of Ober or Upper Harz; the latter forms the Unter or Lower Harz. A series of hills bordering the range, but not properly within it, is called the Vor or Anterior Harz. The culminating point is the Brocken, 5791 ft. The summit of this mountain, and of several others which surround it, is granite; the others consist of gneiss and clay-slate. The hills of the Vor Harz are composed of red sandstone. The whole range is rich in minerals particularly argentiferous lead, copper and iron. The sides, and sometimes also the summits, of the mountains are clothed with forests; in the Ober Harz consisting almost entirely of pine, but, in the Unter Harz, of beech and oak.

HAREDOUF (Aur. and Naur) two nearly contiguous vils. Bohemia, circle Brumau, about 3 m. from Kachenberg, with a school, a blacksmith, a weaver and several other trades, and large machine-works. Pop. 2021.

HAREGEKOUDE a tn. Anhalt-Bernburg cap. bail. of same name, 37 m. N.W. Halle. It is well defended by a fort, has a townhouse, old castle and forest school, a trade in corn and cattle, and three large fairs. About 2 m. W. is the beautiful and well-frequented watering-place, Alexishof. Pop. 1517. bail. 4870.

HAREHALL Dacia, a lofty mountain Anhalt Turkey peak. Kharidj, 85 m. E. by N. Koma or Komay, of nearly a conical form, 8000 ft. high, and said to preserve patches of snow throughout the year. Its N.W. base is bounded by the plain of the Lake Tous Ghien; to the S.W. a low undulating country connects it with the Karahaj Dag; while to the E. it is prolonged by one or two cones, and then a lofty chain of hills.

HASAN KALEH a tn. Asiatic Turkey on the Aras, pass. of, and 30 m. E. by N. Erzeroum. It was once a Genoese trading station, but is now in a state of decay. Its double wall, of modern erection, its old castle, towers, mosques, &c. are all in a more or less ruinous condition. Opposite the town across the river are innumerable hot springs, some are bituminous but others contain iron and lime. Two baths, built over the warmest (106°) and most copious sources, are both constantly filled with bathers.

HARCOMBE par Eng Surrey 1630 ac. Pop. 866.

HAREK a market tn. Arabia prov. Hadramout, in Curia Muria bay. It lies in a verdant district, and is held on fertile hills, 4000 feet high.

HARELBIECH par Eng. Northampton. 1648 ac. P. 148.

HARELBURY two pars. Eng.—1 (Bryen) Dorset 2360 ac. P. 709.—2 (Puchet) Somerset; 2068 ac. P. 856.

HARELY two pars. Eng.—1 Warwick 1152 ac. P. 138.—2, (Great) Oxford 3219 ac. Pop. 750.

HARELÖR, par Eng. Warwick; 1950 ac. Pop. 860.

HARELUNN, a tn. Hanover, gov. of and 55 m. N.W. Osnabrück, cap. bail. of same name r. bank Hase. It has a court of justice, a parish church, a Latin, and another school, blast furnaces, tile-works, several distilleries, and manufacture of molasses, hair, sythes, shovels, white lead, vinegar and tobacco. Bail. 1780; bail. 8669.

HARENPOTH, a tn. Russia gov. Omsk, r. bank Tobolsk, 86 m. W.N.W. Mikau; with a court of justice, a church, and a castle. Pop. 1016.

HAREFIELD par Eng. Gloucester, 1460 ac. P. 804.

HARGUARD par Wales, Pembroke; 1476 ac. P. 172. **HAREMYE ISLANDS**, a group of five low isles, N. Pacific Ocean; lat. 54° 47' N. lon. 138° 6' E. connected by coral reefs and forming a lagoon inside. They are about 15 m. in circumference, covered with coconut trees, and are thickly populated by a light-complexioned race, who, though wearing the mark of friendship, are not to be trusted. —(Nat. Mag. vol. xVIII, p. 23.)

HARKETON par Eng. Suffolk; 1665 ac. Pop. 508. **HARKNI**, an isl. E. coast Arabia, one of the Curia Muria group. lat. 17° 27' 12" N.; lon. 55° 35' 40" E. (n.); 12 m. long N. to S. and about 4 m. broad having a high-peaked hill near its S. point.

HARLACH a market tn. Upper Austria and on a height above the Mühl, 17 m. N. Eßling; with a church, two towers, an hospital and an active trade in linen. Pop. 1180.

HARLACH a tn. Baden, circle Middle Rhine cap. bail. of same name, l. bank Kinzig 15 m. S.E.E. Offenburg. It is walled, flanked with towers, and has manufactures of vermifell and red leather, a wax refinery iron works, and a trade in wood. Pop. in 1720. Area of bail. 40 sq. m. Pop. 10148.

HARLE, a vil. Denmark, W. coast, lat. Bornholm, about 6 m. N. Rønne. It has a church, a winter house of the 5th class with 7 ft. water and a factory. Some coal is worked in the vicinity. Pop. 700.

HARLEMERE, a bor. market tn. and par. England co. Surrey. The town 40 m. S.W. London is indifferently built, has an ancient church with a low square tower; an independent chapel, and three schools. Near it are some large paper manufactures. Market day Tuesday. Area of par., 1877 ac. Pop. 655.

HARLI OR **EL-HARLI**, or **HARLI** in SWITZERLAND, a bail. Switzerland, can. Bern comprehending all the upper part of the Aar valley resting on the Grimsel and the glacier of the Aar from its sources to the lake of Brienz. Surrounded by the loftiest masses of the Bernese Alps, it is noted for its natural beauties among its cascades are those of the Reichenbach, Gathelbach, Handeckfall, Gelmacher, &c. The people are supposed to be descendants of Scandinavian ancestors, who came hither in the 5th century. Pop. 6723.

HARLINGDEN a market tn. and township, England co. Lancashire 16 m. N.W. Manchester, on the Liverpool and Manchester Railway. It has improved greatly in appearance of late years, many old mean-looking houses having been replaced by substantial new edifices. It has a handsome modern church with an ancient tower erected in the reign of Henry VIII. four Dissenting chapels, several day schools, and a free school having a small endowment. The woollen manufacture, formerly the staple of the town is now supplanted, to a great extent, by that of cotton. Excellent building-stone, slate, and flags, abound in the neighbourhood. Market day Saturday. See annual fairs, chiefly for horses and cattle. Area of township, 4430 ac. Pop. 9020.

HARLINGFIELD par Eng. Camb. 2527 ac. P. 754. **HARPAEREN** a tn. France, dep. Basas-Pyrénées, 13 m. S.E. Bayonne, in a fertile and well-cultivated district. It has a church several barns, both for common and shammy leather and a considerable trade in these articles and in cattle. Pop. 2415.

HARRES, a vil. France, dep. Nord 9 m. S.W. Valenciennes r. bank Sella with manufactures of beet-root sugar, breweries, and gin distilleries. Pop. 3987.

HARSEN or **HARSAN** an isl. Red Sea, east of Arabia lat. 55° N. lon. 37° 10' E. height, on the N. side, 400 ft. whence it slopes away to the S.E. Indifferent trade is obtained here in small quantities, and that only in winter. During the warm season, the Arabs leave the coast for this island, to avoid the great heat of the continent and to dispose of their grain dates, &c. to the bail holders, which put in here.

HASELFEDE, a tn. Brunswick, circle of, and 9 m. S.W. Harenburg, cap. bail. of same name with a church, borough school, hospital, and postoffice, tile-works, a brewery and a trade in milk and cattle. Pop. in 1817 bail. 4500.

HASSELT—1 A tn. Belgium gov. prov. Limbourg, on the Demer, 15 m. W.N.W. Maasbracht. It is regularly fortified, tolerably well built, has a court of first resort, and several public offices; four churches, two chapels, a courthouse, two hospitals, an almshouse, a college, and several primary

anbecker with manufacture of tobacco, snuff, soap, oil, candles, chemicals, refined wax, and hats; dye-works, bleach-works, mill-works, numerous breweries, and distilleries; an important trade in spirits, tobacco, and snuff; and two weekly fairs. Pop. 3210.—3 A to Holland prov. (Overijssel, 6 m. N. Zwolle, on the Vecht, formerly fortified. It has a townhall tower, a church, a synagogue, a school, a library, and several inns. Shipping and turf-cutting are the principal occupations. There are three best-building, four harness, and eight weaving are likewise carried on. P. 1871

HASSPURT a to. Bavaria, circle Lower Franconia, cap. dist. of main town, on the Main, 34 to N. E. Würzburg. It has a parish church and two chapels, a townhouse and hospital, manufacture of linen and other mills; a factory and mineral spring. Near it, fruit, hops, and wine, are extensively grown. Pop. in 1880 dist., 10,341

HASSINGHAM par Eng Norfolk; 5°4' N. Pop. 127
HASSLEBEN a to. Prussia-Westphalia circle of, and 17 m. N. W. Wesel on the Rhine with a station, an mill and a flour mill, and three windmills. Pop. 1846

HASLOCH a vil. Rhine, circle Bavaria, on the railway from Mannheim to Haselberg 15 m. N. E. Landau with a R. Catholic and two Protestant churches, coal works, and several inns. Pop. 477

HASSEMERFIM a vil. Baden, circle Lower Rhine, 1 bank Neckar 20 m. E. S. E. Heidelberg with a church and several breweries, some shipping and a trade in wine and cattle. Pop. 1961

HASTINGA, a river Australia, New S. Wales, the entrance to which is the large harbor of Port Macquarie, 193 m. N. E. Sydney lat. 31° 25' 45" S. lon. 152° 53' 54" E. Total course, generally E. about 60 m. through a pleasing undulation of hills and dale, richly clothed with timber

HASTINGA, a pari. bor. market to., and one of the Cinque Ports, England, co. Sussex, 54 m. S. S. E. London, and about midway between Dungeness and Peashead Head lat. 50° 51' 30" N. lon. 0° 26' E. (N.) pleasantly situated on the sea-coast, with lofty hills and cliffs towering behind. Hastings may now be considered as consisting of an old and a new town, the former occupying a hollow between the East-hill and the Castle-hill the latter called St. Leonards, stretching S. and W. of the Castle-hill. Most of the houses of recent erection are handsome, and agreeably situated under the cliffs along the shore. The streets are well paved and lighted. In front of the town is a splendid esplanade, tastefully laid out. It has two parish churches, built of flint and stone, modest, but handsome edifices; two Episcopal chapels, several Dissenting places of worship, an elegant townhall supported on arches, with market-place beneath and two fine schools, baths, barracks, assembly-rooms, promenade, public gardens, &c. There are several charitable institutions, including a dispensary and two free schools. There is no harbor at Hastings, and only an indifferent road for small vessels. Its trade is trifling, but its factory is considerable, giving employment to about 500 persons. There is a good deal of boat-building, and an extensive business in lime; but the principal support of the town now arises from the numerous visitors who resort to it during the bathing season. Westward of the town, on the edge of the cliff, are the ruins of a castle, erected by William the Norman in 1067 and of the church and conventual buildings of a fine college, supposed to have been founded in the reign of Henry I. Hastings, though not the oldest, is considered to hold the first rank among the ancient maritime boroughs called the Cinque Ports. It returns two members to the House of Commons. Registered electors (1853) 976. Pop. 16,066

HATCH two par. Eng., Somerset.—1 (Barnstaple) 1120 m. Pop. 316.—2, (Wash) 1661 m. Pop. 453.

HATCHY (Hus) a river U. States, Tennessee, falling into the Mississippi, 23 m. N. by E. Memphis, after a N. W. by W. course of about 120 m.

HATCLIFFE, par Eng. Lincoln 1870 m. Pop. 147

HATFIELD—1 A to. and par. England, co. Hertford. The town 17 m. N. W. W. London, has a handsome church, which stands on an elevated site; an independent chapel, several schools and some small churches. Near it is Hatfield house, the magnificent residence of the marquess of Salisbury Area of par. 13,619 m. Pop. 3063.—2 A vil. Yorkshire, W. Riding 4 m. N. E. Doncaster consisting of a single street

about 1 m. long. It has an old church; but is chiefly noted for the extensive drapery works in its vicinity, commenced in the reign of Charles I., and having for their object the draining of Hatfield chase, which originally contained about 180,000 m. of ground, subject to be flooded, but which is now all under cultivation. Pop. 1840.

HATFIELD five par. Eng.—1 Hertford 1528 m. Pop. 378.—2 York (W. Riding) 31,150 m. Pop. 3731.—3 (West Oak or Bap) West; 5810 m. Pop. 2084.—4, (Pewell) East; 4728 m. Pop. 1344.

HATFORD, par Eng. Berks, 33 m. E. Faringham. Area, 969 m. Pop. 115.

HATHERLEIGH, a market to., and par. England co. Devon. The town 24 m. N. W. W. Exeter is irregularly built, but well lighted; houses, in general, constructed of cob (a mixture of mortar and straw) and thatched. It has a handsome Gothic church, with a tower and a spire; a Baptist chapel, a national school, several almshouses, and various other charities. Individuals principally employed in agriculture. Weekly markets, Tuesday and Friday. Area of par. 7048 m. Pop. 1710.—(Land Overgrown).

HATHEROP par Eng. Gloucester 2180 m. Pop. 375.

HATHENHAGE, par Eng. Derby; 13,630 m. P. 2108.

HATHIAN a to. Bonn. See Carcano.

HATIFY two par. Eng. Cambridge.—1 (Rush) 1166 m. Pop. 146.—2 (St. George) 909 m. Pop. 168.

HATO Village, N. W. New Guinea, dep. Cameroonian lat. 6° 12' N. lon. 150° 38' W.; between 4000 and 5000 ft. above sea-level. Pop. 1448.

HATRAS, a to. and fort, Hindoostan, prov. of and 96 m. S. W. Delhi lat. 27° 31' N. lon. 75° 56' E.; a very flourishing place. Its fort was destroyed in 1817 by the British.

HATTEN (Latin. *Mons Dei*) a to., Holland, prov. Gel. derland, 86 m. N. by E. Arnheim, on the Grift, with raised walls. It has an ancient townhouse in the market-place, and a watch, and a watchhouse, a Calvinistic, and a dissenting church, and several benevolent institutions, a Latin, and various other schools. Pop. three agricultural, 2428.

HATTEN a to. France, dep. De-Bia, 3 m. S. W. Wissembourg with a handsome R. Catholic, and a Protestant church and some trade in linen. Pop. 2079

HATTENHEIM a vil. Nassau lat. of and 2 m. W. S. W. Elville, r. bank Rhine with a R. Catholic church, a great number of fine villas, and a spring of some celebrity. P. 968.

HATTERAS (Cape) a low rocky promontory U. States, N. W. end of an is. on K. coast N. Carolina lat. 35° 15' N. lon. 75° 30' W. (N.) The shoals extend a long way to the S. E., and have been the scene of many disastrous shipwrecks. A light-house, 95 ft. high, has recently been erected 1 m. inland.

HATTENHEIM, a vil. Nassau, holl. Hocht, 10 m. N. E. Mainz with a parish church. Pop. 948.

HATTIA, an isl. Hindoostan, prov. Bengal prov. Chittagong near the mouth of the Brahmaputra, or Great Megna, by the deposit of which it has been formed 14 m. long by 10 m. broad. It is nearly submerged at spring-tides, but still is productive in grain, and yields good soil.

HATTINGEN a to., Rhineish Prussia, gov. of, and 80 m. W. Arnheim, h. bank Rhine. It has: four churches and chapels, a parsonage, court of justice, manufacture of woollen and linen cloth, muslins, cottons, and flax; a trade in cattle, and five annual fairs. Pop. 4262

HATTON two par. Eng.—1 Lincoln; 1631 m. Pop. 107.—2, Warwick; 4696 m. Pop. 348.

HATTORF a vil. Hanover gov. Hildesheim, principally Grubenhagen, near Harsburg with a parish church, and trade in corn and flax. Pop. 1376.

HATTAN, a market to., Hungary co. Hova, 1 bank Szava, 30 m. N. N. E. Pesth; with a handsome church, an elegant castle, manufacture of cloth, and important fairs, chiefly for hemp. Pop. 3103.

HATZEG, or Hozom (Latin. *Vallée de*), a market in Austria, Thuringia, co. of, and 11 m. S. E. Hurgau, with three churches, a townhouse, Prussian garrison and an important trade in cattle. Pop. 1100.

HATZFELD an m. to. Hess. Darmstadt, prov. Oberhessen, r. bank Rhine 15 m. N. W. Marburg. It is called,

has a castle in ruins, two churches, a townhouse, and school a paper-mill, and three annual fairs. Pop. 686.

HAUBOURDIN, a vil France, dep. Nord 5 m W S. W. Lille, on the Deule. It is generally well built, has a large and handsome church, manufactures of lace and white lead, bleachfields, tanneries, cotton and oil mills, a trade in combed wool, and four annual fairs. Pop. 3092.

HAUENSTEIN (Oetz and Nizenz) two mountains of the Jura chain, Switzerland, on the frontiers of Basel and Solothurn, about 18 m S. E. Basel. Both of them are passed by roads from Basel, which have been constructed at great expense, and form important thoroughfares from W. Germany into the interior of Switzerland. They are supposed to be nearly in the line of two old roads used by the Romans.

HAUGHAM par Eng. Lincoln; 1907 ac. Pop. 117.

HAUGHELEY par Eng. Suffolk; 3518 ac. Pop. 971.

HAUGHTON three pars Eng.—1 North; 1001 ac.

Pop. 78.—2 Stafford 1860 ac. Pop. 510.—3, (Le Sherne) Darham; 10,501 ac. Pop. 1403.

HAUGSDORF (Gum) a market tn. Lower Austria, on the Pulzau 80 m. W N W. Kremsburg with a spa, two market-places, a castle and a brother hospital. Pop. 1935.

HAUKSWELL, par Eng. York (N. Riding); 4030 ac. Pop. 826.

HAULCHIN a vil. and com. Belgium prov. Hainaut, on the old Roman road called the Chaussée Brabant, 10 m S. E. Mons, with a trade in horses. Pop. (agricultural) 1068.

HAUNSTETTEN a vil. Bavaria, circle Swabia 4 m S. E. Augsburg with a of a rough a shape and manufactures of wax-shed, a large bleachfield a paper saw and other mills. Pop. 729.

HAUPTWEIL, or **HAUPTWEI** a vil. Switzerland cant. Thurgau, 1 m. S. E. Bleichfeld, on the frontiers of St. Gallen it has manufactures of cotton with dyeworks, print-works, oil-mills saw-mills &c. Pop. 1350.

HAUSREGEN a vil. Prussia, gov. of and 4 m. S. Minden, r. bank Weser with a Protestant parish church manufactures of starch and gunpowder and a trade in linen yarn and cattle. Pop. 860.

HAUSRUHN or **HAUSRUENKA** a vil. Hungary on of and 86 m. from Pressburg with all plough and tile works, and several mills. Pop. 1256.

HAUSDORF (Oetz) a vil. Prussia, prov. Silesia gov. Breslau, circle Glatz with a parish church a bleachfield and several mills and coal mines. Pop. 1079.

HAUSEN numerous places, Germany particularly—1 (Ober-Hausen) a vil. Bavaria, circle Swabia 8 m N W Augsburg with a parish church and several cattle-markets Pop. 1861.—2 Two adjoining vills Würtemberg, circle Neckar had Bismarckheim United pop. 2062.

HAUSPTON par Eng. Cambridge 588 ac. Pop. 313.

HAUSBRUCK, a mountain range, Upper Austria, giving its name to a range, and forming the watershed between the basins of the Inn and the Ager. It is covered with forests, and has seams of lignite. In 1817 part of one of the mountain peaks fell in and was replaced by a lake.

HAUSA state Africa, see Housa.

HAUSBY a vil. France dep. Nord 18 m. N. N. E. Cambrai, r. bank Scluse formerly defended by a strong castle. It has manufactures of linen, breweries, brick works, lime-kilns, and sandstone quarries. Pop. 8012.

HAUTBOIS-MAGNA par Eng. Norfolk; 610 ac. Pop. 181.

HAUTF JLE or **HARR ISLAND** a small isl. British America, bay of Fundy 8 m. S. W. Cape Chignecto, composed mostly of steep rocks but easily accessible on the E. side.

HAUTELUCE (Latin *Vallis Lucie*) a vil. and com. France dep. Haute Savoie, on the Doron, here crossed by a stone bridge, 59 m S. E. E. Geneva with a parish church, having one of the finest steeples in Savoy a court-house, school, and a trade in cattle and dairy produce particularly cheese, resembling Gruyère. Pop. 1866.

Vol. I

HAUTRAGE a vil. and com. Belgium, prov. Hainaut on the Sambre, 8 m. W. Mons. It has silk and pottery works, breweries, and flour-mills, and a trade in hay. Pop. 1990.

HAVANA, or **TER HAVANNAH** (Spanish, *La Habana*, the haven) French *La Havane*, Italian, *Avana*) an important maritime city belonging to Spain cap. of Cuba, and one of the greatest commercial ports of the Western World, on a bay N. W. side of the island. lat. (Moro Light) 23° 9' 24" N. lon. 82° 22' W. (a.) Its harbour formed by this bay

which nowhere exceeds 1½ m in width is one of the best in the world. It is entered by a channel which is about 1000 yds. long and not more than 850 yds. wide and is defended by two strong castles—the Punta on the W. side, and the Moro on the E. Other four forts, some of which are very strong, defend the harbour and town. The bay with it forms a spacious basin in which 1000 vessels of the largest class may ride safely at anchor. The town consists of the town proper and the suburbs. The former occupies a tongue of land on the W. side of the bay is surrounded by a wall and otherwise strongly fortified. When viewed from the sea, it has a very picturesque and imposing appearance but its interior is by no means attractive. The streets, though regularly formed and intersecting each other at right angles, are narrow badly paved, dirty ill ventilated and lined with many structures of stone closely crowded together and generally provided with ponderous folding-doors and barred win-

THE EXCHANGE HAVANA. From the Original Sketch

dows which give the whole place a heavy and even gloomy appearance. But considerable improvement in the character of the streets has been, of late years, effected, and the town, though still unhealthy in summer is less so than formerly.

The suburbs, standing chiefly on the other side of the bay, tend to some parts approaching closely to the walls, are more chiefly built of stone, and, even in some, are superior to the town.

Havre is the see of a bishop, and the seat of the chief colonial authorities. The only exception is the episcopal court which, notwithstanding repeated proposals to remove it to the capital, still sits at *Puerto Príncipe*. Among the principal buildings, the first place is due to the Cathedral not so much on account of any architectural merit, but because it contains the bones of Columbus, which were brought thither from *San Domingo*. In 1790, when the altar above the episcopal tomb of Columbus is a table, inlaid on the wall, and completed with his bust in bas-relief. In addition to the cathedral, there are nine parish, and seven other churches. The principal one is *San Felipe*. The other buildings or public establishments deserving of notice are—the governor's house, the Admiralty, the Royal University including a medical and law school and chairs for the natural sciences, the large convent of *San Juan de Dios*, now used as an hospital, the Exchange, the Opera-house and two theatres—one of them said to be larger than the *Teatro de Milano*, the *Casa de Founding Hospital*, the *Casa Real de Beneficencia*, an extensive and well-ordered institution, combining an orphan hospital, a female asylum, and an infirmary, *San Lorenzo*, an hospital for persons affected by Koeber's or *Lamarie*—a kind of leprosy peculiar to the W. Indies, and said to be incurable; and the prison a large quadrangular building, well arranged, and placed so as to secure a free circulation of the sun-beams. The staple manufacture of Havre is that of paper, which have long obtained an almost universal celebrity. The other manufactures, consisting chiefly of chocolate, straw hats, and woollen fabrics, are not of much consequence. There are numerous printing-offices (and several daily papers are issued). The trade is most extensive and important, and a large share is naturally engrossed by the mother country, after which follow Great Britain and the United States of North America.

The exports from Havre in 1844 comprised 1,100,911 boxes and 16,404 hds of sugar, 13,690 hhls of molasses, 2,039 tons of honey, 1,195,400 lbs of wax, 9,736 pipes of rum, 163,428 hds of wine, 9,441 cwt of tobacco, and 1,479,580 lbs of coffee. Among the imports were 7,082 quintals of cod fish, 231,605 bbls of flour, 475,098 quintals of rice, 190,301 quintals of lead, 64,025 pipes of wine, 149,884 tons of coal, 332,111 jars of olive-oil, and 2,804 quintals of other oil. The vessels engaged in the Havre trade in the same year were 740 Spanish, of 215,815 tons; 416 American, of 201,814 tons, 598 British, of 100,673 tons, and 7 French, of 29,277 tons.

A railway 45 m long connects Havre with *Caudebec* and there are several other lines leading into the interior and used chiefly for traffic. Havre was founded in 1619 on a site which was then called the *Port of Carenac*. In 1636, it was surprised and burned by a French privateer. During this and the beginning of the following century it rapidly increased, great numbers of the inhabitants of *Cuba* flocking to its vicinity to avoid the depredations of the buccanniers. The English failed in an assault upon it in 1655, but succeeded in capturing it in 1762. In the following year it was the scene of 1768. It was restored to France, and has ever since continued in its possession. For a long time Spain derived the chief part of her fleet from the building yards of Havre, which, from 1734 to 1796, furnished her with 61 ships of the line, 22 frigates, and several smaller craft amounting in all to 110 vessels, carrying 5068 guns—six of them above 100 guns each. Pop., which has been increasing rapidly, amounted in 1844 to amount to 230,000 of whom 170,000 were coloured, 30,000; Havre, 50,000.

HAVANT, a market in and par England, co. Hants. The river, 19 m. E. by S. Southampton, on the railway thence to Brighton, consists of two narrow but regular and tolerably well kept streams has a church, a Dissenting chapel, national and other schools. Parliament and leather were formerly made here on an extensive scale. A well-attended corn-market on Saturday. Area of par, 3201 ac. Pop. 2416.

HAVEL, a river Germany which flows among the lakes in the E.P. of Mecklenburg-Schwerin, enters Prussia near *Stettin*, and flows directly into N.W. past *Potsdam*, where it receives the *Spree*, past *Potsdam* to *Brandenburg*, where,

after expending into a series of lakes, it turns N.W. past *Brandenburg* and *Havelberg*; and, 5 m. below the latter town, joins a bank *Elbe*, after a course of about 166 m., of which more than 100 m. are navigable. Its principal affluents are—the *r. the Elbe* and the *Demme*, and on the *r. the Spree* and the *Fläma*. Its navigable importance is much increased by three canals—the *Fläma* connecting it with the *Oder*; the *Fläma*, connecting it with the *Elbe*; and the *Kappeln*, which by connecting the upper and lower part of the *Elbe*, through means of the *Elbe*, serves a long distance of great-ton navigation. A peculiar feature of the Havel is the great number of lakes which it forms by its expansion.

HAVEI BINGO a town, prov. Brandenburg, gov. and 48 m. N.W. Potsdam, on an island formed by the Havel, and connected with the land by three bridges. It has a handsome cathedral, another church, and a large poorhouse, a court of justice, and several public offices, manufactures of hosiery, sugar-works, a brewery, distillery, building-yards, some shipping and trade, particularly in wood. Pop. 3077.

HAVEKINGHAM par Eng. Suffol. 1650 ac. P. 422.

HAVETAY (Havetay and Lutter), two mls. Havetay, co. Shetland off W. coast Mainland.

HAVFORD—Wear (called by the Welsh *Haford*) a part bar market on river-port, and co. of itself S. Wales locally in co. Pembrokeshire, of which it is the exp., beautifully situated on an eminence above the *Miver Gladly* 200 m. W. by N. London. It has some luxuriantly steep streets paved, and lighted with gas, a grand old hall and court-house—all respectable structures, three churches, two of which are ancient; seven Dissenting places of worship, a number of daily schools, including a free grammar-school, an almshouse and school, for clothing and educating 24 boys and 12 girls, founded in 1684, an asylum for pauper and criminal lunatics, and a workhouse. With exception of a paper-mill there are no manufactures carried on either in the town or vicinity. The river is navigable, at spring-tides, to *Haverford-West*, for vessels of 100 tons burthen. The port is dependent on that of *Milford*. Imports, chiefly groceries, and other articles for the consumption of the town and surrounding country, and a few cargoes of timber from the Baltic and Canada. Exports, principally cattle, butter, corn, and hard coal, for sailing. The town was fortified by a strong castle built in the 14th century upon an adjoining rocky eminence. Part of the remains of this castle has been converted into a county jail. Haverford West has sent one member to the House of Commons since the 17th of Henry VIII. Registered electors (1851) 698. Markets on Tuesday and Saturday. Races in the vicinity in autumn. Pop. (1851) 5380.

HAVERHILL, tw. vils. U. Mass., America—1. A vil. and township, New Hampshire, 63 m. N.W. Concord with a courthouse, jail, Congregational church, and academy. Pop. 2784.—2. A vil. and township, Massachusetts, 1 mi. Merrimack, across which is an elegant bridge, connecting it with *Bradford*. It has four churches, two printing-offices, and several manufacturing establishments. Vessels of 100 tons come up to the village. Pop. 4336.

HAVENHILL, a market in, and par England, co. Essex and Suffol. The town, pleasantly situated near the source of the *Stour* 11½ m. S.W. *Bury St. Edmunds*, has an ancient church, a Dissenting meeting-house, a charity school, and manufactures of cotton, fustian, and shawls. Market day Friday. Area of par, 2549 ac. Pop. 2550.

HAVERING-ATTE-BOWNE, par Eng. Essex. 4390 ac. Pop. 423.

HAVERINGHOLM par Eng. Norfolk; 2022 ac. P. 148.

HAVISHAM par Eng. Nicks; 1480 ac. Pop. 280.

HAVKE, a vil. and com. Holstein, prov. *Holstein*, on the *Rajna*, 5 m. E. *Moss*, with two breweries, a tannery, mill-work, saw-mill, and a trade in agricultural produce. P. 1906.

HAVRE (Le) (formerly *Le Havre-de-Grâce* Latin, *Portus Gratiae*) a port in France, dep. *Seine-Inférieure*, 10 m. N. of the mouth of the *Seine*, 108 m. N.W. Paris, with which it is connected by railway. It is lined by a triple range of ditches, supplied with water from the sea; and is surrounded by ramparts and lofty walls, crowned by a parapet, and adorned by a fine planned alley. The fortifications, however, cannot be considered strong, as they are completely surrounded by adjoining heights. It is entered by five gates,

The town, which, with exception of a number of old wooden houses of wretched appearance, is of comparatively modern date, is built of brick or stone, with great regularity in straight, wide, and well-planned streets, which intersect each

other at right angles. The public buildings are not numerous and possess little interest. They include the church of Notre-Dame, in a kind of bastard architecture, partly Gothic; the church of St. Francis, the townhouse, formerly the governor's palace, the round tower of Francis I., the only relic of the fortifications of that monarch; the theatre, arsenal, exchange, library and barracks. The manufactures consist of sulphuric acid, earthen and stone ware, paper starch, lace, oil refined sugar cables, and other marine cordage. There are also breweries, and numerous brick and tile works. A government tobacco factory employs 800 workmen and from the building-yards a great number both of sailing vessels and steamers, celebrated for the beauty of their masts and their masting properties, are annually fitted out. But the great dependence of Havre is on its commerce for which it possesses great advantages, both in its harbor and in its position. Its harbor, which is said to be one of the most accessible in France, is entered by a narrow channel formed by two long jetties, stretching from E. to W. and kept clear by constant dredging. This channel leads to the outer harbor (great port), an irregular expanse of no great extent, which is left dry at low tide and is occupied by great numbers of coasters, and other small vessels, which can safely touch the ground. Within the coast port are numerous warehouses, four in number through three of which are completed capable of floating and accommodating about 300 large vessels, and four with fine quays and extensive warehouses. The harbor is accessible by large vessels only during four hours of each tide, a disadvantage so far counterbalanced by the fact that the tides of Havre continue at their maximum for three hours. Havre thus commands the greater part of the import and export trade of Paris, and of the more important towns in the N. of France; importing vast quantities of colonial and other produce, among which cotton holds a most important place; and exporting numerous articles of French manufacture—particularly silk, cotton, ironware, plate, mirrors, furniture, stained paper bricks and tiles, provisions, tools, philosophical instruments, and agricultural implements also wine, liquors, sugar &c. Havre is the second port in France being exceeded

only by Marseilles. The number of British vessels that arrived in 1863 with cargoes was 1111 against 1036 in the year 1862 457 of them being laden with coal. Of vessels bearing the French flag 4316 including coasters entered the port in 1863, against 4941 in 1862. Of vessels bearing other flags, 254 arrived in 1863 against 318 in 1862. In the latter year only 84 American vessels entered, whereas in 1861 the arrivals were 417 a diminution caused by the cessation of imports of cotton and grain.

Havre is the seat of a court of primary resort, and of commerce; the residence of foreign consuls and possesses a chamber of commerce, and a hydrographical school of the first class. Its history is not of much interest. The earliest notice of it is in the 16th century when it became of importance to form a new harbor in consequence of the silting-up of that of Harfleur. The project was conceived, and some progress made in it by Louis XII but it continued little more than a fishing village till the time of Francis I who conferred important privileges upon it, erected numerous works and at Harfleur expense gained the greater part of the present site of the town from the sea which has, however repeatedly threatened to resume possession and caused great disaster. A Citadel was afterwards built and Havre, being now regarded as a place of strength, became the object of repeated contests between the French and the English. The old fortifications having disappeared have been replaced by others due chiefly to Bonaparte. Pop. 27,058.

HAVRE-DE-GRACE, a small seaport, U. States, Maryland, on bank just above the mouth of the Susquehanna River, 33 in N.E. Baltimore. It contains an Episcopal church; and has valuable shad and herring fisheries. It is a station on the Wilmington and Baltimore Railway and the Susquehanna Canal, which connects the Chesapeake with the canal of Pennsylvania, terminates here. Pop. 1200.

HAWAII or OOWHEE, the largest and most southerly of the Sandwich or Hawaiian Islands, forming a melancholy contrast from having been the death-scene of the illustrious navigator Cook, who was there murdered in Kealahou bay February 14, 1779 lat. (S point) 19° 5' N. lon 155° 49' W. (h.) It is somewhat of triangular shape, 100 m. long N. to S. the N.E. side 84 m. the R.E. 64 m. area, 4040 sq. m. It is wholly volcanic, and appears to be less an upheaval than merely deposits from the numerous volcanoes of which it forms the base. The S.W. B. and S.E. coasts are composed almost wholly of lava or volcanic cinders, frequently exhibiting deep caverns, the abode of innumerable birds and perpen-

THE CRATERS OF KILAUEA, HAWAII.—From the United States Exploring Expedition.

dicular cliffs, against which the sea dashes with fury. The N.E. coast is likewise generally precipitous, often basaltic, and cut into deep gullies, and presents almost insurmountable cascades, resulting from heavy showers falling on the mountains. In some localities, twenty of these cascades may be seen in

a distance of 100 or 200 yards. The N and NW coasts are flatter than the others, and possess a considerable extent of rich fertile land in many places, however badly supplied with water. On all the other coasts, however, are numerous spots having a rich soil. The mountains do not ascend in peaks, but rise gradually and comparatively unbroken. The principal summits are Mauna-Kea, in the N.E. 18,933 ft., topped with one summit. It consists almost wholly of snow, and presents no apparent crater. Mauna-Loa, in the S. 15,768 ft., a smooth dome, crowned by an immense crater called Moku-e-wa-wa, upwards of 2 m. in diameter, of whose treacherous power the surrounding country, covered with lava, shows ample evidence. and Mauna-Huailoh or Huailoh, in the W. 7522 ft., with several craters. But perhaps the most remarkable of the volcanoes is that of Kilauea, 3070 ft. high, E.S.E. of Mauna-Loa, on an elevated plain. It does not present a cone, but is a huge black pit of irregular shape, with almost perpendicular sides, 2½ m. long by 2½ m. broad and 1020 ft. deep; the basin is bordered by a black ledge of cooled lava, 600 to 800 ft. broad. During the day the bottom looks like a heap of smouldering ruins, but at night, it shows two immense pools or lakes of cherry-red liquid, in a state of violent ebullition, which like molten the whole vast expanse, and flows in all directions. In the water and numerous small craters continually throw up hot steam, ashes, lava, smoke, and flame. Sulphur is plentiful and steam and gas jets numerous earthquakes occur very frequently but are not often disastrous. Between the above-mentioned three great mountains is a great crater valley almost unknown and unexplored. Among the numerous mountains of the coast, the most important are the Bay of Kilauea or Kilauea, on the W. and Byron's Bay, on the N.E., or Waiake have on the E. coast, the latter is described as extensive, well-protected and affording good anchorage and excellent facilities for watering. The climate is in general mild and equable in some parts runs seldom falls except in occasional showers, while in others both in the interior and on the coast as at Byron's Bay showers occur daily. The island a well-wooded land cultivation is carried on in many places which would be almost impossible in any other country existing in a great measure from the desire of the natives to see the sea, for the sake of the fish which abound along the coasts. In excavations among the lava rocks sweet potatoes, melons and pine-apples are planted all of which produce a crop. The staple commodities are sweet potatoes, upland taro, and yams the latter almost entirely raised for ships. Sugar-cane, bananae, pine-apple, bread-fruit, coconuts, and melons, are also cultivated. The inhabitants are almost entirely confined to the coasts, along which they live in small villages. —Pop. 1925 55,000; 1890, 39,554 (1833, 41,000) —(C. S. Esch. Esq., *Travels in the Pacific* &c.)

HAWAIIAN ISLANDS. See *Southwestern Islands*.
HAWAIIAN a market in and par. N. Wales, on Fluad. The town 6 m. W. Chester is well paved has an ancient plain of brick an endowed free grammar-school and several other day schools. At its E. end are the picturesque remains of an ancient castle supposed to have been built some after the Conquest. Market day Saturday. In most of the townships of Hawarden parish there are considerable coal mines, from which Chester and the adjacent country are chiefly supplied. And in some of them fire-clay of very fine quality is also found. (Glebe sales, 1850-1851, 1852-1853, see also notice in the parish. Pop. 18308.)

HAWAII a river Abyssinia, which rises in a small mountain district, lat. 9° N.; lon. 40° E.; and after a N.E. course of about 276 m. discharges itself into Lake Annesley at 11 15° N., lon. 45° E. Both sides of this stream are covered with beautiful forests.

HAWAII, a fr. Peruv. See *Artisan*.

HAWESBY with Hamsey par Eng. Lincoln; 1170 ac. Pop. 65.

HAWES a market in and chapelry England, co. York (N. Riding) 17½ m. W. Whitby, on the Yore. It has a church and places of worship for Independents, Wesleyans, Methodists, and Friends an endowed and a national school and manufactures of high quality caps, boots, &c. Near it is a fine waterfall Market day Tuesday Area of chapelry 16,479 ac. Pop. 15,708.

HAWES WATER, a small picturesque lake, England, co. Wiltshire about 5 m. N. Reading; 3 m. long, and very deep.

HAWICK, a bur of burgh, Scotland, co. Roxburgh, at the Tiviot, 40 m. S.W. Edinburgh, with which it is connected by railway. It consists of one long, and several diverging streets and lanes, paved, lighted with gas, and well supplied with water. Several of the more stately houses have handsome houses; but some curious old structures are said to be seen at various parts of the town, having more the appearance than ordinary dwellings. It has an old, and in almost new parish church, a Free, and three U. Presbyterian churches, and a Congregational chapel an infirmary-holding exchange, three public reading-rooms, a public and a trades' library a school of arts, a savings bank, several religious and benevolent societies, an excellent academy and several private schools. At the upper extremity of the town is an artificial mound of earth, called the Moot, of great antiquity; supposed to have been used, at a remote period, as a court for the administration of justice. The Tower Inn is composed in part of an ancient border pool and was the residence, in former times, of the barons of Drumrig. Hawick has long been celebrated for its woollen manufactures. These consisted formerly of carpets, tartans, shawls, plaids, fannels, &c.; but the attention of the manufacturers is now principally directed to the production of woollen hose of which they annually produce above 1,000,000 pairs, exclusive of blankets and fannels. Leather-tanning, skin-dressing, glove, and cap making, are also carried on to a considerable extent. Gavin Douglas, the poet and translator of Virgil was educated at Hawick in 1495, and near the town Dr John Leyden was born. Pop. (1851) 5683 or including the adjacent village of Winton 8946.

HAWK a prefix to the name of several par. England —1 (Hawthorn) Dorset 4130 ac. Pop. 773.—2 (Hawthorn) Suffolk 1441 ac. Pop. 559.—3 (Hawthorn) (Holt) center 9770 ac. HAYDON BRIDGE, a vi. and chapelry England on Northamptonshire, 6 m. W. Hexham on the S. Tyne here crossed by a bridge and on the Newcastle and Carlisle Rail way. It has an Episcopal and two Dissenting chapels a free school and 30 almshouses. Pop. 2065.

HAYDOR par. Eng. Lincoln 5140 ac. Pop. 648.
HAYES or **HILL RIVER**, British N. America. It rises near Lake Winnipeg traverses several small lakes, and falls into Hudson's Bay at Fort York into an E. course of above 800 m. Its banks are in some places steep rocky and covered with ice.

HAYLE, two par. Eng.—**1. Kent** 1272 ac. 1 553.

—2. (see Essex) Middlesex 5670 ac. Pop. 4769.

HAYFIELD a vi. England, co. of and 8 m. N. W. Derby on the Ender. It has well-kept streets, houses of stone, water abundant, a handsome arch an old Methodist meeting-house, an endowed grammar and several other schools cotton manufactures and calico printing. Pop. 1767.

HAYINGEN a tn. Württemberg circle Dautsch, half of and 10 m. S. E. E. Minsingen with its old castle, town-house, parish church, two chapels and an hospital potash-works, breweries, a trade in corn houses, and cattle. P. 650.

HAYLF a small seaport in England, co. Cornwall, 8½ m. S. E. by E. St. Ives. It was formerly celebrated for its copper-houses for smelting the ore but, on account of the scarcity of coal, the latter is now carried to Swansea. It is at present equally celebrated for its two iron foundries in which the largest engine cylinders are cast, not only for the Cornish mines, but for exportation. The principal trade of the port is the exportation of copper ore to Wales and tin to Bristol. Imports—coal timber groceries and shop-goods. Vessels of 300 tons burthen can come at spring-tides.

HAYLING an isl. S. coast England co. Southampton, in Chichester harbour separated from Portsea by a very narrow channel. It lies low comprises much heath and waste land, and is divided into the two parishes of N. and S. Hayling in the latter of which a watering-place has been formed. Area, 10,682 ac. Pop. 1096. Off the S. coast is the rise of a tract of land submerged in the reign of Edward III., now forming an extensive island named the Woolenar sandbank.
HAYMAH, a tn. Prussia, prov. Sillesia, gov. of and 11 m. W. N. W. Lignitz, on the Delowia, and on the railway from Frankfurt-on-the-Oder to Breslau. It has a Protestant church, several schools, an infirmary hospital, and porcelain manufactures of woollen and linen cloth, tile-works, several mills, a trade in corn, and a weekly market. Pop. 3899.

HAYNESTOWN two par. Ire. 1.—**1. Kildare**; 430 ac. Pop. 42.—**2. Louth**; 1900 ac. Pop. 336.

HAY'S CATTLE, par. Wales Pembroke. Pop. 345.

HAYTI **HATTI** or **HAS DOMINGO** (Haiti) [Spanish]. *San Domingo* originally *Spahola* Latin, *Hispahola* one of the Lowland Islands W. India and, after Cuba, the largest, one of the richest, and most beautiful of the Antilles. It lies S. E. from Cuba, and is separated from it by the Windward Passage 50 m. broad; Jamaica and Porto Rico lie W. and E. of it, but at considerable distances. It extends from Cape Engabo, lat. 18° 35' N.; lon. 68° 30' W. (s.) to Cape Tiburon lat. 18° 22' N. lon. 74° 28' W.; and from Point Beate, lat. 17° 38' 45" N. lon. 71° 32' W. to Cape Isabella, lat. 19° 59' N. lon. 71° 1' W.; and is about 400 m. long, E. to W. and 150 m. broad at its broadest part. Area including the islands of Tortuga, Gonave, &c. about 27,000 sq. m., or nearly as large as Scotland. The E. part of the island is occupied by the Republic of Santo Domingo—(see HAITO DOMINGO) and the W. part by the Empire of Hayti—(see next article).

The island of Hayti is of irregular form, being deeply indented by bays and inlets and having corresponding projections the greatest of the latter being its S. W. portion which forms a headland about 150 m. long and 18 m. to 40 m. broad. It is intersected, W. to E. by three chains of mountains all mutually connected by offsets between are extensive plains and savannas. The principal central chain, which contains the culminating peaks—of which Cibao 7200 ft. high is the loftiest—commences W. at Cape Nicolas, takes an E. S. E. direction and terminates at Cape Engabo. Nearly parallel with this chain, another commencing W. near Monte Christi nearly skirts the N. coast, till it terminates E. abruptly on approaching the so-called peninsula of Remans. It is followed by low marshy grounds, intersected by estuaries and channels, which separate the main from the mainland and afford communication from the bight of this name to the sea on the N. shore of the island; the heights, however re-appear on the opposite side of the low grounds and terminate in Cape Samana. Between these two mountain-ranges extends La Vega Real or the Royal Valley 120 m. long, watered by the Yucki and Yuma, and presenting almost boundless pasture lands. The third, and N. mountain-range, commences W. at Cape Tiburon extends E. along the whole of S. headland and terminates at the river Neiva, about 80 m. W. the town of San Domingo. Besides La Vega Real there are other extensive plains and valleys more particularly on the coast E. of San Domingo, *los Umanos*, or the flats, 80 m. long—a rich pasture district. The plain of Cayen, at the W. end of the island, has been greatly increased in extent by the formation of a kind of rock consisting of minute fragments of shells and coral cemented with calcareous cement, resembling travertine. Fragments of vase and other human works, have been found in it at a depth of 30 ft. This kind of rock is now in process of formation throughout the whole of the W. Indies. All the streams of Hayti of any importance, originate in the great central mountain-chain and as may be inferred from the general direction of the mountains, have either an E. W. or S. course—no stream of any consequence, flowing N. The principle are—Arribonita, flowing W. and Monte Christi or N. Yucki; W. the Yuma, flowing S. E. and the Neiva or S. Yucki the Nuan, and the Ozama, flowing S. They are all considered at their mouth with sand-bars and hence few of them are navigable, even for short distances. The Ozama, however admits vessels drawing 12 ft. or 13½ ft. There are several lakes, mostly in the S. W. of the island. The chief are, the salt lakes of Enraguillo, and Assay; the former in the valley of the Neiva, about 20 m. long by 8 m. broad and abounding in caymans the latter 10 m. W. of Lake Enraguillo, about 10 m. long by 6 m. broad. S. of these lies the fresh lake of Itocha or Lamo, about the size of Lake Assay. Mineral springs exist in various parts. The most noted is the E. portion of the island are those of Beaulieu—temperature, 119° to 120°—Bilewans Yocki and Parguel and in the W. portion those of St. Rose, containing iron vitriol, and steam the saline waters of Jean Mabel and those of Delmarco, containing sulphur petash. The mineral products are various and rich, including gold, platinum, silver, quicksilver, copper iron—similar to that of Demerara in Sweden—mag-

soils iron, tin, sulphur manganese, antimony, rock-salt, bitumen, Jasper, corals, and lamellar, chalcography, &c. The gold mines are abandoned, and gold-washing is only carried on by the poorer classes, in the N. river. Indeed, all of the minerals are neglected from want of capital.

Hayti, as a whole, is one of the healthiest of the W. Indian islands, and thus may be especially be said of its N. provinces, and more elevated localities. The Vega Real is famed for its salubrity. The seasons are a wet, during which heavy rains are frequent—3 and even 5 inches, at times, falling in 24 hours, and a dry during which little or no rain falls, and, in some localities, years have passed over without a single heavy shower. At San Domingo the mean temperature is 75° F. and the extremes 60° and 95° while at Port-au-Prince the range is from 62° to 104°. The malarial fever occurs in December and the maximum in August and September. Land-breezes moderate the summer heats. Hurricanes occur seldom than in the Windward or Caribbean Islands. Earth quakes, though not frequent, have been very disastrous; the most notable recorded are those of 1564, 1634 1691 1751 1770 and 1842. By that of 1751 Port-au-Prince was destroyed and 60 m. of coast destroyed, and, by that of 1842, towns were destroyed, and thousands of lives were lost. Elsewhere in tropical regions even to greater extent of damage than in Hayti, continuing with the lofty and at times, rugged mountains and deep valleys, to render the scenery of this island unsurpassed. Columbus and his followers when they came in sight of La Vega Real supposed they had reached an earthly paradise. Majestic pines, noble mahogany trees, lucite, sacro-wood, and lignivivres clothe the mountains, and form the principal exports of the N. provinces. The rubber or *cau* (*Latex boguensis*) which yields hard durable wood, the wax palm, *Ceroxylon* (the *palme*) covered with scarious fine velvet-wool and the richest flowering plants, abound, and the usual tropical vegetables—yams, bananas, pineapples, and fruit—orange, pine-apples, cherries, mangoes, apocryphes with melons and grapes, yield a plentiful return. The staple cultivated products are—coffee, sugar indigo cotton, tobacco and cacao the quantities of which raised him a *hahen* off in consequence of the unsettled state of the island. The W. or French section has always been the best cultivated. The native quadrupeds of Hayti are small—the largest not bigger than a rabbit, but the animals introduced from Europe, and *in a wild state*, have thriven prodigiously—large numbers of cattle pigs and dogs, now roam freely in the mountains and in the mountain forests there are neither numerous in species nor beautiful in appearance still great numbers of pigeons (*Columba leucophala*) are usually taken and used as food and ducks, in large quantities, and other swimming and waters, frequent the marshy places. If birds are few insects are no less numerous. The lakes and rivers contain numbers of caymans and alligators and, in the surrounding seas, whales are common in spring and green and hawbail turtles, lobsters and crabs, abound on the coasts.

When the Spaniards discovered the island, under Columbus, in 1492 they found it inhabited by a happy race, Indians, were rude subject to five hereditary chiefs, named *caciques*, who reigned over as many districts—that which included the La Vega Real being the most important. So ruthlessly were these poor aborigines dealt with by the Spaniards, that in 1507 they were reduced to 60,000 and in 1585 there remained only 500. The pure race died wholly out the latter end of last century; but their characteristic features, and luxuriant hair are still to be traced among their descendants, from transients with Europeans, Africans, and coloured people. They still are *negro* Indians. The aborigines lived in a Republic being, when they did not adhere; paying that tribute to inferior chiefs, called *caciques*, whom they dreaded, and whom they represented by figures carved in wood and stone, or manufactured of clay or cotton. They believed in the immortality of the soul; and thought in the future state to meet their friends in an earthly paradise. A number of Indian villages are still met with, consisting of huts, masonry, dugout, stone, &c., carved in wood, or shaped in clay. British pottery is often found and recently a granite ring, 2570 ft. in diameter, was discovered in the interior near San Juan where, in former times, resided the redoubtable chief, *Cambuca*. A cemetery with numerous graves,

and several *Sanctuary* caves and grottoes, with picture-writings traced upon the rocks, have been met with in various quarters, some of them very obscurely accounted. The W. end of the island is now inhabited by an African race; and the E. end by a race of Spanish descent, intermingled with numerous negroes and coloured people.

The principal towns in Hayti are Cape Haytien, Gonaives, and Port-au-Prince, in the W. San Domingo, and *San Juan* in the E. and Maitre Chantal and Santiago in the N.

As already indicated, Hayti was discovered by Columbus in 1492 and here, on Isabella, on the W. shore of the island, the discoverer founded the first Spanish colony in the new world. The Spaniards, by their oppression, having exterminated the aborigines introduced African slaves to cultivate the sugar-cane, &c. Numerous colonies emigrating to S. America, after the conquest of Peru, the inhabitants were all withdrawn to the interior to prevent their escape; and the W. end of the island thus left free to the French colonists, who, driven from St. Christopher's, settled there in 1650. These settlers captured the pigs and horned cattle that had become wild, sold the skins to traders who landed on the coast, and smoked the flesh, both for food and for sale, on a genus of wood, called *houma* whence was given them the name of *Sanctuary*. Amongst them with freebooters, who, in 1632 settled in Tortuga, and who were named *filibusters*, from the small that fly boats in which their expeditions were carried on, they became marauders by sea and land and their successes rendered the name *filibusters* terrible over all the W. Indian seas. Ultimately the island of Tortuga, and part of the mainland, were claimed by the French settlers for their king. The first governor was appointed in 1664 and by treaty with Spain, of 1778, the W. part of the island was ceded to France. The Spanish part consisted of the old French port prospered, and in 1789 was in its most flourishing state. In 1790 the population of the island was estimated at 250,000 consisting of whites, who were Europeans, and their descendants, negroes, nearly all slaves and people of colour the offspring of the intercourse of the two former races. Many of the latter were free-born, or had obtained their liberty and likewise had enjoyed a liberal education still they were carefully excluded from political privileges, and were not eligible to situations of authority or trust. On the breaking-out of the great French revolution a contest ensued between the coloured people and the whites, the former demanding equal privileges with the latter. A petty but an arbitrary war ensued until the slave population, also rising joined the col.ured people, and completely subdued the whites.

The whole island including the Spanish portion, ultimately fell under the power of the negro chief, Toussaint L'Ouverture first president of the Haytian republic. He was afterwards betrayed into the hands of the French, who had dispatched an army to Hayti, with the view of regaining the position they had lost in the island but, after some partial successes, they were permanently expelled; and in 1808 the island was declared independent, and its Spanish name, of San Domingo, replaced by its indigenous one, of Hayti, meaning the mountainous territory. Contentions for power succeeded between the various leaders of the young republic; unheard-of atrocities were committed and much blood spilt—limited, however already to the French portion of the island. In 1821 the Spanish portion declared itself independent of the mother country and assumed the name of Spanish Hayti but it was soon subjugated by Boyer the president of the Haytian Republic, or French Hayti; and the whole island was then brought under one government. In 1843 a revolution broke out, and President Boyer was compelled to flee to Jamaica and, in 1844, the inhabitants of the Spanish portion rose, overpowered their Haytian oppressors, and formed themselves into a republic, under the name of Santo Domingo, which was proclaimed, November 24, 1844. After various individuals had, for a short period, occupied the presidential chair of the Haytian Republic, the election fell upon General Salustiano, who, in 1846, ordered a new measure of the coloured race; and the following year made an unsuccessful attempt to subvert the Dominican Republic. He was assassinated, however in sleeping at the imperial orders; and, in the latter half of 1846, occupied the throne, under the title of *Rosario Ponsa*. He surrounded his throne with a court and hereditary nobility, instituted orders of knight-

hood, and, as he had no male issue by the empress, the testamentary commission permitted him to select his successor from among his issue. The independence of the Dominican Republic was virtually recognised by Great Britain, by the appointment of a consul to it, in 1849; and it was formally recognised by a treaty of amity and commerce, ratified September 10, 1850. But neither Emperor Faustin I. (born number 10, 1850), nor any European power has yet recognised the Dominican Republic. Pop. of whole island estimated at 948,000.—(Private Communication from Mr. R. H. Schomburgk, H. M. Consul at San Domingo, do.)

HAITI or HAYTI (HAYTIEN or) an independent state W. Indies occupying the W. and of Isl. Hayti or San Domingo, and corresponding with the portion of the island formerly belonging to the French, and including the adjacent islands of Tortuga, Gonave, &c. cap. Port-au-Prince. The F. boundary towards the Dominican Republic is formed by an irregular line, drawn, S to N, from the river Assa-é-Pito or Pedernales, on the S. coast, about lat 17° 50' to the mouth of the river Manzanillo, which flows into the bay of Manzanillo, about 10 m. S.W. Cape Hayti. Area, 10,081 sq. m. It is divided into six departments subdivided into arrondissements and communes. The country, as seen by the preceding article, is mountainous interspersed with rich fertile plains and valleys is well watered and yields spontaneously numerous valuable products more especially the timber of various kinds and dye-woods. Agriculture, however, which it must greatly depend for prosperity is in a very indifferent state, and is accompanied with no degree of vigour. The generality of the rural inhabitants living from day to day on the spontaneous productions of the soil. The produce in cotton sugar indigo tobacco &c. has consequently greatly fallen off reducing, in a corresponding degree, the exports of these articles. I. title satisfactory information can yet be obtained respecting the commerce of this empire. In 1845 Great Britain exported to Hayti manufactures to the value of £215,072 obtaining in return cochineal cacao coffee, francs, sugar, gum, guano, cotton, and bees wax. Arsenals are kept in U. States for large and cords.

By the constitution of 1843 the sovereign power was recognised to be in the people the executive power was placed in the hands of a president the legislative in a chamber of commons and a senate—the former consisting of one or more representatives for each commune, elected for three years, and the latter of six for each department elected for four years, and both meeting on certain occasions, to form the National Assembly. The judicial power was placed in a court of cassation being the high tribunal of appeal with various subsidiary and tributary courts. The laws are based on the code civil of France. The whole patronage, civil and military being in the hands of the president, Roucoux displaced it in such a manner as enabled him in 1849 to have his title of president changed into that of emperor and to have the constitution altered to suit the circumstances. Princes of the blood, dukes, counts, barons and two orders of knighthood—that of St. Francis and a legion of honour—were created to adorn the court of this pigmy empire. The effective force of the army is stated to be 40,000 men and that of the navy 15 small vessels, formerly merchantmen and 1000 men.

The people are nearly wholly of negro race, speak the French language, and profess the R. Catholic religion; other forms of religion however being tolerated. The government having reserved to itself the supervision in matters of religion the Pope has never recognised the Haytian church the affairs of which are superintended by a vicar-general under the direction of the minister of education and religion. In every parish a school, on the Lancasterian system, is maintained at the public expense. The clergy says a recent French writer with few exceptions, consists of priests that have been expelled from their diocese, and who seek a fortune in a country over which the hierarchical sway does not extend. Others are only priests in their own opinion, and some are not even able to officiate finally the larger number live in concubinage. With such a state of matters, in a population composed of slaves and their descendants, a lax state of morals is to be expected religion is neglected—nay often despised, the marriage tie is seldom cemented and concubinage so general that not more than four brides in the

hundred are said to be legitimate. Few foreigners reside in Hayti still those who do are well protected. They cannot hold real property except in the name of a Haytian with whom they associate for that purpose, and in whose name it is registered. Principal towns—Port-au-Prince, the capital; Cape Haytien Gonave &c. Pop. estimated at 850,000—females greatly preponderating in numbers. For History, see preceding article.—(Private Communication from Mr. R. H. Schomburgk, H. M. Consul at San Domingo, do.)

HEBBERD Donnet, a large manufacturing vil. England, co. York (W. Riding), 3 m. W. Halifax, in a valley celebrated for the romantic beauty of its scenery, a station on the Manchester and Leeds Railway. It has a handsome church, several Dissenting places of worship, with extensive cotton, silk, and woollen manufactures, and mills for grinding corn.

HEBRIDES (New) an archipelago or Isl. group, S. Pacific Ocean, N. E. of New Caledonia, between lat. 13° 15' and 30° S. E. and lon. 160° 30' and 170° E. It consists of about 20 larger and a much greater number of smaller islands and rocks. The most important are Easter Island, 70 m. long by about 25 m. broad; Mallico, 60 m. long, by 28 m. broad, with a good harbour called Port Sandwich lat. 16° 26' S. lon. 167° 46' E. (A. Eromanga (which see) Tanna, 20 m. long; Ambrym; Anson, Aurora, Banks, Fandrich, and Whit islands. They are all of volcanic origin, and in Tanna is a volcano of great activity. Most of the islands rise into lofty hills and some of them into mountains of considerable elevation, but all of them are well wooded almost with water and present a most luxuriant vegetation. Cultivation is carried on with great care. The animals are few. The natives are of Papuan race, brave, slender active, hospitable, but are accused of cannibalism and in point of intelligence, rank below the natives of many of the other S. Sea islands. Area estimated at 200 sq. m. Pop. 210,000.—In 1606 Quiros and Torres discovered the more N. islands, Easter, Santa, &c. and 162 years later Bougainville re-discovered them, and added the islands of Pitouet, Pit de l'Est, Aurora, and Lepreux. In 1771 they were visited by Cook, who discovered Mallico and the more S. islands, and gave the group its present name.

HEBRIDES (THE or WESTERN ISLANDS) [anc. *Elsedes* or *Elsedes*] a series of about 200 islands, of which 80 only are inhabited off W. coast Scotland, extending from lat. 55° 25' to 58° 37' N. lon. 5° 35' to 10° 35' W. being the island of Arran in the Firth of Clyde, and the most N. the island of Lewis. They are usually divided into the Outer Hebrides, popularly called the Long Islands, of which the principal are Lewis and Harris, N. Linn. Beabach, S. Uist, and Barra, and the Inner Hebrides—Skye, Mull, Islay, Jura, Coll, Rum, Tiree, Colonsay, &c. and within the Firth of Clyde, Bute, Arran, Cumbrae, and Ischnamrock. The former being separated from the latter and from the mainland, by a strait or channel called the Minch which, at its narrowest part, between Harris and Skye is about 12 m. broad. The Outer Hebrides consist of a continuous series of islands and islets, running, N.W. and N.E. through a space of 180 m. having Barra Head lat. 56° 47' N. lon. 7° 58' W. at the N. extremity and the Point of Lewis lat. 58° 21' N. lon. 8° 14' W. at the S. extremity. The Inner Hebrides are more widely scattered, and more irregularly disposed, many of them being from 10 to 30 m. asunder. Of these islands, seven are within the Firth of Clyde, and constitute the county of Bute, the others being, respectively to the shores of Argyll, Inverness, and Ross. Area about 2739 sq. m. or 1,688,980 ac., of which about 170,000 ac. are arable, and about 64,000 fresh water lakes. The Outer Hebrides are almost wholly formed of granite, with poor soil, the more N. of the Inner Hebrides, Skye, Rum, Lough Conn, Mull, Ulva, Skellic, St. Kilda, &c., being to a great extent, with a more fertile soil than the former. Islay, Jura, Colonsay, &c., belong to the older formation and the islands in the Firth of Clyde are composed of trap, sandstone, and New Red. Most of the islands are rugged and mountainous, and contain large proportions of moss and snow. The climate is mild, salubrious, but variable, tempestuous, and humid. Snow and frost are almost unknown in the smaller islands, and are but rarely felt

in the larger. There is comparatively little wood in the Hebrides, and, on many of the islands, none at all, although some countries, some of them were formerly covered with wood. In Skye, Islay, Mull, and several of the other islands, however, both forest and fruit trees have been planted, in recent times, to a considerable extent, with great success. The rivers of the Hebrides are necessarily small. There are many however in which salmon abound, particularly in the larger islands. Lakes are numerous, but few of them of any great depth, the deepest not exceeding 8 or 10 fathoms. In some of the larger islands, as Barra, Lewis, Mull, Islay, great improvements in agriculture have taken place of late years; but, in all the others, it is still in a very backward state. Oats and barley are almost the only white crops raised. Potatoes are extensively cultivated, and small quantities of flax for family use. Black cattle, known by the name of kyles, constitute the staple product. The native breed of sheep is very small but Cheviots have been introduced with success. The breed of horses is also small, but hardy and docile.

The food is generally held by the natives, tenants, and cultivators, including cottagers and fishermen. Fowls, though sometimes of great extent, are mostly of small value, varying from 25 to 550 yearly rent. Most of the cottiers who are a numerous class, pay their rent in services instead of money in consequence of the minute division of the arable land, there is, in many of the islands, a great excess of population, as well which some of the proprietors have remedied by encouraging emigration. The condition of the inhabitants generally more especially in the Outer Hebrides, Mull, and Skye, is very depressed, their dwellings miserable, and their living poor consisting chiefly of potatoes, milk and oat or barley bread and in bad harvest often insufficient in quantity to support nature. The manufacture of kelp was at one time carried on to a great extent in the Hebrides, but the reduction of the duties on salt and barilla have nearly extinguished it. The fisheries, though prolific and abundant in a remarkable degree, are strangely and unconsciously neglected by the inhabitants. Gaelic is the universal language of the Hebrides which, in remote times, was subject to the Kings of Norway, but, in 1764, were annexed to the crown of Scotland. They were now held by various native chieftains, in vassalage to the Scottish monarch, but, subsequently all fell into the hands of one powerful chief who thereupon (1840) assumed the title of Lord of the Isles, and began to affect an entire independence of his sovereign. The abolition of hereditary jurisdictions, in 1748, secured to these islands, for the first time, the peace and safety afforded by a just and powerful government. Pop. (1841) 22,615.

HEBRON (anc. *Aspendar*) a town, Asiatic Turkey, gov. Damascus, 18 m. N. by W. Jerusalem 2834 ft. above sea-level lat. 31° 58' 20" N. lon. 35° 8' 30" E. It lies in the narrow valley of Mesour with numerous olive trees towards the W. and vineyards N. with bare mountains rising above. It has narrow streets, seldom more than 2 or 3 yards in width, and extremely dirty; high wall-built stone houses, with flat roofs, surmounted with small domes, but many of them in ruins, rather extensive covered bazars, with well furnished shops, exhibiting in profusion glass manufactures, consisting of lamps, coloured rings, &c., for which the place has long been celebrated, and in which it carries on a considerable trade. There are also mosques, but none of them possessing any architectural interest, excepting the mosque of the office built over the tomb of the patriarch, from which Christians are rigorously excluded, it being attended by Mahomedans one of their holiest places. It is surrounded by a lofty wall, built of large stones, and of great antiquity, almost the only ancient relic in the town. Hebron is one of the oldest existing towns, having been built seven years before Zion. It is mentioned prior to Damascus (Rum. xlii 23 Gen. xlii 18) It was the residence of Abraham, and the Patriarchs, and of David. Pop. about 5000.

HECHINGEN a town, Germany, cap. principally Hohenzollern-Nagstaden, on a high shore above the Rhine, 30 m. S.E. W. Stuttgart. It is walled, and divided into a high and a low town, but a castle, in which the prince resides, a new, but unsightly structure. Two E. Catholic churches, a synagogue, and numerous sulphur springs, with a bathing establishment. Manufactures of woollen cloth, and a trade in cattle. About 2 m. from the town, and connected with it by

HEESTERT a tn. and com. Belgium, prov. W. Flanders, 5 m. E. Courtrai, with linen-weaving, breweries, a tobacco-works, a malt and several flour mills. Pop. 3299.

HEUNYHIM a vil. France, dep. Haut Rhin, 15 m. E. Altkirch, near bank Rhine. Pop. 3151.

HEGYALYA the S. termination of an offset of the Carpathians, Upper Hungary, co. Szabolcs, between the rivers Hernád and Bodry and lat. 48° and 49° N. and slanting on the Tisza, near Tokaj. It is a rich wine district; area, about 80 sq. m.; producing the famous wines known in this country as Tokaj but the growth of a great number of vineyards, among which those of Tural and Talya, take precedence even of Tokaj itself. The annual produce is about 7,200,000 galls.

HEGYES or Ierocseh a vil. Hungary, Magyar Database, co. of, and 59 m. N.E. Kees, on the Toltokai with a R. Catholic church, and a trade in corn and cattle. Pop. 800.

HEGYES-HALOM or STRASS-DOMMERHAY a vil. Hungary, co. of, and 7 m. from Wieselburg with a Protestant and a R. Catholic church, and a mill. Pop. 1790.

HEHNK, a thriving vil. Turkestan, Akmoys of Khovdovo, 80 m. N.W. the Hudson bank, and 4000 ft. above sea-level, with a castle of sun-dried bricks, built on a commanding eminence. The houses have domes instead of terraces, with a lake in the rear for a chimney.

HFFDE, a tn. Denmark, Holsten N. Dronow, 2 m. W.S.W. Rendsburg. It is divided into four quarters, and a well built, has a large market-place, a parish church, several schools, a posthouse, manufactures of earthenware and white and common leather, several tile works, tobacco factories, oil and flour mills, a trade in cattle, a weekly market and two annual fairs. In the churchyard, a monument has been erected to the Reformers Heinrich von Sarpfen, who suffered martyrdom here in 1524. Pop. 5400.

HEIDELKHI G. a. France, prov. E. Prussia, gov. of 57 m. N.E. Königsberg; cap. circle of same name, near E. shore of the Curonian bay, with a court of justice, several public offices, a Protestant church, and a trade in horses and cattle. Pop. 400. — The circle is flat and swampy. Area, 234 sq. m. Pop. 31,320.

HEIDELBERG a tn. Baden, circle Lower Rhine; cap. built of same name, beautifully situated, a bank hecker here crossed by a bridge of nine arches, in one of the loveliest districts of Germany. 11 m. E.E. E. Mannheim, on the railway from Frankfurt to Karlsruhe. It stands on a narrow

church of St. Peter; the church of the Holy Ghost, divided by a partition-wall, so as to serve both as a Protestant and a R. Catholic church; the castle, antedating the residence of the Rhenish Palatines, and now an imposing ruin, exhibiting the character of a palace and a fortress. The university founded in 1584, and possessed of a library of 150,000 volumes, not remarkable as an edifice, but distinguished by a school of law and medicine, and attended by about 700 students; the tombstone, the anatomical and zoological museums, lycæum, superior burgher and other schools. The manufactures, not of much importance, include refined wax, leather, vulgar paper, surgical and musical instruments, saddles and, more than all, beer which employs 34 breweries, and bears a very high name. One of the greatest curiosities of the place is the well-known Heidelberg tea, kept in a cellar under the castle; and, though far less than several of the London parties teas, it is the largest wine cask in the world, being 36 ft. in length, 26 ft. in diameter and capable of holding 800 hogheads. Heidelberg is rich in public walks. The gardens around the castle are well laid-out and at every turn present the finest views of the Neckar and the fertile and richly wooded valley through which it winds to join the Rhine. Still higher up, behind the town and castle, a carriage-road leads, by easy ascent, to the top of the Königstuhl—the loftiest hill of the district, from which an extensive view is obtained, of surrounding country. In 1733 the town Tilly after bombarding Heidelberg for a month, took it by storm and gave it up to three days pillage. In 1698, a French general Mâlar on the orders of Louis XIV., took the town, and burnt it, overrunning even Tilly in cruelty and brutality. In 1693 another French force repeated, and, if possible, executed all former atrocities. Pop. 13,088.

HEIDELHOFIM a tn. Baden circle Middle Rhine, r. bank Salzbach 12 m. N.E. Karlsruhe, with two churches, a school, hospital and a trade in wine. Pop. 3274.

HEIDELFELD (Hantz) a tn. in Baden, circle Lower Franconia, on the Main here crossed by a new bridge, 15 m. W.N.W. Würzburg, with manufactures of leather and earthenware, some shipping, several mills, a trade in wood and wine, and three annual fairs. Pop. 3042.

HEIDENHEIM—1 A market in Bavaria, Middle Franconia, 31 m. S.W. Nürnberg, with two Protestant churches, an old Benedictine monastery, manufactures of earthenware, several mills, and a mineral spring. Pop. 1839.

—2, A tn. W. Erenburg, circle Jast, cap. built of same name in the Brem valley 40 m. E.N.E. Stettin. It is an old, but well built place, has several public offices, a Latin and superior burgher school, manufactures of woollen and linen cloth, flannel paper and earthenware, blacksmiths, dye-works, several mills, and a trade in corn. The iron-works here, which were ones of great importance have gone into decay. Pop. 2465. Area of hall, 101 sq. m. Pop. 22,764.

HEIDENSDORF two places, Prussia, prov. Silesia—1 A vil., gov. Breslau, circle Niespach, with a castle, church, and 5 mills. P. 1250.—2 A vil., gov. Liegnitz, circle Lebus, with a castle, 6th-works, a saw, and 4 other mills. P. 2183.

HEIDESHEIM a vil. Hesse-Darmstadt, prov. Rheinhessen, l. bank Rhine, 9 m. W. Mainz, with a R. Catholic church, an old castle, a school, and tanneries. Pop. 1405.

HEIDINGSFELD a tn. Bavaria circle Lower Franconia, 31 m. S.W. Würzburg, with a church, chapel, synagogue, school, hospital, and posthouse; manufactures of lacquerware and famous cutlery, a large weavers' and several other mills, and a trade in wine and fruit. P. 8131.

HEIDELBERG seen from the bridge—From Allgemeine Illustration of Prussia.

ridge, between the river and the rock on which the castle is built; and, from the nature of the ground, is almost confined to a long narrow street, with a few dark and narrow lanes opening into it. The principal buildings are—the

NEHAZ a division of Arabia, extending along the N. half of the E. coast of the Red Sea bounded N. by the Gulf of Akaba E. by Nejd R. by Yemen the dividing line passing from KAZ to the sea-shore, in lat. 18° 55' N. to KHAZ in the N. borders of Ayr and on the W. by the Red Sea comprehending a lowland (Tahmas of Hqiz) and a tract of highland or Nejd, E. of a range of mountains, generally visible from the sea-shore and which attain, in some places, an elevation of perhaps 8000 ft., and are often covered with snow in winter. The main chain of these mountains is to be formed of granite; but porphyritic rocks occur in many places, and volcanic rocks are also seen. Fertile formations of Mesopotamic type are numerous in the Tahmas, in the vicinity of the Gulf of Akaba, where the land has been released by their agency; as is manifest from the numerous beds of coral which border the shore above the level of the sea, and which rise higher above that level the further we advance N. Arab historians attest that in the middle of the 16th century a volcano broke out a little E. of Madinah, and near that city the second is now covered with barren lava.

There are no rivers in the Tehlams of Haid, where the wadies or beds of occasional torrents are but rarely filled; indeed, the lower part of the Tehlams does not enjoy the refreshing influence of ten days rain in the year and whatever fertility it possesses is due to little streams led to it from the mountains. On these the rain falls more copiously; and the well-watered valleys among the hills, with their cornfields, their variety of exquisite fruits, and their shady groves of date-palm, contrast strongly with the burning plains of

the calcitator to its fine natural harbour which is well sheltered, and affords excellent anchorage in 13 fathoms. It is defended by strong batteries, contains the official residences, being a spacious parade, and has a handsome embankment and ships well supplied with European and Asiatic merchandise. The best access to the interior is up James valley which, as well as the other valleys leads as has been already mentioned to a kind of central plateau. This is traversed by a limestone ridge, stretching E. to W. dividing the island into two unequal portions, and attaining in Diana's peak, near its centre, the height of 3700 ft., the highest summit in the island. The portion on the S. of this ridge is the more abrupt and rugged of the two and consists of an almost continuous succession of rugged hills and peaks, evidently of

LOT'S WIFE.—From Foster's Geography of St. Helena.

volcanic origin. Several of these assume curious and fantastic forms. Of these, two of the most remarkable are situated near the S. coast, and from some imaginary resemblance, have received the names of Lot and Lot's Wife. They are both formed of strangely contorted columnar basalt,

THE CHIMNEY.—From Foster's Geography of St. Helena.

and their summits are respectively 1444 ft. and 1438 ft. above sea-level the former rising 197 ft. and the latter 180 ft. above its base. Along the coast, at this part of the island, W. from Sandy Bay there stretches, for a considerable

distance, a stratum of horizontal columnar basalt, forming a stupendous wall 50 ft. to 180 ft. high. An isolated portion of this stratum forms what is called the Chimney, a remarkable column of horizontal hexagonal basalt 64 ft. high. The portion of the island N. of the ridge is also rugged, but contains several tolerably level tracts, which, during the season when moisture is abundant, are covered with rich verdure. The largest of these tracts is that of Longwood, where Napoleon had his residence. The soil, though free of great natural fertility is partly under cultivation, but the vegetation instead of being tropical, as its position might have led one to expect, is decidedly European and almost even British. Many of the hills are crowned with irregular plantations of Scotch firs while many of the sloping banks are covered with the common gorse or whin. Of the 755 species of plants now found on the island, only 52 are native.

There cannot be a doubt as to the volcanic formation of a considerable portion of the island, or the emergence of other considerable parts of it from the bottom of the sea. Though there is no well-defined crater, earthquakes have frequently been felt and even in the absence of storm, both at sea and on the island, strange heaving in the surrounding waters the result evidently of subterranean commotion, are not uncommon. One of the most remarkable of these took place, February 17 1849 when the sea suddenly became agitated as if by a heavy storm, and several vessels were from their moorings dashed upon the beach; still at a short distance from the island no disturbance was felt. Owing to the elevation of the surface the climate is temperate, and free from the hot regions of the E. coast rapidly under its genial influence. The range of the thermometer is between 57° and 72° and gives an annual average of about 68°. Properly speaking there are neither manufactures nor trade. The island is far from being able to supply its own wants, and the only traffic consists in supplying commodities to the sailing vessels. The revenue of 1848 amounted to £18,585. 14s. of 1849 to £15,931. 8s. Of the latter sum, £2840 was derived from customs, and £2014 from licences. The total expenditure of 1849 was £23,867. Pop. 5000 of whom nearly one half are whites.

HELENS (Sr.)—1. A market town and chapelry, England, co. Lancaster on a branch of the Mersey 11 m. E.N.E. Liverpool originally and at a comparatively recent period but an insignificant village, now a considerable and important town. Well-built, thriving and populous. It owes its rise to the introduction of various branches of manufactures, but more especially to that of glass, which is carried on here to a great extent. Copper-smelting is also extensively carried on excellent watch movements are made and there are large chemical works, and earthenware manufactories. There are two churches several Dissenting places of worship, a handsome town-hall several schools, various charities, and religious and benevolent societies. Market day Saturday. Pop. 14,866.—2. Par Eng. Hants. 16° 6' N. Pop. 1948.—3. One of the smaller Heilly Islands, N. of Traces island, with an old church, good pasture but no inhabitants.

HELENSBURGH a small maritime town Scotland co. Dumbarton, 7 miles S. of Firth of Clyde, opposite Greenock, from which it is distant about 4 m. It is rather prettily situated and is a favourite sea-bathing place. The town stretches along the shore, and consists of two or three long parallel streets, intersected by several shorter. These, being spacious, and the houses generally wide apart, with gardens attached the whole place has an airy and cheerful appearance. It is lighted with gas, has an established chapel a Free, and a U. Presbyterian church, and Independent, Baptist, and Episcopalian chapels. It has some retail trade, but depends chiefly on summer visitors. P. (1851) 9841.

HELGE A, a river in the S. of Sweden, which has its source in several small lakes, like Werth, whence it flows

R.R.W., extending into Lake Mechal after which it turns S.W., and, on reaching the town of Christeneden, extends into a lake of its own name, about 9 m. long, by 3 m. wide, whence it flows E.N. to the Baltic, near Alna. Total course about 70 m.

HELIK (St.), cap. Isl Jersey, E. coast, E. side St. Aubin Bay, lat. 49° 11' 18" N.; lon. 2° 7' W. (N.), at the base of an amphitheatre of low hills, which slope down to the bay. N. Helier is protected by two fortresses, namely Elizabeth Castle, on a rock in the bay opposite the town and Fort Regent, a strong and well-garrisoned fort which overlooks the inner harbour. The town is composed of several spacious, and a number of narrow and irregular streets. Most of them, however, well drained and kept clean, houses generally of stone, some of them well, but most of them indifferently built; lighted with gas, and supplied with water from wells. The places of worship comprise—six Episcopal churches, five Methodist, four Independent, two R. Catholic, one New Jerusalem, one Mormon and one Plymouth Brethren. The educational means include a national, two infant, a British and foreign, and several other schools, and a college. The only public building worth noting is the House of Assembly but it has little architectural merit. The Royal Square is an open flagged area, surrounded by the principal bank shops, newspaper office, reading-rooms, the courthouse and a large hotel. There are many factories of soap and candles and several foundries and breweries. Shipbuilding, also is carried on to a large extent. The harbour docks, and quays are spacious and commodious and a considerable shipping trade is done, chiefly with Newfoundland. The richness of the climate, and the cheapness of many of the luxuries of life, have induced a great number of persons of limited means to fix their residences at St. Helier. Pop. (1841) 23,968 (1851) 29,133.

HELIKOLAND [Danish, Heligoland—Holy Land] see Heligoland. It is a small island belonging to the British empire in the N. W. nearly equidistant from the mouths of the Elbe and Weser. Lat. 54° 11' 36" N. lon. 7° 53' 15" E. (N.) circumscribed about 2 m. area, 52 ft. m. Its surface is partly elevated and partly flat, and the sea is pressing so fast upon it, that it will probably at no distant period be reduced to a mere shoal or bank. Its rocks consist of reddish sandstone, which present a perpendicular face to the sea, and has a striking appearance. The interior is partly cultivated, and produces a little barley and oats. The town consists of about 400 houses, and, during the continental blockade by Napoleon, was a very stirring place, being the depot for the immense stores of British goods which were brought over and afterwards smuggled ashore. Since the peace, it has lost its importance. It is much resorted to for sea bathing. P 2809.

HELIOPOLIS, see Heliopolis.

HELL GATE, a pass in the strait called East River I. States, New York, between Great Barn and Long Islands, with a dangerous eddy which, however, can be passed at all times by steamers, and by the largest vessels at high water and with a fair wind.

 7 m. W by N Halifax, on the summit of a precipitous hill,
 houses all substantially built of stone. It has a church,
 Wesleyan, and Baptist chapels, and a free grammar-school.
 Hand-loom weaving is the main employment; the young work
 is in the neighbouring cotton and silk mills. Pop. 4177.

HEI WORTH, per Eng. Statist. 1872 no. Pop. 592.

HI RACIAE, a seaport in Asiatic Turkey. See ENKELI.

HERACLIA, a small vil. Greece, Archaipelago 5 m. S

Naxos, or Naxos about 4 miles square.

HERALTZ, (New) a market in Bohemia, circle, and
 80 m. S. Caslau, with two castles, a church, school, manufac-
 tures of lime, a potash works, blast field, and two mills.
 Pop. 966.

HERAT or **HERAT** formerly Heri (anc. *Aria*) a city
 Afghanistan 370 m. W by N Cabool and 265 m. N W Kar-
 fahar near the Heri, lat. 34° 22' N. lon. 69° 5' E. a beautiful
 and fertile valley or plain 30 m. long and 16 m. wide. It is
 of an oblong form, about 1600 yards in length and 1400 yards
 in breadth, enclosed by an artificial earthen mound surmounted
 by a lofty wall of m. burned brick, the former from 40 ft. to 60 ft.
 the latter from 25 ft. to 30 ft. in height. A broad, deep wet
 ditch surrounds the whole. At the W end of the town is a
 strong citadel also protected by a wet ditch. There are five
 gates, from four of which as many long bazars lead towards
 the centre of the town, where they terminate in a small square
 surrounded by a dome. Houses generally two stories high
 smaller streets covered over and low dark and moonoonably
 filthy. The principal mosque is a large building and was
 once magnificently adorned, but is now going rapidly to decay.
 The town contains altogether 1200 shops, 17 caravanserais,
 20 public baths, many public reservoirs for water and a
 great number of mosques. Herat has been long celebrated
 for its carpets, which are remarkable for their softness and
 for the brilliancy and permanency of their colours, but this
 manufacture has been for some time on the decline. The
 sword-blades made here are also much esteemed all over
 Persia. Belong to the great thoroughfare from India to the
 E. districts of Persia, the commerce of Herat is very con-
 siderable. It exports saffron and saffron, its two staple
 articles, pistachio nuts, mace, mace, gums, dyes and ear-
 ray-ways and imports shawls, indigo, sugar, olives, muslin,
 leather and skins most of which are re-exported to Mueh-
 tel, Kerman, and Isfahan, whence are received in return
 dollars, tea, china-ware, brood-cloth, copper, pepper and
 sugar-candy. Great quantities of lamb and sheep-skins are
 here made up into cloaks and caps, and sheepskins are carried
 on in a great extent, but not to an extent sufficient to meet
 the demands of the city and provinces, whole canal loads of
 skins being brought from Kandahar to make up the
 deficiency. Nearly the entire commerce of Herat, with the
 capital embarked in it, is in the hands of the Hindoos. The
 plain or valley in which the city stands, is described by
 Conolly as one beautiful extent of little fortified villages
 gardens, vineyards, and corn fields, brightened by many small
 Vol. I.

streams of shining water. It is carefully and simply irrigated
 by artificial canals, and in this mode to produce the most
 delicious fruits. The climate is on the whole healthy. The
 winters are cool the snowing for several days, but for two
 months in summer the heat is excessive. The numerous
 architectural remains scattered over the neighbourhood, afford
 evidence of Herat having been at one time, a much larger
 and more splendid city than it is now. Amongst these re-
 mains are the ruins of a Mosallah or place of worship, about
 a mile N from the city dedicated to the memory of the
 Imam Raza. A vast series of beautiful and costly buildings,
 finely sculptured, and otherwise embellished. Herat is rep-
 resented, by native writers as having been in its glory in the
 15th and 16th centuries. It was a long time capital of the
 empire founded by Tamerlane was taken from the Persians
 by the Afghans in 1715 retaken by Nadir-Shah, in 1781;
 and recovered by the Afghans, in 1793. The population of
 the city and territory is of a mixed character—Persian
 Afghan, Sanjak, Belooches, Mogul, Hindoo and a few Jews
 said to be 45 000.

HERAULT a dep. France, bounded, N and N E by
 Gard S E and S. Gulf of Lyons, S. W. Tarn and
 W. Aveyron. Lat. 43° 15' to 43° 57' N. lon. 2° 32' to
 4° 10' E. greatest length, N E to S W 55 m.; central
 breadth, 38 m. area, 3800 sq. m. It is of a very compact
 and somewhat oval shape. In the N W it is covered by the
 central chain of the Cevennes, whence the descent is rapid,
 and gives the whole department a strong S.E. inclination
 towards the coast, the greater part of which is a by a long
 succession of lagoons. The principal rivers are the Hérault,
 which traversing it N to S. divides it into two unequal parts
 and the Orb and Les which are both partly navigable. Water
 communication of a much more valuable nature than that of
 the rivers is furnished by the Canal du Midi which here has
 its terminus in the large lagoon of Thau, and completes the
 connection between the Mediterranean and the Atlantic.
 The climate was at one time regarded as so superior that the town
 of Montpellier situated within it, was a great resort of invalids
 from the N and particularly from Great Britain and though its
 reputation in this respect has considerably diminished
 it must still be admitted, that notwithstanding the sudden
 changes which alter the temperature often undergoes and the
 variety of winds of which, even at Montpellier, no fewer than
 14, of more or less intensity are counted, the interior of the
 department possesses a pure and healthy air and a generally
 cloudless sky. Unhealthy localities are only found along
 the coast where, owing to the number of lagoons and marshy
 flats, rheumatism and intermittent fevers are common. The
 quantity of waste land in the department amounts to con-
 siderably more than one-fifth of the whole surface. Of the
 remainder one-sixth is under the plough, one-eighth in vine-
 yards, and one-thirtieth in wood. The arable land is thus
 far below the proportion which is usual in the other depart-
 ments of France but the soil being generally of great fertility
 and tolerably well cultivated yields much more grain than
 the home consumption requires. The crops of wheat, rye,
 barley and oats, are very abundant. Permanent pastures are
 limited in extent but in several districts valuable artificial
 meadows have been formed, and valuable crops of the finer
 grasses, including clover, sainfoin, and lucerne, are obtained.
 Many of the wines produced, of which the annual average is
 695,570 pipes are of the first quality. The best of the red are
 St. George's, St. Chantal, and St. Drézéry of the white,
 Maradillon and Pinet; and of the Muscat or sweet wine,
 Frontignan Lunel, Marignan &c. The olive is partially
 and the mulberry very extensively cultivated. Aromatic,
 medicinal and dye plants are also raised on a large scale.
 Fruit, including almonds and chestnuts, is abundant and
 among forest trees, the oak, both of the common and ever-
 green species, holds a prominent place. The minerals include
 coal, which is worked to some extent, copper, of which there
 are several mines, slate, millstone, marble, and green-
 salt is chiefly obtained from the lagoons. Among the man-
 ufactures are woollen, silk, and cotton goods, gloves, hosiery,
 muslin chemical products, perfumes, essences, &c., and there
 are numerous dye-works, tanneries, paper-mills, and distilleries.
 An important general trade is carried on by means of the
 ports of Cette and Agde. For administrative purposes,
 Herault is divided into four arrondissements—Montpellier

the capital, Bédarr, Lodève, and St. Paul-de-Thiers— subdivided into 36 cantons, and 235 communes. Pop. 596,020.

HERAULT (anc. *Aroux*) a river, France, which rises in the Cévennes at the foot of the lofty mountains of Algepal and Lozeron dep. Gard, flows first E., then S., enters dep. Hérault traverses N to E., and passing the town of Bédarr, commences with the Canal du Midi, near where it enters the S.W. extremity of the lagoon of Thau, and shortly afterwards falls into the Mediterranean at Agde, after a course of about 90 m. of which 10 m. are navigable. Its principal affluents are the Ergue, Douzou, Payze, Tongue, Rester, and Dardailon. **HERFERNY** a vil. Blenach Prussia. gov. of, and 16 m. R. Münster with a parish church, manufacture of linen cloth, and wooden clogs; tile-works and limekilns. Pop. 1006

HERBERTINGEN a vil. W. Rhenish Prussia, circle Danneberg, 5 m. S.W. Ulm; with a large Protestant church and chapel. Pop. 1878

HERBREMONT a vil. and com. Belgium prov. Luxembourg, on the Semois, 73 m. W. Arlon; with extensive slate quarries, from which about 8,000,000 of slates are annually obtained. Pop. 1108

HERRIEUX (Lac) a la. France, dep. Yvelde, 24 m. N.E. Bourdon Val-de-Loire on the Maine. It is well built, and has some trade in country produce. Pop. 1300

HERRIGNAC, a la. France, dep. Loire Inférieure 40 m. W. N.W. Nantes. It has manufactures of earthenware, a trade in cattle, and an annual fair one of which is well frequented. None it is the imposing ruins of the old castle of Renetot, in good preservation. Pop. 514

HERBOLZHEIM a tn. Baden, circle Upper Rhine, on the Mosel, 17 m. N.W. Freiburg with a R. Catholic church, manufactures of linen and a trade in hemp and tobacco. Pop. 265

HERBORN a tn. Nassau rep. bal. of same name r bank 14 1/2 m. N. Weilburg. It is walled has two churches, an old castle a Calvinistic theological seminary with two professors, and superior schools, manufacture of woollen and linen cloth, leather, earthenware, tobacco, and tobacco pipes, red and white leather dye-works, Hessian, paper, walk bark, and other mills. Pop. 11,326. bal. 10,691

HERRENTON par Wales, Pembrok. Pop. 25; **HERRENTON** a vil. Wiltshire circle Just on the Brent, here crossed by a stone bridge 50 m. S.E.E. Marlborough with a church, the remains of an old monastery and a cotton m. l. Pop. 1594

HERBILFERN a vil. Rhenish Prussia r bank Unstrut, 15 m. N.E. Gotha with a church, castle, and hospital. Pop. 1440

HERBSTFEN a tn. Hesse-Darmstadt, Oberhessen, on the Vogelsberg 16 m. W. Falka with a R. Catholic church, two schools and an hospital, manufacture of linen and combs, a trade in linen and cattle and five annual fairs. Pop. 1616

HERK, two places Belgium—1. *de Vilt* a vil. and com. prov. Limbourg 7 m. W. Hasselt, on the Merck. It is an ancient place, and once possessed some importance, though now merely a village. It has a flour and two oil mills, and an annual fair. Pop. 2018—2. (*Herck-Lambert*) a vil. and com. prov. Limbourg at the confluence of the Monbek with the Merck, 3 m. S. Hasselt. It has two breweries, but the sheep employment is declining. Pop. 1155

HERCLANDRI M. or *Herclandri* (Italian, *Arcaudi*) an ancient city on the coast, and about 7 m. from the town of Naples, near the base of Mount Vesuvius. It was buried A.D. 9 by the same eruption of that volcano which buried Pompeii. In site was discovered, in 1712, by the sinking of a well and, by the extensive excavations which have since been made, several buildings, including a theatre and two temples, have been opened up, and many interesting antiquities obtained. Among the latter are an immense number of *Mosaics*, on rolls of papyrus. They are in a state resembling charcoal, dry and crumbling, and with the hues so strongly adhering to each other as to form almost a compact mass. Unfortunately the attempts at unrolling have had very partial success, and still more unfortunately the subjects, so far as ascertained, prove to be of very little interest, consisting only of battles, by obscure writers, an actual history of battles, etc. The collections obtained from Herclandri are principally deposited in the royal museum at Naples.

HERCULIAN FOREST See Hercul.

HERDECKE, a tn. Rhenish Prussia, gov. of, and 27 m. W. Arnsberg r bank Ruhr here navigable. It has three churches, important manufactures of woollen cloth and iron-ware, and a trade in corn and cattle. Pop. 1808

HEREFORD a co. in England, bounded N. by Shropshire, E. by co. Hereford and Gloucester, S. by Worcester, W. by Radnor and Brecknock; about 80 m. in length, S.E. to N.W. and 22 m. in breadth at the broadest part; area 863 sq. m., or 553,320 ac., of which nearly 500,000 are arable, meadow and pasture. The surface is beautifully diversified by hill and dale, the former commanding some of the finest views in England, noble and extensive woods and orchards, alternating with rich corn fields and verdant meadows. The county belongs wholly to the basin of Severn, towards which river it has a general slope N. to S., as indicated by the course of its rivers the Wye and its affluents the Lugg, Arrow, and Frome, and some smaller streams. The soil is in general fertile, particularly the alluvial lands upon the banks of the river, but the pastures are in many places indifferent, and the heathage poor. Wheat is the principal crop, but barley, hops, and turnips are also extensively cultivated. Orchards are numerous, and not confined to any particular districts. The quantity of cider made from their produce is very great and the quality excellent. The Herefordshire cattle are held in high estimation. They feed easily are quiet, tractable, work well, produce the finest beef, but are poor milkers. They are much employed in farm operations. The usual breed of sheep is a cross between the Leicester and the Ryeland, and the numbers are estimated at 200,000. Horses are bred in considerable numbers mostly agricultural and of indifferent quality excepting in the N. parts of the county where both riding and coach horses of a superior description are reared. Agriculture is, on the whole, in an improved and improving condition, although in many parts drainage is greatly neglected. The farms, which are held mostly from year to year are generally large, and the number of small ones decreasing. Oak timber is very abundant, and forms with oak bark, an important article of export. Iron ore has been found in the eastern bordering on Gloucestershire, but in unworkable condition. The climate is various, but in general remarkably salubrious. Some medicinal springs are met with on the Hereford side of the Malvern hills, and petrifying springs in the hilly parts of the county where the soil is calcareous. The manufactures are few and unimportant, consisting chiefly of some coarse woollens and gloves the latter manufactured in the city of Hereford and borough of Leominster. Herefordshire is divided into 11 hundreds, and 219 parishes. It returns seven members to Parliament, three for the county and two each for the city of Hereford and borough of Leominster. Registered electors for the county (1851) 6856. Pop. 167,396.

HEREFORD a city and par. bar. England, map. above on 1. bank Wye, 120 m. W. N.W. London. It is situated on slightly rising ground, in a fertile and well-cultivated valley nearly in the centre of the county. The principal streets are broad and straight, all macadamized and well lighted with gas houses mostly of brick, and the public buildings of stone. The most remarkable structure in the city is the cathedral, situated near the Wye built, or rather rebuilt, in the reign of William the Conqueror on the site of an earlier edifice. Its entire length is 885 ft. width 174 ft. None of the other parish churches require any special notice. There are places of worship for the principal denominations of Dissenters, and a handsome R. Catholic chapel. The only other public buildings of any consideration are, the college, a venerable, but gloomy building, adjoining the cathedral; the shire-hall, a large, well-proportioned, and commodious building; the county-hall, also a fine edifice the city prison, formerly one of the gateways of the ancient walls; the county jail built on Howard's plan in 1797 and a new theatre. There are a great many schools, of various descriptions, in the city including one for educating and clothing 60 boys and 50 girls; the free, or college grammar-school, a very ancient foundation, with many valuable scholarships; a liberal school, and Dean Lister's gift for educating the poor scholars of the free school of Hereford. There are several other schools, in which education is given gratis, and in some instances clothing besides. The charities unconnected with educational purposes are numerous, and comprise an infirmary, a lunatic hospital, asylum for lunatics, &c. The

manufatures, which are few and mostly inconsiderable, consist chiefly of hats, leather cardigans, coats and cutlery. There is also an extensive iron-foundry and a large ale and porter brewery. Gloves were formerly made to a considerable amount, but the trade has been for some time declining chiefly through the successful rivalry of Worcester. Oiled, galls, bone, oak bark, and wool are conveyed down the Wyre, to Bristol and other places. There are annual races held here in August, and a triennial musical festival in September which continues during three days. Eleanor Gwynn, better known as Nell Gwynn, the favourite mistress of Charles II., and founder of Chelsea hospital, and David Garrick, were natives of Herford. Pop. 12,108.

HERFORD (Lettia) par Eng Herford 8460 aa. Pop. 493

HEREGH a vil. Hungary. Hither Danes oo of and 21 m. E.S.E. Komorn with a Protestant and a R. Catholic church. Pop. 1301

HERENCIA a tn. Spain, New Castile prov. of, and 36 m. N.E. by N Ciudad Real near the confluence of the Valdepeño with the Gállego. It has level and paved streets, is tolerably well built, has four squares, a parish church, three chapels, a convent, a Latin and four primary schools, a storehouse, and confectionary manufactures of soap, chocolate, white wax, and coarse cloth, and a trade in its manufactures and in agricultural produce. Pop. 7151

HERENT a vil. and com. Belgium, prov. Brabant, on the Dyle and the Louvain canal 14 m. E.N.E. Brussels. It has a trade in agricultural produce and cattle. Pop. 3391

HERENTHALS a tn. and com. Belgium, prov. of, and 30 m. E. Antwerp, on the Lierre Nette. It is a very ancient place, and in the 14th and 16th centuries during the latter of which it was surrounded with walls, was considered the capital of the Campine. It has a church and a townhouse neither of them of much architectural merit, two chapels, an hospital and a prison, manufactures of woollen cloth, hats, and cordage, tanneries, breweries, dye-works, several mills, and a weekly market. Pop. 8307

HERFALLINGEN a vil. and com. Belgium, prov. Brabant, 18 m. S.W. Brussels. It has a brewery and four mills. Pop. (agricultural) 1746

HERFORD a tn. Rhineland Prussia, gov. of, and 16 m. S.W. Minden cap. circle of same name, at the confluence of the Aa and Bega with the Weser. It is walled has a R. Catholic and four Protestant churches, a synagogue, gymnasium, industrial and other schools, prison, workhouse, and the remains of a fine old abbey, a court of law and several public offices, manufactures of linen and cotton goods, leather basket-work, and tobacco, several oil mills, and a trade in corn, cattle, and yarn. Pop. 8,469.—The climate is hilly and only of moderate fertility. Area 128 geo. sq. m. Pop. 66,103

HERGNIES, a vil. France, dep. Nord 7 m. N. Valenciennes r bank Scheldt, with manufactures of woollen hosiery and brick works. Near it is a seam of coal. Pop. 1633

HERICOURT a tn. France, dep. Haute-Saône, 1 bank Lourenne, 30 m. E. Vesoul. It is irregularly but tolerably well built has a church, the choir of which is used by the R. Catholics, and the nave by the Protestants, an old castle, important manufactures of cotton prints, cotton hosiery, glass, and earthenware, several dye-works, brick-works, tanneries, and breweries, and monthly fairs, chiefly for cotton-twist and tissues. Pop. 3030

HERINGEN a tn. Prussia, prov. Saxony gov. of, and 51 m. W. Merseburg r bank Havel, with an old castle, a law court, a potash factory and a trade in fax and cattle. Pop. 2108

HERINTHIE, HOSSENROTH, or HOSSENROTH a vil. Hungary. Hither Thiele, on the Maros, in a plain, on the Nagyer about 25 m. from Segesvár, with a Greek church. Pop. 1423

HERIOT, par Scot. Edinburgh; 64 m. by 4 m. P. 852

HERISAU a tn. and par. Switzerland, com. of, and 5 m. N.W. Appenzel, cap. dist. Hinder-Aar-Sitter in the Aargau, beautifully and advantageously situated r bank Glatt, at the confluence of the Brühlbach. It consists of two principal squares and four streets with seven smaller ones opening into them; contains a large and handsome church, with an ascent tower; a new and elegant townhouse, a porch, a school and a school; and has extensive manufactures of wool, plain and embroidered, forming the staple of the

town, and of notions and silks, tanneries, dye-works, bleach-works, paper, wax, and other mills. The environs are laid out in beautiful walks and gardens, and two of the surrounding heights are crowned by the old castles of Rosenberg and Rosenberg. Pop. (1860) 8887

HERJEAN a river Sweden, rising in a mountain-range which separates the Ostermand from Falun flows first S.E. E., expanding into several lakes, then N. and joins the bank Ljungan, a little above Svog, after a course of 40 m.

HERJEADALEN a dist. Sweden, forming the S. part of the Ostermand, and named from the Herje, which writers

HERKIMER, a vil. and township, U. States, New York, 1 bank Mohawk with a courthouse, jail, two churches, and an academy several tanneries and mills. Pop. 2309

HERKINGEN an agricultural vil. Holland prov. S. Holland 15 m. S. Brille, with a church and school. P. 600.

HERLESHAUSEN a vil. Hesse-Cassel, Niederhessen circle Eschwege, with a church and the handsome palace of Augustus, a residence of the Landgrave a of Hesse-Philippsthal. Pop. 1049

HERM one of the smallest channel islands, 24 m. N.E. Guernsey possessing inexhaustible quarries of excellent granite. Pop. 83

HERMANNSTETZ, HERMAN MISTED, or HERMANSTADT a tn. Bohemia circle of, and 5 m. W. Chlum r bank Chrudimka, at the foot of a mountain-ridge. It is well built has two squares, a large and handsome parish church, three chapels, a synagogue, a castle, with garden and park, a scorehouse, larger hospital, poorhouse, and school, tile-works, stone quarries, and a large woollen mill. P. 2665

HERMANNSTADT (Latin Odenus, Hungarian Nagy-Szeben) a tn. Transylvania, cap. stuhl of same name and of Saxon-land on the Cibin, in an extensive valley bounded S. by the mountain chain of Fogaras, and on other sides by lofty and picturesque hills, 54 m. S.E. Klausenburg 1315 ft. above sea-level. It consists of a high and a low town and of three suburbs. The high town is surrounded by double walls, crinkled with towers and bastions, and enclosed by ditches, all in a very dilapidated state, but in the whole well built, consisting of several handsome squares and regularly paved and tolerably clean streets. A succession of steep stairs lead down to the lower town which presents a very disagreeable contrast, being both ill built, unpaved and filthy in the extreme. The principal buildings are the Protestant cathedral, a handsome Gothic structure, commenced in 1507 by King Ludwig and completed, in 1480 by Matthias Corvin, surrounded by a lofty tower and containing numerous interesting monuments; the R. Catholic high church, formerly belonging to the Jesuits, the new Reformed church, the Protestant gymnasium and connected with it, the Bruckenthal museum, with several good collections, and a library of 15,000 volumes; the townhouse, theatre barracks, house of correction and orphan, and two other hospitals. The manufactures consist of woollen and linen cloth, hats, bone-combs, of which about 750,000 are annually sold in Turkey and Wallachia, earthenware and tobacco-pipes, cordage, copperware, refined wax, leather, paper and gunpowder. The trade in these articles, as also the transit trade, chiefly to and from Constantinople are of great importance. Hermannstadt, as the capital of the Saxon land, is the place where the meeting of the states, called the National Universität, is held. It is also the seat of a military governor and of several important courts and public offices and has a physical society devoted chiefly to the geology of Transylvania. Pop. (1846) 21,500

—THE MOUNTAIN, a district on the frontiers of Wallachia, is hilly well wooded, and is watered by the Arus and its tributaries. It contains much good arable land, grows a large quantity of wine, but of indifferent quality, pastures great numbers of cattle, and yields honey and wax. The inhabitants, mostly Saxons, in addition to agriculture, carry on a considerable trade, particularly with Wallachia, the principal part to which over the Carpathians, by the Rothbarren, is in this stuhl. Area, 544 geo. sq. m. Pop. 70,008

HERMANOBER.—1 A group of small islands Caribbean Sea, belonging to Ymberu, 12 m. S.E. Blasquillo lat. 11 43° N.; lon. 84 29° W. (a).—2 Two small isles, Philippines, W coast of Luzon lat. 16 50° N.

HERMANSEIKEN HERMANSTADT, or HERMANSTADT, a vil. Bohemia, circle Badenow, in a narrow valley with a

church, manufacture of linen a large paper-mill and yarn bleachfield. Pop. 1904 1,000.

HERMANSTADT *See* **HERMANSTADT**.

HERNEKEIL, a vil. Rhoush Prussia, gov. of, and 12 m. S.E. Dörve, in the Hochwald; with a court of justice, a Catholic parish church, and a trade in cattle. Pop. 965.

HERNIEZ, a vil. France, dep. Puy-de-Dôme, 17 m. S.E. Arzac. Pop. 3377.

HERNIOGA (VALE DE), a vil. Canaries, Isl. Gomera, beautifully situated, with a lovely bay with a parish church, a primary school, a suppressed convent, several flour-mills, and a trade in wine, silk and fruit. Pop. 1637.

HERMINE (Str.), a vil. France, dep. Vendée, 14 m. N.W. Fontenay-le-Comte with manufacture of linen, a trade in cattle and two annual fairs. Pop. 1261.

HERMIT ISLAND a remarkable isl. S. Pacific, about 10 m. N.W. Cape Horn, the S. extremity of which forms the bold perpendicular promontory called Cape Spence; lat. (W. cape) 55° 50' S. lon. 67° 65' W. (s.) It is of irregular form, deeply indented by bays and coves, shores bold and steep, surmounted by conical peaks, the highest of which is 1742 ft. about sea-level. It is about 12 m. long E. to W. of plateau *crucis* *avulsi* greenstone, resting on a base of granite, with here and there some quartzites and felspathic rocks. The mountain peaks are of very compact greenstone, and highly magnetic, possessing the property of polarity in an extraordinary degree. The mountain themselves rise at once from the water's edge, clothed for half their elevation with a low deep-green forest, and crowned with rugged precipices and gray masses of rock, while flaming escarpments rush down every gully, the whole scenery according to Captain Ross, closely resembling that of many parts of the west of Scotland. The natives here do not exceed 5 ft. in height; they are in the most abject misery and wretchedness, wandering naked about the snow and living in wigwags, affording inadequate shelter from the inclemency of the weather. They are, however, peaceable and inoffensive, cheerful and good-natured, but indolent, leaving all drudgery to their wives. — *For. Adv. and Sample R. and J. and J.*

poorly built; has a church, and some trade in corn. Pop. 984.—3. (*Herresdel Druel*) a tn. Betermaiden, prov. of, and 70 m. E by N Radagou. It has clean wide, and well-paved streets; three squares, a parish church, chapel town and session house, a prison, school, storehouse, manufacture of coarse cloth and flises and a trade in grain, cattle, sheep and pigs. Near it are the ruins of a Roman castle. Pop. 2499.—4. (*Herresdel-Scho-Pinscop*) a tn. Old Castle, prov. Heland, on a height, above the Flaccop, here crossed by a handsome bridge of 18 arches 31 m. N.W. Bergens, with a church, townhouse, prison, several four-mills and a trade in corn. Near it is a magnificent ruin, supposed to be of Moorish construction. Pop. 744.—5. (*Herresdel-Valdecoen*) a tn. Old Castle prov. of, and 17 m. E.N.E. Palencia. It is irregularly built, but consists of houses generally of two stories has a parish church townhouse, and primary school; and a trade in agricultural produce. P. 661.

HERRIARD per Eug. Haute; 2069 ac. Pop. 515.

HERREDEEN a tn. Bavaria, circle Middle Franconia. 1. bank Altmühl, 29 m. W. S.W. Nürnberg. It is walled has a law court, a R. Catholic church, the handsome buildings of an old collegiate endowment, a wax refinery gypsum-kilns, and a trade in corn and cattle. Pop. 1889.

HERRIKIN, two places, Belgium.—1. A vil. and com. prov. Brabant, 16 m. S.W. Brussels. It has several corn-mills; but the chief employment is agriculture. Pop. 4348.—2. A vil. and com. prov. Heland; 1 bank Scheldt, 39 m. W. N.W. Maastricht. It has a brewery and two flour-mills and a trade in agricultural produce wool, and cattle. Pop. 3098.

HERRINGFLEET per Eug. Suffolk 1720 ac. P. 179.

HERRINGWELL, per Eug. Suffolk 3640 ac. P. 225.

HERRELEBERG a vil. and prov. Switzerland can Argen on a height above R. shore Lake Zürich, 7 m. S.E.E. Zürich with a number of good houses and villas, a handsome church and two schools. Near it excellent wine is grown. Pop. 1078.

HERRELSHEIM two places, France, dep. Haut-Rhin.—1. A tn. 4 m. S. Colmar on the Leuch. Pop. 2389.—2. A vil. and com. 12 m. N.E. Strasbourg 7 bank Rhine. Pop. 1269.

HERRHUT a tn. Saxony circle of, and 18 m. S.E. Ratisbon. It was founded by a colony of Moravians, driven from their homes in 1721-25 by the persecution of the Jesuits. They found an asylum with a Saxon nobleman, Count Ziesendorf, and, assuming the name of Herreshutten (The Lord's Watchmen) built the town of Herreshut which is now the seat of a bishop, and the central locality of the sect, which has spread itself far and wide and particularly distinguished itself by antiseptic exertions. The town is built with great regularity and distinguished by the order stillness, and cleanliness which prevail in it. It contains two meeting-houses, a large missionary establishment, a Bible society and several schools and has manufactures of linen, cotton, ribbons, sail-cloth, and a great number of minor articles in tin, leather, gold, and silver. Pop. 1200.

HERRSHEIM, a market tn. Hesse Darmstadt, Rheinhessen, near the Rhine, 55 m. S. Mainz, with a R. Catholic church, parsonage townhouse, school and castle. P. 1835.

HERNSTADT or WASCORA, a tn. Prussia, prov. Silesia, gov. of, and 34 m. N.W. Breslau, at the confluence of the Herla, here crossed by a bridge, with the Barisch, here crossed by three bridges. It has a court of law several public offices, a Protestant, and a R. Catholic parish church several schools, and an hospital manufacture of linen a beet-root sugar and numerous tobacco factories and mills, a trade in fax and cattle, and four annual fairs. Pop. 3381.

HERSBRUCK, a tn. Bavaria, circle Middle Franconia, 1 bank Pegnitz, here crossed by four bridges, 17 m. E.N.E. Nürnberg. It is walled, has a court of justice, two churches, an hospital and infirmary manufacture of leather tile-works, a trade in hops, and several mills. Pop. 3810.

HERSEBAUX, a vil. and com. Belgium, prov. W. Flanders on the Tourney and Courtray Railway 20 m. S. Bruges. It has manufactures of woolen and cotton stuffs, tobacco, potash, and oil; and a trade in grain and fax. Pop. 3179.

HERSEBELL a tn. Hesse-Cassel prov. of, and 10 m. N.W. Kassel, dep. circle of same name, at the confluence of the Haspe with the Fulda, here crossed by two bridges. It is walled, very irregularly built, has two churches, a town-

house, gymnasium, grammar and industrial schools, orphan and infirmary hospitals, extensive manufactures of woollen cloth, employing about 3000 hands; manufactures of mixed cotton goods, soap, red and white leather and numerous dyeworks and worsted mills. Pop. 5715. Area of estate, 164 geo. sq. m. Pop. 36 935.

HERSEBELT a vil. and com. Belgium, prov. of and 34 m. E.N.E. Antwerp on the Great Niche, at the confluence of the Hersebrook. It has several brick-works a distillery of gin and three mills. Pop. 4145.

HERSTAL, or HERSTAL, a tn. and com. Belgium, prov. of and 8 m. N.E. Liège 1. bank Meuse with a church, founded by Charlemagne, but rebuilt in 1777; a courthouse, of ancient date, restored in 1833 and manufactures of all kinds of iron and steel ware, including fire-arms, for the dealers of Liège a gun distillery a work for the extraction of pyrolysates and, a saw-mill, salt-refinery and two breweries. Coal is worked to some extent in the vicinity. Herstal was the residence of Pepin-le-Grand, at the beginning of the 8th century and of several of the French kings of the second race. Pop. 6053.

HERSTELLE a vil. Rhenish Prussia gov. of, and 39 m. S.E. Minden, 1 bank Weser over which there is a ferry. It has a church, and manufactures of soap and tobacco. Pop. 917.

HERVEN a vil. Rhenish Prussia, gov. Münster circle Recklinghausen with a church two mills and a trade in cattle. Pop. 973.

HERTFORD (contracted HERTS) an inland co. England bounded N by Cambridgeshire, E. Essex, S. Middlesex W. Buckingham and Bedford, about 88 m. in length S.W. to N.E. and about 20 m. in breadth area, 403,390 ac., of which about 300,000 are arable, meadow and pasture. The general aspect of the county is pleasing, being diversified by hill and valley. The highest elevations, which do not much exceed 900 ft., occur in the chalk hill ranges, in the N. part of the county. The abundance of growing wood adds much to the beauty of the scenery while the great number of gentlemen's seats, distributed over the country imparts to the whole an air of comfort and wealth that is very striking. The principal rivers are the Lea and Colne both of which have numerous tributaries. The climate is mild and healthy soil various but principally loam and clay and generally fertile; although there are several gravelly tracts in the centre of the county that are poor and unproductive. The largest portion of the county is under tillage. Wheat, barley and oats, form the principal crops. Turnips and artificial grasses are also cultivated to a great extent. The wheat and barley are of a superior description. In the S.W. parts of the county there are many cherry and apple orchards the produce of which is sent to the London market. Large quantities of hay of excellent quality are grown on the meadow lands. There are no breeds of cattle peculiar to the county now is the rearing of live stock an object of much regard, the land being chiefly arable. The sheep, mostly prepared for the butcher are principally of the South Down and Wiltshire kinds. There are few large estates in the county and the farms are, in general rather small. Leases are usually from 7 to 14 years. Rye, cotton, and black lace, were at one time manufactured to a considerable extent, but have now much declined. A considerable quantity of malt is made in various districts and straw-plaiting affords employment to a great many females. Ribbons are made at Tring Watford St. Albans &c. and paper is manufactured, on a large scale, and in the most approved manner near Rickmansworth and Watford. The Great Northern Railway traverses the centre of the county the London North-Western Railway and Grand Junction Canal pass through its W. borders and the Eastern Counties Railway along its E. limits. Hertfordshire contains 8 hundreds and 125 parishes. It returns 5 members to the House of Commons 3 for the county and 2 for the bor. of Hertford. Registered electors in 1861 5414. Pop. 167 298.

HERTFORD a pari bor. and market tn. England, dep. of above co., on the Lea, 19 m. N. London on a branch of the Eastern Counties Railway. It consists of three principal streets, meeting in the centre well paved, lighted with gas, and amply supplied with water from the Lea. It has two parish churches, several Dissenting places of worship, a free

grammar-school, for the education of women's sons; a fine coat school a branch of Christ's Hospital; a girl's charity school, an infant school, a green-coat charity school, and several others that afford gratuitous instruction six almshouses, and a number of minor charities. The principal public buildings besides the churches already mentioned are—the shirehall in the market-place, comprising the courts of law and a handsome assembly-room; the borough jail, county house of correction, and infirmary. On the site of an ancient castle, is a large handsome brick edifice, used as a preparatory school to the E. India Company's college at Haileybury about 2 m. from the town. There are three library and reading institutions. With exception of some pretty large breweries, and an extensive distillery there are no manufactures in the town. A very active general business, however is carried on. There is a good trade in coal and timber—a great deal is done in making and there are many corn-mills on the Lea, in the neighbourhood. In 1773 a national ecclesiastical council was held in Hertford and about A.D. 1005, Edward built the castle, and rebuilt the town. This castle was occupied by John of Gaunt, and by the queens of Henry IV. V. and VI. and Queen Elizabeth also resided in it occasionally. John II. king of France, and David king of Scotland were both in captivity here during the reign of Edward III. Pop. 6605.

HERTIN or **HERIA** a vil. Bohemia, circle Küniggrätz, on the Ritzka with a handsome church, a school and a mill Pop. 1568.

HERTINGFORD HT par Eng. Hertford 2586 ac.

Pop. 753

HERTOGENBOSCH (S) **BOSCH** or **DEN BOSCH** [Latin, *Arundinacea* or *Silvaceae* French, *Boule-Duc* German, *Herzogentusch*] a city Holland, cap. prov. N. Brabant 49 m. S.E. Amsterdam lat. [great circle] 51° 41' 18" N. lon. 5° 18' 45" E. (A.) It lies at the confluence of the Aa and the Demme which here form the *Dijnt* or *Jenne*, in a low marshy situation. The surrounding country and the lower parts of the city are flooded in winter and, even late in spring, a stream of water often runs through the principal streets. Still it is a lively pleasant place, and esteemed healthy for which last quality it is indebted to the constant supply of fresh water flowing through it. Hertogenbosch is fortified, has four gates, five large squares—in one of which named the Groote markt [great market] stands the elegant townhall and the watch-house. Other public buildings are—the government-house, the courthouse, prisons, barracks, granary &c. Of the churches, seven in number the Groote, or St. Jankerk [great, or St. John's church] is the finest in the city and one of the finest in Holland. It was built 1389–1512 is well preserved, though it suffered much in the sieges of 1601, 1603, and 1639 and was recovered in 1643. There are several benevolent, literary and scientific institutions and a Latin, and twenty other schools, some of them free. The harbour is merely a reach of the Dunes, lined with quays and warehouses, and is frequented by numerous vessels shipping and trade forming the main branches of occupation. There are also manufactures of cutlery yarn, ribbons yarn, hats brushes, &c. with breweries, tanneries, soap-works, and oil works, and saw mills. Hertogenbosch was founded in 1184, by Godfrey III., on the site of a hunting-seat of the Duke of Brabant. It witnessed Prince Maurice, who besieged it in 1601 and 1603 but was taken by Prince Frederic-Henry, after a memorable siege, in 1629 by the French in 1794, and by the Prussians in 1814. Pop. (1850) 21 782

HERTH a co. England. See HERTFORD.

HERTIGSDORF (Jes.) **MIRRA**, and **KUMER** three contiguous vils. Prussia, prov. Silesia, gov. of, and 50 m. N.W. Legnica. They contain a castle and a R. Catholic church and several mills. Pop. 1590.

HERTIGSWALDAU several places, Prussia, particularly—1 A vil. prov. Silesia, gov. Breslau, with a R. Catholic parish church and a mill. Pop. 1268.—2 Two nearly contiguous vils., prov. Silesia, gov. Legnica, circle Jauer with a Protestant and a R. Catholic church, and several mills. Pop. 1080.

HEYAE, a co. Spain, *Extremadura*, prov. of, and 75 m. N. E. Cáceres, indifferently built, with crooked, dark streets, two squares, a handsome church, surrounded by a square stone wall, a large town-house, prisons, hospital, storehouse, infirmary, and a delugated almshouse. It has

manufactures of linen, coarse cloth and wool and a trade in fruits wine, and pork sausages—immense quantities of which are made here. Pop. 3360

HERVE, a to. Belgium, prov. of and 10 m. E. Liège. It is well built, has two handsome churches, a college, several primary schools, and two almshouses; manufactures of shoes, woollen cloth and soap a salt-refinery a brewery brick works, tanneries, and a trade in excellent butter and cheese; which is sent to all parts of the kingdom. Pop. 3895.

HERVELD a vil. Holland prov. Gelderland, 5 m. W. Nijmegen, with two churches and a school. Near it tobacco is cultivated. Pop. 890.

HERWEN or **HERWEN** a vil. Holland, prov. Gelderland, 13 m. S.E. Arnhem with two churches, and a school. Pop. (agricultural) 654.

HERWIJNEN a vil. Holland, prov. Gelderland 18 m. W. Tiel with a church and school Pop. (agricultural) 1784.

HERXHEIM a vil. Bavaria, Palatinate, dist. and 6 m. S.E. Landau with a church and two mills. In 1793, a battle was fought here between the French and Austrians Pop. 8557 among whom are 140 Jews.

HERZBERG a to. Hanover prov. of, and 38 m. S.E.E. Hildesheim 1 bank Steier with a church and an old castle now converted into a courthouse manufactures of woollen and linen cloth firearms, paper saw and other mills. Pop. 3706.

HERZBERG a to. Prussia, prov. Saxony gov. of, and 69 m. N.E. Merseburg on the Black Elster with a court of justice, two churches, a courthouse manufactures of earthenware, and a trade in corn and cattle. Pop. 8277

HERZELLE, a vil. and com. Belgium prov. E. Flanders, on the Molenbeek, 18 m. S.E. Ghent, with manufactures of shoes, coats, wicker-work and articles of turnery a tannery two dye-works, and four mills. Pop. 1998

HERZOGOVINA or **HERZEG**, an island prov. Turkey-in-Europe, between lat. 42° 25' and 44° 5' N. lon. 16° 25' and 19° 17' E. bounded N.E. by Bosnia and Croatia, S.W. by Dalmatia, and S.E. by Dalmatia and Montenegro; length N.W. to S.E. 140 m. greatest breadth 50 m.; area, 7000 sq. m. It is generally mountainous being covered by a branch of the Dinaric Alps, and slopes to the Adriatic, to which, through the Neretva and its tributaries it sends its waters. Tobacco of excellent quality is produced hydnal or mead is extensively manufactured and is the favourite beverage of the inhabitants. The exports, which are unimportant, consist of hides, wool fruit wax, cattle and tallow. The province is divided into 13 prefecture or departments, and is governed by a viceroy. The principal towns are—Mostar the capital, Solakta, Trebinje, Dubrovnik, Nikush, Foyat and several others. Herzegovina fell into the hands of the Turks in 1483 Pop. 200 000.

HERZOGVINA a vil. Denmark Holsten. cap. lordship of same name, on the Rhm, 5 m. N.E. E. (Hilke) with a railway it comes to Elmhorn. It contains a parish church—The *Lordenur* forming two parishes, has an area of 8 800 sq. m. Pop. 1800

HERZOGENAUACH a to. Bavaria, circle Upper Franconia 11 bank Rhine 11 m. N.W. Nürnberg with a court of justice, church, chapel, cattle, and hospital many features of cloth, tile-works, two mills and four annual fairs. Hops and tobacco are extensively cultivated in the vicinity Pop. 1837

HERZOGENBURG or **HERZOGENBURG** [Latin *Ducum Burgen*] a market in Lower Austria, in a wide but marshy valley 1 bank Traun, here crossed by a bridge, 81 m. W. Vienna. It is walled has an Augustinian monastery a large structure in an unfinished state, with a handsome church adorned with numerous frescoes a library of 15,000 volumes, a picture-gallery, and museum. Pop. 1260.

HERZOGENBURG, a vil. and par. Switzerland, can. Bern in a beautiful and well-cultivated district, 18 m. E. S.E. Solothurn. From the number of Roman coins and other antiquities found in it, it is supposed to stand on ground which once formed a Roman camp. It is well built; has a church, on a gentle eminence; two schools, several charitable endowments, and a large corn magazine belonging to the canton; and a comfortable tenant farm. The churchyard was surrounded by strong and lofty walls, and formed a kind of fortress. Pop. 6008.

HERZOGSWALDAU (OBER, MITTEL, and NIEDER) three nearly contiguous villa Prussia, prov. Hesse, gov. of, and 17 m. N.W. Lügde. They contain a parish church, two castles, tile-works and several mills. Pop. 1753.

HESARAB, or AARAB, a *ca. Central Asia*, Khanat of, and 50 m. E.S.E. Khiva, on a canal of same name, near 1 bank Amoo-Darya. It stands on a height, is surrounded by a good earthen wall, and consists of about 600 houses, inhabited chiefly by Uzbeks and Sarts, who live by trade, and send caravans to Bokhara, Fergha, and Russia.

HESDIN, a fortified town, France, dep. Pas-de-Calais, 14 m. S.E. Montreuil in a picturesque and fertile valley near the Canche. It ranks as a *chef-lieu* of the third class, is well built of brick has a church, a handsome townhouse, manufactures of hosiery in thread and cotton earthenware, refined salt, and leather; breweries, brick, and tile-works, and three annual fairs one of which lasts 15 days. P. 3444.

HESKET is *St. Peter-Forster*, par. England Cumberland; 14,961 ac. Pop. 2051.

HESKET *Kawakawa*, a small compact market in England, on Cumberland, pleasantly situated on the Calder 11 m. S.W. Carlisle, with a Methodist chapel a Friends meeting-house, an inconsiderable weekly market, and several well attended cattle fairs.

HESKETH with *Bacombat*, par. England Lancashire 8483 ac. Pop. 693.

HESLINGTON par. Eng York (E. Riding) 6170 ac. Pop. 618 — *Hastington* (St. Paul) par. Eng York (E. Riding), 1187 ac. Pop. 25.

HESSE (German, *Hessen*) three independent sovereignties, W. Germany situated contiguously and in some measure intermingled with each other between lat. 49° 24' and 51° 38' N. and lon. 7° 53' and 10° 11' E. —

I. **HESSE-CASSSEL** (Electorate of) or **ELECTORAL HESSE** (German, *Kurfürstentum, or Hesse-Cassel*) a principality consisting of five distinct portions, of which four forming the county of Schaumburg, the lordship of Schmalkalden with Hainfeld, the old district of Kasselburg and the half-voivod of Hildesheim, are completely isolated. The far larger portion, forming the principality proper though of a very irregular and straggling shape, lies contiguous, and is bounded N. by Rhineland Prussia and Hanover E. by Prussia Saxony Hesse-Warmer and Bavaria S. by Bavaria, Hesse-Darmstadt and Frankfurt and W. by Nassau Hesse-Darmstadt and Waldeck areas, including the detached portions 2677 geo. sq. m. The greater part of this principality belongs to the central German plateau and has a very rugged surface, partly covered by branches of the Harz. These however nowhere attain a great elevation the culminating point not exceeding 3600 ft. The far greater part of the drainage is carried into the Weser, either directly or by its tributaries, Fulda, Unster, Werra, Gellert &c. but a small portion chiefly in the S. is carried to the Rhine by the Lahn, Ohm and Main.

The climate is severe, particularly in the higher districts where corn ceases to ripen. The best climate is on the Main where some wine of indifferent quality is grown. From the rugged nature of the soil the extent of arable land is limited, and cultivation is chiefly confined to the narrow valleys and lower hill slopes amounting however to about two-fifths of the whole surface. The system of agriculture is very imperfect and the soil poor with exception of a rich tract in the province of Hanau but still the amount of grain raised is fully equal to the home consumption. The principal crops are rye, barley and oats. Potatoes also are extensively grown, and form the chief dependence of the lower classes. Fruit is tolerably abundant and a great part of the loftier districts is covered with extensive forests which employ a considerable number of the inhabitants, and furnish one of the most valuable sources of revenue. The minerals include gold, silver in connection with copper, lead, iron, cobalt, salt, alum, porcelain earth, common coal, and lignite. Of the metals the only one from which profitable returns are obtained is iron and the coal though said to be abundant, is very partially worked. The manufactures consist chiefly of woolen, cotton, and linen. The last was long famous, and in many districts formed the principal occupation; but English competition has almost driven it from the foreign market. The central position which the principality occupies between N. and S. Germany secures to it a considerable transit trade;

The navigable rivers afford extensive facilities to this trade, and to these have recently been added the benefits of railway communication. Lines which cross at Cassel and lead N. to Hanover W. to Cologne, E. to Frankfurt, and E. to Leipzig, being either completed or in course of construction. The principal towns are Cassel the capital; Hanau, and Fulda. Hesse-Cassel ranks as the eighth state of the Germanic confederation, and has three votes in the *plenum*. Its constitution is a monarchy subject to certain modifications but the extent of these is either not properly understood or not fully ascertained, and hence quarrels between the Elector and his subjects have recently endangered the peace of Europe. Administratively the principality is divided into the four provinces of Niederhessen, Oberhessen, Fulda, and Hanau, subdivided into bailiwicks. About four-fifths of the inhabitants are Protestants. Pop. 746,703.

II. **HESSE-DARMSTADT** (GRAND DUCHY OF) (German *Hessen- oder Hesse-Darmstadt*) an independent state, consisting of five distinct portions. Three of these, forming the districts of Viel Wimpfen, and Kinnthal, all of limited extent, are wholly isolated and enclosed by other states. The other two portions, forming about nine-tenths of the whole, are separated from each other by a belt of land stretching E. to W. and including part of Hesse-Cassel and the whole territory of Frankfurt. The more S. of these portions forms the two provinces of Rheinhessen and Starkenburg and is bounded N. by Hesse-Cassel Frankfurt, and Nassau W. and S.W. Rhineland Prussia, and Rheinhessen S. Baden and E. Lower Bavaria. The portions forming the single province of Oberhessen, is bounded W. by Rhineland Prussia and Nassau, and enclosed on its other three sides by Hesse-Cassel area of whole grand duchy 2448 geo. sq. m. Oberhessen is generally mountainous, being covered in the W. by the Taunus, which in Hainburg rises to 1755 ft. in the N. by the Rodaargebirg which in Hainfeld attains 2730 ft. and in the E. by the Vogelsberg whose culminating point here is 3104 ft. The provinces Starkenburg and Rheinhessen are also mountainous towards their frontiers more especially in the S.E. occupied by a portion of the Odenwald, and in the S.W. by the Donnersberg, a few eminences of the Vogelsberg, but these mountains, rapidly subsiding in the interior form extensive plains belonging to the valleys of the Main and the Rhine. To the latter river the whole surface of the Grand duchy belongs, with exception of a small portion in the N. drained by the Lahn and Fulda, affluents of the Weser. The climate is greatly diversified being cold and bleak in the mountainous districts, and mild and pleasant in the valleys of the Rhine and the Main. Here, however, the only unhealthy districts are found among the extensive marshes which the Rhine has formed. The soil particularly in provinces Starkenburg and Rheinhessen is remarkably fertile, and corn of all kinds is raised in quantities sufficient to leave a large surplus for export. Hemp, flax, potatoes, and rapeseed, are also extensively grown and in particular districts tobacco and hops. The vine forms a most important object of culture, and fruit is very abundant. The right bank of the Rhine is densely but the left bank poorly wooded, and though the extent of ground occupied by forests is nearly equal to that occupied by arable land, yet the timber is reported scarce, cattle, sheep, and swine, are very numerous but a surplus of bread is not sufficiently attended to. The minerals include iron, coal, lignite and salt and there are good quarries of sandstone, limestone, whetstones, basalt, and roofing slate. Agriculture and the rearing of cattle forming the principal employments leave little room for extensive manufactures.

In some districts, however they have made considerable progress. The most important is linen. The transit trade is very considerable and has lately received the benefit of a railway which ensuring the grand duchy on the frontier of Baden, traverses it centrally from S. to N. passing through Frankfurt. The principal towns are Darmstadt the capital, Mainz, Gießen, Bingen, and Worms. Hesse-Darmstadt ranks as the ninth state of the Germanic confederation and has one full vote in the minor diet, and 3 votes in the *plenum*. Its constitution is a hereditary monarchy which was almost unlimited till 1830, when it was modified by the introduction of two chambers—an upper, composed chiefly of nobility and citizens, appointed for life by the grand duke, and a lower composed chiefly of deputies from the principal towns. About two-thirds of the inhabitants are Protestants. Pop. 834,711.

HIL. HANNA-HOMBERG (German, *Hanna-Homburg*) a head-
quarters, W. Germany forming a member of the Germanic
Confederation and consisting of two separate territories placed
at a considerable distance from each other.—Homburg proper,
about 10 m. N. W. Frankfurt, and bounded N., W., and S. by
Naumb., and N.E. and E. by Hesse-Darmstadt, and Meissen-
berg, about 30 m. S.W. Mainz, bounded, N. by Rhinisch-Prussia,
from which it is separated by the Nahe N. W. by Rhenishfeld,
an isolated territory of Oldenburg S.W. and S., Rhinisch
Prussia and S.E. and E., Rhinisch-Bavaria; area, 80 sq. m.,
of which, 24.63 sq. m. is belong to Homburg and 55.36
sq. m. to Meissenberg. Both territories are mountainous
—Homburg lying on the E. slope of the Taunus and Meissen-
berg, being partly covered by hills of considerable height;
but both are well cultivated. Meissenberg, in particular
has a mild climate in the S.E. where the vine is extensively
cultivated. The agricultural produce exceeds the home con-
sumption, the forests abound with excellent timber and the
minerals include both iron and coal. Hesse-Homburg, as a
member of the Germanic Confederation, shares the 16th vote
in the main diet with Hildesheim, Waldeck-Rhoda (both
branches) Lippe-Detmold and Lippe, and furnishes a
contingent of 200 men. Its constitution is monarchical, with
few constitutional checks. A considerable portion of its
revenue is derived from the gaming-table. Pop. 24,303.

Pop. 4432

HEVES, a market in Hungary Thaur Thaur, co. of
same name, 65 m. E.E.E. Pesth. It was once fortified, has
a parish church a castle, with fine gardens and riding-school,
and a trade in corn, cattle, tobacco, and wine. Pop. 5669.

The country in the N., is mountainous and well wooded, but
elsewhere slopes down into an extensive plain, much of which
is covered with meadows. It belongs entirely to the basin
of the Thaur, which traverses it in a S.E. W. direction. The
soil is fertile, producing large crops of wheat, the best in
Hungary, the kingdom, a little wine, fruit of all kinds, and
particularly melons of excellent quality. On the pasture,
which are both rich and extensive, great numbers of cattle
are fed. Fish, especially sturgeon, are taken in great num-
bers in the Thaur. The principal minerals are lime, marble,
and slate. The inhabitants are chiefly Hungarians, with a
small mixture of Germans and Slovaks. For administrative
purposes, the county is divided into four districts—Gyngyly,

Town, Thales and Metra. Edeas inconveniently situated on the N.E. extremity of the county is the capital. Area, 1922 sq. m. Pop. 295,570.

HEWORTH (Hunxar) a chapelry England co Durham par Jarrow 2½ m. S.E. E. Gatehead a station on the Harrington Junction Railway with an Episcopal and various Dissenting chapels, extensive chemical works and manufactures of bottles, earthenware and brown paper and shipbuilding. Pop. 6888.

HEXHAM a market town and par England co Northumberland. The town is situated on r bank Tyne, about 1 m below the junction of the N and S branches of that river which, about ½ m from Hexham is crossed by a handsome stone bridge, 20 m. W Newcastle on the railway thence to Carlisle. It has some tolerably wide streets the greater number however are very narrow only partially paved, but well lighted with gas. The market-place is a spacious, well paved square, and contains the market-house an ancient stone building with a dail in front, formerly used as the court-house of the bishops and priors of Hexham. The abbey or priory church of Hexham is a cruciform structure of mixed Norman and Gothic architecture, with the remains of the monastic buildings at its W end and there are also several Dissenting places of worship, a free grammar-school and several day schools a mechanics institute, a dispensary and a number of small churches. Woollen yarn spinning, hat making, tanning, leather-dressing and glove-making are carried on here to a considerable extent. Market day, Tuesday and frequent and extensive cattle-markets. Hexham is supposed to have been Aelodunum. In the 7th century a monastery was founded here by St. Wilfrid and a bishop is seen afterwards established. The diocese was subsequently united to Lindisfarne. The town and part of the church were burnt by the Scotch in the time of Edward I. On March 8 1761 a formidable riot arose from an attempt to ballot for a succession of men for the militia, after the term of three years prescribed by law had been served when 45 persons were killed and 300 severely wounded by the fire of a military P. in 4501 Area of par 3797 ac. 1 6537

HILZINGEN a vil Baden, Lake ehrs 8 m. N. F. Schaffhausen, with a church a castle, two mills and a market for corn and fruit. Pop. 1009.

HIMALAYA a chain of as many mountains the most elevated on the earth which encloses the Indian peninsula on the N and separates it effectually from N. Asia. These mountains are regarded, by some as parts of a great mountain chain which runs across the entire continent of Asia, from the Taurus to the E.E. coast of China, but this attempt to view him the geological unity of successive mountain ranges throughout thousands of miles, rests wholly on hypothesis only a few small portions of the great range in question having been geologically examined and much of it (the Chinese portion) being almost wholly unknown. The mountain range known as the Hindoo Koosh, W. of the Himalaya, might indeed be fairly considered as a continuation of the same chain. But, even here, broad distinctions present themselves as soon as we compare the neighbouring ranges, with respect to their physical character and extent. Then, for instance, the Hin loo Koosh forms the N. of the Himalaya, the E. edge of a great tableland. It seems inadvisable, therefore, to class, in this instance, within the limits prescribed by ordinary language, and to consider as the Himalaya only that chain of mountain peaks which forms the N. boundary of Hindoostan, between the Indus on the W. and the Brahmaputra on the E. Both these great rivers have their sources on the snowy of Kailash, a group of mountains rising above the high plains of Tibet,

In the rear of the Himalaya; but they flow in opposite directions, taking courses, however nearly parallel to, and equidistant from, the snowy chain on the S. The Indus runs at first to the N.W. about 100 m. distant from the Himalaya which it cuts through in lat. 34° 30' N lon. 75° 40' E. and thence descends S. to the Indian Ocean. The Brahmaputra, on the other hand flows from the Kailash to the S.E. and E. till, turning suddenly S. it rushes through the mountain chain, in lat. 27° 45' N lon. 95° E. and thence, by a descent but rapid course, reaches the Bay of Bengal. Thus the same rivers which mark out the limits of the Himalaya, properly so called, serve also to complete the boundaries of the peninsula of Hindoostan. Thus defined as to limits, the Himalaya has a length of 2008 m. with an average breadth of 180 m. and the extent of its perpetual snows and glaciers might doubtless bear comparison with the area of many flourishing kingdoms. Its direction beginning at the Indus, is from N.W. to S.E. for about a third of its whole length at then curves gradually to the E. which direction it retains during its last third.

Name.—The name Himalaya is a Sanscrit term of great antiquity signifying the abode of snow. The abridged form Himadri is also met with. From the adjective Himavate changed analogically into the proper Himadri, the Greeks and Romans formed their Himodra himodra, and Jurast. Ptolemy observes of this last name, that it means snowy. The Himavata or snowy region is already mentioned, in the Laws of Manu (probably 1500 B.C.) as the N. boundary of India.

Aspect.—The great plain of India, E. of the Himalaya, has a general elevation of 1000 ft. above the sea. Some points of it may attain double this height, while others (towards the E.) sink to an elevation of 300 ft. but these variations are few and have no perceptible effect on the prevailing uniform character of the plain along which the commencement of the mountain region is everywhere marked in the most distinct manner. The ground sinks gradually for a short distance, towards the foot of the Himalaya, the marshy hollow being covered with thick jungle (properly jungles or forests) frequented by elephants, and the chief houses of the villages of hills immediately behind this low elevation, and does not conceal the lofty summits in the rear of which it is said that there are generally three ranges distinguishable rising successively one above the other. Lastly in the remote distance is seen a continuous range covered with snow towering high above the rest and reaching in some points, such an immense height as to be visible from a distance of 200 m. or more. If the higher regions however be explored it is found that there is not, in reality any unbroken ridge or continuous chain of heights covered with snow but that numerous summits, at very different distances being projected on the same level in the field of view coalesce in vision owing to their uniform whiteness, and present the appearance of one wall of snow. As the eye surveying the Himalaya from the plains at its foot, ranges at once over an immense region of most varied character and climate, till it rests at last on those icy heights, which, though so conspicuous, yet lie perceptibly beyond the ordinary reach of vision the scene is one of the most impressive imaginable but if the heights beyond be ascended, the first impressions of novelty and grandeur give way to others of a more solemn kind, till at last the boundless extent of the snowy tracts, with their perfect silence and desolation, while the lively landscape below fades away in the distance, inspires feelings of awe and melancholy.

Transverse Section.—It will conduce much to a just conception of the general form and structure of these mountains, to study carefully a complete section of them from the plains of India on the one side to the high land of Tibet on the other. Towards the foot of the mountain the plain, 1000 ft. above the sea, declines N. forming a marshy hollow which, lying as jungle or waste, is remarkable only for its extreme sterility, and for the number of wild beasts which it harbours. This tract is called the Tharai or Tharapad, that is the passage through and its outer margin, when it happens to be irrigable and fertile, is entitled Kadir. Behind the Tharai rises the secondary chain of hills gradually to a height of about 3000 ft. above the external plain, but not more than 500 ft. above the longitudinal valley within. The secondary ridge is sometimes covered and totally concealed, by numerous fragments of other kinds of rock. The dry,

sunny slope between this ridge and the Tarra is known as the Bhader and is covered with forests of immense timber in which the sand or sals (*Shorea robusta*) and teak (*Tectona grandis*) predominate. The longitudinal valleys in the interior are called *dhads* in their jungle and dense forests, frequented by elephants, and in their pestiferous atmosphere, they resemble the tracts immediately below them. Such is the lower region of the Himalaya which may be considered as extending on the N side of the Dhdna, up to an elevation of 4000 ft. above the sea. Thence, to the height of 10 000 ft. may be marked out as the middle region. The upper region of the Himalaya, comprising the snow fields terminates above at the ridge of the Ghat or Fades at a general elevation of 16 000 or on some think, of 18 000 ft. The great overwhelming summits of the range are here left out of view in order that the characteristic general features may more easily engross attention; it will suffice for the present, therefore, to remark, that the general height of the Himalaya is double that of the Alps, that the passes over the former ordinarily exceed, often by half a mile the elevation of Mont Blanc (15 782 ft.) the highest point in Europe, the Karakoram pass being 18 600 ft. the Pamgala 18 600 ft. the Koolbong 16 212 ft., and the Doon Ghat 17 750 ft. high and finally that there are several summits in the Himalaya which approach closely to double the absolute elevation of the greatest of the Alps and forty of these are stated to be above 20 000 ft. It may also be remarked that the highest points, which tower far above the line of perpetual snow are not generally situated in a line with the peaks, but rather in advance of them and that, in the opinion of recent travellers the ridge on the r or N bank of the Arin which flows W behind the Ghat of Sikkin and Nepal, all it descends through the latter country to join the Kosi is still more elevated than that which we have described.

Divisions.—For all the purposes of a general, comprehensive survey of the Himalaya, it will be sufficient to view it only under the eight following divisions which may be easily retained—

1. The rivers of the Punjab (five waters) spring from a portion of the great chain which portion may be conveniently constituted a distinct group under the title of the W Himalaya, but which may also be subdivided into three parts, the first and last of five rivers being separated from the other three. The most N. river of India is the celebrated Cashmere, which is the upper valley of the Jallum Saragar the capital (in lat. 34° N) stands at an elevation of only 6000 ft. above the sea but the valley is surrounded by perpetual snows. It must, however be observed that, W of Cashmere between it and the Indus, there lies a small portion of the Himalaya, not presenting any remarkable features nor considered as appertaining to India, but inhabited by the Dards or Dardis, a people connected probably by race, with the mountaineers of the Hindoo Koshi.

2. The Chenab, the Raver, and the Bejah or Byas, the three middle rivers of the Punjab, all rise in the snowy summits of the Pariyat which border Ladakh, and descend through Lahoul and Kishtwar to the plains.

3. The fifth and most E. of the Punjab rivers is the Sutlej or Sathra (literally hundred rumble). This great river springs from the S.W. foot of Kalika, which sends, from its N.W. and S.E. extremities respectively the Indus and Brahmaputra. Also after flowing some distance N.W. parallel to the Himalaya, it turns S.W. and runs through this chain descending successively through the three separate valleys of Kinewar, Buzahar and Balaspor. Thus the easternmost river of the Punjab leads us to the middle of the Himalaya, where, between the range of Kalika in the rear (21 000 ft.) and the widely-spread snows of Jawahir or Yanda Devi in front (25 600 ft.) lies, at a height of nearly 15 000 ft. the sacred lake of Manasarovar. This portion of the snowy range, including the sources of the Ganges and Jumna, is regarded by the Hindus with peculiar veneration, and has ever, on every account, to be grouped apart as the central Himalaya. The W. commencement of this division of the chain may be placed in lat. 78° E. though, behind the mountains, the Sutlej reaches further E.

4. Jummotri the triple-peaked mountain 25 749 ft. high at the foot of which the Jumna takes its rise is regarded by the Hindus as holy ground. Numerous warm springs, here

ing in some instances, from beneath the snow add to the sanctity of the place. This river before entering the plains, waters the fertile valley of Surmor. From the sources of the Jumna, the mountains E. rise gradually till they attain a height of 22 000 ft. Here, under the Ranopaputra or five mountains, rise the streams which unite to form the Ganges. The most celebrated and sacred of these sources is the Gangavari or Gangootri about 15 000 ft. above the sea, in lat. 31° N. The valley of the upper Ganges is named Garhwal and is a together a land of narrow defiles and hill forts to the S and E. lies Kumaon separated from the higher land of Garhwal by the river I. In the lofty mountains S.E. of Nanda Devi, the sources of the Gogra, more anciently named the Sarayu the alpine land which it visits in its downward course is not known by any collective name but is usually described as the 22 principalities. Here we have reached the highest part of the Himalaya, as far as it is known and measured. The Dhawalagiri (lon. 83° E.) the Goomthan (lon. 86°) a raneless summit about 40 m. E. of the preceding and Kangchung or Kura-ho-jung (lon. 88° 13') are all said to be of nearly equal heights and to exceed 28 000 ft. the last which is the highest having an absolute elevation of 28 178 ft. or 53 m.

5. The tract about 850 m. in length, comprised within the extreme limits above mentioned, is partitioned nearly in the middle, by a lofty ridge, projecting S.W. from the Goomthan all the mountain streams W of the last-named height, or between it and the Dhawalagiri, are collected, within the mountains into the Gandak and hence they are called the Sept-Gandaki or the seven Gandaks.

6. Is the I. division between the Goomthan and the K. the Ganges the rivers all unite to form it the Kosi or Kosee their collective name, therefore is the Sept-Kosha. One of these, the second from the E. and properly named the Arun rises in the table-land of Kanglung and flows from E. to W at a little distance from the snowy ridge of the Himalaya, is said to divide thus from a still more elevated ridge to the N. The valleys of the Sept-Gandaki and Sept-Kosha, were formerly known as the 24 principalities but the Goorkhas the possessors of one of these independent hill states, gradually extended their sway over the whole and he c. formed them into a powerful kingdom under the name of Nepal.

7. An arm of the Kat ghor, called the S. separates Nepal on the W. from the valley of the Teesta or Teesta, on the E. This comparatively narrow but interesting territory, walled in on three sides by stupendous mountains, from 17 000 to 28 000 ft. high, forms the independent state of Sikkin. And here terminates the region of the middle Himalaya all the streams from which, from the Jumna in the W. to the Teesta in the E. unite in the Ganges.

8. The E. Himalaya which extends from Sikkin E. to the Brahmaputra, and completes the chain, sends all its waters to the last-named river and is all comprised in the country named Bhotan or Butan with which Europeans are as yet, but little acquainted. A little to the E. of the Sikkin Himalaya, the Chamarai is seen to attain the height of 23 380 ft. About 250 m. further E. (in lon. 92° 50') a conspicuous group has been observed with two peaks, named the Gomm or Twins 21 600 ft. high. Thence towards the E. the mountains sink rapidly and may be said to disappear altogether on the r. bank of the Brahmaputra. E. of this river the snowy heights pass over.

Geology.—Wherever the geology of the Himalaya has been examined from Cashmere in the N.W. to Sikkin in the S.E. the same rocks in the same relations, and with great uniformity of character have been found throughout. The connected results of the observations in this department—made, indeed only at a few points of a vast region the complete examination of which is physically impossible—must here serve as a general outline of the geological constitution of the whole. It appears that the snowy ridge, with all its towering summits—the Himalaya proper in short—is everywhere formed of granite, the rock which has elevated or upheaved the rest, and with which are immediately associated gneiss, and lower down mica slate. These are followed in the ordinary succession by metamorphic and secondary rocks, till we arrive at the diluvial formations, and the more recent alluvial deposits. This descending series is found as here indicated, on the S. side of the Himalaya, from the granite protruding through the par

perpetual snow, to the summits of the Sivdih hills, and the plateau of the plains. But it must be remembered, that the mass forms which thrust forward the granite ridge, raised up also the table land of Tibet, where consequently the same series of rocks is found at very different elevations. Near the *Spiti* (see 78 807) at a height of 15,000 ft. is found a soft limestone, consisting almost wholly of shells, with various fossils, such as *Nautilus*, and is found on the N. side at a height of 5,000 ft. Tertiary deposits, of immense depth and extent, occur on the table land of Tibet as well as on the plains of India. The inclination of the strata is said to be generally N. E. or S. W. but this probably applies only to that part of the range, the axis of which lies N. W. and S. E. Limestone deposits are of frequent occurrence and it has been even assumed that indubitable traces of the former presence of the sea may be found at a great elevation. Fossil remains of the largest extinct mammalia be in being at the foot of the mountain range (the Sivdih hills) which borders the plains and it is reported that similar bones, prized for their colonial uses, are sometimes brought from Tibet by native traders. It is manifest that the stratified rocks and sedimentary deposits of the Himalaya, were all formed previous to the convulsions which have set them in their present position that is to say the bursting forth of the granites, and the upheaving of the Himalaya, therefore—the loftiest and in all respects, most stupendous chain of mountains on the earth—took place at a later period than that of the tertiary formations and, therefore, may be reckoned as one of the most recent of these convulsions which have given the earth its present form and aspect. Earthquakes are still frequent within this region, and hot springs gush forth in abundance, even from beneath the snow.

Climate.—The S. face of the Himalaya presents every variety of climate that can be found between the tropics and the poles. While the S. W. monsoon prevails (from May to September) the snows rapidly diminish and have reached their highest limit in 10 or 12 days in mid. when the rains are at an end. At the same time snow begins to fall, but melts immediately in the middle Himalaya, up to a height of 15,000 ft. Further W., where the atmosphere is drier the snow at the same time does not lie lower than 17,000 ft. In Tibet, N. to Kang Lak (the ridge behind the Ardi) snow often falls in August, but melts to a height of 19,000 ft. It is remarkable that the snows desert lowest in the E. part of the Himalaya which reaches, nevertheless 8° further S. than the W. extremity of the chain the obvious reason is, that the snows, as well as rains, are more abundant towards the E. whereas, at the W. end of the Himalaya, the climate is dry to excess, and most of the rivers cease to flow during the summer. The average annual fall of rain at the equator is about 60 inches in W. India, about 10 inches less in the W. Himalaya, probably not half so much. At Darjiling, in Sikkim it amounts to 120 inches. But at Cherra, in the Khasia mountains, 8, at Bochar, no less than 530 inches have fallen in one year and 120 inches in the single month of July! In Jan. 78° at an elevation of 2000 ft. the thermometer varies throughout the year from 100° to 3° at the height of 600 ft. its range is from 80° to 26° and at 12,000 ft. the nocturnal temperature begins in September to fall below zero.

Snow and Glacier Limits.—Recent investigations have led, in general, the effect of raising the estimated level of perpetual snow in the Himalaya, and of explaining the apparent irregularity of that line. The limit of perpetual snow in the middle division (see 78° E.), is now stated to be at the height of about 15,500 ft., on the S. side and 15,500 ft. on the N. side of the ridge. But towards the E., in Sikkim the snow line descends on the S. face of the S. ranges to 14,500 ft. while further N. in the interior it rises to a level of 19,600 ft. Were it possible, in every case, to ascertain the exact height of the snow line on the whole contour of the mountain it is probable that the bearing of its greatest elevations would be found to vary according to local circumstances of exposure, between N. W. and N. E. At all events, it is now certain that the apparent anomalies in the height of the snow line depend much less on conditions of radiation and evaporation than on the more or less abundant supply of snow and the direction whence it comes. The existence of real glaciers of smooth ice in the Himalaya, long doubted, is also now fully established. The Himalayan glaciers are in truth, numerous,

and descend from the limits of perpetual snow to a height of 11,500 ft.

Vegetation.—In the lower region of the Himalaya, up to 4000 ft. we find, with little modification, the vigorous vegetation of the plains. The forests of the Ilavari and the Dhimu, consist chiefly of the largest timber trees, the *sal* and *teak*, with the bamboo or cotton-tree, *fig-tree* (*Ficus Indica*) and *Relbunium* and *Acacia*. Here also the palm (*Phoenix*) associated with the pine (*Pinus longifolia*) forms a forest of stately growth mix with European species. The bamboo is common, the passing or plantain grove wild and rice is cultivated in the valleys. This crop is sometimes succeeded the same year by wheat, which, with barley grows abundantly higher up. At the height of 7000 ft., the woods consist of oak maple elm chestnut, magnolia, laurel, tree rhododendron, &c. and the fruits now cultivated in most parts of Europe here grow wild. Maize and millet are the chief summer crops at this height wheat and barley are reaped early in the spring. As we ascend the pine trees of various species grow more numerous. Walnut, willow, birch, and juniper with many species of dwarf rhododendron, now appear to advantage at length the pine ceases at about 11,500 ft. the juniper ascends perhaps 1000 ft. higher and the rhododendron ceases capable of advancing still further. These estimations of height all refer to the S. side of the range on the N. the juniper thrives to a height of 14,400 ft. the rhododendron and lancera to 17,000 ft. and humbler vegetation reaches even to 19,000 ft. Cultivation ceases on the S. side, at an elevation little exceeding 10,000 ft., while on the N. side of the range and truck wheat are gathered at the height of 13,500 ft. Tropical forms sometimes make their way up the mountain much higher than might be expected and bamboo are sometimes met with at heights of 8000 or 9000 ft. This phenomenon is particularly striking in Sikkim where the humidity of the atmosphere is favourable to tropical vegetation. But at 10,000 ft. all the species are new and, on the table land, most of them disappear all together owing to the dryness of the air. Yet it was here at a height of 19,000 ft., that Dr J. D. Hooker discovered the *Lamprolaima* which is a higher consequence from its bright orange colour which he had previously discovered on Cockburn Island near the Antarctic circle.

Zoology.—The lower region of the Himalaya is the favourite abode of the elephant and rhinoceros; and of the ibex and bharal, or wild buffalo. Deer of several kinds are very numerous and antelopes, of which the tetraceros or four-horned species, is the most remarkable. The sparrow, among which are the *Exaltis* and *Motacilla* chiefly inhabit the lower region, though some species is found in the pine forests at the height of 5000 ft. or even 11,000 ft. The carni-
ferous animals are more numerous and various in the lower valleys, but, with some modifications, they extend throughout the tiger glutton bear badger and mongoose remaining below wild leopards, hyenas wolves, and wild dogs extend higher up the centre the mountain fox and the cat-ferry hunting even the highest region. To the middle region belong the true ox (*Bos*) the common here, and several species of deer. In the upper region we find the bison, the yak (*Bos porphyreus* or *przewalskii*) the wild goat (*Ovis*) and wild sheep (*Capra*) the mountain pika (*Lepus*) and the bear. The feathered tribes of the Himalaya are so numerous, so widely diffused and so frequently monadic, as to defy all attempts to classify them with respect to habitation, within a moderate compass. The common fowl (*Gallus*), and the francolin, prefer the forests at the foot of the mountains; the bustards choose the middle region; while the pheasant species occupy the pine woods at the summit. Of doves, nearly every one has its own variety. The birds of fine plumage (thrush, parrots, &c.) belong chiefly to the lower region; where also are found the *Macropodidae* or flycatchers, and the *Zosterornis*. The *Sylviidae*, or singing birds are more equally divided and the birds of prey are found everywhere.

Rhinoceros.—The ethiopian line of *Desmodium* connected with the Himalaya, does not coincide with the line of the Ghats or passes. Along the whole range, except towards its W. extremity the variety of the snowy crest is occupied on the S. as well as N. by *Indica*, or people of Tibetan origin and Mongolian race. At the N. W. end of the chain, the Hindoos, of Arian race (that is, whose forefathers spoke Sanskrit) have taken possession of the whole of its S. face, and have

even crossed the ridge but E. of the sources of the Ganges, the mountains seem to have had no attraction for them, and the Bhaktia mountaineers were allowed to descend towards the plains and are found at the present day, more numerous the further we go E. Of the original occupants of the plain speaking the Tibetic language, a few tribes also sought refuge in the mountains, at the time of the Aruan invasion (12 or 13 centuries a.c.) These Tibetic tribes might in number be confined to the lower region exclusively of the Middle Himalaya. The tribes of Mongolian origin amount to at least 85 speaking different dialects and, in some cases, nearly savage. Their migration from the N. is assigned by tradition and collateral evidence, to the fifth and sixth centuries of the Christian era, anterior to the introduction of Buddhism and civilization into Tibet. A few tribes only, as the Khakias, have mixed freely with the Hindoos changing their manners, and in some degree, their language also. The chief families among the Ghorkas, in Nepal, have, through frequent intermarriage with Himalians and Rajpoots, completely lost the Mongolian features and peculiar complexion and would fain believe that they are altogether of E. extraction. It is remarkable that the H. tribes become attached and naturally inclined to certain elevations and cannot change their residence up or down without serious inconvenience. Notwithstanding the great extent of the uninhabited Himalayan region and the warlike habits of many of its tribes it is, taken altogether politically weak for it is but a long chain of petty states, separately strong only in defence, and incapable of union.—(Gardner's *Tours in the Himalayas*, 1889 Colabrook *On the Heights of the Himalayas, Anasie Researches* 1816 Hodgson *On the Heights of the Himalayas, Anasie Researches*, 1827 *Numerous Papers by Colebrooke, Webb, Fraser Herbert* *History, Sketches on the Anasie Researches in Four Anasie Society* *Journal and in Four Voyages*, See London)

HIMBELG a market in Lower Austria, in a somewhat bleak and exposed situation on the Kalltengange, 8 m. S. E. Vienna. It is a well built, has a market-place, adorned with an obelisk an old church, old townhouse and burgher hospital has manufactures of linen cotton, cloth, muslin and calico a madder-mill and trade in corn. Pop. 1319

HIMBETON par Eng Worcester 7040 ac 1 402 **HIMBURY** par Eng Richard 1180 ac. Pop. 400 **HIMBELKON** a vil in Harz circle Lyrer Franconia, r bank White Main, 9 m N N E. Belzenth with a castle, in the chapel of which several of the Margraves of Belzenth have been buried. The mulberry is cultivated here and some silk is produced. Pop. 682

HIMBLEY a market in and par England co Leicester The town 13 m. S.W. Leicester on the line of Watling Street, contains many good houses an ancient and spacious parish church, with a tower and finely proportioned spire several places of worship for Dissenters a national and an infants school. Large quantities of cotton and worsted hosiery, especially the former are manufactured here. There are also manufactures of coarse cotton thread and worsted. The town was ravaged a harony soon after the conquest. Near it are some interesting Roman remains. Area of par 6200 ac P. 071

HINDELANG a market in Bavaria, circle Swabia, 15 m. S. S. E. Kempten with a royal castle, an iron and other mills, and a trade in cattle. Near it are iron mines. Pop. 1288

HINDELÖFEN a maritime in Holland prov Friesland, 25 m S.W. Leeuwarden lat. 53° 55' N lon 5° 17' E. It is a bare plain washed on three sides by the sea, and has a good harbour frequented by small vessels. It is traversed by numerous canals, has a townhouse, also serving the purposes of a weighthouse prison, &c. two churches an orphan hospital, house of correction school and two annual cattle markets. Inhabitants mostly seafaring. Pop. 1229

HINDCHAY par Eng Suffol 1456 ac Pop. 894 **HINDEWELL**, par Eng York N Riding 4400 ac

HINDIA a Hinduoosian Reibold's dominions L bank Nerabadda lat. 22° 26' N lon 77° 5' E. of little strength but of some importance from its commanding some of the best fords over the Nerabadda, which is here 1000 yards broad

HINDLEY a vil and township, England co Lancashire 8 m. S. S. E. Wigan, on the railway thence to Bolton It consists of one principal street houses of brick, two stores

high water deficient and has Episcopalian, and several Dissenting places of worship several schools, an important-looking police station, and extensive manufactures of cotton but many of the people are employed in collieries. Pop. 7028. —(Local Chronicle of the)

HINDMARSH—1 A co. S. Australia, comprising the peninsula of Cape Jervis forms the S.W. extremity. —2 An ml. S. Australia, in the entrance to Lake Alexandrina. —3 A vil. S. Australia, 2 m from Adelaide —4 A lake Victoria 80 m. in circumference, discovered by Mr Byrle lat. 36° 8' lon. 141° 30' E.

HINDØEN the largest isl of the Lofoden group N.W. coast, Norway from which it is separated by a narrow channel. It is of irregular shape being both indented by numerous, and penetrated S. beyond its centre by a deep narrow creek length N.E. to S.W. about 50 m., mean breadth, nearly 20 m. The fishery on its coasts is very productive.

HINDOI VESTON par Eng Norfolk 2480 ac P. 48. **HINDON** a market in and par England co Wilts. The town 15 m. W. by N Salisbury on a gentle eminence, has an old church dissenting chapels and a free school for boys and girls. Near it, linen dowers and belidoking are manufactured and there are traces of a British village where Roman coins, pottery &c. have been found Area of par 212 ac Pop. 710

HINDONE a tn. India, prov of and 65 m. S.W. Agra lat. 26° 42' N lon 78° 54' E. with many of the houses built either wholly or in part of a fine dark red sandstone, cut in large quadrangular masses, and well polished and some Hindoo temples built in the Mahometan style

HINDOO KOOSH COOSH or INDIA CAGUASTA, a vast mountain system of Central Asia generally considered a continuation of the Himalayas, but regarded by Humboldt as a prolongation rather of the Kuen-lun the direction of its axis corresponding with the latter both being E. and W. while that of the Himalayas is S.E. and N.W. Viewed as an extension of the Himalayas, the Hindoo Koosh may be said to commence E. at the point where the Indus intersects the former and to terminate W. indefinitely with the Ghar Mountains (anc. Paroparosa) in N. Afghanistan then traversing the countries of Karkharistan Koonduz, and Badakshan, and filling them with its lofty and rugged elevations. The range takes its name from one vast and lofty mountain named Hindoo-Koh, N. of Cabool lat. 35° 40' N lon 68° 60' E. crowned by a succession of lofty peaks, with sides often perpendicular and wrapped in a perpetual covering of snow in all parts not too steep to admit of its lying. It has never been measured but the culminating point has been conjectured to exceed 20 000 ft. being visible at a distance of 160 m. The next highest peak is Kohabala, 17,906 ft. Transverse valleys are more numerous in this range than in the Himalayas proper above 30 occur within a distance of 150 m. between the Kawk Pass and Bamuz. Many of them although treacherous and shrubby, are beautiful being traversed by meandering streams, which, in winter dash through them with noisy and impetuous force, but, in summer pursue their way calmly and gently. In the vicinity of Hindoo-Koh the geological structure of the mountains consists of a core of beautiful granite—the felspar being purely white and the hornblende glossy black, and collected into large spheroidal masses. This granite has been ascertained to form the interior part of the range to a great extent, in some places assuming an appearance resembling basalt. On each side of the granite are huge strata of slate gneiss, chlorite carbonates of lime, quartz, and exterior to these, secondary limestones and fossiliferous sandstones. The principal minerals are silver lead, iron, zinc, and antimony. Gold and copper are also said to exist. The Hindoo Koosh is, in general, characterized by barrenness, and, in a remarkable degree, by want of timber. Dwarf fir willows, poplars, birches and numerous fruit-trees are grown but these have been all introduced by man. Hindoo, however appears to be indigenous to these regions growing wild in vast quantities, and of a quality equal to that produced in any other locality. At certain elevations on the N. side of the range, vegetation is poorer in form and individuals than on the S. side and has, from the rains and a greater preponderance of curious succulent *Chenopodiaceae*. The only green spots visible are those confined to the banks of rivers and in such places as are not under cultivation, cool, green,

months, into the Bay of Bengal. It is held in high veneration by the Hindus; who consider its waters so sacred that to sweep upon them constitutes their most heinous oath—(*see GANGES*). The Brahmaputra exceeds the Ganges in size, and probably in the length of its course. Its sources are very imperfectly known; but the main stream is traced to about lat. 28° N., and lon. 92° E., in Upper Assam, where it is considered to be formed by a junction of the Dihang, Dibang, and Lohit rivers the second of which penetrates into Assam, from Tibet, breaking into S. Asia, like the Indus and Sutlej, by gorges in the Himalayas. The Brahmaputra enters Bengal in the Rangpoor district and having run a course subsequently of nearly 800 m. in a S. and S.E. direction, falls into the Bay of Bengal, in about lat. 23° 50' N. lon. 90° 45' E., in conjunction with the largest branch of the Ganges. For the last 80 m. of its course it has a breadth of from 4 m. to 5 m., increased to 10 m. at its mouth—(*see BRAHMAPUTRA*). Amongst the other rivers of note in Hindoostan are—the Juma, Chumbul, Son, Gunduck, Gogga, Teesta, &c. tributary to the Ganges the five rivers of the Punjab—the Sutlej, Beas, Ravi, Chenab, and Jellum affluents of the Indus and in peninsular India—the Nerbudda and Tayles, flowing westward into the Krishna or Krishna, Godavery and Mahanuddy, flowing the sea on its eastern side.

In remarkable contrast to its mountains and rivers are the lakes of Hindoostan the latter being few in number shallow and comparatively small in size. Amongst the largest are the Chilka and Colair lakes, both on the eastern shore of the peninsular. The former a salt water lake, separates the five north-eastern towards the sea, from the district of Cuttack. It is about 85 m. in length, and 8 m. in average breadth; its general depth being 4½ ft. It abounds in fish and large quantities of salt are manufactured on its banks. The Colair, a fresh water lake, is situated between the Godavery and the Krishna, about 5 m. E. from Elloor. It is of an oval form and, in the dry season, is about 10 m. in length, and about 10 m. in breadth at its widest part. In the rainy season, it greatly exceeds these limits. It contains numerous islands which disappear as the lake swells and re-appear as the floods subside. On a failure of the periodical rains it dries up altogether. To make up, however for the want of natural reservoirs, the whole surface of India is more or less interspersed with tanks, or artificial collections of water made for the purpose of irrigation. The construction of which has been always held highly meritorious by the professors of the Brahminical religion. Some of these are of such considerable size as almost to merit the name of lakes; and yeals or large ponds, formed by some of the large rivers during their inundations, are also numerous in several provinces as in Bengal and elsewhere. On the W. side of Hindoostan is a remarkable tract of morass, called the Rann, lying between the province of Cutch and the S.E. parts of Seinde, and having continual contact with the Gulf of Cutch. It is about 150 m. in length and its greatest breadth about 60 m. Its total superficial amounting at different periods, to between 5000 and 8000 sq. m. Several rivers discharge into this tract which is diversified with several verdant oases, and on which the phenomenon of the mirage is of frequent occurrence. The coastline of Hindoostan having an extent of nearly 3100 miles, is particularly deficient in islands and in bays of the latter two only are of much size—the gulf of Cutch and Cambay both on the western side. Along all the W. coast, Bombay Coast, and a few less important localities are those only which present any good accommodation for shipping and on the E. coast, from Cape Comorin to Bengal, there is not a single good harbor.

Climate.—From the vast extent of Hindoostan, stretching, as it does, through no fewer than 27° of latitude, its climate and productions, particularly the former by position and local influences, can be here spoken of but cursorily the reader being referred for more minute and ample information on these and other subjects, either not at all, or but slightly noticed in this article, to the accounts of the various provinces, states, provinces, and districts of which the territory is composed, and which will be found under their respective heads. Generally speaking, Hindoostan has three seasons; the hot, wet, and cold. The first commences about the middle of March, and continues for three months. The heat is, for the most part, intense, and in some places so excessive,

especially on the Coromandel coast, as to destroy vegetation; the thermometer ranging in the sun from 100° to 110°, and rising as high even as 120° F. The wet season also occurs during the S.W. monsoon, in most parts of India, though, in the country E. of the Ghats the rains occur when the wind blows from the opposite quarter. The rains are ushered in with a dreadful commotion of the elements—lightning, thunder and tempest and the rain which it brings, though falling for some time at intervals only gradually becomes a continuous deluge. These rains, however though excessive, are highly beneficial refreshing the earth, invigorating vegetation and cooling and purifying the atmosphere. The N.E. monsoon blows during the winter months, and the S.W. during the rest of the year but both are subject to various modifications, according to local circumstances particularly the direction of monsoon-ranges. In the cold season, fogs and dews are common and the degree of cold is so great, in some places, as to render fires necessary. Even in Calcutta, the thermometer falls as low as 52° in December with a N.E. wind and in some of the N. provinces to 45° and 55° Still the whole of Hindoostan, except the higher mountain-ranges, may be considered as having a hot climate for although, N. of lat. 27° the climate from November to March, is comparable with that of Italy the larger part of the territory is within the tropics; and in the low plains as far N. as lat. 18° winter is hardly perceptible. At Bombay the mean annual temperature is stated to be about 62° at Madras, 64 and at Calcutta, 79° F.

Natural Products.—The principal vegetable productions of Hindoostan are—rice, maize, wheat, barley cotton indigo sugar-cane, opium, tobacco, ginger aloe cardamom, pepper coconuts, areca, and other palms yielding nut, which are extensively consumed by the native population milns, silk, various dyes, flax, hemp, &c. The principal indigenous fruits are—the mango, the coconut of the Indians fruit—pear, or plantain pomegranate, citron, date, almond, guava, plum-apple and tamarind. In the N. provinces, apples, pears, plums, apricots, and other European fruits abound. Oranges and lemons are also to be met with but are of an inferior quality.

The minerals of the vast territory are as various as its other products. The Himalayan mountains abound in iron copper and lead the mines have, however been only superficially worked. Graphite has been found in the province of Kumaon and traces of lignite in the tertiary formations, where immense deposits of fossil bones have also been discovered. Deposits of coal stretch across India from E. to W. from Assam and Sythet into Burdwan where some coal mines are wrought for the supply of Calcutta and along the course of the Nerbudda as well as in the W. district of Cutch. Agates and carnelians abound throughout Central India and at Surat and other places, on the W. side of the peninsula, carnelians are cut and wrought with great ability by native artists. Nitre and nitrate of soda effloresce in great quantities on the soil in different parts of Hindoostan and all or nearly all, the supply of these minerals to Great Britain is now derived from India. Gold is procured by washing the sand of some rivers, and iron is in many parts abundant but few mines of any metals exist. Diamonds are found at Panna, in Bundelcund the mines of which under the name of Pannas, are mentioned by Ptolemy. They are also found in the Deccan but few are now produced. A species of carbonate of lime, termed *lousher* and porcelain clay, are plentiful as are marbles of various colours. Alum is obtained in Cutch in considerable quantities.

It is pretty generally believed in Europe that the natives of India live chiefly upon rice. This is by no means the case for, excepting Bengal, the number of those who sedulously taste rice probably far exceed those who live upon that grain. Wheat, barley, jowary or common millet (*Holcus sorghum*), bajra or barley (*Holcus sploshus*), sesamum, and several grains peculiar to the country constitute the staple products forming the nourishment of the Hindoos. Of wheat, several varieties are grown some of very fine quality—the soft wheat, called *gahwa*, and the hard called *phulwa*. Indian corn or maize is cultivated, in small quantities, all over Hindoostan, but not as a corn crop being eaten chiefly in a green state and after the grain have been roasted. The great millet, or *darna* of the Arabs, jowary of India (*Holcus sorghum*), occupies the place of maize in other

parts of Asia. But, besides the cereals, a great variety of pulses are cultivated also yam, sweet potatoes, mangoes, guava, &c. Sugar-cane is raised, less for the manufacture of sugar than the consumption of the cane itself, as a sweetener and article of food; though some of the finest guava sugar is produced in Hindoostan. The opium-poppy is cultivated to supply opium for foreign exportation, exclusively in the provinces of Bihar, Benares, and Malwa, and is supplied by the cultivators, at fixed rates, to the Anglo-Indian government, to which it continues to yield a large revenue being almost entirely exported by the British to the markets of China, and the Indian Archipelago. Indigo is raised in great quantities in the lower plain of the Ganges, particularly in Bengal, but also in other parts of Hindoostan and it forms one of the most profitable of Indian crops. Cotton, of several kinds, is produced, chiefly on the table-land of the Deccan, and if ready means of transport for it thence to the coast existed India would be made to yield as all but insurmountable supply at prices which might defy competition. Cardamoms and pepper are amongst the most valuable products of the Malabar coast; to which locality their culture is almost exclusively confined. Betelnut, cashew, mace, nutmeg, and many other drugs, are indigenous. The forests of Hindoostan contain an immense variety of large trees, little known in Europe; but capable of yielding valuable timber and distinguished by their fragrant, luxuriant growth, or adaptation for manufactures. Teak, of the first quality, grows on the W. Ghats. Other forest trees characteristic of Indian scenery are—the banana, sugar-cane (Shorea robusta) *uncaria* (*Dalbergia sissoo*), &c. with which are seen the oak, cypress, poplar &c. Large and beautiful flowering shrubs are in great rarity. Forests of bamboo are numerous and so rapidly does their growth proceed, that some of them reach have been reported to attain a height of 60 ft. in the course of five months! Extensive tracts of the country covered with grass, jungles, the remains of formidable wild animals, numerous across the country at the mouths of the rivers and the whole of that wide tract, termed the Sunderbunds, at the united delta of the Ganges and Brahmaputra, is a rank forest, inhabited by tigers, deer, and elephants and the rivers traversing which are, in many parts rendered impassable by ships, on account of the obstacles to which its thick vegetation gives rise.

The elephant, tiger, leopard, panther, hyena, wild bear and sea, deer, jackals, foxes, marmosets, the cat, mongoose, and numerous other kinds of apes, are natives of Hindoostan. Lions are found in the N., but they are not of the same species with the lion of Africa. The elephant, buffalo, domestic horse, and ass, have been domesticated the first-named has, from time immemorial, formed an important appendage to the riches of Indian princes, and the right of property in wild elephants was claimed by them as a royal privilege. The Malabar horse is a small and active animal but rapidly and Hindoostan has never been particularly famous for its breed of horses. The wild ass is a native of the desert. Troops of porcupine dogs inhabit the hills and towns of Hindoostan. In the lower forest of animated life, Hindoostan equally abounds as in the higher. Alligators and gharials are abundant in the tanks and rivers and some of the most formidable serpents known inhabit this region.

Population.—The inhabitants of Hindoostan have been estimated to amount to upwards of 150,000,000.—(Trigouven, *Survey of India*, Reg. 1851, p. 60)—by far the greater number of whom are Hindoos the Mohammedans of Arab, Persian, or other descent—being vaguely estimated at 10,000,000 and the Europeans, amongst the native population, at no more than 80,000. The Hindoos are not the aboriginal inhabitants of India but, having arrived from the N.W., they first occupied that portion of the country to the N. of the Nerbudda, called, emphatically Hindoostan; and subsequently crossed the Nerbudda into the Deccan, or South, where they displaced the natives, as before. The native tribes, however, were by no means exterminated, and, under the various denominations of Bhaos, Oorissas, Ootias, Odias, Gonds, &c., they still exist in the peninsula, to the number, it is computed at the base of two or three millions. They are mostly of small, native frame, dark-complexion, with a peculiarly quick and restless eye, unadorned, or wearing only a few impressions of Hindoo superstition or civilization. They have

little clothing, and few arms, beyond bows and arrows. Their ordinary food consists of wild berries and game; they have no repugnance to killing or eating man; and they bury their dead, instead of burning them. The aboriginal tribes chiefly

COOLIES.—From Lewis's View of India.

inhabit the fastnesses of Gaudwara, the Vindhyas, and Sapt-poor mountain-ranges, and their effects and combinations, as far E. as the hills of Bhagpur (Bengal) they are also to be found on the N. frontier of Bengal, and in considerable numbers, in Cutch, Gujarat, and along the line of the W. Ghats. There is, in fact, scarcely any considerable mountain or hill region in India where some of them are not to be found and the districts they inhabit are the wildest and most unclaimed portions of the whole peninsula, many of them remaining still uncultivated by Europeans.

The Hindoos.—Although commonly darker in colour than the rest of the nations composing the Caucasian race the Hindoos are held to belong to this great division of mankind. They are well formed, and, in some parts of India, as in the Deccan and the upper plains of the Ganges, they are even robust, energetic, and hardy; but the chief bodily characteristics of the Hindoos are extreme suppleness and flexibility of the animal fibre; rendering them this best runners, climbers, jumpers, and wrestlers in Asia, though incapable of maintaining exertion, or resisting fatigue, for any lengthened period. The face of the Hindoo is oval; the eyes are uniformly dark brown, with a tinge of yellow in the whites; and the hair is occasionally long black, and straight. The upper classes especially in Hindoostan proper, and especially so toward the N.W. are nearly as light in colour as the natives of S. and central Europe. They are also far more handsome and tall than the lower classes.

In proportion as we proceed toward the E. extremity of the peninsula, the hue of the skin is observed to darken until, in the lower states, it assumes almost the blackness of the negro. The females of the inferior ranks are diminutive, and by no means attractive; but those of the higher are frequently quite the reverse, possessing graceful forms, finely tapered and rounded limbs, soft dark eyes, long fine hair and a glowing complexion. As to dress, the labouring population of both sexes go almost naked; a turban, and a dhoti covering around the joints, constituting the whole of their apparel, though the different castes have usually some distinctive peculiarity of costume, indicative of their position in the social scale. Amongst the upper classes, the dress of the females, particularly in Gujarat, consisting of a jacket, with half-dresses, fitting closely to the shape, and often made of rich silk with a flowing garment of silk or cotton, called a *cholis*, and so disposed as to fall in graceful folds; embroidered slippers; and the hands, arms, ankles, and ears, profusely ornamented with rings and jewellery. The provisions of numerous articles of furniture, and every all ranks of the population; and it is common to see females adorned with gold ornaments, anklets, &c., but with severity a shroud of

clothing. Subtlety and shrewdness are the most conspicuous mental characteristics of the Hindoos, and they have been properly described as 'the ancient buyers and sellers in the world.' In their manners they are mild and retiring; timidity and indolence are all but universal qualities; and yet, when offered by Europeans, they have proved themselves faithful and obedient soldiers, and courageous in the field. Artifice and deceit, a want of probity and candour, are amongst their conspicuous failings.

Arts and Manufactures.—In a few arts and manufactures—such as weaving, dyeing, carving, stone-cutting, architecture and sculpture of certain kinds, and the fabrication of some metallic articles—the Hindoos have undoubtedly excelled. The cotton, muslin and silk fabrics, the carpets and the shawls, of India, have deserved celebrity amongst these goods, the muslins of Dacca, formerly made in much larger quantities than at present, in and around that city claim the foremost notice. These muslins are known by various names chiefly denoting the fineness, beauty or transparency of their texture. The finest of all is the *muslin blue*—(literally muslin made for the special use of a prince or great personage). It is woven in half pieces measuring 10 yds in length and 1 yd. in breadth having 1000 threads in the warp, and weighing only about 2½ oz. avoirdupois. Some of the other muslins are also beautiful productions of the loom; as *shirases*, compared by the natives, from its clear pitted texture, to 'running water,' and *shab-ras*, so named from its resemblance, when it is wetted and spread upon the bleaching-field, to the evening dew on the grass. Embroidery (*zari-das*) is not in which the Mahomedans of Dacca display extraordinary skill. They embroider Cashmere shawls and muslin muslins, and net fabrics, with silk, gold and silver thread, in a manner probably unrivalled in any other part of the world. In Bando and the Panjab, also this branch of industry is conducted with eminent skill. The muslin manufacture like the production of Indian cotton goods of all other kinds, has materially declined within the present century in consequence of the competition of British goods: nor would there appear any prospect of the revival of Indian manufacturing properly said at least as to common woven fabrics, in the face of such powerful rivals. Meritlins, and various other pieces on the E. side of the peninsula, have been famed for shawls, and other coloured cotton goods which are still made there, as well as at Sarat, near the Gulf of Camber. The shawls of India are inferior to those of China. But for the production of shawls, the country is unrivalled, especially the province of Cashmere, where those goods are woven from the fine hair of the Tibet goat. Trichinopoly is noted for the manufacture of gold chains of exquisite workmanship and at several places, on the W side of the peninsula, carmelians blood stone, and other products of the same character which are abundantly found in that region, are as already stated, cut and polished in superior style. In Digree work, and stone wood, and ivory carving, pottery and engraving on gems the Hindoos are highly respectable artisans and the beauty, brilliancy and durability of their dyes, were as celebrated among the Greeks and Romans as they are at the present day—*adder*, *indigo*, *red*, *turmeric*, *saffron*, &c. dyeing materials of the first importance, being native products. Numerous manufactures, calculated to give a high idea of Indian ingenuity and taste appeared at the Great Exhibition in London, in 1851. Amongst these were various articles in agate from Bombay mirrors from Lahore, marble chairs from Ajmer, kinnocks from Benares embroidered silk shawls and scarfs, carpets from Bangalore, and a variety of articles in iron, inlaid with silver.

All the excellences hitherto evinced by the Hindoos in the prosecution of arts and sciences, appears, however to have been wholly unproductive. The people, with a few rare exceptions—amongst which Hammurabi they has been a striking example—have evinced no grasp of intellect enabling them to become wiser, beyond a very limited extent, in the higher branches of learning. In arithmetic, algebra, geometry and astronomy they have made some rudimentary progress; and their genius is somewhat adapted to metaphysical speculations, and the intricacies of grammar and jurisprudence; but their geography, medicine, and other practical sciences, are a chaos, and their agriculture is of the rudest kind.

In literature the Hindoos are, and always have been, far

behind several neighbouring nations. Except some of their theological writings, the only works of any celebrity amongst them are the *Mahabharat* and the *Ramayana*, the one recording the wars of the sons of Bharat and the other the adventures of Rama. They are both poems, there being hardly any prose compositions in Hindoo literature and both extremely bad; being destitute of every quality they ought to possess, and having nearly all they ought not. The state of education is equally backward there being scarcely one man in a hundred who can read a common letter: neither can they derive any benefit from such scientific, or other useful works, as they have in consequence of them being all written in Sanskrit with which the mass are entirely unacquainted. The females are, in general, utterly ignorant of reading and writing a Brahminical prejudice existing against female education.

India and especially the Deccan, abounds with stupendous and highly-elaborate architecture: not indeed, possessing the elegant proportions of the edifices of ancient Greece, but rather exhibiting the ponderous sublimity which characterises those still extant in Egypt: with the addition of a great deal of ornamental and minute sculpture representations of the deities of the Hindoo pantheon and their reputed acts &c. not generally conceived or executed in good taste or with any regard to delicacy of sentiment. Amongst the most remarkable monuments of the kind are the excavated temples of Elora, Elephanta Caves, and Bang, on the W side of the peninsula the pyramids of Poros (Juggernaut) in the E and the temples of Tanjore, Trichinopoly &c. In the E. Most of these are Brahminical, others of Buddhists, and some of Jain origin: all have been constructed at epochs long passed, and some say perhaps boast of a high antiquity. In the region of Hindoostan proper which was the great seat of Mahomedan ascendancy many beautiful structures, constructed by the warrior invaders of Hindoostan, exist: the most elegant of which is the Taj Mahal, at Agra—a splendid mausoleum, constructed by the Emperor Shah-Jehan. In the Mahomedan edifices marble is plentifully employed—a material never used in Hindoo structures all of which have been either excavated in sandstone, or hewn out of granite. Throughout the centre and E. of India a hill fort on heights of difficult access, are numerous, and have provided formidable strongholds of native chiefs. But, with exception of the latter and of the embankments, tanks, and other constructions for facilitating irrigation—in which endeavour the Hindoos have displayed much care and ingenuity—nearly all the great architectural efforts of the Hindoos have been spent on structures consecrated with their religion. From the palace of the sovereign to the hut of the peasant, their habitations are for the most part, meanly built; in some hilly parts the walls are constructed of stone, but elsewhere only of mud or un-fired bricks, and roofed with bamboo or palm-leaf leaves except in the principal cities and towns, where more attention is paid to solidity in domestic architecture.

Religion and Castes.—The Brahminical religion dates, no doubt, from a very remote epoch. It acknowledges a self-existent Supreme Being, who however is held by it to take no concern in the government of the universe: this is dedicated to his true manifestation—Brahma, Vishnu, and Shiva—who are respectively emblematical of the creating, preserving, and destroying powers. To Brahmas—except amongst a sect termed the Jangamas, who inhabit chiefly the S. of India—there is but one temple dedicated, which is situated near Ajmeer in Rajpootana. The great bulk of the Hindoo population are Vishnavas, or followers of Vishnu or Shiva, votaries of Shiva besides which divinites, a vast multitude of inferior deities are worshipped—their number amounting, according to the Brahmans, to 339,000,000! Figures of a great many of these deities and their attributes are sculptured in the temples, and retained at household gods in the dwellings of the people, to receive daily adoration; and however at first, the Hindoo pantheon might have merely represented emblematically the forces of nature, and changes in material bodies, it has given rise to the most gigantic and degrading system of idolatry in the world. The temples and worshippers of Shiva, the destroyer are far more numerous than those of any other Hindoo idol and his worship, like that of the goddess Kali or Durga, is, at certain periods, marked by acts and sacrifices of the most brutal and savage kind. The worship of Vishnu, the preserver—which is chiefly prevalent in

Bengal and Orissa—and that of Krishna, the representative of the sun, are regulated by day, such, however. The women of Siva and Vishnu are distinguished by certain assumed marks on the forehead, those of the Balva sect being horizontal and those of the Vaishnavas perpendicular. The supremacy of the Brahmins, and the doctrine of metempsychosis, or the transmigration of the soul, after death, into the bodies of animals or human beings, for a long series of ages according to the purity or impurity of previous life, are leading dogmas of the Brahminical faith. Pilgrimages to remote and holy places, penances, and offerings to the priesthood, are held in high esteem; the avoidance of layups or forbidden food, especially the flesh of the cow and the preservation of caste, are amongst the most important moral duties enjoined on the Hindoos. In no country does the religion of the inhabitants appear so prominent, in every act, as in Hindoostan. It pervades the entire frame of civil society and mixes itself up with every concern of life—public, private, and domestic. The whole of Indian theology is professedly founded on the Vedas, four in number and believed by the Hindoos to have been revealed by Brahma himself; but, practically the *Puranas* and the Institutes of Manu, compositions of later date, and which must more strongly on the supremacy of the priesthood, are the basis of the existing Brahminical system. Further on, will be found a few specimens from these productions, showing the spirit in which they have been composed.

The institution of *caste*, so characteristic of society throughout nearly the whole of India, cannot be considered entirely peculiar to that region since prejudices of rank and position prevail even in Europe in many curious respects, similar to those which divide the classes of the population in Hindoostan; but nowhere are such prejudices and distinctions pursued to such ramifications and by so arbitrary and often merciless a manner as in that portion of the globe under consideration. In the outset, the Hindoos are divided into four great classes or castes—the Brahmins or sacerdotal class, the Kshatriyas warriors and rulers, the Vaishyas capitalists, traders, and farmers, and the Sudras labourers, artisans, and menial servants. These divisions are hereditary, impassable, and indelible. The three first classes are termed twice born, and are fabled to have sprung respectively from the mouth, the breast and arm and the thigh of Brahma, while the Sudras, at an immeasurable distance below the rest are deemed only once born and to

outcasts or of no rank whatever; and some are so utterly abominable that a Brahmin is defiled by coming within their shadow! Purity of caste is incapable of acquisition; and the Mahatras themselves, besides others who, at various times, have

HINDOO WEAVER AND WINDER OF THREAD
From *Indo-European* of Hindoostan

acquired sovereign dominion, have been still held to be no more than Sudras, or of the servile class. The Brahmins are regarded as greatly superior to the rest of the population, and are distinguished by wearing a certain cord termed the thread, they may engage in warlike or literary pursuits and some others are held not derogatory to their dignity but they are mostly attached to the pagoda, and live by giving instruction or on the alms of the charitable and devout. The following passage will denote what observations reverence the Brahmins claim for their order—A Brahmin, whether learned or ignorant is a powerful divinity—(*Institute of Manu* vol. II., pp. 316, 317) These excellent Brahmins who are guilty of such crimes as theft, are offenders against themselves, not others. Brahmins are masters of the Kshatriyas, Vaishyas, and Sudras they are masters of one another who are worshipped being earthly gods. —(*Pandita Purana*, ch. 12.)

A *hata-var* exists in the universe itself in effect though not in form the wealth of the Brahmin, since the Brahmin is entitled to it all by his prerogative and command of birth. The Brahmin eats but has own food, wears but his own apparel and bestows but his own alms. He alone deserves to possess the whole earth. —(*Ibid.*) A remarkable section of the religious orders is formed by the fakirs, or mendicant monks. They dress in rags, and live in filth and perpetual poverty on the alms of the faithful; practise on themselves the most unheard-of descriptions of ascetic tortures perform pilgrimages prostrate to the gift of prophecy and though held in high veneration by the mass of the people, they are of the most shadowed habits, and the grating of Hindu shrines and fasteners. The military profession is held to be nearly as honourable as the sacerdotal the Vaishyas or mercantile classes are regarded with much less consideration. Contrary to the opinion commonly entertained, there is nothing to prevent the son of a potter from becoming a worker in metals, or the son of a washerman from becoming a weaver, but occupations usually depend on hereditary descent. Thus, amongst the mixed castes, the *Vaidyas*, whose function is medical, is the son of a Brahmin by a woman of the Vaishya class; the *Vaidika* is the descendant of a Vaishya father and a Brahminical mother and his business is to wait on women; the *Pons*, the offspring of a Vaishya and a Vaishya is a musician the *Adhik*, descended from a Brahmin and a Vaishya is a sword and the *Kapashika*, born of a Vaishya and a Sudra, is a writer. Agricultural employments are generally held to be creditable, as are ordinary trades, except those of *Sabarnas*,

VAISHYA AND WOMAN OF LOW CASTE.
From *Indo-European* of Hindoostan.

have sprung from the foot of the divinity. But, in addition to the foregoing there are a vast number of subdivisions constituting so many different castes, originating in intermarriages of the four great orders, or dependent on the employments, trades or professions they pursue—some of which, for instance in Europe, are held to be much more honourable and worthy than others and in addition, a very large number amongst the population particularly in certain districts, are

carriers, and other having to do with animals and animal products, as also those which are concerned with spirituous liquors, which are abstained from by the pure castes. Barriers of the dead and public executors are held to be wholly impure and basket and mat makers in some districts, as that of Patna, for instance are considered so despicable that they are not allowed to enter the villages. With all these fine-drawn divisions of rank and respectability the division into superior and inferior castes is not attended in Hindoostan with any feeling of insultation on the part of the latter. Every caste, and subdivision of a caste, forms a little distinct society in the general community. Its members enjoy the same of equality among themselves, whilst their position in all respects, towards the other members of the general community is determined before their birth. The divine origin of castes being universally admitted there is no ground for personal animosity. The members of the higher castes feel no malice or pity for but rather indifference towards, those of the lower or the latter any envy or hatred of the former. Each caste has its peculiar notions of purity and uncleanness by which their manner of living and general conduct is regulated, and men of all castes are found serving together with equal discipline and efficiency in the ranks of the Anglo-Indian armies. Degradation of caste follows the use of forbidden food and the eating drinking or intermarrying with persons of a lower caste (which, it may be said is, in a minor degree the case even in Europe). To avert the penalties of such intermarriage the Jharjabs of Cutch, and the Rajpoot military tribes, continue to destroy a great number of their female children soon after birth. Such are a few of the peculiarities of the social system of the Hindoos. It cannot be wondered at that, with a debasing superstition and institutions that have oppressed and split its people into a multitude of un sympathizing sections, India, with a vast population and abundant resources, should have been during all its history the prey of one invader after another.

The institution of caste, thus arbitrarily stereotyped upon the Hindoos, has produced a multitude of monstrous customs which pervade the whole framework of society in India. In one caste and one alone, the females are permitted to marry or form matrimonial alliances with Europeans from another caste, a certain proportion of the females, regarded as unsuitable for marriage, are contributed to be brought up as *devadases*, *maths*, or *das* (sing-gals in the Brahminical temples

RAJPUT GIRLS.—From Leavelle's Views in India.

where they minister to the appetites of the priesthood. Some of the population following the daimism which their descent has marked out for them, have become illustrious as slaves, highwaymen, or professional assassins, without thereby losing consideration or respect from their compatriots. Amongst these, the *Thugs* have been the most conspicuous; they are robbers, united by religious or superstitious ties, who mainly subsist by strangling and plundering travellers; their secret practice of murder excited the interference of the British government,

by which it is believed that *Thugges*, in the territories under its control, had been nearly extirpated. The Hindoos mostly burn their dead, but some, like the aboriginal tribes, practise burial in other castes, the dead are consigned to the waters of the Ganges, or other rivers and in some districts, as Bahar, according to Hamilton, persons when about to die are turned into the open air and exposed to any weather. Slavery is very general as is inheritance by adoption. On the Malabar coast, in S.W. India, sovereignty, property &c. descend in the female line, so that not a man's own children but his sisters or those of his nearest female relative, become his heirs. But despite of all sorts of incongruities in the Hindoo social system, the internal government of the villages and communities is remarkable for its perfect organization and adaptation to the requirements of the people—(see INDIA—HISTORY) India is in fact, a land of contradictions and the most childlike usages and consummate vices, are to be met with in its institutions side by side.

Other Forms of Religion, Nations &c.—Buddhism which now prevails over all Central and E. Asia, appears to have originated in Hindoostan but it is now all but extinct there. Various traces, however, exist of its former supremacy especially at Baidha-Gaya, in Bahar in the cave temples of India, and even at the temple of Juggernaut, which is resorted to by vast numbers of Brahminical pilgrims but within the precincts of which no recognition of caste exists—a distinguishing characteristic of the Buddhist faith. (For an account of Buddhism see INDIA) The Jainas, a numerous sect inhabiting the W. part of the peninsula, especially Gujarat, Candellah &c. are supposed to have been an offshoot of the Buddhists at the time that Buddhism was extirpated in Hindoostan they also do not recognize caste and with the addition of worshipping a small number of deified saints their form of religion presents some striking similarities to that of Buddhism. The Sikh or Sikh religion is confined to the Punjab and adjacent territories. It is an heretical form of the Brahminical religion which originated in the 16th century and its chief characteristics are perhaps the intolerance of followers, and the perfect abstinence from eating the flesh of the cow (see PUNJAB) The Mahometans, who form about one-fifth of the entire population of India, are of Afghan Persian Turk Baluch and Arabic origin being the descendants of the numerous invaders who have entered Hindoostan from the N.W. since the commencement of the 11th century. Singular to say they are not most numerous around Delhi Agra &c. which were the chief seats of the Moslem empire in India but in many parts of Bengal, which was at the extremity of that dominion they constitute the majority of the inhabitants and the same is the case in various parts of the Deccan. Of the sovereign states they established the principal now existing is that of Hyderabad or the Nizam. At Bombay Surat, &c., Parsees are numerous they are the descendants of the ancient Persians, expelled from the table-land of Iran at the Mahometan conquest of Persia, and preserve the worship of fire and the sun with other ancient customs, in great purity they are mercantile, industrious, often learned and many of them are amongst the opulent individuals in India. In the S. of the peninsula are a great number of native Christians in many localities they predominate, in point of numbers, over the rest of the population, particularly on the coasts where they are chiefly engaged in fishing and maritime traffic. They are partly Nestorians, or of the Syrian church the doctrines of which appear to have been introduced into India in nearly the earliest ages of Christianity and partly R. Catholics especially on the Coromandel coast. Abyssinians in Gujarat Armenian Jews Tartars, some Malays, and Europeans of various nations, with a considerable number of native descendants of Portuguese settlers make up nearly the remainder of the motley population of India. Goa, Damara and Diu all in W. India, belong to the Portuguese Pondicherry Chandernagore, and a few smaller settlements on the Coromandel coast, to the French and Tranquebar on the same coast, to the Danes but, with these exceptions—and Nepal and Bootan, states which are still independent, as well as Buddhist—the whole of India is substantially under the British dominion.

History.—The Assyrians under Sennacherib, and the Persians under Darius, are said to have penetrated into the N.W. part of this region but the information we have respecting their

expedition thither is very fragmentary and the earliest details giving any connected account of Hindoostan, are those by the historians of Alexander. This conqueror traversed the Punjab, but did not establish any permanent dominion beyond the Indus. Seleucus Nicator, one of his successors, is believed to have introduced with an army into the heart of India, against Sandracottus (Chandragupta), and he afterwards sent Megasthenes on an embassy to that sovereign, at his capital Pataliputra, which is conjectured to have been either Patna or Bhagulpur. The Great monarchs of Hindia appear really to have pushed their conquests into India, and subsequently the Parthians and Scythians. The author of the Periplus of the Erythraean Sea, and Ptolemy give some descriptions of the W coast of India, but from the decline of the Roman empire, a lapse of many centuries occurs before we arrive at any further authentic information concerning the countries beyond the Persian desert. The modern history of Hindoostan commences with A. D. 1000, when, Mahmood of Ghaznee, a Mahometan sovereign whose dominions reached from the Indus (near) to the Caspian made the first of his 13 successful expeditions into Hindoostan which region he penetrated as far as Kanooje, Daudpound and Gujarat. In 1174, the Gujars dynasty was overturned by Mahomet of Ghore, who also invaded India on several occasions, and whose successor Taimur, in 1215 founded the Feroz or Afghan sovereignty who had his seat at Delhi. The Feroz dynasty lasted till 1525 and, during its continuance, Hindoostan suffered from the successive devastations of Jemshid-khan and Taimur. Baber a descendant of Taimur in 1526 established the Mogul dynasty of which, after himself Akbar, Jehangir, Shah Jehan, and Aurangzeb were the most celebrated sovereigns. In the time of Aurangzeb the Mogul dominion had reached its culminating point, and in his reign the Mahometan conquest of the Deccan was achieved, but his rule was disturbed by the rise of the Marhatta power under Sivajee and after the death of his successor Shah Alim, in 1713, the Mogul sovereignty rapidly waned and decayed. The Nizam and other viceroys of the empire, then founded for themselves independent kingdoms in different parts of India which were soon afterwards devastated by the incursions of Nadir Shah, and a fresh invasion of Afghans. Meanwhile that the foregoing dynasties ruled in Hindoostan S. India was long the seat of several independent Hindoo sovereignties the principal of which were Bikanpore and Bijnagur but which were successively conquered by the Mahometans. Shortly after the fall of the Hindoo empire of the Deccan and 27 years before the foundation of the Mogul empire by Baber the Portuguese under Vasco da Gama, in 1498, arrived at Calicut, which was then governed by a prince named the Zamorin. Within a short period they had possessed them selves of Goa, Diu, and other places, on the W. side of India the trade of which coast was for a period wholly under their control. They were followed by the Dutch, who however nearly confined themselves to trading with India, and never made any important settlement on its soil. In the 18th century the French found means to establish colonies, chiefly on the E. side of India, but before the termination of that century their project for domination in India was checked, and early in the present century their influence over Indian princes and native sovereignties, was thoroughly destroyed by the British, the rise of whose power will be hereafter described in the article INDIA (British).—(For Orillio, Jacquesmont; Hindoostan, Hindoostan and E. India, Gen. Conard, Modern Traveller, Bell's British Review, Pictures of India, Crawford, Annals, Researches, Journals of the Royal Acad. Soc. and Annals of the Bengal, Bombay and Madras Journals, Calcutta Review, 1850-51 &c.)

HIRSCHBELLDAU (Hirsch, Hirsch, and Oms, three nearly contiguous vils. Prussia, prov Silesia gov Liegnitz, circle Sagan with a R. Catholic church a castle tile-works, and several mills. 1 op. 1551.

HIRSCHFELDE, a vil Saxony circle of and 26 m. S E. Bautzen, 1 bank Neisse with a handsome church black-field, and eye-works. Pop. 1551.

HIRSCHHORN a to Hesse-Darmstadt, on a hill-slope, above r bank Neckar at the confluence of the Finkenbach 9 m. N E E. Hirschberg. It is finely situated, but poorly built, has a castle a church, and several mills. Pop. 1694.

HIRSHOLM or **HIRSHOLM** a vil Denmark tal. Seeland, 14 m. N Copenhagen with a new church, built on the site of a large and magnificent castle which had been erected by Christian VI but, from a defect in its foundation soon gave way and was obliged to be taken down. The inhabitants live chiefly by agriculture, and have some land trade. P. 500.

HIRSHOLM a group of small islands Denmark, in the Kattegat, off N E coast, Jutland, land, Hjørring 4 m. N E Frederiksborg, completely covered with large boulder stones, and having so thin a soil as to be unprofitable. The inhabitants live by catching seals and fish. The largest, Hirschholm, has a church, and a lofty lighthouse. Pop. 200.

HIRSON a to France dep. Aisne, 10 m. N E. Verrieres, on the Oise with extensive manufactures of nails, lace and earthenware. Near it are cotton mills. Pop. 8024.

HIRZEL a vil and par Switzerland, can of and 12 m. S. S. E. Zürich in one of the most beautiful districts of the

canton. In 1448 a bloody battle was fought here between the Confederates and the Zähringers. Pop. 639.

HIRINGEN an oval-shaped isl. Sweden, formed by the two arms of the Göta-EU S W coast of the Göteborg greatest length N E to S W 15 m. central breadth about 7 m. It forms the two districts of E and W Hammen. Göteborg was originally built upon it.

HISSAR—1 A small Asiatic mountain state, Turkish N from Budaköy and Kocaeli, near the sources of the Oruz. Its cap. Hissar or Shadran lies about 140 m. N E. Balkh, about lat. 39 30' N lon 66 30' E. The territory is traversed N to S, by a mountain range Kohistan, 4000 ft high. It is well watered, and yields rice and rock salt. It is governed by an Uzbek chief and the people use a peculiar kind of middle—(Ritter)—2 A ruined in Hindostan, prov of and 105 m. W W. Delhi. The ruins cover a large extent of ground; in the centre are the remains of a palace having very extensive subterranean apartments. There are also several large tanks and wells.

HISTON par Eng. Cambridge 2800 ac. P. 1011.

HIT a to Asiatic Turkey r bank Euphrates path of and 145 m. N W Bagdad. It consists about 1500 houses built all round an elongated hill rising from and parallel to the river. The houses are chiefly of clay one or two stories high flat-roofed, and many of them covered or repaired on the top with bitumen the streets are narrow dirty and frequently steep, rising one above the other along the side of the hill with a dusty black appearance, owing to the smoke from the constantly burning bitumen the preparation of which is one of the chief employments of the place. The hill and town are inclosed by a high mud wall with semicircular towers but no ditch. One graceful minaret appears amid this mass of brown clay and some respectable specimens of Arabesque architecture are displayed in some of the saloons, a little way outside the town. Besides the preparation of bitumen that of wool and boat building burning lime and making salt are carried on.—(Chesney)

HITA a to Spain New Castle prov of and 13 m. from Guadalajara. It is built in the form of an amphitheatre on the side of a hill crowned by an old castle has two parish churches, a townhouse, convent, primary school and a trade in corn, wine, oil estate, wood, and charcoal. Pop. 867.

HITCHI a market in and par England, co. Hartford The town 13 m. N W Hartford, is irregularly laid out, but the houses are in general well built, and the streets spacious partially paved, and lighted with gas. It has a handsome church, with a low massive embattled tower surmounted by a spire several places of worship for Dissenters, a free grammar-school, Lancasterian endowed infant, and national schools some benevolent bequests apprenticed funds, a dispensary and a number of almshouses. Its principal trade is in corn, malt, and flour. There are several breweries some of which are upon a large scale and a silk-mill. Many females are employed in straw plaiting. Market day Tuesday Hitchin was a place of some importance to the reign of Alfred and formerly comprised in the Mercian territory. Area of par 6847 ac. Pop. 7077.

HITTEN an isl Norway off the coast of S Troms, 10 m. greatest length S E to W S W 80 m. mean breadth about 12 m. A good many cattle are reared upon it, and an active fishery is carried on at the coasts. Pop. including several adjoining isles, 9685.

HITTEROE, an isl off S coast Norway, prov Christianized hall of and nearly opposite Mandal. It has a parish church, and a fertile soil. Pop. 1138.

HITTELEIGH par Eng. Devon 1150 ac. P. 180.

HITTORF a vil Rhine prov Prussia, gov Düsseldorf, circle Solingen on the Rhine with manufactures of tobacco, and a large trade in corn coal and wood, which is here cut up in large quantities and exported. Pop. 1438.

HITTYAS, a vil Hungary co. Temesvar 6 m. from Kismat with a Greek church. Pop. 1120.

HITZKIRCH, a vil and par Switzerland, can. and 12 m. N Luzern, near the W extremity of lake Baldeg with a parish church and the buildings of a commandery of the Teutonic

order, which make a very conspicuous appearance. Much fruit, and some wine, are grown in the vicinity. Pop. 565.

HIVAQA an isl., Pacific, the largest of the S.W. group of the Marquesas. lat. (N pole) 9° 54' S. lon. 139° 4' W. (n.) 22 m. long E. to W. about 10 m. greatest breadth. Mountains and bearing indications of volcanic eruptions. Pop. about 600.

HJARNÖ, an isl. Denmark of E. coast Jutland, hall Wille, at the entrance of the bay and 8 m. E. by S. the in. of H. v. v. It forms a parish of same name, and has in the deep strait, which separates it from the mainland, a winter harbor on the first class. Area, 4 sq. m. Pop. 170.

HJELMAR, HJELMAR, or JELMAR, a lake, Sweden, bordering on, and partly belonging to each of the three lars Örebro, Nyköping, and Westra. greatest length E. to W., about 40 m. greatest breadth about 15 m. It receives the Svart å in W. extremity near Örebro, and discharges itself at its E. extremity by the Thorsdalla into Lake Malar. It also communicates with this lake by the canal of Hjelmar which proceeds from its N. shore, and is carried to the Arborg.

HJERTING a vil. Denmark, Jutland E. shore of Hjerting Revier. It carries on an active seal fishery and, though it has no proper harbour the roads are well sheltered, have good anchorage, and form a kind of winter haven of the fourth class, with 17 m. 10 to 15 ft. water. A considerable export, particularly of oil and tallow takes place here. Pop. 400.

HJÖRRING, a vil. Denmark, Jutland, hall of same name, 23 m. N by E. Aalborg. It is an old place has frequently suffered from fire, and is now improving in condition. It has an iron foundry but its inhabitants are chiefly agriculturists. A few are engaged in shipping. Pop. 1800. Area of hall, the most 1/4 in Jutland, 620 geo. sq. m. Pop. 67 800.

HJORTÖL a small isl. Denmark S. of, af Funen. The inhabitants live by fishing and agriculture.

HJUNSA cap. Tibet. See LAMA.

HLEBOK, HLEBO, or HOBOKO, a vil. Hungary on Transylvania. It is a struggling place in a mountainous district, and has a R. Catholic church, 18th century. Pop. 2500.

HILINKO a vil. Bohemia, 15 m. S. E. of S. R. E. Chlumec traversed by the Chlumka. It has a large modern church, a townhouse, and a superior school manufactures of linen and earthenware, silkworms, several saw and other mills. Pop. 3284.

HO-KIAH a vil. China, in v. Chihle in a plain between the Tae-ho and the Hou-to-ho 102 m. S. S. W. Pekin. It is one of the largest towns in the province and is surrounded by lofty walls but the houses, in general have no great appearance. It has a kind of college.

HOAI HO a river China, formed by the numerous streams who run in prov. Honan, flow S. E. and E. S. E., and unite in prov. Ngan-ho. Thence the stream flows E. N. E. to prov. Kiang-soo where it falls into lake Hang-tai. Total course about 400 m.

HOANG HO, or YELLOW RIVER, a large river China, the sources of which are in mountains in the Koko-Nor territory N. from Tibet about lat. 34° 30' N. and lon. 97° 30' E. Its course is exceedingly devious. After flowing in all directions, excepting towards the S. through a winding course of several hundred miles, it proceeds nearly due N. to about lat. 41°. Then E. for nearly 300 m. when it suddenly turns round, and flows directly S. for about other 200 m. then turns abruptly E., and finally discharges itself into the Yellow Sea. In lat. 34° N., long. 115° 30' E. after a course of about 2280 geo. m. although the distance in a direct line, from its source to its mouth is only 1150 geo. m. It is a turbid furious, and impracticable stream and is but little used by the Chinese for navigation. From its frequent floods, the cities on its banks—including Lanchoo, Poo, and Kailung—are in constant danger of being submerged to prevent which and other damage, great expense is incurred in maintaining artificial embankments. In its progress, the Hoang Ho receives several tributaries than any other Yellow river in the world, except the Nile. The principal are—the Hui-ho and Lo-ho, in prov. Shensi; the Fuen-ho, in Shensi; and the waters of the lake Hong-tai, in Kiangsoo about 60 m. above its outlet, where it is crossed by the Imperial Canal. It derives its name from the vast quantities of yellow mud held in a state of solution by its waters.

HOATH par Eng. Kant. 898 ac. Pop. 599.

HOBART TOWN or HOBARTON cap. of Tasmania or Van Diemen's Land, S. E. side of the island v. bank Derwent; lat. 43° 54' S. lon. 147° 28' E.; occupying a commanding and extremely picturesque position at the head of a sheltered bight, called Sullivan's Cove, about 20 m. from the sea. It

covers from 1 to 1 1/2 sq. m. of gently rising ground, backed by an amphitheatre of lofty and well wooded hills. The streets cross each other at right angles, are airy, pretty wide, and agreeable to the eye; those, however, that are not are much cut-up by the constant transit of carts and cattle. The principal streets are lined with excellent houses and handsome shops. The more modern buildings are chiefly of brick or a dark-coloured freestone the older principally of wood. The public edifices are numerous, and some of them handsome, particularly the churches of which five belong to the Church of England. There are, besides the Presbyterian churches, various chapels and meeting houses belonging to different denominations, a R. Catholic chapel and a Jewish synagogue. The other more remarkable public buildings are—64 government-houses, female house of correction or factory the military and prisoners barracks, custom-house, ecclesiastical stores, police-office, colonial hospital, &c. The manufactures comprise breweries, tanneries, foundries, timber-mills flour-mills, coach-building, cabinet-making, and ship-building the last now become an extensive occupation. The harbour is excellent, and well-adapted for trade. The tide is irregular; rising at times 7 ft. or 8 ft., but usually only 4 ft. or 5 ft. Along the water's edge is a spacious wharf, at which vessels of the largest burden may lie or anchor. On either bank of the Derwent, both above and below the town, are numerous beautiful villas and agricultural farms. Hobart Town was founded in 1804. Pop. in 1843 37,083.

HOBKIRK, par. Scot. Roxburgh; 11 m. by 1 m. P. 750. **HOBOKEN**, a vil. and conc. Belgium, prov. of and 4 m. S. Antwerp, v. bank Scheldt, with manufactures of oleary three breweries, a flour and a mill mill. Pop. 1468.

HOBRO a vil. Denmark, Jutland, hall of, and 16 m. N. N. W. Randers, at the W. extremity of the Mierig-sund.

It has a church, a townhouse, and a winterhaven, of the fifth class, with 7 f. Pop. (approximate) 1000.
BOBY per Eng Leicester 1068 ac. P 495.

BOCH WARELY or **Wamur** a market in Bohemia, circle of, and 7 m. N W Eidenhow in a valley. 1 bank Cyl lina, with a castle, church, townhouse school court of justice, and a trade in linen, yarn, and cattle. Pop 992

BOCHREIM a. ta. Nassau, cap. hall of same name, on a gentle slope fronting the S. and descending gradually to the Rhine, on the Tannus Railway 4 m. E N E Mainz. It has a parish church and a demary new a summer residence of the Duke of Nassau, and is famous for its wine the best of which is grown in vineyards through which the railway passes immediately R. of the church. From this vine, called in Germany *Bochreim* is derived the English name *Bock* applied indiscriminately to the wines of the Rhine, Main &c. Pop. 2370

BOCHKIRCH, a vil. Saxony circle of, and 6 m. E S E. Bautzen, with a church and school. It is memorable as the spot where, in 1758, the Prussians, under Frederick the Great, were surprised during the night by the Austrians, under Marshal Daun, and lost 100 cannon and 9000 prisoners. Marshal Keith a Scotchman, and one of Frederick's best generals, was killed, and is buried in the church where a monument has been erected to him.

BOCHSPEIER, a vil Bavaria, Palatinat, near Kaiserlautern with a parish church, and a trade in wood. P 1333

BOCHST two places, Hesse Darmstadt.—1 A vil prov Starkenburg 1 bank Mühlberg 20 m. E S E. Darmstadt, with a church churches tile-works, and several mills. Pop 1820.—2 A vil Oberhessen, circle Friedberg on the Nidder with a Protestant church, and a castle, with a small picture-gallery a saloon of stone, and library of nearly 50,000 volumes. Pop 659.

BOCHSF a vil Saxony, cap. hall of same name, on the Main 14 m. E N E. Wiesbaden, with manufactures of wool len and henn cloth some shipping, and trade Pop. to 1800 bal., 17,081.

BOCHSTADT several places, Germany.—1 A market to Hesse-Cassel prov. of, and 5 m. N W. Hanau. It is walled, flanked with towers and has tile-works and a trade in wine. Pop. 798.—2 (Ober and Nieder) two nearly conjoined vils Bavaria, Palatinat. They contain a Protestant and a Catholic church and a courthouse. Pop. 1757

BOCHSTADT or **Wismar**, a. ta. Bohemia, circle of, and 39 m. N E. Bautzen, built almost entirely of wood, with a parish church townhouse, and school flax and other mills, and a trade in yarn. Pop. 1604

BOCHSTADT several places, Bavaria particularly.—1 A ta. circle Upper Franconia, 1 bank Aisch, here crossed by a bridge, 20 m. N W Nürnberg, with two churches, a castle, and hospital 1 polish works, saw and other mills. Pop 1713.—2 A ta. circle Swabia, 1 bank Danube, 23 m. N W Augsburg, with a court of justice, castle two churches, a Capuchin hospital, and a trade in corn and cattle. Several great battles have been fought near it. The most memorable is that of Blenheim, in 1704 when the French and Bavarians, under Marshal Tallard and the Elector of Bavaria, were signally defeated by Marlborough and Prince Eugene, with a loss of 40,000 men, 120 pieces of cannon and 800 standards. Pop. 3460.

BOCHSTETTEN (Swiss), a vil and par Switzerland cant. of, and 10 m. S E Bern, well built, with a handsome parish church. Pop. 4455

BOCKENDORF, a vil Saxony circle of, and 15 m. N N E. Dresden, with manufactures of linen saw oil and deer mills, some trade and a silver mine. Pop. 780

BOCKENHEIM, a vil Baden, circle Lower Rhine, 10 m. S W Heidelberg with two churches, and numerous breweries. Many of the inhabitants are engaged in outting turf, in which there is a considerable trade. Pop. 2555.

BOCKERING per Eng Norfolk 1331 ac. Pop 420

BOCKETON, per Eng Nottingham 1378 ac. P 114

BOCKHAM per Eng Norfolk 8436 ac. Pop 490.

For 1

BOCKHOCKING a river U. States, Ohio, which after a S. E. course of 80 m. falls into the Ohio, at Troy 25 m. below Marietta. It is navigable for boats 72 m., and affords good water-power.

BOCKLEY per Eng Essex 4614 ac. Pop 898.

BOCKLIFFE per Eng Bedford 1091 ac. Pop. 489

BOCKWOLD-cum Winton per Eng Norfolk 7475 ac. Pop 1087

BOCKWORTHY per Eng Devon 2526 ac. P 582

BODDAM per Scot. Dumfriess 6 m. by 8 1/2 m. P 1797

BODDESON a market in England, co. of, and 4 1/2 m. S E. Hartford consisting principally of two long streets well lighted. It has a small townhall and police station, with a clock-tower a commodious and new church, Independent chapel Friends meeting-house, a national and British school a practical school of agriculture, and an extensive brewery. The ancient inns of Boddeson are attested by Prior and Isaac Walton. 1 op. 1854

BODEIDA, or **BODEIA** a seaport in Arabia, on the Red Sea, 100 m. N. Mocha. It is of considerable size, has a fine appearance from its numerous and commodious domes, minarets, and mosques. Wharves generally well built market well supplied with articles of comfort and luxury.

BODGESTON per Wales, Fennorke 705 ac. P 78.

BODIMONT a vil. and com. Belgium, prov. of, and 18 m. E. Liège, on the Vesdre, so near Verviers as to be properly only one of its suburbs. It has extensive manufactures of woollens and acids, a foundry a brewery a cotton, a tanning, and numerous saw-mills. Pop. 2650

BODNET per Eng Selop 15209 ac. P 2057

BODONY, a vil Hungary Thibet Thama Banat, co. Temesvar about 4 m. from Kis-Betarek with a Greek church. Pop. 1469

BODSAK, or **ODAK**, a market in Hungary Hither Danube, co. Baos in a beautiful valley 14 m. from Zombor with a R. Catholic church Pop. 8110

BOP per Eng Norfolk 1400 ac. Pop. 225

BOEDIC an vil Franco dep. Morbihan, opposite the mouth of the Vilaine. It has no proper harbor, but is defended by a small fort. Some corn is grown upon it. The inhabitants are mostly fishermen. Pop. 250

BOEI numerous cities and towns. Chinese empire, including.—1 (Hoo-hyeu) prov. Kiangsoo 100 m. N. E. Hankow, on the Imperial Canal, and near R. bank Huang-Ho. It is surrounded by a triple wall and is a place of great bustle and activity.—2 (Hoo-Yung-Tehung) Chinese Tartaristan, 15 m. N. E. Li. with a garrison of 1900 men.—3, (Hoo-Tehou) prov. Kiangtung on an affluent of the Canton river 70 m. E. Canton. It is well built, and has some fine edifices with a bridge of 40 arches across the river. Articles of shell are manufactured and there is an active trade.—4, (Hoo-Tung) prov. Kiangtung L. coast isl. Hainan 50 m. S. Kiang-chau-fa. It has extensive but thinly inhabited suburbs. The walls of the town are high the streets paved, and narrow and the houses built of red brick. Pop. about 44,000

BOEI Ho a river China, prov. Kamao and Shenes forming the principal affluent of Hoang Ho or Yellow River which it enters in lat. 34 45' N. 75 m. E N. E. Nyan

BOEKSCHE WAALEN (see) an isl. Holland, prov. S. Holland bounded N. by the Old Maas, E. by the Voortrekeil S. by Hollands-diep, and W. by the Spaal. It contains sixteen parishes, is fertile, and has a pop. of 22,000

BOELLALION a vil. Indian Archipelago, S. coast isl. Ceram with a school, and 400 inhabitants all Christian.

BOEN Ho a river China, prov. Chihle, which joins the Peiho at Tien-Sing 70 m. S. E. Peking, after a S. E. course of about 200 m. Principal tributaries, the Tiao-Ho and Hsiao-Ho.

BOEVLAKEN a vil. Holland, prov. Gelderland 14 m. S W. Harderwijk with a court of justice, a church, and school. Pop. 742

BOEVLARET a vil and com. Belgium, prov. Brabant on the Yaahe near the forest of Solmes 7 m. S. E. Brussels. It has a brewery a flour-mill, a limestone quarry and lime-kilns but the greater part of the inhabitants are employed in agriculture, or in hewing wood in the forest. Pop. 2181

HOEYTLLEINEN, a lake, Russian Finland, near the centre of circle Kampo; greatest length N to S, 80 m. in greatest breadth, 12 m. It communicates, at the S. W. with lake Wutjarrv.

154

HOHENSTEIN or **Hohenstein**, two tns. Saxony—1 Circle of, and 2 *Freie R. Zwickau* on the slope of a lofty hill. It contains a handsome church, and a postoffice and has manufactures of woollen and cotton goods, flannel and hosiery dye-works, tile-works, spinning-mills, a chalybeate spring, and three annual fairs. Pop. 4670.—2 Circle of and 18 ts. *S.B.E. Dresden*, cap. hall. of same name, on a height above 1 bank Poles with the remains of an old castle, a court of justice, and manufactures of linen. Pop. ca. 9941. lat. 51° 20'.

HOHENSTEIN or **Obenstein**, a ts. *Prussia*, prov. *R. Prussia*, gov. of, and 75 ts. *S.W. W. Königsberg* on the *Amalg* with a court of justice, a castle, church, and a trade in cattle. Pop. 1370.

HOHENSTEINGLEN a vil. *Württemberg* circle *Danube* 40 m. *S.W. Ulm* with a *R. Catholic* church. In 1799 it was more than once taken by the French and burned. P. 410.

HOHENWETZ a vil. *Denmark*, *Holstein* bail. of and 15 m. *S.W. W. Hamburg*; an ancient place, and at one time of considerable importance. It has a church, many features of linen and an annual fair. Pop. 1169.

HOHENZOLLERN a territory in the *S.W. of Germany* consisting of a long comparatively narrow and very irregular tract, and constituting two contiguous, but independent principalities bounded *N.E.* and *W.* by *Württemberg* and *S.* and partly *W.* by *Baden*.

Hohenzollern Hohenzollern, a principality forming the twenty-seventh member of the Germanic Confederation the more *N.* of the two areas, 90 sq. mi. is almost wholly situated between the *Herzberg* and the *Rough Alp*, and has a very rugged and even mountainous surface—several of the mountains exceeding the height of 2660 ft. Between the hills a number of small valleys intervene and are drained by small affluents of the *Neckar*; but the climate is generally severe, and the soil by no means fertile. Where practicable, however, it is well cultivated and where the plough cannot be used, there is much excellent pasture-land on which great numbers of cattle are reared. The minerals are of little value and are chiefly confined to building-stones, limestone, and potter's clay. Manufactures are not much advanced but some woollens are made and a good deal of worsted and cotton is spun. The government of *Hohenzollern Hohenzollern* is a constitutional monarchy. As a member of the Germanic Confederation it has a vote in the *plénium*, and shares a vote in the minor diet with *Hohenzollern* *byrgrun* *Irchtstein* *Waldeck* *Reuss* *Lippe-Detmold* and *Lippe-Schaumburg*. Its contingent to the Confederation is 145 men. Its capital is *Heddingen* besides which, there are several small villages. Pop. 30 148.

Hohenzollern-Sigmaringen, a principality forming the twenty-sixth member of the Germanic Confederation the more *S.* and larger of the two areas, 266 sq. mi. is situated partly on the *Rough Alp*, and partly in the valley of the *Danube* which crosses it *W.* to *E.* and within it receives the *Lauchert* and other small affluents. A small portion in the *N.* is drained by affluents of the *Neckar* and hence part of the great watershed which divides Europe into two great basins is formed in this principality. The surface is in a line a very mountainous and is intersected by only a few narrow valleys. The best part of it is in the *S.* on the *E.* bank of the *Danube*; elsewhere the climate is severe and the soil of a stony and ungrateful nature. Agriculture, however, forms the principal employment and being conducted with considerable skill and industry grain is produced sufficient, in ordinary years, to meet the home consumption. The minerals include *hog-iron-ore*, bituminous coal, *gypsum*, *limestone*, *rock salt* and *fullers earth*. A considerable part of the higher ground is covered by wood chiefly *pine*. Manufactures have not made much progress but there are several iron works, and numerous oil saw and other mills, *breweries* and *distilleries*. The government is a constitutional monarchy. As a member of the Germanic Confederation, *Hohenzollern-Sigmaringen* has a vote in the *plénium*, and takes the lead of several other small principalities in sharing the sixteenth vote in the minor diet. Its capital is *Sigmaringen* besides which there are several other small towns and villages. Pop. 85,560.

HÖHR, a vil. *Germany* duchy *Nassau* bail. *Montabaur* with manufactures of water-jugs, plates, and numerous other

articles in earthenware more especially bottles for *Saline* water. Pop. 1171.

HÖHSE or *Hohse* was *Mansourin*, a township, *Rhinish Prussia*, gov. of, and 17 m. *E. Düsseldorf*, circle *Sollingen* with extensive *laid-works*, and numerous *laid-works* which are employed chiefly in supplying the *Bollinger* factories. Pop. 11,595.

HÖHWACHT a vil. duchy of and *N.E.* coast *Holstein* with a harbour and fine roadstead the latter having 15 ft. to 20 ft. water. Exports—grain imports—seals from *King Island* and *thunder* from *Sweden*. Numerous *horses*, sent from the *Denish* islands to the *Holstein* markets, are landed here.

HÖIER, originally *Höier* was a vil. duchy of *Schleswig* bail. and 3 m. *W. W. W. Lunden* on the *Seesbeck*, near where it falls into the mouth of the *Widau*, or rather the *Rathelshiller* canal in which it has a dock, with from 8 ft. to 9 ft. water. It has a church a custom-house and some shipping trade but the chief employments are agriculture and cattle-rearing. *Höier* is protected by a strong outer embankment. P. 1000. *HÖIA-JAMORA-KA* *Gora*, a vil. *Bahobolistan* lat. 26° 18' N. lon. 66° 55' E. The place itself is insignificant, consisting only of about 40 huts, made of mats, but has attracted attention from its having been ascertained that there are rich lodges of *sopper* in its vicinity. *Oras* of *antimony* lead and *silver* are also reported to be abundant.

HOKIANGA a broad river *New Zealand*, in the *N.* of *the* coast. It flows *S.W.* and enters the sea in lat. 35° 30' S. 110 m. *N.N.W. Auckland*.

HOLABRUNN (Osnab. or *Holstein*) a market in *Lower Austria*, on the *Elbe* in a valley covered with vineyards. It has a square adorned with a fountain and statue a handsome church, infirmary and posthouse and a considerable trade in corn and wine. Pop. 2688.

HOLAR (*Danish* *Holm*) a ts. in *Island* in the *N.* of the island near the *Skagerrak*. It is a very ancient place and was once the see of a bishop founded in the beginning of the 12th century. It still possesses its cathedral and has a school and a printing press.

HOLBACH a market in par. *England* in *Lincoln* the river 87 m. *S.E. Lincoln*, in a low marshy district, about 5 m. from the sea, has a large and handsome church, a Wesleyan chapel a free school and an hospital for 15 poor persons. Market day, Thursday. Area of par. 30 220 ac. Pop. 5191.

HOLBECK, a vil. and chapel *England* in *York* (*W. Riding*) in the bor. of and 1½ m. *S.W. Leeds* with a handsome chapel several dissenting places of worship extensive mills for spinning flax, and thread works for constructing steam engines, and all kinds of machinery and other important manufactures. Pop. (1851) 14 152.

HOLBEK, a seaport in *Denmark*, lat. *Sweden*, cap. bail. and on a fiord of same name, forming an arm of the *Isfjord*, 83 m. *W.N.W. Copenhagen*. It contains a parish church, formerly belonging to a monastery a school and a town-house and has a distillery and a harbour which forms a good winter haven, of the fourth class admitting vessels drawing 9 ft. to 10 ft. and at which a considerable trade, chiefly in corn, is carried on. In early times *Holbek* was one of the most important towns in the kingdom and possessed a strong castle demolished by the *Swedes*, in 1659. Pop. in 1800 Area of bail. 488 sq. mi. Pop. 73 200.

HOLBETON par. *Eng.* *Devon* 4748 ac. Pop. 1029.

HOLBROOK par. *Eng.* *Suffolk* 3108 ac. Pop. 857.

HOLCAR, or *Holkar's* *Dominions*. See *INDIA*.

HOLCOMBE three par. *England*—1 *Somerset* 780 ac. P. 464.—2 *Hereford* *Devon* 1536 ac. P. 289.—3 *Devon* 325 ac. P. 759.

HOLCOT par. *Eng.* *Northampton* 1670 ac. P. 608.

HOLCUT par. *Eng.* *Bedford* 680 ac. Pop. 63.

HOLDENBY par. *Eng.* *Northampton* 1936 ac. P. 211.

HOLDENHURST par. *Eng.* *Hants* 7390 ac. P. 1380.

HOLDERNESSE, a dist. *England* co. *York* (*E. Riding*) occupying the *S.E.* projection of the co. which terminates at the mouth of the *Humber*. It is remarkable for the fertility and possesses a soil suitable to every purpose either of arable or stock husbandry.

HOLDFAST BAY *S. Australia*, Gulf of *St. Vincent*, co. *Adelaide*, about 55 m. *N. Cape Jervis*. It is merely an open roadstead exposed to the *S.W.* gales which are by far

the most violent that blow on the coast of Australia. A tremendous sea runs into the anchorage during a S.W. storm.

HOLDGATE *par Eng. Southampton* 1896 ac. Pop. 311.
HOLDSCHWITZ, or **HOLZSCHWITZ** a vil Bohemia, circle Rakonitz, 1 bank Mollava 2 m from Fugene with a textile manufactures of cotton, and a trade in wine. P. 1001.

HOLFOURD *par Eng. Somerset* 796 ac. Pop. 181.
HOLGUIN a tn., Isl. Cuba, dep. Oriental, 50 m. N.W. Santiago lat. 20° 40' N lon. 76° 10' W the center point of a sugar-growing district. Pop. 4199.

HOLICA, or **HOLAZICA**, a market in Hungary Mithor Deaulic co. Neutra, 1 bank March, 3 m S.W. Szekes with a Protestant and a C. Catholic church, a synagogue, and a magnificent imperial palace; manufactures of stoneware, and a fine breeding stand. Pop. 4533.

HOLITZ, or **Van HOLST**, a tn. Bohemia, circle of, and (1) as N.E. Chudam. It is almost entirely built of wood has a parish church, townhouse, and school. A battle was fought here, in 1560, between the Prussians and the Imperialists. Pop. (agricultural) 3424.

HOLLAND'S DOMINIONS, *See* **INDONESIA**.

HOLLKHAM *par Eng. Norfolk* 5973 ac. Pop. 681.

HOLLACOMBE, *par Eng. Devon* 1218 ac. Pop. 103.

HOLLAND (New) *See* **AUSTRALIA**.

HOLLAND two parts, *See* **ENGLAND** — 1 (Great) 2683 ac.

Pop. 400 — 2 (Little) 816 ac. Pop. 89.

HOLLAND (1) *ARTS* *or* a dist. England, one of the three portions into which the Lo Lancashire is divided. It occupies the S.E. part of the co. round the Wash and consists almost entirely of low marsh and fen-land the marsh being the portion nearest to the sea, and the fen that which lies more inland. It is principally included within what is called the Great Level of the Fens being defended from the sea, and from the overflowing of the rivers, by immense embankments.

HOLLAND (*INDONESIA*) *See* the name usually given to this country in the histories of the Netherlands. Though now strictly speaking only applied to the provinces of N. and E. Holland—*see* next article—the name was associated with that kingdom for four years (1606-1610) under the rule of Louis Bonaparte. The kingdom of Holland, during that time included nearly all the territories composing the present kingdom of the Netherlands, together with that of Hanover and the duchy of Oldenburg. *See* **NETHERLANDS**.

HOLLAND the most important and interesting portion of the Low Countries, now included in the kingdom of the Netherlands and divided into two provinces, N. and S. Holland. It lies between 51° 40' and 53° 10' N lat. and 3° 28' and 5° 30' E lon. and is bounded, W. and N., by the German Ocean. E. by the Zuider Zee, Utrecht and Gelderland and M. by the Meuse and its estuary—one branch of which, the Grooten Oude, separates Holland from Zealand. Its length, N. to S. is about 60 m. or 110 m. including the islands of Texel and Vlieland N. of the Zuider Zee and its breadth, at its S. limit, about 45 m. decreasing towards the N. area, about 1954 sq. m. of which 1074 belong to S. Holland. The line of demarcation between the two provinces crosses the S. angle of the lake Helder, and winds, in a very sinuous course, near the parallel of 53° 1'. N. Holland, the smaller but more densely-peopled province, was formerly called W. Friesland and is still so designated in some public documents though Friesland, properly so called, lies wholly on the E. side of Zuider Zee.

Holland is altogether a flat and depressed tract, sinking, N. and W. towards the German Ocean consequently N. Holland is lower than the S. province, and some portions of it—as Waterland, Krommerland, and Farmerland—are, partially at least, below the level of the sea. A broad margin of dunes or sandhills, often 100 ft. high, extending along the coast from the mouth of the Meuse to the Helder protects this low country from the waves of the sea, and checks the encroachments of the element to which it owes its origin. Where this natural embankment ceases, the work of man begins and dykes, raised by the perishing toll of $\frac{1}{2}$ m. along the remaining shores of the German Ocean on the W. and those of the Zuider Zee, on the E., in a winding line of more than 100 m. save the green fields from the devastation threatened by the waters that roll above. The sandhills of Holland are supposed to gain slowly in extent and stability by the gradual retirement of the sea but they are liable to

sudden and unaccountable changes. The Dutch, taught by experience, are ever on the watch to secure every spot as soon as it is raised above the waters by casual deposition. Holland was originally a series of banks of sand or mud, exposed to inundation from the Rhine, and other rivers, as well as from the sea; and thus exhibited a succession of silty marshes and barren sands. But patient industry, by raising dams against the sea and rivers, has converted the waste into a smiling garden. These dams or dykes form the characteristic and most remarkable feature in the Dutch landscape; being generally about 50 ft. in some cases 80 ft. in height, and sometimes planted with rows of trees, between which run the canals and roads of the country. Wind-mills, the office of which is to pump the redundant water from the inclosed land or polder into the canal, are constant accompaniments of the dykes.

The rivers of Holland are—In the N. province, the Vecht, Amstel, Zaan, Spaarne, Groot, Geyse, Goope, Diem, and Korte-Diem or Blokker—most of these, however are but side-branches from the Zuider Zee, or Rhine in S. Holland, the Rhine, with its numerous branches; the Lek, Linge, Merwede, IJssel, Gouwe, and Rotta. Several lakes still remain in N. Holland as the Haarlem, Wyker, Naarder Horster, Leg, Lange, and Uutinger lakes. In N. Holland 43 lakes have been drained—on S. Holland, 40 but it is said that the increasing of peat-land in the still remaining mosses nearly keeps pace with the work of reclamation.

Two-thirds of the population are Protestants of various sects—the Calvinists and Mennonites (Anabaptists) predominate; the rest are R. Catholics and Jews, to the number of 25,000. The public schools, in 1849 were 951 attended by 114,823 pupils and are carefully watched by the provincial administration. The University of Leyden maintains its long-established reputation and boasts of a magnificent museum of natural history. The hospitals, as well as schools, of Holland are well endowed and 87,000 poor are maintained by public charity.

Holland is the most populous part of the kingdom and, indeed with respect to density of population and the development of industry of every kind, it is one of the most remarkable countries in the world. The entire population is (1854) 1,222,580 of which number 681,871 belong to the larger—that is the N. province and 540,709 to the S. province. Yet the density of population is greater in N. Holland where there are about 637 n. inhabitants to the square mile but this density of population, in a country of golders, densely inclosed with dykes, rivers and canals, becomes intelligible, when it is considered that the small territory of N. Holland reckons, besides numerous goodly villages, 11 towns—namely Amsterdam, Edam, Enkhuizen, Haarlem, Hoorn, Medemblik, Monnickendam, Pernisland, Weesp, and Zierikzee while the S. province has 12—Brille, Delft, Dordrecht (Dort), Gorinchem (Gorkum), Gouda, Leyden, Maastricht, Rotterdam, Scheveningen, Schoonhoven, S'Gravenhage (the residence of the king) Vlaarding, and Woerden.

HOLLAND-PRUSSIA a tn. E. Prussia, gov. of and 50 m. S.W. Zolingen *See* circle of same name on a height above the V. circle. It has a seat of justice, several public offices, a Protestant parish church, a chapel old castle, and hospital manufactures of woollen and linen cloth and bark, walk, and flour mills. Pop. 2465.—The climate is flat, and generally fertile. Area, 255 sq. m. Pop. 25,400.

HOLLANDS-DEER, the lower part of the estuary of the Waal, Holland. It separates provs. S. Holland and N. Brabant and, flowing W. from the Beersbrook, for about 14 m., divides into the Haringvliet and the Volke-rak, which lose the island of Oyer-fakke.

HOLLESCHAU or **HOLZSCHAU** a tn. Moravia, circle of and 18 m. N. Hradisch on the Ruzawa with a ducal church, a fine castle, a townhouse, three chapels, a synagogue, and a trade, chiefly in the hands of the Jews, in wax, honey, hides, and wool. Pop. 4589.

HOLL FELD a tn. Bavaria, circle Upper Franconia, 12 m. E. Bamberg with two churches, two chapels, a hospital and a trade in cattle. Pop. 1048.

HOLLIDAYSBURG a tn., U. States, Pennsylvania, 118 m. W. N. Harrisburg with five churches, five schools, and two printing-offices. Pop. 1800.

HOLLINGBOURN *par Eng. Kent* 4680 ac. P. 1800.

HOLLINGSTEDT [formerly *Zeilingstede*] a vil. Denmark, Schleswig, half Geestrup, a bank Treene, here crossed by a long bridge, 12 m. W. S. W. Schleswig. It was, in early times, a place of considerable importance, and carried on a considerable trade with England. The spacious old warehouse (Stapelhaus) now forms the church. The W. part of the celebrated wall called Dannewerk terminated on the Treene, near Hollingstedt.

HOLLINGTON par Eng. Sussex 2470 ac. P 579
HOLLUM, a vil. Holland, prov. Friesland S.W. end of old Ameland consisting of well and regularly built one-story houses. It has a Calvinistic church, two Baptist meeting houses, a school and a large store for stranded goods. Pop. (Seherman and steamer) 1075

HOLLYN par Eng. York (E. Riding) 3740 ac. P 516
HOLLYMOUNT a tn. Ireland co. Mayo, 14½ m. S. by E. Castlebar with a handsome parish church, several schools a dispensary market-house and police barrack. Pop. (Agricultural) 481

HOLLYWOOD a tn. and par. Ireland, co. Down. The town is pleasantly situated on the E. shore of Belfast Lough, 5 m. N.E. Belfast, has an ancient church, with a handsome spire, two Dissenting meeting houses, and several schools. It is a constabulary police, and a coast-guard station. Pop. 1532 Area of par. 8064 ac. P 4317

HOLLYWOOD two pars. Ireland — 1 Wicklow 18,384 ac. P 2021 — 2 Dublin 3998 ac. P 335

HOLM LAGOON par Eng. Hereford 3122 ac. P 522
HOLME par Scotland, Orkney 9 m. by 4 m. P 548

HOLMER, par Eng. Hereford 13069 ac. P 747

HOLMES House, a seaport vil., U. States, Massachusetts, 89 m. S. E. Boston with two churches. It has a safe, commodious harbor and several fishing vessels. Pop. 600

HOLMSTRAND a municipality in Norway bail Jarlsberg and Larvik, in the gulf, and 33 m. S. W. Christiansia. It has an old wooden church, two schools, a brandy distillery and a tobacco work. Retail trade and shipping are the main occupations, but there is no proper harbor. P (1845) 1746

HOLMFIRTH a manufacturing vil. and dist. England co. York (W. Riding) The village, 6½ m. S. by W. Hindersford on the stream of same name in a beautiful valley sheltered by lofty hills, is somewhat irregularly laid out. It has a commodious supply of water ample. It has a commodious townhall, a handsome church and chapel for Independents and Wesleyans, a national school, and a mechanics institute. Woollen cloth plain and fancy extensively manufactured. On February 5, 1858 about 100 lives were lost, and property to a vast amount destroyed, by the bursting of the retaining dam of an immense reservoir 3 m. above the town. The water of which supplied motive-power to many of the factories in the valley and which, rushing out with overwhelming force, swept before it trees and cattle, houses and factories. Pop. 18,400

HOLMOV or **GOLMA**, an isl. Sweden, gulf of Bothnia, 20 m. E. Umeå; lat. 58° 40' N. lon. 21° E. It belongs to the Quark group.

HOLSTEIN (Duchy of) [Latin, *Holsatia*] a prov. Denmark, bounded, N. by the Baltic, S. by the Schleswig, from which, with exception of a small tract of land, it is separated by the Elbe and the Schleswig-Holstein Canal. E. by the Baltic and territory of Lübeck. S. by Lübeck, duchy of Lauenburg, and territory of Hamburg. S.W. by the Elbe, separating it from Hanover and W. by the N. Sea or German Ocean. Its shape, though irregular may be regarded as that of a triangle, the apex of which is at Hamburg, while the base lies on the N. greatest length W. to E. 85 m. greatest breadth, 69 m. area, 2476 sq. m. The surface of Holstein, its geological formation, is craggy and, in general appearance, very much resembles that of the duchy of Schleswig. The central part consists of a large open plain covered, for the most part, with sandy heath, but presenting occasional patches of redclay arable land and not unfrequently tracts of bog and low meadow flats. The W. coast generally as well as the banks of the Elbe consist of marsh land, little raised above sea-level and not protected, like the W. coast of Schleswig, by chains of islands which break the force of the waves, but lying completely exposed to their devastating effects. Hence it has become necessary to protect the coasts with strong and lofty dykes. The E. coast, and a considerable part of the interior behind it, are easily inundated and present numerous tracts, where fertile corn-fields, and richly-wooded knolls, in which numerous lakes are embosomed, unite in forming enchanting landscapes. The highest points in the duchy occur in the N.E. but only attain in their loftiest peak, Bungeberg a height of 308 ft. They are generally of a swelling rounded form and occasionally exist as isolated hills. The Elbe and the Eider skirt the borders of Holstein. The proper rivers of the duchy are the Trave and the Stör which, rising in the same central plateau near each other take opposite courses and proceed, the former to the E. and the latter to the W. coast. The two principal lakes are the Plön and Seelet, both in the N.E. and both abundantly supplied with fish. The climate of Holstein differs much according to the locality and the nature of the surface. On the elevated grounds of the interior, and on the E. and S. sides, the air is clear and salubrious; in other quarters, it is overcharged with humidity. The localities where fogs and mists prevail are decidedly unhealthy. The vegetable productions include all the ordinary cereal leguminous, root, and thron crops. On the E. side of the duchy wheat of excellent quality is grown. In almost every quarter potatoes may be regarded as a staple article of produce. It is estimated that arable land occupies rather more than 2/3 of the surface, marshland not quite 1/3, moorland and pasture 1/3, woodland 1/3 and heath 1/3. Great attention is paid to the rearing of stock. Grass land is managed with a skill which almost rivals that of the best English graziers and both the horses and horned cattle of Holstein have long been famous. Sandstone, limestone, gypsum, clay and a little salt, are the only minerals wrought. Neither manufactures nor trade have made much progress the chief locality of both is Altona. Almost all the inhabitants are of German origin, use only the German language, and are so decidedly German in all their feelings, habits, and customs, that the influence of severance from the Danish government has not only been mooted but arms have been taken up, and battles fought, by which the general peace of Europe has been more than once seriously endangered. Holstein, though belonging to Denmark, forms one of the states of the German Confederation and, in conjunction with the duchy of Lauenburg, gives the Danish sovereign one vote at ordinary meetings, and three votes in the plenaria. The capital is Glückstadt, but Altona is the largest town, besides being one of the chief places of commerce in Denmark. Kiel and Rendsburg are also important towns. For administrative purposes, it is divided under the separate heads of 1 Town 2 Amts or bailiwicks and 3 Conventual districts and lordships. Of the first there are 14 of the second 31 and of the third, three conventual districts and nine lordships. Area, 479,850

HOLSTEINTON, a vil. forming property a suburb of Lübeck with a school, various manufactures, a bleachfield, and three mills. Pop. 1800

HOLSTON a river U. States, Tennessee, which unites with the Clinch at Kingston, to form the Tennessee. It is navigable 70 m. and near its sources are valuable salt works.

HOLSWORTHY a market town and par. England on Devon. The town 36 m. W by N Exeter nearly surrounded by the Derril is compact and well built; has an ancient church, two Dissenting chapels, a national, and other schools, and several charities. Weekly markets on Wednesday and Saturday; three annual fairs and numerous grant markets for cattle and sheep. Pop. 334. Area of par. 8936 ac. Pop. 1882.

HOLY a market town and par. England on Norfolk. The town 21 m. N N W Norwich, is pleasantly situated on rising ground, streets straight, paved, and lighted with gas, houses neatly built of brick and stone. It has an Established church, several Dissenting chapels, a Friend's meeting-house, a shirt-hall free grammar-school founded in 1554, and on dowed in 1556, by Sir John Gresham, a native of Holt, and founder of the Royal Exchange, London and Gresham College a church, national, British, and infant schools. Area of par. 2961 ac. Pop. (agricultural) 1736—3 A. par. Worcester 2511 ac. Pop. 539—3 A. par. parli. and municipal par. N Wales, co. of, and 29 m. E.S.E. Denbigh. The town, though anciently a place of some note, is now only an inconsiderable village situated on an eminence on the N bank Dec. The church is a handsome old edifice, with a square embattled tower. There is one Dissenting place of worship, and several schools. Area of par. 6155 ac. P 1536

HOLY or **YEMALORY** an island Pacific Ocean. Low Ar. shipwrecked 18° 25' N, lon 147° 6' W (N). It is very low, contains a lagoon, produces some coconut trees, and is sometimes inhabited by a few families.

HOLY ISLAND (anc. *Leifseyri*) an isl. N.E. coast England, co. Durham, 9 m. S.E. Berwick on Tweed. lat. (circle) 55° 40' 12" N lon 1° 47' W (N). It is 1½ m. from the mainland, with which it is connected by a narrow neck of mud, traversable by foot passengers at low water, but dangerous without a guide. It is of an irregular form, about 3½ m. in length, and about 1½ m. in breadth at the broadest part the N W discharging to half a mile. The N W part of the island consists chiefly of barren soil and sand hills, and is overgrown with rabbits. The S.E. end terminates in a perpendicular rock 60 ft. high, covered by a small fort or castle. The cultivable soil is fertile, producing excellent crops of corn, turnip, &c. Limestone and iron ore abound, and coal also has been met with. On the W coast are some curious caves, the largest extending 50 yards inwards from the entrance and also the small, but shell-strewn village of Lundfarne, now much resorted to by summer visitors. The inhabitants are chiefly engaged in fishing and in taking lobsters, which are sent to the London market. Close by the village is a small harbor.

The chief object of interest here is the celebrated ruined abbey of Lundfarne, a column, bays, and dark red pile of great antiquity which, though frequently plundered for

the stones of houses in the village, are still magnificent, and are now secured from further dilapidation by their proprietor. The length of the church is about 186 ft. and its breadth 36 ft.; the style of architecture somewhat resembles that of Durham cathedral. The arches are, in general, strictly Saxon and the pillars which support them short, strong, and square. In some places, however, there are pointed windows which indicate that the building has been repaired at a period long subsequent to the original foundation. The exterior ornaments of the building, being of a light sandy stone, are much wasted. Area of par. 8295 ac. Pop. 908

HOLY TRINITY several par. Eng.—1 Dorset. Pop. 1123—2 Dorset. Pop. 1549—3, Surrey Pop. 1616—4, Warwick 3310 ac. Pop. 16,504.

HOLYCRUGHER a vil. and par. Ireland co. Tipperary. The village, 3½ m. S.W. Thurles, a bank near has the parish church and a R. Catholic chapel. Near it are the ruins of Holycross Abbey founded in 1182 by Donald O'Brien, King of Limerick one of the finest remains of the pointed style of architecture in Ireland. Area of par. 8153 ac. P 164

HOLYHEAD (Welsh *Ynys-y-Glyn*, The Portress of Cybi) an isl. par. par. respect to and par. N Wales, co. Anglesea. The island which is about 7 m. long and 6 m. broad at the widest part is situated off the W. side of Anglesey with which it is connected by a long causeway over a channel fordable at low water. It is mostly a barren rock, ending in the N in a huge headland of serpentine presenting in some parts, immense perpendicular precipices, in others magnificent caverns excavated by the action of the waves. N.W. of the head on two rocks called the N and S stacks are two revolving lights, visible 30 m. distant. The S stack is connected with the head by a handsome suspension bridge extending over a chasm 90 ft. wide through which the sea roars and boils with great impetuosity. Area of par. which occupies 4 N, and 3000 ac. Pop. 4898

HOLYHEAD a town and par. N Wales, co. Anglesea on the N.E. side of the island. lat. (par. high) 53° 20' N lon 4° 37' W (N). 67 m. W Liverpool. It is irregularly built, but contains many good houses has a handsome parish church several Dissenting chapels, a national and British school a library and savings-bank. There are no manufactures, but shipbuilding and rope-making are carried on to some extent. From its advantageous situation Holyhead has been selected as the principal station of the post-office packets for carrying the mails to Dublin, from which it is 69 m. distant. The harbour is formed by a pier 600 ft. in length, bearing at the head of the latter a depth of 14 ft. at low water during ordinary tides and a handsome lighthouse on the land side is a triumphal arch of Anglesey marble erected to commemorate the landing of George IV. in 1821. Holyhead is also one of the places selected by Government, at which to form a harbour of refuge. The Chester and Holyhead Railway company have an extensive terminus here. A submarine electric telegraph was laid down across the channel from Holyhead to South on June 1 1862. Area of par. 6938 ac. P 3983

HOLYTON a mining vil. Scotland co. Lanark 13 m. E by Glasgow. Near it are extensive coal and iron works Pop. 900

HOLYWEIL, a market town, municipal and par. par. and par., N Wales, co. Flint, on a fertility near the S. shore of the estuary of the Dee, 14 m. S.W. Liverpool, with a station on the Chester and Holyhead Railway. It has one principal street, and two smaller; the former tolerably straight, the latter the reverse. In wet winter weather the streets are extremely dirty. The houses are of brick, and of very indifferent construction. The town is lighted with gas, and supplied with water chiefly from the celebrated St. Winifred's well. It has a parish church, a nautical observatory with a square embattled tower, nine Dissenting, and one R. Catholic chapel and a Memorial meeting-house several small schools, a dispensary and savings-bank. The principal manufacturing establishments in the town and vicinity are flour and flannel mills, copper-works, white and red lead works a shot tower carrying from 200 to 300 hands. Near it are several productive mines of lead, zinc, copper, and coal, and an extensive limestone quarry from which many thousands of tons are shipped annually to various parts of England. Holyweil is a constituency parliamentary borough to Flint. Area of par. 15,561 ac. Pop. 11 801

HOMONNA or **HOMANA**, a market in Hungary. Father Thaum on Szemplin, 90 m E. Spasza with a Greek and R. Catholic church a synagogue and two castles, a large weekly market, and several important annual fairs. P. 29-6.

HOMN a to. Syria. See Hama.

HONAN a large and populous city China, prov. of same name, on an affluent of the Hoang ho 118 m. S W Kai-feng lat. 34 43' 15" N lon. 112 28' 5" E (C) and surrounded by the Chinese to occupy the centre of the empire. It is surrounded by mountains 150000 and suburbs are adorned with gardens. It gave China the first Emperor of the Song dynasty and under the name of Young-king played a conspicuous part in the former revolutions of the country. The province lies between lat. 31 30' and 37° N; lon. 110° E and 118 25° E. area 65104 sq. m. bounded N by provinces Shantung, Chihli, and Shantung E by Kiang and Nganhou S by Hoang and W by Shensi. It is generally level but as traversed in a S E direction by a range of low hills and is watered by the Hoang-ho and its affluents. The soil is fertile, carefully cultivated, and produces more food than supplies the province likewise cotton hemp flax and silk. The forests in the W supply timber and the yield tungsten, copper, iron &c. Honan is divided into nine principal departments capital Kai-feng Pop. 28 087 171.

HONDA —1 A to. New Granada, dep. Cundinamarca, prov. Mariquita lat. 6° 18' N lon. 74 50' W L. bank Magdalena streets regular and all paved. It contains some good edifices including two convents two hospitals and a college and is an entrepot for the merchandise of the S and N prov. incas, which is despatched thence into the interior. Pop. 4600 —2 A bay New Granada, N coast, near the N E extremity of the state —3 A bay N W coast Cuba, 62 m. W by S. Havana.

HONDELY an uninhabited coral is. Pacific Ocean. Low Archipelago lat. 14 50' S lon. 128° 47' W (a). It has little or no soil but abounds with birds of various kinds. The sea swarms with fish, including enormous sharks while shells and large mollusks lie thick on the shores. Snakes crabs, and spiders are also numerous. It was visited by Van Schouten and La Mare April 10 1616

HONDURAS or **LA-NUEVA**, a vil Spain Valencia, prov. of and about 26 m. from Alicante with a church on an isolated height which rises up in the centre of the village a primary school, several distilleries and oil mills and a trade in corn wine, and oil. Pop. 1278.

HONDROOFE, a to. France, dep. Nord, 10 m. F S E. Dunkirk, on a branch of the canal of Haine-Culme. It is an ancient place, supposed to have been founded about the 10th century, and has been repeatedly reduced to ruins by war and fire. It has manufactures of linen and calico a bleachfield, breweries, tanneries, oil mills and two annual fairs. Here the French gained a victory over the British in 1793 P. 3250

HONDURAS (Belize) or **BELIZE**, a British territory E coast, Central America. It lies between lat. 15° 54' and 18° 30' N, and lon. 88° and 90° W, having N and W Yucatan W and S Guatemala; and E. the Bay of Honduras length, N to S. 175 m.; breadth, E to W about

80 m. but part of the S.W. boundary lies, towards Guatemala, is quite undetermined. Area, upwards of 16,000 sq. m. Excepting the river Hondo, which forms the Yucatan frontier the only rivers of consequence are the Balise, which traverses the territory S.W. to N.E. dividing it into two somewhat equal parts, and the Bay River which flows in the New River lake. Both in a course nearly parallel to the Balise, till it reaches the Caribbean Sea, a few miles S. from the mouth of the Hondo. The country N. of the Balise River and traversed by the New River is low and level towards the shore, swampy and interspersed with several lakes. S. of the New River however is a range of hills stretching N.E. to S.W. and joining on to the mountains of Guatemala. S. of the Balise River the country though also swampy on the coast, rises inland much more rapidly and may be generally described as mountainous. It is intersected by a ridge parallel to that of the New River and also joining on with the mountains of Guatemala, the E. part, both N. and S. of this ridge being covered by its lateral branches. The mountains, and the wide valleys between them are covered with vast forests of the finest timber including cedars, pines, mahogany, log-wood, Brazilian mahogany and cabbage and silk cotton trees.

The climate, especially during the wet season is considered by some worse hardly than any of the W. Indian lands though the low swampy portions can scarcely fail to exhale pestilential vapours. The mean annual temperature is 80° but the heat is seldom oppressive, from the beginning of July to the beginning of April being tempered by refreshing north-east winds but during the other three months, it is excessive though mitigated, occasionally by violent thunder-storms. The most rainy months are July, August, and September. The salubrious portion of the soil is extremely fertile producing readily all kinds of tropical produce of which plantains, yams, manioc, and maize, are grown, and also arrow-root and rice to a small extent. Sugar, coffee, cotton, and indigo, might likewise be raised, but are neglected. Fern-parilla is collected in the S. districts. The wild animals are those usual in such regions of America—cougars, panthers, tigers, deer, peccaries, agoutis, armadillos, and monkeys. Manatees and alligators frequent the lagoons. Birds, aquatic and land abound. Fish, turtle, lobsters, and shell-fish, are plentiful and of excellent quality.

The exports, in 1862 consisted of 6,885,163 lb. mahogany the staple article of the country an increased quantity compared with preceding years. Logwood 7803 tons, rosewood, 19 tons, cochineal, 968 arrobas, indigo, 18¹/₂ tales; casahuate, 56¹/₂ arrobas; cotton, 64,893 lbs. and 849 tales; coconuts, 7,04,400. The total value of the exports was £256,390. The chief imports from Great Britain are dry goods and fancy articles, for the Balise and Spanish markets wine, spirits, gunpowder and occasionally provisions from the United States, provisions, shingles, and lumber. The total value of the imports in 1862 was £211,355.

The government is administered by a superintendent, nominated by the Crown and seven councillors, who form a council and are elected annually by the inhabitants. The only town in the colony is Balise or Balise (old San). Honduras was transferred by Spain to England by treaty in 1670 but at different times its occupation was contested by the Spaniards till 1796, since which period it has remained quietly in the possession of Great Britain. The population is composed chiefly of negroes, who were first brought to the country as slaves. With exception of a few Caribs, who have fled into it as a place of refuge, there appear to be no native tribes in the territory. The white inhabitants are exclusively occupied in commerce, and the negroes in cutting mahogany and dye-woods, and in fishing. Pop. (1846), 10,708—white 339 coloured 10,410; (1861) 23,655.

HONDURAS, an independent republican State, Confederation of Central America lat. 12° to 16° N. lon. 85° 40' to 90° 5' W. bounded N. and E. by the Caribbean Sea and Mosquitia W. Guatemala; S. Salvador, and the bay of Conchagua on the Pacific. H.K. Mosquitoes and Nicaragua area, 3080 sq. m. Its surface is irregular being traversed by numerous cordillera-ranges, in all directions, but generally of moderate elevation. The valleys between are numerous and fertile, and there is no lake above 18 m. long by 10 m. broad, near the centre of the state. Its mineral wealth is very con-

siderable, but was turned to much better account formerly than now. It comprises gold, silver, lead, and copper; the two latter found in a variety of combinations, and the two former frequently combined with each other; also opals, emeralds, asbestos, and diamond. There are some considerable rivers in the state, the largest of which are the Chameleón, Ulu, and Aguan, all flowing to the Caribbean Sea, and the Choleston, an affluent of the Pacific. The climate is, upon the whole, extremely good and salubrious, especially in the interior parts, but it inclines to a temperature rather high particularly close on the N. coast, and the shores of the Pacific, where deposits of mud, noted upon by a tropical sun, with a heat often of 120° produces miasma, clouds of mosquitoes and sand flies and almost every other description of annoying insects. There are some extensive forests, abounding in fine timber such as mahogany cedar (more a species of *Quercus*) &c. &c. The principal cultivated productions are maize, beans, some wheat, rice, and plantains, but, being almost exclusively a mining district, it is doubtful if the quantity raised is sufficient for the whole population. Some tobacco also is grown. The country abounds in cattle of a fine breed, but its description of property does not afford much revenue to the owners, the price of the animals slaughtered for consumption being extremely low. The state is divided into the seven departments of Comayagua, Tegucigalpa, Guaymas, Yoro, Choluteca, Segovia, and Tegucigalpa, all named after their principal towns, of which Comayagua is capital also of the country. Its principal ports are Truxillo on the Caribbean Sea, and Port San Lorenzo in the Bay of Conchagua, in the Pacific. Pop. (1840) 350,000.—(Daily's Central America.)

HONDURAS (Bay of), a wide inlet of the Caribbean Sea, mostly between lat. 16° and 18° N. and lon. 84° and 87° 50' W. having S. Mosquitoes and Honduras, and W. British Honduras and Yucatan. Along its shores are the islands of Bonos, Russian Ulu, Turned, and numerous islets and reefs called cays. It is divided into several smaller bays, of which that of St. Thomas, the innermost in the gulf of Amatique, is spacious and deep. Several considerable rivers fall into the bay namely the Balise Dulce Motagua Chameleón, and Ulu.

HONEYE PAI LA, a vil U States, New York 214 m W by N Albany on Honeye Creek, which has a fall of 30 ft. in the centre of the village. It contains four churches, and various kinds of factories and stores. Pop. about 1000.

HONKADALE, a tr U States, Pennsylvania, 172 m N E Harrisburg. It has a university and several schools, two academies, and two schools. The Lackawanna Canal and railway terminate here. Pop. 1065.

HONEYBOURNE (CHURCH) with POUZE per Eng 4¹/₂ crozier 1512 ac. Pop. 112

HONEY HURCH per Eng, Devon 607 ac. Pop. 50 HONFLEUR, a seaport in France dep. Calvados, agreeably situated on a shore estuary of the Seine, 7 m S E Havre. It is a poorly built and dirty place, but considerable improvements have recently been made, and promise to give the town a more attractive appearance. It is the seat of a court of first resort, possesses an exchange, and a hygienical school of the fourth class contains several churches and public buildings, remarkable only for their antiquity and some peculiarities of structure; and has manufactures of lace, ship-bacon, cattle and mineral acids, rope-works, tanneries, building-yards, and a harbour accessible only at high water. The trade, once important, has been almost destroyed by the rise of Havre. The chief exports are corn, elder salt provisions, barley and other produce. About 7000 doses ages are said to be exported weekly to England. On the hill above the town, is the church of Notre Dame de Grace, much embellished by silver, and filled with their votive offerings. Honfleur was long in possession of the English, and makes a considerable figure in their French wars. Sir Sidney Smith was taken prisoner here, in 1796, while landing off a vessel which he had captured. Pop. 9000.

HONG HAI, an inlet, China Sea, off the coast of Quing-tai, lat. 22° 45' N; lon. 115° 13' E.

HONG KIANG a name given to the Longching, a river China, during a portion of its course in prov. Quingto.

HONG-KONG (Red Harbour) or HANG KEE (The Fragrant or Flowing Stream) a small is. off S.E. coast, China, prov. Quing-tai; now belonging to the British. It

is situated at the mouth of the estuary that leads to Canton from which it is distant S.E. 75 m. and from Macao, 40 m. E. lat. [Victoria church 21° 10' 30" N. lon. 114° 14' 45" E. (x)] It is about 10 m. in extreme length, N.W. to S.E. and 7½ m. in extreme breadth, separated from the mainland

On the N. side of the island and situated in a magnificent bay of same name, capable of accommodating any number of vessels affording excellent anchorage and deep water close in shore, is the thriving town of Victoria the chief town of the island and centre of its commerce. This

bay presents a lively and busy scene, being crowded with shipping of every nation, and with dense masses of Tanka boats and other Chinese craft. From Victoria, a road leads across the island to Stanley, a small town on a bay of same name on the S.W. peninsula. Another road 34 m. long, nearly encircles the island. The European shipping that arrived at Victoria, in 1847 consisted of 684 vessels, 229,486 tons. In 1849 the total number of native boats frequenting the harbours of Hong Kong was 1243 including 300 fishing sampans (carrying sugar, alum, sulphur, rice, oil, dyestuffs, provisions, &c. taking in exchange, opium, manufactured goods, saltpetre, and stones, which are quarried in the island. A promising trade in Chinese sugar has arisen at Victoria. It is shipped for New S. Wales, England, India, and Shanghai.

Hong Kong was ceded to Great Britain by the treaty of Canton in 1841 and again by the treaty of Nan Kung in 1842. Since then many wealthy Chinese merchants have established branch houses there and have begun to charter British ships to carry British goods to the N. ports. The government of the colony is vested in a governor lieutenant-governor (who is likewise a commandant) chief justice attorney general legislative council.

by a strait, which at J.ymoon Pass, is only about a quarter of a mile wide. Its coast is indented by numerous bays, of which the most considerable are on the S.E. end of the island, which they form into two peninsulas. The general appearance of the island is somewhat picturesque and curious but on the whole exceedingly unprosperous being composed mostly of lofty barren rocks that rise from the sea, to heights of 1000 and 2000 ft. and so abruptly as to leave hardly any space to build upon. There are no trees of any size on the island, and few valleys of any extent. Some rank vegetation here and there, with a little herbage and brush-wood growing in the intervals between the masses of granite, and a few plants on the margins of the streams, form almost its only vegetable productions. Good water however is abundant, and some of the cascades are sufficiently picturesque.

The climate at one time considered very unhealthy is now believed to be quite as well suited to European constitutions as that of any of our Eastern tropical possessions, and by judicious treatment, the great mortality which unfortunately took place among the troops, has been materially lessened. In 1849 the total Europeans on the island (including women and children numbered 887 of whom 64 died, being at the rate of 6.48 per cent. In the same year the total population exclusive of troops was as follows—

Europeans	Portuguese	Indians & Malays	Chinese	Total
666	731	233	24,297	25,627

and the per centage of deaths in 1849 was 0.65 The annual deaths per cent in London are 2.72

Vol. I

THE HARBOR OF HONG KONG from 'New Territories' island

all of fire assisted by various submersible boats, officers and secretaries. The governor has also the office of superintendent of British trade at the five ports, and exercises a general control over all British ships and subjects resorting to China. An effective police has been established whereby the number of crimes

and burglaries have been much diminished, and life and property formerly unsafe, have been rendered secure. This service has been much improved by the introduction of a native force. Education also is in process of being extended to schools having been erected at Victoria and other parts of the island. The population on the first occupation of the island by the British was only 1000. In 1862 the European population was 1894; Chinese, 121,907 total 123,811.—(Voyage of the Samarang Government Reports and Papers Davidson's Far East Martin's China, &c.)

suitable for market boats two churches and a school Pop., chiefly agricultural 1031.

HOOGEVEEN a vil Holland prov Drenthe, 20 m S. Assen with a church synagogue seven schools, a post office and a weekly and several annual markets Agriculture, and turf-cutting and selling are the chief occupations P 8275.

HOOGEZAND a vil Holland, prov of, and 8 m S.E.E. Groningen on the Winckorstediep with a church, synagogue, and schools some transit trade, boat-building four distilleries, and several mills. Pop. 1575.

HOOGLY a town Hindoostan, presid. and prov Bengal cap dist and on a back river of some size 21 m. h. Calcutta in an elevated situation. It contains a handsome compactly placed church and a Hindoo temple which, during the Rath festival is visited by thousands of pilgrims and a flourishing college in which English Persian, and Arabic are taught. Hoogly is now comparatively of little note though still thriving and having a considerable population The first Dutch fortresses and Dames, had each a factory here. The first English factory was built in 1640 The first action fought in Bengal took place here in 1686 It arose from a quarrel in the house between some English soldiers and the nabob's people. The latter were attacked and defeated by the garrison of the English factory while the town was bombarded by an English fleet, and 500 houses destroyed.—The district between lat 23 1/2° and 23 10' N and lon 87 20' and 88 45' E bounded N by Burdwan and Kuchingur S. by the sea, E. by the Sunderbunds and W by Midnapoor is low and flat, but extremely fertile excepting the sea coast which is covered with jungle, and is very unhealthy Being intersected in every direction by rivers, it possesses an extensive inland navigation. On the banks of its numerous streams near the sea, large quantities of salt are manufactured on Government account.—The rivers, formed by the junction of the Gomti, Ghaghara and Jellanghy the two most W branches of the Ganges which unite about 65 m N Calcutta, flow S past Hoogly (Chinsurah Chandernagore Calcutta and Onidja, to the Bay of Bengal which it enters by a wide estuary It is the only branch of the Ganges esteemed sacred by the Hindoos and it is likewise the only one navigated by large vessels. The scenery on its banks is extremely beautiful but its navigation is rendered difficult and dangerous by its shifting bed rapid currents and the islands of the tide called the bars, which rises upwards at the velocity of 15 m. an hour Total course about 200 m.

HOOGLDIE, a vil and com. Belgium prov W Flandres 17 m S.W. Bruges with distilleries, several breweries manufacture of linen a rope-work flour and oil mills. Pop. 4627.

HOOGSTRAATEN a vil and com. Belgium prov of and 20 m. N.E. Antwerp, on the Meuse. It has a beautiful church, with finely painted glass a chapel a courthouse, a diocesan seminary a primary school two orphan hospitals and a poorhouse manufacture of common cloth earthenware, and leather brick works and distilleries. Hoogstraaten ranked as a town in the 12th century and afterwards became the capital first of seigniority and then of a duchy P 1578.

HOOGLY a vil Holland prov S Holland 6 m S.W. Rotterdam, on bank Old Maas with a small harbour church, and a school. Pop. 702.

HOOKE—1 Par Eng Dorset 1287 ac. Pop. 361.

HOOKE a decayed town Hindoostan prov Bengal 5 m. S.W. Merritch lat. 16 13 N lon 74 47 E. It still exhibits some vestiges of its former prosperity.

HOOKE par Eng Lancaster 2923 ac. Pop. 977.

HOONAN an inland prov China, between lat 24 50' and 30 10' N lon 109° and 114 10' E bounded N by Hoang, W. Sechuen and Koelichow, E. Quangsee and Quang-tong and E. Kiangsee. It is generally hilly and rises into mountains on the E. is intersected by several rivers, of which the Long Kiang, the Yuen-Kiang and the Lo-Kiang are the most considerable, all falling into Yonting-hoo, the largest lake in China about 60 m long by 20 m broad which lies on the N side of the province. The country around the lake is extremely fertile rice &c. are raised in abundance plus, cassia, &c., are obtained from the mountains; and malachite, from lead and coal, are mined. Capital town, Chang-sha-foo. Pop. 18 659,507.

HOOPEE'S ISLAND an isl Corea Sea off the S. coast of Quebert Island lat. 33 10' N lon. 136° 30' E.

HOORMARA a small town and port, Beloochistan on the Arabian Sea lat. 25° 15' N lon 65° 5' E. A few small vessels belong to the port which trade to the shores of Arabia, Persia, Soudan and Cutch The surrounding country is extremely barren and dreary Pop. about 2000.

HOORN three places Holland 1 [Latin *Horne*] A seaport town, prov N Holland, 20 m N N.E. Amsterdam, on a small bay of the Zuider Zee which forms a convenient roadstead lat. (tower of the great church) 52° 28' 38" N; lon 5° 52' 52" E. It is fortified has four gates and the country around it can easily be inundated. Its four principal streets are broad, and meet in the great market-place and the town is traversed by numerous canals communicating with the harbour which is divided into two sections—one for war vessels the other for merchantmen. It is an old neat townhouse a weigh-house, and several other important buildings, many of which since the town has declined are diverted to purposes for which they were never intended they include the offices once belonging to the E India Company the mint arsenal &c. Besides the Grootekerk [great church] the most important in the town, there are three two Calvinistic churches a Lutheran and two H. Catholic several benevolent institutions, and numerous schools. Hoorn has an extensive trade in cheese—upwards of 5,000,000 of pounds weight being brought to its market annually it likewise has extensive cattle markets some ship-building rope-splinting &c. and saw trade and corn mills. Hoorn is the birth place of the navigator Schouten who first doubled the S. point of S. America, and named it Cape Hoorn or Horn from his native town, and the port where he built the great fleet of Admiral de Ruiter Pop. 8177—2 A vil S. and st Texel with a church and school. Inhabitants engaged in cattle-rearing and agriculture. Pop. 569—3 A vil st Schelling generally named de Hoorn. Inhabitants engaged in agriculture, sea-faring and the taking of wild ducks, which here are numerous. Pop. 122—(Van der Aa).

HOORN an isl Indian Archipelago in the reefs of Batavia, about 2 m N.E. Oost the inhabitants of which subsist by salt ng trepang.

HORSENB. a report in Denmark hall, Skanderborg at the mouth of the Bygholm in the Horsens Fjord 37 m. S.S.W. Aarhus. It is a very old, but well built town, occupying both banks of the river which is here crossed by flint bridges. It contains two handsome churches, a normal school, and a house of correction and has manufactures of woollen stuffs, flannel, and hats but more especially of tobacco—400,000 lbs. being here annually prepared and 5,000,000 of cigars made. The harbour formed by one of the bridges, is only a white haven of the fourth class admission vessels drawing 9 ft. and the trade is chiefly in corn and fish. In the vicinity E. of the town is the strong castle of Skanderborg. Pop. (1851), 5837.

HORREY a small Isl. E. coast England, co. Essex, 4½ m. S.S.W. Harwich, about 6 m. round, and abounding in game.

HORNORTH a vil. and chapelry England, co. York (W. Riding) 5 m. N.W. Leeds, with a good Episcopal church, several Dissenting chapels extensive manufactures of woollen cloth filling, paper and corn mills, with some tanneries. Pop. (chapelry) 4664.

HORNHAM, a port. bar market in and par., England, co. Sussex. The worst station on the London and Brighton railway lies on a branch of the Arun, 33 m. S.S.W. London. It consists of two principal streets, crossing each

other at right angles, one of which is adorned with rows of trees and several smaller ones diverging from them. A great number of the houses are built with timber and shod with brick, and some of the streets are paved with gravel, well lighted with gas; ample supply of water. Hornham has a handsome courthouse, commodious county jail, a spacious and handsome church, with a lofty tower; a chapel, and sundry Dissenting places of worship, a free grammar-school, founded by Richard Gillyer in 1539, a Lancasterian school, for 800 boys and 100 girls, and national, British, and infant schools. There are no manufactures in the town but a great amount of trade is done in corn and timber. The retail trade carried on with the surrounding country is also very considerable and imparts to the town on occasions a lively and bustling appearance. Weekly corn market on Saturday. Hornham sends a member to the House of Commons. Registered electors (1851) 846. Area of par 10770 ac. 1 pop. 3847.—(Local Correspondent.)

HORSELEY a vil. and par. England, co. Gloucester. The village 12½ m. S. Gloucester as well built of stone, has an ample supply of good water, a handsome parish church, two Dissenting chapels, free and infant schools and extensive manufactures of fine woollen cloths. Area of par 4083 ac. Pop. 2351.—(Local Correspondent.)

HORSELEY four par. England.—1 Derby 2793 ac. P. 2161.—2 (East) Surrey 1874 ac. P. 247.—3 (Long) Northampton 11,849 ac. P. 990.—4 (West) Surrey 2098 ac. Pop. 719.

HORSEEN a vil. Holland prov. Gelderland 10 m. W. by S. Nijmegen with two churches and the ruins of a castle. Pop. (agricultural) 813.

HORSE a vil. Holland prov. Friesland 17 m. N. Roermonde with a (foliate church a school, a courthouse, large barrack, poorhouse, and old castle. Pop. 570.

HORSTED three par. Eng.—1 (Keynes) Sussex 4304 ac. Pop. 847.—2 (Little) Sussex 2240 ac. Pop. 283.—3 (see the Sussex) Norfolk 3713 ac. Pop. 995.

HORSTMAN a tn. Rhineland Prussia, gov. of, and 16 m. N.W. Münster on the Sanderbach. It is walled, has two churches, and a castle manufactures of linen and leather and a trade in cattle. Pop. 1078.

HOET a vil. Hungary Hither Thracia, co. Ilver about 2 m. from Hatvan, with a parish church. Pop. 1795.

HORTA, two places Spain.—1 A tn. Catalonia, prov. of and 50 m. S.W. Tarragona, on a small affluent of the Ebro. It is built in the form of an amphitheatre, on a small isolated hill, has a church a palace courtyards, prison and primary school and a trade in corn, wine and fruit. Pop. 1747.—2 (Horta or San Gines de Anglada de Horta) a vil. and par. Catalonia, prov. of and about 4 m. from Barcelona, with two parish churches a primary school and manufactures of cotton cloth harelath leather and gins. Pop. 1855.

HORTA, a tn. Isl. Fayal one of the Azores lat. 38 31 42 N. lon. 28 28 50 W., prettily situated on the shores of a small bay extending between two rocky headlands. The landing-place is at the remains of a mole under the walls of Fort Santa Cruz, the only one of numerous ruinous fortifications where a few guns in wretched condition are mounted. A sea wall runs along the face of the town parallel with this is the principal street with others at right angles extending up the hill. The narrow streets are clean and well paved; the houses, generally of one story are built of tough grey trachyte. Pop. about 10,000.—(Foy H. M. & Riddleman.)

HORTEN a maritime tn. and naval station, Norway prov. Agderhus, W. coast, gulf of Christiania lat. 59 54 N. lon. 19 40 E. The harbour is one of the three naval stations of the country and is very spacious, and well sheltered. It has a marine arsenal, and works for building and repairing war-vessels, and for the construction of engines for war-ships.

HORWITZ, or **HONOWITZ**, a tn. Bohemia, circle Blatzen 14 m. N.W. Koenigsgratz, near the Batschana, with a parish church, and a castle. Pop. 2760.

HORWITZ, or **HONOWITZ**, a tn. Bohemia, circle of and 48 m. S.W. Barmen r bank Sothenbach with a church, castle, Franciscan monastery and the most celebrated iron-works in Bohemia. It is also famous for its cheese. George von Radobrod, afterwards king of Bohemia, was born here. Pop. 2565.

HOSE, par. Eng. Leicestershire 2140 ac. Pop. 471
HOSEHAI a vil. and par. Ireland, co. Limerick. The village, 16 m. S.E. E. Limerick, well known for its horse and cattle fairs. Area of par., 9999 ac. Pop. 1977

HOSPITALT formerly SANTA EULALIA DE PROVEN SANA, a vil. Spain, Catalonia, prov. of, and 3 m. S.W. Barcelona, 1 bank Llobregat with a church, confraternity, primary school, poor prison, and two flour-mills. Pop. 2504

HOSTALRICH a walled tn. Spain, Catalonia, prov. of and 25 m. S.E. W. Gerona, r bank Forcada with a church manufactures of cork, and a trade in corn, fruit cork and timber. Pop. 1051.

HOSTAU or **HOETOW** (Latm. *Hostovum*) a tn. Bohemia circle of, and 16 m. W. W. Klattau r bank Radburn with a castle, church, sugar-mills, and manufactures of linen. Pop. 1166.

HOSTAUN a vil. Bohemia, circle Rakonitz, 10 m. N. W. Prague, with a church, a school and a mill. Sheep-rearing is carried on by some of the inhabitants. Pop. 1861

HOSPET, an isl. Thera Isl. Paego lat 36° to 36° 40' E. lon. 68° to 70° W., having E. N. E. N. island, and separated from King Charles South Land, by the Bosque Channel. Length, E. to W. 90 m. greatest breadth, 50 m.

HOTELRITZ, or **HOTTERHEAD** a market tn. Moravia, circle Znaun, 24 m. S.W. Brunn with a church, and a trade in corn, wine, iron, and other wares. Pop. 1470

HOTOMITZ, or **HOETOWITZ**, a tn. Bohemia, circle Beraun, 25 m. S.W. Prague with a church. Pop. (agrarian town) 1701.

HOGESZU superous places, Hungary particularly.—1 (Bosmer-nest, or *Deleposz*), a market tn. Hungary Thither Thelen, co. Bacs, about 8 m. W. N. W. Sengsb in a beautiful plain. It has a Protestant, and a Greek parish church, and a trade in corn and cattle. Pop. 1651.—2 (Hosmer-nest), a vil. or rather three contiguous vils. co. Abaujvar on the Harard, here crossed by a bridge, 8 m. from Kacsina; with a handsome castle. It stands in a fertile and well-wooded district. Pop. 1222

HOGZU several places, Hungary.—1 *Hosmer-nest* (Kolas) a vil., co. Zemplin, on the Oudava, 7 m. from Nagy-Mihaly; with a R. Catholic church. Pop. 1100.—2 (*Hosmer-nest*, or *Krasmer-nest*) a vil., co. Gemer, on the Jelewa, in an unbarred district, 16 m. from Bosmer-nest, with an iron, and several saw mills, charcoal furnaces, and a trade in wood. Pop. 1614.—3 (*Hosmer-nest*) a vil. Hungary Thither Thelen, co. Temesvar 10 m. from Lappa on the Maros with a Greek non-united church. Pop. 1800.

HOTENSLIBEN a vil. Prussia, prov. Saxony gov. of, and 25 m. W. Magdeburg with a church, a distillery and several mills. Near it are sulphate works, and gypsum and Kieselguhr. Much small wood also is obtained. Pop. 1161.

HOTHAM par. Eng. York (E. Riding) 2670 ac. P. 266.
HOTHFIELD par. Eng. Kent 1777 ac. Pop. 387

HOTTENTOTS a peculiar African race, the aboriginal occupants of the E. end of that continent, as and near the Cape of Good Hope. Their limits may be said, in general terms, to have been the river Orange, on the N. and N.E. and the Kal, on the E. but their E. boundary appears to have been fluctuating, and owing to their mixture with the Kafir race, not definable. On the N.W. they passed the Orange, and advanced N. and N.E. far into the interior as shall be explained lower down. The name now given to the whole race was that of the tribe in the immediate vicinity of the Cape of Good Hope, with which the Dutch settlers first became acquainted. The Hottentots are generally tall and muscular, of a pale olive complexion; their cheek bones project much and their chins narrow and pointed, so that the face is tri-

HOTTENTOTS.—From Donnell's N. African History

angular. They have thick lips a flat nose, with wide nostrils woolly hair and little beard. The women are often elegantly formed in early life, but their bloom is transient. They are courageous at 12 or 13 and become hideous in a few years. They have certain physical peculiarities, long contorted and misshapen. Both sexes are distinguished also by excessive ornamentation of the skin.

When the Dutch first settled at the Cape, the Hottentots were a numerous nation, of pastoral and partially nomadic habits and occupied a territory of 100 000 sq. m. They were rich, according to their own ideas, having abundance of horned cattle and sheep and it is supposed that the seven tribes, into which they were divided, made up together a population of at least 200,000. At the present day this race is nearly extinct within the wide territory which formerly belonged to it. Constantly harassed and hunted down by the Boers, who confidently sought their extermination, their only chance of escape was to engage in the service of their persecutors. But this domestication was fatal to the purity of the breed and of those classed as Hottentots within the limits of the colony the greater majority are in reality Bastards, as the Boers call them or people of mixed race. The mixture of European blood has much improved their physical appearance but the indigenous manners and the language have nearly disappeared. Of the 50 000 Hottentots, as they are called, now reckoned in the population of the colony there are not 300—exclusive of the Namaquas—who added to the colony by a recent change of boundary—who understood the Hottentot language. Their language at present is the Cape Dutch jargon. From their ancient pastoral habits, they still retain traditionally their passionate love for the Baskins or cattle Hottentot life, with its numerous whimsical peculiarities belongs therefore to history. It exists no longer in what may be properly called the land of the Hottentots.

But, connected with this great utterly decayed trunk, are certain side-branches and collateral stems, which call for notice.

A large body of the Hotentot population, reconquered in the colony as the Basters, wandered some years ago in search of a settlement along the banks of the river Orange, at that date beyond the colonial boundary. Their disorderly and unpatriotic movements awakened some alarm, and, fortunately counteracted, also in the colony, and they were strongly urged, by philanthropic friends, to get rid of the colonial name of Basters, by the adoption of some other and to settle down in a carefully organized community. They consequently assumed the name of the Griqua, an ancient native tribe, and fixed themselves at Klearwater on the river Orange. The experiment has succeeded completely. Their chief having shown his capacity for government, now receives a small annual grant of money and fire-arms from the colony and here a mixed Hotentot population of some thousands has at all events emerged from utter barbarism.

The Koras or Koonas (shoe-wearers) higher up the river Orange or Gariep, as they call it, still remain a favourable specimen of the pure Hotentot race. They are, however taller stronger and cleaner than the tribes further W. Most of them possess cattle those who do not, soon degenerate into Bushmen. On the E. frontier of the colony are still some remnants of the Gona or Gonaqua tribe but they have nowhere preserved their ancient usages and purity of blood, but are much mixed with the Amasos or Kafirs, the choking sounds of whose language prove their ancient affinities with the Hotentots. The Namaqua dwell towards the mouth of the river Orange, towards the N.W. border of the colony. Little Namaqualand on the S. side of the river is now within the colonial limits. Opposite to it, a large tract, watered by the Fish River and some other occasional streams, bears the name of Great Namaqualand. This W. side of the continent is far more hot and dry than the E. In the same latitude and all the peculiarities of character traceable to presence of life suffering and frequent famines are fully developed among the Namaqua. Yet they are much attached to their country and though diminished in numbers by want and disease, yet their villages it is said, often contain examples of great longevity. Their huts are erected in the old Hotentot fashion, being hemispheres of boughs covered with mats and about 6 ft. high.

The Bushmen, or in colonial language, Boschmans, are also of Hotentot race and call themselves Bequa. Their proper country is between the Roggeveld mountains and the river Orange, but they are to be found wherever the absence of a stronger population permits their increase. Their general height is about 4 ft. 6 in. they are at the same time, slender but well-made, and very active. Their only covering if they have any is a skin round the loins. They wear a belt, called by the colonists, the belt of hunger which they keep as tight as possible, to mitigate the pain of inanition. They live on game antelopes especially which they kill with poisoned arrows. Their great feasts are after violent thunderstorms, in which many millions are struck by lightning. On such occasions, these little men eat till they resemble barrels. Their life is always fluctuating between a feast or a famine but the latter predominates. Bushmen have been met with who had gone 15 days without food. But it is remarkable, that the constant comforts of civilized life can never seem them from the occasional pleasures of the desert. The young Bushmen in the service of the Boers, though treated with the greatest kindness, are sure to run off when the sun sets are in season and his pleasure consists not merely in graving on the ground to devour these, his face covered with worms, but in his excitement, and being able to slink his civilized acquaintances. As to the number of these singular and degraded people, it is impossible to form any trustworthy estimate of it.

Beyond, or N. of Great Namaqualand, on the W. side of Africa, in lat. 21 to 23 are the Damara of whom these called Hili Damara are of Hotentot race. Regarding the condition of these people, we have no details; but we know that the Hotentot race has spread E. from the Damara hills, and that a large, if not the chief portion of the population round Lake Ngami, recently discovered in lat. 30° 40' lon. 24 E. is of Hotentot descent. The Bechnamas call them Bakoto, which means surf or vessels but their more general name is Bayeye, Badoles, or Ballela, all evidently Bechnama plurals of the untranslatable Hotentot word page,

am. The Bayeye are the boatmen and chief navigators of Lake Ngami, and it is said that they are numerous also on the navigable rivers further N. — (Trends of Ten-Klyn Kolbe, Hermann Lubenstein, and Patterson. In *Appleyard on the Kaffir language*, is an interesting account of the Hotentot grammar.)

HOÜTING a vil and par Austria, Tyrol circle Unter-Innthal, on the Inn, here crossed by a bridge close to Innsbruck with a castle and a church. Pop. 2524.

HOTZENPLOTZ.—1 A to Moravia (Moravian, Ch-Mole) circle, and 24 m. from Tropan on a small stream of same name with two churches a townhouse, and hospital and some general trade. Pop. 2572.—2 A river which rises in the N. slopes of the Sudetes, near Wurbenthal flows N.E. past the towns of Jeschowitz and Hohenpriebe, enters Prussian Silesia passes Ober Glogau, and after a course of about 40 m., joins the bank Oder at Krossen.

HOUGHTON Le-Breton, a market in. township, and par England, on Darlman. The town 6 m. S.W. Sunderland, is small but neat, has a fine large venerable church, and spacious burial-ground. There are, besides, meeting-houses for Methodists Baptists, and Independents a national school a charity-school for girls some almshouses, and a lunatic asylum. The prosperity of the town depends on the numerous mines in the neighbourhood, and is proportioned to their success. The coal of Houghton-Le-Spring is of a superior description and commands the highest price. Its annual fair lasts several days. Area of par 15,494 ac. Pop. 25284

HOULME, a small dist. France which belonged to prov Lower Normandy and is now included in dep. Orne

HOULME (La) a vil France, dep. Seine-Inférieure, 5 m. N.W. Rouen, b. bank Cluyl. It is a cheerful-looking place, and has manufactures of cotton goods, blacksmiths, and a cotton and paper mill. Pop. 2633.

HOUNAM par Scot. Roxburgh; 5 m. by 6 m. P. 252 HOUNAN prov China. See HOUNAN.

HOUND par Eng Hants 4891 an. Pop. 827 HOUNSLOW market in. and chapelry England on Middlesex 11 m. W.S.W. London. The town which stands

on the edge of Howndow beach, consists of a long street irregularly paved, and lighted with gas. The church, erected on the site of an old priory, is a handsome structure, in the modern English style, there are likewise several dissenting chapels, and a charity school for 100 boys and 100 girls. Near the town are some extensive powder-mills, a flax-mill, a mill for rolling copper and a cavalry barracks, erected in 1793. The adjoining heath, notorious for the robberies committed on it in former times, is almost entirely enclosed. Market-day, Thursday. Pop. 3514.

HOUTA [North of the lake], a central prov. China, between lat. 29° and 33° N.; lon. 106° 35' and 116° E. bounded, N by Hoonan E. by Kianghoo and Kiangsoo S. by Hoonan and W. by Fokien and Cheensi. It is intersected by the Han-kiang and the Yang-tse-kiang, and its surface, particularly towards the S., is dotted with numerous lakes. It is considered one of the most fertile parts of the empire produces broad stuffs, silk, cotton, tea, fish and timber and manufactures cloth paper and wax. With Hoonan, it formerly constituted one province, named Hukwang. Provincial capital, Woo-Chang-foo. Pop. 37,310,098.

HOULINES, a vil. France, dep. Nord, 10 m. N W Lille, r. bank Lys = th manufactures of lace, and cotton twist, tanneries, breweries, a cotton, oil and falling mill. Pop. 1055.

HOULEN (Lochin), an inlet, W coast, Scotland, co. Inverness, stretching inland for 10 m opposite the S.E. coast of Skye. It is about 3 m wide at the entrance.

HOUBE, one of the Shetland isles. See BURRA.

HOUSA or **HAUSA**, an independent kingdom, N W Africa, central Soudan, between lat. 11 and 14 N. and lon. 4 and 11 E. bounded, E. by Bornu W. by the Quorra N. by Sahara and S. by Bornu. This country though yet little known is represented as extremely fertile and as being clothed with a small little inferior to that of European. Here it is said, the hot winds come from the E. and the cold from the W. and that rains are neither so frequent nor violent as in other parts of Africa. The natives are said to be of mild and courteous manners, and cheerful disposition, being much given to dancing, and singing, and other amusements. They are expert warriors, as well as agriculturists, and manufacture large quantities of cotton cloths, with which they supply Faccas. They are also well acquainted with tanning, and working in iron. Where the country is not cleared for cultivation, it is covered with forest-trees, especially mimosa and acacias, and there is rarely a spot without vegetation. There are two large towns in this kingdom—Saccas, and Kambas, about 150 m. distant from each other. These towns carry on an extensive trade with the countries of W Africa, particularly Faccas and Tripoli.

HOUTSTON,—1 A vil. and par. Scotland, co. Renfrew. The village, 5 m. E W Paisley has extensive cotton factories, employing the great bulk of the inhabitants. Length 1/2 par about 6 m. breadth 3 m. Pop. 2753.—2 A city (State, Texas, co. Harrison, 70 E. above the sea—at the extreme point of Buffalo Bayou, that can be reached even by small boats, 50 m N W Galveston. It has four churches, a theatre, numerous manufactories, and numerous stores. It was commenced in 1837, and is a rather unhealthy place about 4000.

HOULTMAN or **ABDOLHOZ**, three separate groups of vil. N.W. coast, Australia, between lat. 25° 15' and 25° 10' S. lon. 113° 30' and 114° E. separated from the mainland by Fleckvick Channel which is about 30 m. broad. The names of the several groups are, respectively, Felsart Group, Northern Group, and Eastern Group. They extend in a N.W. direction, in 60 m. diminishing in breadth towards the N. Felsart Group is separated from Eastern Group, by a channel about 4 m. broad, and the latter again, from Northern Group by a strait 6 m. wide.

HOWK, A vil. and com. Belgium, prov. of and 12 m. N. Kamer = both Meuse. It is a busy place, a marble quarry and the ruins of the ancient citadel of Faldruiche, standing on the summit of a lofty rock overhanging the river, and in which is a well, sunk about 250 ft. through the rock, to the level of the Meuse. The castle figures much in the early history of the Netherlands.

HOWAKELI, an isl. Red Sea, off the coast of Abyssinia; lat. 15° 9' N. lon. 40° 19' E. (a.) It is lofty, rugged, and about 5 m. long.

HOWDIE, a market town and par. England, locally situated in co. York (E. Riding), but a dependency of co. Durham. The town, 17 m. S.E. York, a station on the York and N. Midland railway in small houses generally rather of a mean appearance but streets lighted with gas. Its church a noble cruciform structure, is unsurpassed for the beauty of its architecture by any other edifice of its kind in Great Britain. Close by the church, are the remains of an ancient palace of the Bishops of Durham, now converted into a farm-house. There are several places of worship for Dissenters, a free and a national school several other small churches, and an elegant union workhouse. Bricks and tiles are made in the neighbourhood. There are, likewise, some considerable tanneries, and several corn-mills but no other manufactures. Market-day Saturday. There are several annual fairs one of which, held in September is said to be the largest for horses in England. The supply of horses for the army is chiefly obtained at this fair which is likewise resorted to by foreign dealers and breeders. Area of par. 16 292 ac. Pop. 5178.

HOWE par. Eng. Norfolk 767 ac. Pop. 111.

HOWELL, par. Eng. Lincoln 1650 ac. Pop. 65.

HOWI Howa, a considerable co. China, prov. Quingtoong, S. coast on Hainan, about 3 m. from Hsueh-Son on a narrow peninsula, with a deep bay to the N.E. and traversed by a river from E. to W. The streets have considerable breadth and are clean and well paved. It is the residence of the viceroy of Hainan and the principal commercial town of the island. The exports consist chiefly of sugar, betel-nuts, coconuts, coconuts oil, salt, and tanned leathers and the imports of different articles from China, fine English cloths, gun-flint, and opium.

HOWICK,—1 An island co. W. Australia of a triangular form, about 52 m. long, E. to W., and about 41 m. in breadth. In the centre of the country are some salt-water swamps, and a range of hills with some good pasturage intermingled.—2, An isl. group, N.E. coast Australia, lat. 34° 20' S. lon. 145° 0' E. nearly mid-way between Cape Finisterre and Cape Melville; about 10 m. number all low and covered for the most part with mangroves; and abounding in turtle and vampire-bats. Here, says Macgillivray as elsewhere (*Pellicula aiposoides*) filled the air with its loud and almost incessant, but varied and pleasing notes, the only bird we ever met with on the N.E. coast of Australia which produced anything like a song.—(Voy. H.M.S. *Acidemia*.)

HOWICK par. Eng. Northumb. 3692 ac. Pop. 315.

HOWICET, a vil. Austria, Moravia, circle Hradach about 40 m. from Winkelsdorf, on the Hradach with a church and two mills. Pop. 8407.

HOWTH, a par. and small tn. Ireland, co. Dublin. The town extending along the N. side of the Hill of Howth, 7 m. E.N.E. Dublin, with which it is connected by railway consists of a single street, with numerous small cabins straggling around has a church, a R. Catholic chapel, the ruins of Howth abbey a religious establishment, founded early in the 13th century and a large harbour of refuge, with light-house, etc. constructed by Talbot, but so obstructed by rocks and accumulations of sand as to be almost useless. It is chiefly inhabited by fishermen who supply the Dublin markets with the fish in *Howth cods*, the residence of the earl of Howth. The peninsula on which the town stands, called the Hill of Howth, forms the N. enclosure of Dublin bay, and is a very striking and remarkable object. It is about 3 m. in length, by 2 m. in breadth, and terminates towards the sea, in a rocky elevation of 563 ft. in height. On June 1 1838 a submarine electric telegraph was laid down between Howth and Holyhead. Pop. 829. Area of par. 5870 ac. Pop. 1715.

HOXNE, par Eng. Rail. 4237 s. Pop. 1968.
HOXTER, a tn. Rhinisch-Prussia, prov. of, and 40 m. S.S.W. Minden, cap. circle of same name, 1. bank Weser here crossed by a stone bridge 500 feet long. It is walled, defended by a fort has a court of law, several public offices, a Protestant and a R. Catholic church, a synagogue, hospital, and brazier school; manufactures of wax candles and oilcloths; a bleach-field, paper-mill, brewery distillery a trade in cattle, wool, yarn, and lace. In the vicinity is the suppressed Benedictine abbey of Corvey a handsome modern edifice, now the seat of Prince Hohenzollern-Schillingfürst. Pop. 3657.—The climate is mild, but productive. Area, 208 sq. m. Pop. 50,671.

HOY an isl. and par Scotland, Grimsby, N.W. side Pentland Firth, 2½ m. S. Stromness about 14 m. long, by 6 m. broad; in some parts tolerably fertile; but generally mountainous, and covered with heath. Near its S.E. extremity is the well-known harbor of Long-Hope. P. 615.

HOYA—1. A tn. Hanover 1. bank Weser here crossed by a bridge, 40 m. N.W. Kassel with a court of justice, a church, townhouse, and cattle some shipping and a trade in linen. Pop. 3124.—2. (Goslar) A tn. Spala, Moravia, prov. and 15 m. from Albnitz with a parish church and primary school and a trade in saffron, wool and cattle. P. 1125.

HOYERSWERDA, or **WOZEMER** a tn. Prussia, prov. Rhine, gov. of, and 85 m. W. by N. Longtin, cap. circle of same name, on the Black Elster. It has a court of law several public offices, a castle, Protestant church, chapel, townhouse, and hospital manufactures of linen and hosiery and numerous distilleries. Pop. 3170.—The climate is generally a sandy plain. Area, 196 sq. m. Pop. 27,718.

HOYLAND-HAM, par Eng. York (W. Riding) 1944. Pop. 3345.

HOYLE LAKE, or **HOY LAKE**, a vil. England, co. Chester at the mouth of the Dee. 8 m. W. by K. Liverpool, much resorted to during the bathing season. There are two lighthouses, with fixed lights lat. 53° 24' N. lon. 3° 11' W. leading into the river, which afford safe anchorage. P. 444.

HOYM a tn. Germany Ansbach-Bayern gov. P. 444. same name, on the Saale 19 m. W. Ebernburg. It is walled has a castle, a church, townhouse, tile-works, and three mills. Pop. in 1830 had 5000.

HOYO-DE-PIRAMES, a tn. Spain, Old Castile, prov. Avila, 25 m. W. Madrid tolerably well built with two squares, a parish church townhouse, a primary school, manufactures of woollen cloth, and a trade in corn and cattle. Near it are mines of argillaceous lead, silver and copper. Pop. 917.

HOYOS, several minor places, Spain, particularly a vil. Extremadura, prov. of, and 43 m. N.W. Cáceres with a church chapel, church, a townhouse, prison public fountain, and some trade in oil. Inhabitants engaged in tillage and cattle-rearing. Pop. 2126.

HRADISCH HRADISCH a tn. Austria Moravia, cap. circle of same name, 1. bank March at the confluence of the Oosawa, 43 m. S.E. Brinn. It stands in a fertile district, subject, however to frequent inundations consists of an old and a new town occupies a large market-place, four churches a townhouse, courthouse high school, and barracks; has a trade in corn and cattle. Pop. 3100.—The climate is healthy, and adapted for pasture but has some fertile valleys and unproductive flats. Area, 1021 sq. m. Pop. 310,191.

HROCHOW TOWN, a market tn. Bohemia, circle of, and 5 m. E.N.E. Chrudin, on the Lesak with a castle, church, townhouse, school, and a mill. Pop. 951.

HROZINKAU (AUX and NUNG) two large vils. Austria, Moravia, circle Hradisch. The former contains a church and has in its vicinity the castle of Swietlan. Pop. 7240. The latter, on the Beschwa, about 48 m. from Welskirchen has a parish church. Pop. 3950.

HUBERTZOW a tn. Prussia-Poland 64 m. S.E. Lublin, among marshes, on the Hulawa. It has three churches and a convent a considerable trade in Hungarian wine and meat, and several large annual fairs. Pop. 1700.

HUACHAPURE, a headland, Chili lat. 54° 58' S. lon. 75° 17' W.

HUACHO a small bay Peru, 63 m. N.N.W. Callao with good anchorage in 5 fathoms. About 1 m. from the coast, is a small town of same name, at which provisions can be obtained at a moderate price.

Vol. I

HUAHEINE an isl. Pacific Ocean, Society group; lat. 16° 45' S. lon. 151° 7' W. (A). It is mountainous, but fertile; and is nearly surrounded by a coral reef. It is the most frequented of the Society islands, and furnishes abundant supplies. Coffee thrives in the gardens of the missionaries. On the N.W. side of the island there is a safe and spacious harbor, though somewhat difficult to enter, called the Bay of Fare. Pop. estimated at 2000.

HUALLAGA a river Peru which rises on the E. slope of the Andes, near N. Lake Olmehayocha, and falls into the Marañon, at La Laguna, after a course, chiefly N., of about 450 m. It receives numerous affluents, of which the Moyobamba, the Huangabamba, and the Apurimbo, are the most considerable.

HUAMBILIN or **BOCONO**, an isl. W. coast, Patagonia lat. 48° 48' S.; lon. 75° 15' W. (A).

HUAMACHUCO a tn. Peru. See GUAMACHUCO.

HUAMANGA, a tn. Peru. See GUAMANGA.

HUANGVELICA, a tn. Peru. See GUANGVELICA.

HUANQUE a tn. Peru. See GUANQUE.

HUAQUI or **YACQUI**, a river Mexico, which rises in dep Sonora, about lat. 31° 40' N. lon. 108° 10' W. flows S.S.W. then W., and falls into the Gulf of California, 20 m. S.E. Guaymas total course about 400 m. It is broad, liable to floods, and its banks are extremely fertile.

HUARAZ a tn. Peru, dep. Tarma 80 m. S.F. Trujillo with two churches a convent, and an hospital. Pop. 5000.

HUARTE, two places Spain—1. A tn. Navarra, prov. of and 8 m. E.N.E. Pamplona. It is a poor place, consisting of a small square and a few irregular streets; with a parish church, courthouse, two schools and some trade in hides. Pop. 600.—2. (Huesca) A tn. Navarra, prov. of and 16 m. W.N.W. Pamplona with a well-planted promenade, a parish church, townhouse, prison, school and a trade in corn and cattle. Pop. 875.

HUASCO or **GUASCO**, a seaport Ch. I. r. bank, and near the mouth of the Huasco prov. of and 96 m. N. Coquimbo lat. 28° 18' S.; lon. 71° 11' W. It derives its chief importance from the silver mines in its neighbourhood large quantities of that metal being exported from it. The country around has a barren miserable appearance. The river is small, and a heavy surf breaks outside of it but the water is excellent. At Huasco the phenomenon of the parallel terraces is very strikingly seen no less than seven perfectly level but unequally broad plains, ascending by steps, occur on one or both sides of the valley.—(Darwin.)

HUERB, two rivers, Helocheistan—1. Supposed to rise near Lha, in lat. 28° 12' N. lon. 66° 55' E. For about 25 m. in the upper part of its course it flows S.E. and then turning due S. holds its way for about 50 m. in that direction. It then turns to the S.W. and after a total course of 100 m., falls into the Arabian Sea, on the N.W. side of Cape Monze, m. lat. 24° 50' N. lon. 66° 35' E. Its whole course is described as a succession of rocky or gravelly gorges in the rugged and barren Public mountains.—2. A small stream, which rises in the hilly country N.E. Bela, prov. Loo. It takes a S.W. course, and 4 m. N.E. from the town of Lyraze, falls into the Poronny in lat. 25° 40' N. lon. 66° 35' E.

HUBERT par Walen Fandrich 1880: se P. 1040.
HUBERT (S.) a tn. Belgium, prov. Luxembourg, 83 m. N.W. Arlon, in the forest of same name, which has a circumference of 40 m. It is a miserable-looking place but possesses two churches, one of which the abbey church of St. Hubert, is one of the finest religious edifices in Belgium. Its W. front, and two towers, are Italian but its interior is Gothic, and is adorned with fine marbles. Part of the extensive buildings of the ancient abbey are occupied as a penitentiary for juvenile convicts. The manufactures are ironmongery leather oil, and glass and the trade in horned cattle and sheep is considerable. Pop. 1849.

HUBERTH (Sour or) NASTON OROSCO a vil. Hungary Thierse Thelen, co. Torontal 8 m. from Kikunda; with a R. Catholic church, and a trade in corn, maize, and butter. P. 1051.
HUCKESWAGEN a tn. Rhinisch-Prussia, gov. of, and 24 m. S.E. Düsseldorf, r. bank Wupper with a R. Catholic and two Protestant churches a brazier school, manufactures of woollen, cotton, and linen goods, and of articles in steel and iron, tanneries, dye-works, and a cotton-mill. P. 3937.

HUCKING par Eng. Kent 1188 se. Pop. 111.

148

HUCKNALL-TORKARD, par. Eng. Note; 2870m. P 2870. **HUDDESFIELD**, a flourishing manufacturing town, par. bor. and par. England, co. York (W. Riding). The town, situated on an acclivity, rising gently from the Colne, 37 m. S.W. York on the railway from Leeds to Manchester, comprises about 50 principal streets, nearly all running at right angles to each other, well paved, drained, and carefully kept houses, remarkable for their uniformity generally of a very superior description, and built of the best Yorkshire sandstone. The town is well lighted with gas, and amply supplied with water. The places of worship consist of four Episcopal churches, eight dissenting chapels, a Friends meeting-house, a Unitarian, and a Catholic chapel; none of them are very handsome edifices. The other public buildings of note are the cloth-hall, the riding-school and gymnasium, the stations of the London and North-western railway—an elegant structure, in the Roman-Christian style, the George hotel, a large and fine Italian building, the infirmary and North gate and Southall schools. There are twenty respectable academies in the town, eight church, national, or British public schools, and two large colleges; one of which is immediately connected with the church establishment, the other is of a more general character and is now incorporated with the London University. The literary and scientific institutions are the philological society with library and museum, the moderate artists, and school of ornamental art. The principal manufactures extensively carried on in the town and adjacent villages, are plain and fancy woollens, consisting of broad and narrow cloths, serges, kerseys, cords, and a great variety of fancy goods, as shawls, vestings, &c.; corn ground generally of twisted, silk, and cotton some wholly of the first, others of various admixtures of wool and the other materials. Cotton manufactures are also carried on to some extent. An extensive trade exists with America and Germany to plan and fancy woollen goods. Upwards of 800 manufacturers, from the town and vicinity around the cloth hall each market day (Tuesday) export 20,000. Area of par. 15,000 ac. Pop. 56,190.—(Local Correspondent.)

HUDINGTON par. Eng. Worcester 194 ac 1 089 **HUDIKSVALL**, a seaport in Sweden, lin Gullöberg, in the Gulf of Bothnia, between two bays connected by a channel which traverses the town, 70 m. N. Grefte. It is regularly and tolerably well built, and has manufactures of snuff and tobacco, a harbour at which some trade is carried on, chiefly in hemp, flax, deals, and salt-fish. The last consists of staves/slogs, which are about the size of a spruce, and are here taken in great numbers. They are cured like herrings and are a great sale in the N. parts of the Baltic. P (1855) 2300. **HUDITZ**, or **HUDICK**, a vil. Bohemia, circle Kadanitz, about 4 m. from Hradec with a church and school. Near it are iron mines and blast furnaces. Pop. 1181.

HUDSON a m. and port, U. States, state of, and 116 m. N. New York, 1 bank Hudson. It is very regularly built, all the streets, with the exception of two, which follow the line of the river intersecting each other at right angles; the main street being above 7 m. long. Its principal building is the courthouse, surrounded by a square and with a portico of Ionic columns, and it also has eight churches, numerous academies and schools, a lunatic asylum, and Franklin literary institution, with a respectable library and philosophical apparatus. Several streams in the neighbourhood furnish water-power which is made available for manufactures. At one time, the chief trade was with the W. Indies, but it is now supplanted by the whale-fishery. A steam ferryboat plies between Hudson and the opposite bank, while the Hudson and Berkshire railway connects it with Boston. P (1850) 6383.

HUDSON a river New York, and, though not the largest, yet, in some respects, one of the most important rivers in the U. States. It rises, by two branches, in the N. part of the State, about lat. 44° N. The E. branch passes through Lake Schenectady, and joins the W. or main branch coming from the N. W. after a separate course of about 40 m. each. The united stream proceeds first S.E. 16 m., to Hadley Falls, and then N.E. 30 m., to Glen Falls. From this point to the mouth in New York Bay its direction is almost due S. Its white course exceeds 300 m. Its chief affluents are the Esopus and the Mohawk. The former it receives about 15 m. after its branch enters the river, and the more important of the two, 40 m. below Glen Falls. The tide flows a little

above Albany to which, 145 m. above New York, it is navigable for sloops and steam-boats; in Hudson, 116 m., it is navigable for the largest vessels. For a considerable part of its course, particularly at first, the banks of the Hudson are high, rocky, and precipitous; and the scenery along them is very picturesque. The chief places on it are—New York, Albany, Poughkeepsie, Hudson, Albany, Troy, and Catskill.

HUDSON STRAIT the Hudson's Bay. **HUDSON'S BAY** an extensive bay or rather an inland sea, British America, U. of Canada, extending between lat. 51° and 64° N., and lon 77° and 95° W.; length, N to S, about 500 m.; greatest breadth, about 600 m.; area, 298,000 sq. m., including in this, different gulfs; the principal of which are St. James Bay forming the S. part of Hudson's Bay; Port Nelson and Chamberfield Inlet on the W. and Walesome Sea, or Sir Thomas Ross's Waterway, on the N. Hudson's Strait, which is its N. E. continuation, is 460 m. long, and 100 m. broad, connects it with the N. Atlantic. Hudson's Bay is navigable only a few months in the summer being completely frozen over or obstructed by drift ice, during the rest of the year. It is full of mudbanks, reefs, and islands the best known of the latter being Southampton and Mansfield islands. The shores around it are rocky and steep, the climate is extremely rigorous, and the contiguous countries are of a barren and repulsive character. Numerous rivers fall into the great inland sea; the chief are Great Whale, the E. coast about 140 miles, Mealy, and Albany in St. James Bay and Winnipeg, Severn, Haynes, Nelson Churchill and Seal, on the W. coast. The fledge, or white whale, is found occasionally in its waters; but fish and also crustaceans are scarce. The Hudson's Bay Company have several settlements and forts, especially on the W. coast, and carry on a lucrative traffic with the aborigines for peltry &c.

HUDSON'S BAY TERRITORY a vast tract of country comprising nearly the whole of British N. America, with the exception of the Canadian, New Brunswick, Nova Scotia, Newfoundland and the other British settlements on this part of the E. coast, which, with the U. States territory forms its limit on the S. the Atlantic bounding it on the E. the Pacific on the W., and the Arctic Ocean on the N. In this space is comprehended the great inland sea, known as Hudson's Bay and an immense number of large lakes and rivers W. of it, many of the former upwards of 100 m. in length amongst these are the Great Bear Lake Great Slave Lake, Deer Lake, Winnipeg, &c. It also comprises a portion of the Rocky Mountains, and several islands on the W. coast, including that of Vancouver about 800 m. long, and upwards of 60 broad. The peninsula of Labrador forms its most E. portion. This country is divided into four large departments or regions—the N. department, which includes all the establishments in the fur and frozen regions, comprises the valley of the Mackenzie river and the country between the sterile region and the Rocky Mountains N. of Lake Athabasca. The B. department extends on both shores of James Bay and along the S. shores of Hudson's Bay as far as Cape Churchill. It extends inland to the ridge which forms the N. boundary of Canada, and to the lakes Superior, Winnipeg, Deer and Williams. Along the shore of the lakes it is swampy but inland it is well wooded, surface undulating, but not hilly. It produces the fur-bearing animals in great abundance. The Montreal department, including the country in the neighbourhood of Montreal, up the Ottawa River and along the N. shore of the Gulf of St. Lawrence and Esquimaux Bay; and the Columbia department, which comprehends an immense extent of country to the W. of the Rocky Mountains. Nearly all the rivers in the land own Bay territory flow N. those in the S. parts falling into Hudson's and James Bays, and those in the N. W., including the Great Mackenzie River discharging themselves into the F. Ocean. The country on the E. side of Hudson's Bay forming part of the peninsula of Labrador, is called East Main; that on the S. W., New S. Wales. The latter which is much better known than the former abounds in lakes and rivers. The Hudson's Bay territory has yet been little explored, but its S. and S. W. parts are known to be well adapted for agriculture. Mountains, it is used by the Hudson's Bay Company in whose possession it is, merely as hunting grounds, from which to obtain supplies of furs for the market of the world. These are probably upwards of 50 different

most kinds; the most valuable of which is that of the black fox. The other articles of commerce are oils, dried and salted fish, feathers, quills, and walrus ivory. The Hudson's Bay Company was chartered by Charles II. in 1670.

HUELA, *TRINIDAD*, or *TRINIDAD*, the cap. city of Aconcagua, and of a prov. of same name, on the river Hué, which is here navigable for small craft, 10 m. from its mouth in the Hué road, Gulf of Tonquela, about lat. 16° 38' N; lon. 107° 15' E. It is composed of two cities—an exterior and an interior. The former is surrounded by the river and by walls 5 m. in circumference, and 80 ft. high, fortified in the European manner. It is entered by 10 bridges, corresponding to as many gates; and contains the houses of the near relatives of the king, the different public offices, barracks, prisons, universities and grammar, and a few poor petty traders, who sell rice, beef, and other commodities required by the soldiers. In the middle of the exterior is the interior city also surrounded with walls, containing the palace or seraglio of the king, the palace of the king's mother, the house in which the sovereign receives the mandarin, and a great room for the soldiers on duty at the gate. Probably no capital presents a more dismal aspect than Hué every one in it groaning under the tyranny of a despot who imagines himself to be the only person in his kingdom who ought to be happy and of mandarin who only study to deceive the king, and oppress the people for their own profit. Hué is likewise the ordinary station of a portion of the navy and has extensive building-yards which are alleged to be in constant activity; and a large cannon foundry. The country around being very imperfectly cultivated the capital obtains its supplies of rice from the Y provinces. Pop. estimated at 60,000.—(*Four Indian Arch.*)

HUE a river Aconcagua, which, after a E.N.E. course of about 100 m. falls into the road of same name, 65 m. N.W. from harbour lat. 16° N. It is broad, shallow and only navigable for small craft, but the road into which it falls forms an excellent harbour where vessels of 300 tons can ride in safety during the S.W. monsoon.

HUEBRO a vil. Spain, Andalusia, prov. of and about 20 m. from Almería, poorly built, with a church, courthouse, prison, primary school and the ruins of an old castle. Manufactures of woolen and linen cloth numerous flour-mills, and some trade in alcohol, corn and sugar. Pop. 1010.

HUECOJA a vil. Spain, Andalusia, prov. of, and 13 m. N. from Almería, with a church, primary school, a primary school, and an annual fair which lasts six days. Pop. 1697.

HUEHUETOCAL, or *Guanacaca*, a vil. Mexico, 37 m. N. Mexico, in the upper part of the basin of the Tula, 7000 ft. above sea-level. It gives its name to the canal which serves to protect Mexico from inundation, by diverting the waters of the Guadalupe from the adjacent lakes.

HUELMA (anc. *Asenec*), a to Spain, Andalusia, prov. of and 20 m. E.E. from Seville, tolerably well built, with white, but steep and narrow streets, three squares, a parish church, chapel, two schools a townhouse, prison, and storehouse and manufactures of linen and esparto fabrics soap, glass, tiles, and earthenware. Pop. 3978.

HUELVA, a prov. Spain, occupying the W. extremity of Andalusia, bounded N. by prov. Badajoz, E. by Sevilla, S.E. by Cadix, S. by the Atlantic, and W. by Portugal area, 4579 sq. m. The N. part is occupied by the W. portion of the Sierra Morena and its offshoots; the highest peak is San Cristobal at the base of which are the celebrated copper-mines of Rio Tinto. The mountainous yields pine, oak, beech, chestnut, holly and good pasturage, on which great numbers of sheep goats, horned cattle, pigs, horses, mules, and asses are fed. The S. part of the province is comparatively level and has a rich and alluvial soil. The chief rivers are the Tinto, Meruga, Rueda, Odiel, and Guadalequiv; the last separating Andalusia from Portugal, till it falls into the Guadiana. Copper, iron, lead, and coal are wrought, and some linen and woolen fabrics and other articles for home use, manufactured. Shipbuilding, sawmilling, and tanning employ a number of the people. Education is deplorably backward, even for Spain. Pop. 136,469.

HUELVA (anc. *Onob*) a to. and port, Spain, Andalusia, cap. above prov., in a bay formed by the mouths of the rivers Odiel and Tinto, 51 m. W. by Sevilla. It is well built, has wide, clean, paved, and straight streets; two large squares, two parish churches, several chapels, town and session houses

a Latin, and three elementary schools, an orphan asylum, hospital prison, storehouse, custom-house three cemeteries, one now used as a barrack, manufactures of hampers and esparto ropes, sails, blocks and other articles requisite for shipbuilding, excellent cork in shell, and some tannery fabric. Pop. 2416.

HUEMILA, a to. Spain, Andalusia, prov. of and 89 m. E. Granada. It is indifferently built, has crooked, steep, ill-paved, and narrow streets; two squares, a church, townhouse, prison two schools, several promenades, and is commanded by an ancient and decayed fortress surrounded by ruinous walls. Pop. (agricultural) 2496.

HUEMILAL a vil. Spain, Andalusia, prov. of, and about 3 m. from Almería, well built, with a parish church, court-house, primary school, an oil and a flour mill and a trade in corn. Pop. 1000.

HUEMILAL-ORONA a to. Spain, Andalusia, prov. of and 42 m. N.E. Almería, near 1. bank Almuza. It is well built, has wide, clean, and level streets, numerous squares a handsome parish church several chapels, a college, two Latin and five primary schools, town and session houses, a prison, three store-houses, and a fountain. Manufactures of linen and woolen fabrics, soap, saltpetre earthenware, and brandy. Near it are the mines of the Sierra de Almuza, which many of the inhabitants are employed. Pop. 19,328.

HUEMILAL several places, Spain, particularly—1. (anc. *Valdearrobillo*) a to. New Castile, prov. of and 30 m. E. Toledo with a parish church townhouse, prison school an old castle, on a commanding eminence and a trade in hemp. Many of the inhabitants are musicians. Pop. 2005.—2. (anc. *Rey*) a to. Old Castile, prov. of and 48 m. S.E. Burgos, at the foot of the Sierra de Soria, with narrow and ill-paved streets, a parish church prison, primary school manufactures of leather and refined wax, and a dye-work. Pop. 551.

HUESA, a to. Spain, Aragón, prov. of and 45 m. S. Saragosa, tolerably well built, with a parish church, a townhouse, prison primary school and manufactures of linen and earthenware, several flour mills, and a dye-work. Pop. 658.

HUESCA, a prov. Spain, Aragón, bounded on the N. by France E. by prov. Lerida S. and S.W. by Saragosa, and W. and N.W. by Navarra. Area, 1625 sq. m. The N. portion of the province is unusually rugged and mountainous, being covered with offshoots of the Pyrenees, some of the latter summits of which are covered with perpetual snow. In some places they are precipitous and bare, in others covered with timber and yielding excellent pasturage. Iron, copper and antimony are wrought in them. The S. districts, on the contrary are chiefly level with a rich alluvial soil, producing excellent grain, wine, oil, fruits and vegetables, hemp, and silk and depasturing domestic cattle, especially a superior breed of mules. Huesca is irrigated by the Cinca, Esera, Alcanadre, Gállego, Aragón, Arca, and numerous smaller streams, all affluents of the Ebro. The climate of the N. region is cold, damp, and exposed in the S. it is mild and soft, being sheltered from the N. and E. winds by the Pyrenees and highlands of Catalonia. Linen, woolen and hampers fabrics, earthenware, glass soap, and leather are manufactured and some trade is carried on in timber iron, copper wine, fruits, cattle, and agricultural produce. Education is on the advance, and crimes against the person are of rare occurrence. The inhabitants are, however, much addicted to smuggling. Pop. 247,106.

HUESCA (anc. *Onob*) a city Spain, Aragón, cap. above prov. the site of a bishop, 86 m. N.E. Saragosa, a beautiful town, well built, partly surrounded by ancient and decayed walls, with wide, clean, and well paved streets and squares a magnificent Gothic cathedral, in which are some good pictures four parish churches, six convents, several chapels, a university and many elementary schools, an hospital, town and session houses, two prisons, two theatres, a bull ring, barracks, and the ancient palace of the kings of Aragón, containing a vault called La Campana, the bell of which is named from King Ramiro II. in 1186, having beguiled his traitorous aristocracy to his palace, under the pretence of being present at the setting of a large bell as each one arrived he was deprived of his head, and his body thrown into this vault. In the arched entrance several delightful promenades. Manufactures—soap, earthenware, glass, bricks, and hardware. Trade in fruits, cereals, and cattle. Pop. 9900.

HUESCAR, a to. Spain, Andalusia, prov. and 70 m. N.E. by E. Granada, a bank Bravata tolerably well built.

the old part with narrow crooked, and ill-paved and the modern with clean, wide, and well-paved streets; three squares, three churches, and several chapels, town and court houses, an hospital, storehouses, prisons, four schools, and a convent. Manufactures—linen, cloth, hosiery, blankets, and quilts, earthenware, and soap, which are exported. P 5769

HUTE, a city Spain, New Castile, prov and 25 m. W N W Coana, 1 bank Huete. It has wide, regular, and well paved streets; several squares, four parish churches, four chapels, two convents, two hospitals, town and court houses, a prison, storehouses, cemetery four churches, and a very handsome Episcopal palace. Manufactures—linen, coarse cloth, shoes, white wax, glass, and earthenware. Trade, in its manufactures, and agricultural produce. Pop. 3746.

HULETOR, two places, Spain, Andalusia—1 (Upper) A in prov. of, and 26 m. W Granada, 1 bank Gual; with a parish church, courthouse, prison, primary school brick and tile works, an oil, and two flour mills, and a trade in corn. Pop. 1317—2 (Lower) A in prov. of, and 7 m. E N E Granada, with a parish church, townhouse, school, prison, and several oil and flour mills. Pop. 812.

HUFINGEN a ta. Baden, Lahn circle, cap. batt. of same name, 1 bank Hufingen, 18 m. N N W Schaffhausen, with a church, a castle, manufactures of clocks and watches, spinning and weaving. Pop. 1,800.

HUGGATE, par Eng. York (E. Riding) 4500 ac. P 547

HUGHLEY par Eng. Selwyn 1110 ac. Pop. 112

HUNNEKAWSEN, or KUNSWOORT a ta. Balaun, circle, and 12 m. N W Balaun on a height, surrounded by forests, with a church, castle, townhouse, and school manufactures of linen, plush-ovens, and lime-kilns. Pop. 1103

HUIGH, five par. England—1 Devon 906 ac. P 101—2 (Chapelry) Somerset 2202 ac. P 448—3 (Chapelry) Somerset 2214 ac. P 780—4 (Ward), Devon, 2662 ac. P 464—5, (South Devon 1160 ac. P 382

HUIZEN [Lat. Vinea Idem] a river France, which rises at St. Hilare de Boulay near the forest of Balaun, around. Mortagne, dep. Orne, flows in a generally S.W. course till it joins 1. bank Barthe, a little below Le Mans, after a course of about 60 m.

HUISEN a ta. Holland, prov Gelderland, 8 m. S.W. Arnhem, formerly fortified but now of small extent, with only one good street, and a small market-place, a church, two schools, and the remains of its fortifications, and an old castle. Pop. Agricultural, 1268.

HUIZEN, a vil. Holland, prov N Holland, 15 m. K.S.E. Amsterdam, close on the Zuider Zee, which is here so very shallow that one may wade in above a mile without the water reaching higher than the middle. It is a pleasantly situated beautiful village, and has a Calvinistic church, with a heavy lofty tower a Baptist church, and school. Agriculture and fishing are the main occupations. Pop. 2478.

HUIZUM, or HUNZUM, a vil. Holland, prov Friesland, 1 m. S.W. Leeuwarden, with a church, school, and posthouse. Pop. 678.

HUJAMES, one of the mouths of the Indus, an officer of the State, or great E. channel, called, in the upper part of its course, the Soan. The Hujames mouth is wide, but rapidly narrows inland to about 500 yards; lat. 24 10' N; lon. 67 25' E.

HUKONG or PARHONG, a valley in the K. of Burma, on the Assam frontier. "It is an extensive plain, bounded on all sides by hills; its extent, E. to W.W., being at least 50 m., and varying in breadth from 45 m. to 15 m.; the broadest part being to the E. The hills bounding the valley are a continuation of the Shan-kyang range, which is high, enormous at Mogoke, and seems to run in a direction of N N E." The principal river of the valley is the Shan-kyang or Myingyau, which, rising in the Shan-kyang mountains, after reaching numerous smaller streams, joins the valley of its N.W. corner and again enters the

valley of the hills, beyond which its course is no longer perceptible. The greater part of the low hills are under cultivation. The mineral products of the valley are salt, gold, and amber; for the last, indeed, it is the chief locality in Burma; gold has also been met with. The villages are few and small on the W. side, but the E. is said to be more populous. The inhabitants are chiefly Singphos, and their Assamese slaves and carry on a good deal of trade with the surrounding countries. This valley is supposed to have at one time constituted an alpha lake.—*Jour. Asiat. Soc. Bengal*, April, 1837

HUKWANG an sea. prov China, now divided into the two provinces of Hoonan and Hopen.

HULCOOT par Eng. Bucks 850 ac. Pop. 150

HULDERBERGH a vil and com. Belgium, prov Brabant, on the Yverde, with a brewery, a paper and corn mill; employments are agriculture and cattle-rearing. Pop. 1520.

HULEIN or HULAN, a market ta. Moravia, circle of and 10 m. S. Freres, on the Ranoora, and on the railway from Vienna to Olmitz, with a church, and two mills. Pop. 1068.

HULL (KIRKSTON ON) a large river port, municipal and par. bor. England, and co. of itself, locally situated in co. York (E. Riding) on the N. shore of the estuary of the Humber where it is joined by the Hull 24 m. E N E York, at the junction of the Hull and Selby and the Hull and Bridlington railways lat. (English) 53° 44' 35" N lon. 0° 20' W (P.). The river, which has been greatly enlarged and improved of late years, stands on a low and level tract of ground, about

20 m. from the mouth of the Humber and stretches along the banks of the river from the foundations of which it is secured by strong embankments. The houses are nearly all of brick, and are in general well built. The older streets are narrow and tortuous, but those of later formation are spacious and regular lined with handsome buildings, well paved, well lighted with gas, and amply supplied with water. There are altogether 12 churches in Hull, besides a great number of chapels, belonging to Dissenters of every denomination. Many of these are handsome edifices, particularly the church of the Holy Trinity which is a large cruciform structure, in the Early Gothic style, with an elegant tower. The other public buildings of note are, the custom-house, Trinity-house, public rooms, philosophical society's room, workhouse, institute, grammar-school, exchange, police office, townhall, infirmary, dispensary, subscription library, and almshouse. To these may be added the monument to W. H. Harrison, who was a native of the town; consisting of a fine obelisk, surrounded by a circle of that illustrious person.

In the market-place is a bronze equestrian statue of King William III. The number of schools is about 100 of which the grammar-school is the principal. Charities benevolent, literary and scientific institutions are numerous

THE CHURCH OF THE HOLY TRINITY HULL.

the more remarkable already named. A botanical and zoological garden the former about 1 m. from the town, comprising 10 ac. the latter 6 ac. with handsome buildings for the various animals. There are two large cotton-mills, and four or five extensive iron-foundries the other principal branches of industry comprehend seed-germinating, colour-making, boiler and steam-engine making, turpentine distilling tobacco manuf. featuring, oil boiling and ship-building. Hull now ranks as the third port in the kingdom, and the extent of her ship accommodation docks, quays &c. is commensurate with this eminent position the former with the harbour occupying an area of about 80 ac. The docks constructed successively since 1775 have an aggregate length of 1087 yds. breadth varying from 250 to 400 ft. and a total area of 34 ac. besides a basin between two of the piers on the Humber they are surrounded by broad quays and large warehouses have a depth varying at high tides from about 20 to 27 ft. and are crowded with vessels from all parts of the world. The principal exports are hardware and woollen and cotton goods imports—timber, corn, iron, wool, fax, hump, tallow, hides, pigskin, raw cotton, and, born in 1884 these amounted to about £10,053,898. The nature and extent of the imports will be learned from the following table of the principal articles imported in 1884—

Cattle Bones	11 124 tons	Shew' wool	11 873,718 lbs.
Barley	326 972 gallons.	Olden's ash	326,718 lbs.
Wheat	145,721 do.	Wheat	1 929 200 do.
Barley	41,559 cwts.	Barley	723,622 do.
Cattle	22,467 head.	Oats	100 188 do.
Sheep and Lambs	27,921 do.	Peas	237 230 do.
Cattle	374,083 lbs.	Beans	126,232 do.
Flour	100,057 cwts.	Maiden	60,617 do.
Lard and Oranges	104,957 bush.	Peas and	50,048 qrs.
Cheese	11 006 tons.	Cheese and	21,728 cwts.
Hides	36,172 cwts.	Hemp	74,799 do.
Wool	1,002 728 do.	Flax	414 812 do.
Barley	10,712 cwts.	Wheat oil	81 tons.
Flax & Linseed	585,522 qrs.	Wheat oil	797 do.
Refined Sugar	137,473 cwts.	Olive oil	5,520 do.
Wool	264,207 loads.	Tallow	5,145 cwts.
Wax	20,000 cwts.	Wool	12,141 do.
Iron	21,441 tons.	Outlets	11 894 do.

The number and tonnage of vessels registered at the port of Hull in December 31 1884, were, making vessels 495 tons. 44,983 steamers 80 tons. 27 680 Hull has an extensive commerce with the Baltic, Mediterranean, America, &c., besides a large coasting trade. The whale fishery was formerly one of its most important branches of industry but has greatly declined of late years. The government of Hull

is vested in 14 aldermen (one of whom is mayor) and 14 councillors. The name of Kingston-on-Hull was given to it by Edward I. who erected a fortress, and constituted it a chartered town and port. When Edward III. invaded France, in 1380, Hull contributed 16 ships and 470 marines. In the reign of Charles I., Hull was the first place to close its gates against the king, who shortly after besieged it and would have taken it by stratagem, if the treachery of its governor had not been discovered in time to prevent its being surrendered to the royalists. The town was afterwards besieged by the Marquis of Newcastle, and successfully defended by Lord Fairfax. At the close of the reign of James II. the town fort, and garrison, being in the hands of the Jacobite party the place was surprised and the Prince of Orange proclaimed king the anniversary of which event is still kept as a holiday. Andrew Marvel was a native of the town. Hull sends two members to the House of Commons. Registered elections (1851), £396. Pop. of bor 84,680.

HULME, a chapelry, England, co. Lancaster, par. Manchester. Within the bounds of the bor. in which it is included and from which it is separated by the Mersey. It contains several cotton mills, a cavalry barracks, a handsome chapel, with a tower 125 ft. high several Dissenting places of worship, numerous daily Sunday and infant schools, a workhouse, and an asylum for female penitents. Pop. 55,413.

HULPE (La), a vil. and com. Belgium, prov. Brabant, near the forest of Soignes, 9 m. S.E. Brussels. It has an extensive paper-mill, at which a beautiful paper is made a brewery and distillery. Many of the inhabitants are employed having wood in the forest. Pop. 1457.

HULS, a vil. Rheland, Prussia, gov. of, and 17 m. N.W. Düsseldorf, with a castle and a R. Catholic church, and manu. factories of Huns milk and velvet. Pop. 2144.

HULST (Lat. Hulstum) a co. Holland prov. Zealand 18 m. W.N.W. Antwerp. It has good straight streets several market-places, the principal of which is the great market, in the middle of the town where stands the town hall, the former government-house, and an elegant church, part used as a Protestant, and part as a R. Catholic place of worship. It has also two schools manufactures of silk and leather four breweries, some trade, several mills and two annual cattle markets. It is one of the oldest places in Flanders, and was formerly fortified. Pop. 2889.

HULTSCHIN a tn. Prussia, prov. Silesia, gov. and 58 m. E. Oppeln, L. bank Oppa with a castle a church, chapel, and synagogues manufactures of cloth, several dye-works, a woollen and other mills. Coal is worked in the vicinity. Pop. 2688.

HUMBERK, a vil. and com. Belgium, prov. Brabant, on the canal from Brussels to Willebroeck, 9 m. N. Brussels. It has a brewery and a trade in agricultural produce. P. 2008.

HUMBEK, par. Eng. Hereford; 1464 ac. Pop. 263.

HUMBER, a large river or rather estuary, on the E. side England, between the counties York and Lincoln. At its W. extremity it is joined by the Ouse, after the latter has been suggested by the Derwent and Aire; below Goole it receives the Don, lower down the Trent, and still lower the Hull from the opposite side. Its whole length, from the confluence of the Ouse to Spurnhead, on the E. sea, is 24 3/4 N.; 10. 0° 12' 30" W. (a); is about 25 m. Average breadth 2 m. to 3 m. expanding, however, towards the E. extremity to 5 m. or 6 m. Its general direction, from the W. end to Hull which is nearly in the centre of its length, is W by N, thence to Spurnhead S.E. The basin of the Humber comprises an area of 1175 sq. m.; including those of the Ouse and Trent, 2550 sq. m. Hull is the principal port, and next to it are Goole and great Grimsby. At Hull, spring-

The *Almanach de Gotha*, for 1846, estimates the above territory to comprise 100,742 sq. m., and to have had 11,538,580 inhabitants in 1842; of which there belonged to Hungary-*Proper* with its military frontier, 84,896 sq. m. and approximately 8,907,000 inhabitants—that country is therefore of about the same extent as Great Britain with a population about two-thirds that of England and Wales. In 1849 however by an imperial decree, not only were Croatia and Slavonia officially disconnected from Hungary but the Banat—*os*, Transylvania, Transilvania, Krasno, and part of Anad—*together* with the co. Bana, between the Danube and Theiss, was severed from it, and erected into a Serbian province, or separate crown-land of Austria; and Hungary-*Proper* divested also of the previously-annexed Transylvanian counties, and the Littoral was divided into the following provinces, the former subdivision of circles and counties being abolished—

NEW ORGANIZATION OF 1850.

Province.	Situation.	Official Language.
1. Pesth.	Centre; chiefly between the Danube and Theiss, N.W., embracing most of its circle on this side, or N. the Danube.	Magyar & German.
2. Fehérvár.	N. and N.E., embracing most of the circle on this side or N. the Theiss.	Slavonic.
3. Kassa.	N. and N.E., embracing most of the circle on the other side, or N. the Theiss.	Rumanian & German.
4. Gömör.	N. and N.E., embracing most of the circle on the other side, or N. the Theiss.	Magyar.
5. Eger.	N. and N.E., embracing most of the circle on the other side or N. the Danube.	Magyar.

Hungary has been termed by Caspary, Europe in miniature, on account of the great number of different nations located on its soil. Magyar, whose statistics are entitled to the highest consideration, thus estimated the relative number of races inhabiting Hungary Transylvania, Croatia, and Slavonia—

Magyar	4,819,739
Serbian	1,607,344
German	1,278,677
Wallach	1,000,000
Croat	500,000
Rumanian (Serbian)	500,000
Polonian (Polish)	400,000
Wend	400,000
Russian (Kassian)	400,000
Bulgarian	15,000
French	1,000
Greek and Zambor	5,000
Austrian	5,000
Montenegrin and Cossack	4,000
Total	11,850,408

The Magyars, who are the dominant race, are for the most part occupationally located in the centre of the kingdom and surrounded on nearly all sides by the Slavonic tribes, whose conquests they displaced at their irruption into Europe in the 9th century on the W. they came into contact with the German race, and on the E. with the Wallachs. The Slovaks inhabit the N.W. or Upper Hungary the Rumanians the N.E. the Serbians the S. and the Croats and Illyrians the S.W. parts of the country. The Magyars also people a large part of Transylvania, and many are settled in Moldavia, where the Magyar-Magars inhabit 70 villages, and are supposed to number from 12,000 to 15,000 individuals; there are about 7000 in the Bukowina, and others are to be found in Bosnia, and in scattered localities in the Rumanian dominions. In Hungary nearly 2,500,000 Magyars are R. Catholics, about 1,740,000 Protestants—chiefly Calvinists, and 100,000 Catholics of the Greek church. They are a high-spirited race, brave, and warlike, generous to profusion, and, according to travellers, more sincere than their Serbian and Wallach neighbours; impatient of control, pride, indolence and ignorance are their besetting faults. Their general deportment is serious and in many respects they resemble the Turks, who followed them out of Asia, and belong to the same great family of mankind. The Magyar costume is remarkable for its picturesque elegance. The Magyar language is analogous in its construction to the Turkish and one peculiarity of it is, that it has no separate dialects—rich and poor alike use the same

language. Most of the Hungarian nobles are Magyars; and it is by this section of the population that the constitutional form of government and municipal institutions have been mainly if not wholly upheld. The Slovaks are amongst the people apparently the earliest settled in Hungary; they inhabit 13 counties in the N.W. and speak a Slavonic race, customs, and language to the adjacent Moravians, to whose extensive empire they belonged before the Magyar conquest. They are mostly R. Catholics but number also upwards of 500,000 Protestants—chiefly Lutherans. The Rumanians and Rumanians inhabit 13 counties, in and beneath the N. and N.E. Carpathians they are nearly all of the Greek united church. The Wallachs occupy a tolerably wide tract of country on both sides of the W. and N. boundaries of Transylvania like the Rumanians, they chiefly profess the Greek form of religion. They are far behind the Slovaks and Illyrians, and indeed nearly all the other nations of Hungary in education and civilization, and hold in fact, a position amongst the rest of the population much like that of the lower classes of the Irish in Great Britain. They are distinguished by a slender make, and great conformation, with much physical activity—which, however is not exercised to advantage in their domestic arrangements for their dwellings are uniformly more wretched, and their condition more backward, owing to their indolence and reckless habits than those of any other people in Hungary. They appear to be the descendants of Italian colonists, placed in Dacia during the Roman dominion there, and have been accordingly called *Daco-Romans*—an epithet to which their classic features, easy manners, language and antique costume, seem to give them a claim. They call themselves *Romans* and speak a dialect of Latin which is reported to resemble more perfectly that tongue than does the modern Italian but they write it with the Cyrillic or Russian character. In this last particular, they unite with their Serbian neighbours, inhabiting the Banat on their S.W. The Slovaks and Croats, both of the Slavonic race, in the S. and S.W. people nearly all Slavonia and Croatia, and stretch into seven of the counties of Hungary proper as far as the county Pesth they are nearly all Roman or Greek Catholics. The Wends (Vaudals) inhabit two counties in the W. the Bulgarians the town of Theresopolis, and a few other parts of the Banat. The Montenegrins a part of the county Temes and the Armenians portions of three of the E. counties. The Germans appear in the first instance to have emigrated into the country during or before the 7th century subsequently to which many successive immigrations took place, especially under Gyza, king of Hungary who succeeded the throne A.D. 1141 and who established large numbers of German colonists from Franconia, Thuringia, and Alsace in several of the N. counties, and in Transylvania. They speedily became dispersed in detached settlements over all Hungary; and early in the 18th century Pesth was described as a large and rich German town. In the last century other Teutonic immigrations, with some French refugees settled in the kingdom. The Germans are marked by their industry and thrifty condition but also it is said, by their religious and aversive propensities. They people the greater part of the W. frontier from Pressburg and around the shores of Lake Houdeder S. nearly to the limit of Croatia elsewhere they are most numerous in the co. Zips the mining districts, the Banat, and especially in the towns, where they compose the bulk of the trading population. About 800,000 of these are R. Catholics, and 180,000 Lutherans.

Physical Geography—Hungary, considered as a whole, is a large basin surrounded by mountains on every side, except the S.; but even there the natural boundaries of this geographical basin are completed at no vast distance from the frontier by the highlands of Croatia, Bosnia, and Servia, that meet those of Wallachia and Transylvania at the iron gate—a pass formed by the abrupt division of the mountains on either side of the Danube, which there forms a celebrated rapid. From that point the Carpathians proceed at first E., but afterwards successively N.W. and S.W. reuniting in their course the various masses of the Carpathians, Karpaten, Fehérvár, Tatra, Menn, Jabunka, &c., range. Most of these summits rise to between 8000 and 9000 ft. above the sea; their chief geological formations are granites, gneiss, primitive limestone, trachyte, greywacke, and sandstone. A third part of the whole extent of Hungary is covered with

their transiencies; and amongst these are the Matra and Hegyalja ranges, on the sides of which latter are the vineyards yielding the famous Tokay wine. The Carpathians are richly wooded in many parts, their branches are interspersed with numerous romantic and fertile valleys, and contain many productive meadows. A range of mountains, separating Hungary from Transylvania, is rugged and precipitous, and rises to some places to 8500 ft. in height; it consists of formations similar to the above-mentioned, with similar porphyry &c., and is traversed by rich metallic veins. Iron and quartz appear in the hills constituting the iron gate. On the W., the Lelkes mountains, a spur of the Alps separating Hungary from Styria and Austria, progressively decline towards the Danube. The Balaton (Balany forest mountain) another Alpine spur upwards of 2000 ft. in height, and clothed with dense forests of oak, beech, and other trees, intersect the S.W. quarter of Hungary in a N.E. direction, to near Walden, where the Danube bends E., and with the Matra mountains, beyond that river divides central Hungary into a greater and a smaller plain, respectively about 21,000 and 4,000 sq. m. in extent. The Danube and Theiss rivers traverse the S. half of the country in parallel streams about 60 m. apart, the former previously flowing from the W. and the latter from the E. or N.E., to near the latitude of the capital Buda-Pesth. Near Raab, in Slavonia, the Danube, met by the Drave, turns suddenly again to the E., and forms all the rest of the N. frontier of Hungary receiving, in that part of its course, the Theiss, and several minor affluents. The March, Waag, Weich, Gera, &c., from the upper Hungary flow to the Danube from the N. to the Bodny, Schepa, Herned, and Zagava, flowing from the same direction, unite with the Theiss; and the Samos, Körös, Maros, &c., from that river from the E. The Poprad, in the N. flows into Galicia, and is tributary to the Vistula—it being the only Hungarian river not belonging to the basin of the Danube. The Drave forms the S.W. frontier on the side of Croatia and Slavonia, and is joined in Hungary by the Mar from Styria. Excepting these two, the Raab which joins the Danube near the town of its name, is the only river of any magnitude in the S.W. quarter of Hungary; in that direction of Hungary are its two principal lakes, on either side of the Balanywald—Balaton, on the great plain, and the Neusiedler-See (Hungarian, Fertő-Tó) close to the border of Austria, and on the banks of which are the palaces and chief possessions of the Habsburg family. Lake Balaton is nearly 50 m. in length, by 10 m. in breadth the Neusiedler-See is equally broad, but only about half as long as the other lake. See BALATON REICHSDOMER SEE. In the Carpathians are several smaller lakes, between 4000 and 5000 ft. above the sea. Between Frankburg and Comorn, and Raab, the Danube divides into branches enclosing the Great and Little Schills, two islands of considerable size and high fertility. Numerous other islands are formed by it and by the Theiss, in the great plain and along both of these rivers, so the lower part of their course are extensive marshes and swamps, especially along the Theiss. The total area of the marshes in Hungary has been estimated at 1,500,000 sq. or upwards of 2300 sq. m. within the present country enough marsh-land has been drained to furnish subsistence for 500,000 inhabitants. Mineral springs are numerous; the most celebrated are those which form the baths of Mohács in the Danube.

Climate.—In the Carpathians, the winter is long and cold snow begins to fall in September and remains on the mountain summits till May or June; but while it still covers the so. Mountains, in the N.E., the heat in the Danub is oppressive. At Buda, near the centre of the kingdom, the average temperature of the year is 54° 30' F. and the average range 22° in the great plain, the climate resembles that of N. Italy in the dry and sandy wastes around Pavia, and during throughout the year are generally mild. Along the Drave, and in the adjacent lower parts of Slavonia, the climate and vegetation are those of S. Europe; the forest-trees get forth in February or March, fruit-trees are in bloom in the middle of April; rye and winter-wheat are ripe in May and grapes in June. At Buda, the rain which falls is estimated at 75 inches, and the number of rainy days at 112 annually. The marshy tracts here, as elsewhere, the reputation of insalubrity; yet, on the whole, Hungary is as healthy as any of the neighbouring

countries, and, amongst its natives, noted for longevity; this is cited who attained the age of 145; and another that of 132 years.

Production, and Rural Industry.—A late traveller to Hungary has remarked:—In comparison with the policy of the ancient Hungary presents, in a fertile soil, the first elements of prosperity, for all Europe may be searched through without finding an alluvium superior to that which covers the Danub. All round her N. frontier, to a great distance, the Carpathian protect, from the chilling blasts of Poland, those gentle embankments on which are grown the famous Tokay, and other wines of nearly equal worth, if not of equal note. The most voluminous water-way of Europe rolls through her very heart and in the natural not less than the vegetable kingdom, Hungary takes a rank of the first European nations of transit to the Adriatic, the way to which can be across high alpine chains, which defy the formation of any navigable canals and almost of railways. The Drave and Sava flow in the wrong direction to facilitate the communication of Hungary with W. Europe. The Danube is the great outlet for the produce of the country, the traffic upon it has, however long been crippled by Austrian fiscal regulations and obstacles thrown in the way of the trade of Russia at the mouth of that river tend still further to shut the products of Hungary out of the Mediterranean. Added to which, the greater length of transit sufficiently augments the expense of the wheat to the Danub to prevent its competing in low-price of price with that of Wallachia, Moldavia, and Bulgaria, which is brought to the Danubian ports.

Barley and oats are cultivated but not for exportation and the maize which is grown is used chiefly for feeding cattle. In the upper Carpathians rye, oats, and buckwheat are almost the only grains produced; potatoes, which are there planted, are eaten by the Slavonia and the German colonists, but little, if at all, by the Magyars. Millet, taro, rye, cabbage, gillies, hemp, and flax are raised in different parts. Tobacco is an important product. It is grown chiefly in the centre and S. of Hungary. The annual produce of it is estimated at 400,000 centners or cwts. of which somewhat less than one-fourth may be consumed at home. Wine, to the extent of about 95,000,000 gallons is made annually the most famous growth is that of Tokay raised on the Hegyalja Mountains, near the upper Theiss, over an extent of 100 sq. m. the annual produce being probably 1,000,000 gallons. It is a sweet, rich, and full-bodied red wine the superlative kinds of which are only met with at Imperial tables, and those of the higher nobility. Next to it in celebrity is the Moson wine, so called from the village of that name around which, and Ghelova, &c., in the S. it is raised upon a tract which has been named the Arad-Hegyalja. The Moson wine, from the vicinity of the Neusiedler-See, the white and red wines of the counties of Pesth, Presburg, and Bannay (the chief trade of which last is in wine) and those of Erlau, Vinita, Komossy &c. follow in rank. Wine is a universal beverage amongst rich and poor in most parts of Hungary the best is made by the Magyars, and next by the Slavonic population. Fruits are of various descriptions, from the cherry apple, and pear, in the N. to the fig, almond, and olive in the S. apricots, walnuts, chestnuts, medlars, and pumpkins, are very generally raised but the most abundant orchard-tree is the quince, from the fruit of which brandy and the mineral liquor distillation are made. In the military frontier are a great many small fertile plantations, introduced there in the time of Maria Theresa, and considerable quantities of silk are obtained. Cotton, in the S. west, combs, and other dyestuffs, are other articles of culture.

The farming arrangements and implements in Hungary, especially in the north-west, are very primitive. The ploughs, except a coarse gimble-plough, are wholly constructed of wood, and so ill-built that six oxen are employed to draw them, where, with a tolerably good implement, two would suffice. The harrow is formed of log-shaped branches, pegged together in the roughest manner, and is very inefficient for its purpose. The corn is sown like grass, and harrowed in stubble, when, if not trodden out by horses on the spot, it is often suffered to lie on the ground till it is again green. No threshing is carried on, except on a small scale, and the operations of mowing, sheafing, and binding out the grain, are often performed in the same field at the same time. The farm buildings are on a par with the rest of the appliances: the granaries consist of bottle-shaped holes excavated in the earth, and lined with straw where the corn is suffered to remain until it acquires a very mouldy taste. So little are the rural districts supplied with competent artisans, that, in many parts of the country if a wheel goes wrong, some one must be obtained from Pesth or Vienna to set it right. In the N.W. amongst the Slovaks some better farming is to be seen elsewhere. The surplus of manure, which the grain seems to be quite repaid by the Magyar cultivator but is far from being useless in portions of the great plain where, from the absence of wood, it forms, with straw and stubble, the principal fuel. At Altenburg, Kamathaly and some other places, colleges have been established for instruction in agriculture but it may be imagined that, amongst a rural population so little advanced in arts as that of Hungary their influence has been but little extended beyond their immediate neighbourhood.

The rearing of sheep has been greatly extended of late, and in the census of 1846 their number is given at 17 000 000 exclusive of Transylvania. They have become much improved by crossings with the merino breed, and both sheep and wool are largely exported. The native horned cattle, said to number 4,350 000 are a fine and large race of a gray colour except in the N., where they are of a smaller breed, and black or brown. Tyrolers, Swiss, and Friesland cattle have been introduced. To improve the native horses which are small, and not robust, much pains has been taken by the Hungarian nobility, and at Molegny, in the county of Szabolcs, is the largest stud in Europe, founded by the emperor Joseph, and where from 8000 to 10 000 horses are kept including many of the best stallions. The number of horses in 1846, is given at 1 000 000. De Gerando a late writer on Hungary gives a graphic description of the nomadic herdsmen and herds on the *puszta* or plains, or steppes, of central Hungary and the natural aspect of that region.

Everywhere are seen crowded on the prairie innumerable herds of horses, oxen, and buffaloes, with here and there large villages, formed of few white houses, ranged like beads. Those who inhabit them are not of one nation, but of 30 different races, living distinct from each other as if newly come to seek a fresh abode. Around these hives are extended cultivated fields the fertility of which surpasses the labour of men. Here the inhabitants keep an attitude which they have maintained during 10 centuries. It is almost like that of a camp on the eve of a great battle. The shepherd, the soldier and the labourer cultivating the soil in mountains and spurs, are the true descendants of the Magyar warriors who arrived here 10 centuries ago, sword in hand, from the steppes of Asia. (De Gerando, quoted in the *Bulletin de la Société de Géographie*, 1849, vol. ii.) Vast numbers of swine feed on acorns in the forests, and, as in many other countries, bread and bacon form a chief part of the labourer's diet. On the sandy beaches around Debreczin, millions of geese are kept; poultry are almost everywhere plentiful. Wild animals include the Carpathian bear chamois and marmot the wolf, lynx, wild boar stag roebuck wild cat, fox, hare two species of squirrel, and many other birds of prey with black grouse, and other kinds of game, in great quantities. Fish are especially plentiful in the Theiss; and the insect tribes are more numerous in Hungary than in any other part of Europe. The swarms of gnats which abound on the great rivers are extremely annoying to man and beast but some of a beneficial species are met with in such numbers and floating masses on the streams, that they are given to the cattle for food! The Hemesz and other large bogs, supply leeches in great abundance, which are a valuable export to foreign countries.

Vol. I.

Minerals and Mining.—The minerals of this region constitute a large proportion of its wealth. Hungary, Transylvania, and the mines between the two, still more abundantly, yields half of the whole quantity of gold produced in Europe, of silver, nearly one-third and, after England, it is the richest in copper of any European country. The quantity of gold actually obtained in Hungary-Prater amounted, lately to 1860 marks, of about the value of £71 400. It is met with at Kremnitz, Schomolitz, and other places in the N. and also at Nagy-Banya, on the borders of Transylvania, where it is found in veins lying up, and in trachyte and porphyry. Silver is found with the gold, and also alone, in various localities, to the amount, lately of nearly 69 000 marks yearly. In addition, it is supposed that a considerable proportion of the precious metals raised is unexported and that, for state-reasons, the whole quantity which reaches the Austrian treasury is not made known. Copper is met with in conjunction with the foregoing metals and in springs which yield a solution of it called cement-water. Iron, lead, cobalt, stibnite and other ores of mercury antimony arsenic, sulphur and alum, are amongst other minerals obtained in considerable quantities. The metallic ores stand chiefly in the trachyte region on the declivity of the Carpathians, and the mines are chiefly into the four districts of Schomolitz, Schomolitz Nagy-Banya, and the Banat, of which the first-named is by far the most important: the town of Schomolitz may be considered the mining capital of Hungary. The works there are on the most extensive scale, and quite honeycomb the mountain on which the town is built. As many as 90 000 miners are said to be employed in the Schomolitz district but the mining regulations there and the processes employed seem to be very defective. Most of the gold and silver raised in Hungary is sent to Kremnitz to be coined and, according to Mr. Paget, the quantity of bullion annually converted into money there, was, a few years since, equal to about £250 000 sterling besides which nearly 270 marks of gold, and 16 000 marks of silver find their way yearly to Vienna as ingots. (See Paget, *Hungary and Transylvania* and the *Arsenal* No. xlv. 1844 p. 106.) At Szekes and elsewhere, in the co. Marmaros, at the N.E. angle of the country (between the Carpathians and N. Transylvania) are large mines of rock-salt, which is carefully hewn out in blocks of a certain magnitude on payment of a deduction of half the pay for the same from the miner's wages. Soda lakes are scattered in great number over both of the Hungarian plains, and formerly it was free to any of the population to collect soda, but with an increase of the manufacture of soap at Szegedin and other places, the soda deposits are now more strictly watched as private property than formerly. Nitre, also in vast quantities sulphate of soda, and potash, are native coal is procurable in the sandstone formations, in various places and of the finest quality is found in some famous mines in the Hagyalja, near Eperies.

Manufactures Trade and Commerce.—Hungary has scarcely any manufactures but such as are domestic. In all parts, the rural families weave their own household fabrics, and construct most of the articles necessary for the pursuit of their ordinary occupations even at Szegedin, where soap is made to some extent in about 30 factories, the manufacture is conducted at home, and by the hands of the women while the proprietor of the house travels to obtain orders. Industrious handicraftsmen not of the family are unknown. Linen cloths in the N. and woollens in the S. are indeed made for sale, but they scarcely pass beyond the frontiers, and the fine woollens used are imported from Austria, Bohemia, and W. Germany in fact, for all articles of luxury Hungary is dependent on foreign countries. Leather is one of the principal articles made, and in their saddlery the Hungarians certainly excel, though the fashion of their goods undergoes no alteration or improvement and, as has been remarked, the saddle of the Magyar is the same as that they brought with them out of Asia. Yelt hair in the large towns, earth-wares, iron goods, some glass, rope, paper of inferior quality and best-root sugar, are other principal articles of manufacture. At Pesth some silks are made and a few cotton factories are here and there established. In all parts of Hungary earthen jars of a peculiar kind, narrow necked, and varnished all over are fabricated; their price being the amount of coin which will fill them. About 300 breweries exist, chiefly in the capital and the N. counties brandy distilleries are pretty numerous. At Szegedin

137

gades, the best and cheapest boats are built—that place and Commerce may be considered the great seats of the shipping interest. The Jews monopolize the larger share of the internal trade. The Jew trader early in the spring, makes his annual tour and bargains with the country for their wool, wine, corn and other produce. The exports of the country are mostly confined to its natural productions—tobacco, corn, wax, honey, soap, bacon, wine, wool, turnip seed, hemp, cattle, fags, hides, furs, iron, copper &c. and a few years ago they were estimated to amount in annual value, to about 2824,000 the imports being valued at 2843,000. Most of the trade is with Austria, Moravia, and Galicia and carried on up the Danube and down the Poper. The former river is navigated by steam vessels but goods are chiefly conveyed on the large rivers, in barges, some of which are from 100 to 150 ft. in length, averaging 30 ft. in breadth and capable to carry up from 1500 to 2000 quarters of wheat. From the great plain merchandise is taken into Croatia, &c., up the Rha to Black, or by the Rapa to Carlsbad, and thence sent by land to Lemberg and Trieste, or to Fiume, on the Adriatic, by the *Kousserosses*. This which is a noble road carried over the Alps by the spirited contributions of the Hungarian magnates, is the finest work of its kind throughout Hungary or its former dependencies the other roads are generally very inferior except in the N. county of Arva, and in parts of the Banat which also, in the style and appearance of its towns, seems to be much in advance of most parts of Hungary. The *F. szasz Canal*, between the Danube and the Rha, is the most extensive several other canals exist, especially the *R. Banat*. The salt of Joseph II. connected with the mines of Schwanau, is a stupendous subterranean passage of a somewhat peculiar nature and one of the most remarkable public works of which Hungary has to boast. Across the Danube between Buda and Pesth, a magnificent suspension bridge has been erected by an English engineer and opened for traffic in 1849. It forms a mighty contrast to most of the bridges in Hungary which are but rude and often a mass of structures composed of rough planks and unhewn timber. Its ways have been earned from Vienna, on the R. side of the Danube, around both shores of the Neusiedler See to Lank a d on the N. side of the river through Pressburg to Pesth, thence to the Rha, then, on the Thems, and to Constantinople, in the *Arad*, *Timok*, and in *Hermansdorf*, in Transylvania with a branch to the coal district of Oravica, near *W. Schrecken*, on the Banat.

Costume.—The Hungarian costume as worn in full dress by the higher classes is remarkable for its elegance. It forms the basis of the uniform of the hussar regiments in almost every country. When worn by the Hungarian of rank, the material consists of green and gold with a mantle, richly lined with fur hanging over the shoulder and disposed with elegant grace, but in the case of the *admiral* or *drake*, and the *marine* or *long* *surcoat*, trimmed with fur are often substituted for the hussar jacket, and have a still more elegant appearance. The *ra*, a fox paw and martial attire is extended by masters to their footmen who appear in hussar uniform, with sabre and spurs jingling as they move along. It is startling to a foreigner says *Page*, to find himself served at table by a smart looking hussar, be-whiskered and be-spurred as severely as if he were handling a sabre, instead of presenting a knife and fork. The hussar jacket, with light pantaloons, light boots and a large-brimmed hat, form the costume of the lower orders. The *Sclavonian* peasant women are distinguished by a white kerchief folded neatly over the head and neck, and a blue petticoat, with deep edges of bright red. The dress of the *Wallachian* women consists of a long white linen skirt, encumbered with red or blue wool at the collar and cuffs, two aprons, bound before and behind, serving in place of petticoat and gown. A small sheep-skin jacket, trimmed and richly embroidered, is also sometimes worn. Another variety of costume is found amongst the *Panthe* shepherds or shepherdesses of the plains. It consists of loose linen drawers, and a short skirt, both black the latter descending nearly below the knees and sometimes ornamented by the gaily-embroidered waistcoat or jacket. The feet are protected by long boots or moccasins, and the head by an enormous hat, from beneath which hang two broad plaits of hair over the whole face, generally cast the *muscle* or hairy cloak. The hat is composed of the skins of the long-eared Hungarian sheep,

which undergo some slight process of cleansing but far from being sufficient to remove the natural odour of the article. The wool is left in its original state on the skin, and is turned

SCLOVIAN WATER-CARRIER AND SHEPHERD of the Adir of 1849. From a drawing by C. J. Zeller.

out or in, as the weather demands, out when it is hot and in when it is cold.

History Government, &c.—Hungary S and W of the Danube and S and E of the Thems was included in the Roman empire the former region being termed *Pannonia*, and the latter known as a part of *Dacia*. While the portions of the country north of the rivers were inhabited by the independent *Quadi*, *Jazyges*, &c. the south and fall of that empire the territory was successively occupied by the Goths the Huns under *Attila* and the Avars from which last two tribes the present name is supposed to have been derived. Toward the end of the 9th century the Magyars, a people from the steppes of Western Asia, cognate with the Turks, Finns, and probably with the Huns under their duke *Arpad* broke into the country and in ten years had established their dominion there, having shattered the *Slovak* kingdom of *Moravia* at the battle of *Pressburg* in 907. Their sovereignty was made hereditary in the family of *Arpad*, whose grand son *Geyza*, nicknamed *Christianity*. *Stephen I* in 997 assumed the title of king and added Transylvania to his realm. *Sclavonia*, *Croatia*, and *Dalmatia* were afterwards subdued and the sway of Hungary subsequently extended also over *Romania*, *Serbia*, and *Galicia*. In 1201 the line of *Arpad* became extinct and soon afterwards *Charles of Anjou* was called to the throne. He was succeeded by *Louis the Great* who, becoming king of Poland, ruled from the Adriatic to the Baltic. *Mathias Corvinus*, unanimously elected king in 1459 governed an empire as extensive as that of Austria in the present day but about this time the Turks began to trouble Hungary and after the total defeat and death of *Louis II*, at the battle of *Mohacs*, in 1526 they overran the greater part of the country which they retained for the next 160 years. In 1686, *Ferdinand*, archduke of Austria, was elected by the Diet king of Hungary and the sovereignty has ever since been vested in the House of *Hapsburg*, but the despotic rule of the Austrian sovereigns became so intolerable to the Hungarian nobles, that after repeated insurrections, in 1683, they rose under *Telaki*, called the *Turks* to their aid, and besieged *Vienna*, which was only saved by the timely assistance of *Sobieski*, king of Poland. The Turks were soon afterwards expelled from the whole of their Hungarian possessions, by the troops under *Prince Eugene* and *Duke Charles of Lorraine*.

Before the late struggle in Hungary (1848-49) the government was a limited monarchy the Austrian emperor being

represented by the Palatine or viceroy who, from the time of Maria Theresa, had been a member of the imperial family. The Palatine however was not directly nominated by the sovereign, being chosen by the Diet from a list of four persons named by the emperor. The prerogatives of assembling and dissolving the Diet, of declaring war or making peace, of nominating to archbishoprics and bishoprics, appointing the officers of state, lords-lieutenant of counties, and the presidents, councillors, and judges of the royal and district courts of levying troops and calling out the insurrection or military force of the country, of pardoning culprits, money-granting patents, legitimizing, appointing commissions to examine into the country-administration of funds, etc. were vested in the Crown, and exercised agreeably to orders from the cabinet of Vienna. The laws, however, were enacted in conjunction with the Diet, which consisted of two chambers—the upper or chamber of magnates, being composed of the higher clergy the barons and counts of the kingdom (or great officers of state and lords-lieutenant) and the magnates by birth and title, or higher nobility and the lower chamber consisting of two deputies from each county and from the districts of Great and Little Transylvania, and Jassy, and the Habsburg towns and deputies sent by the other towns the clergy, magnates and widows of magnates. Many of the deputies had the right to speak, but not to vote, and all were paid for their services at the rate of 12*z*. per day while the Diet was sitting. The deputies from the counties and districts were elected by the nobles—a name however not synonymous with that of aristocracy in other constitutional countries, but rather with that of freeholders—nobility in Hungary being the possession of a privilege and not a social rank. Whoever owned land became thereby a noble and was entitled to vote as an elector and this privilege was also shared by others in virtue of descent alone; the total number of electors being between 300,000 and 350,000 many of them in a very inferior station of life. The Personal or president of the lower house of the Diet, was named by the sovereign. In the counties the *ispáns*, or lord lieutenant was chosen by the king from amongst the magnates having property in the county but in eleven cases this dignity was hereditary. Under him were two vice-lieutenants or sheriffs (*ispánok*) chosen freely by the gentry and who were constitutionally resident in the highest administrative functions in the county—the lords-lieutenant, except on special occasions being commonly resident in the capital. The counties were subdivided into from two to six circles (*járások*) each presided over by *alder-stuhlrichter* or under-sheriffs subordinate to whom were *vice-stuhlrichter* or police-officers. The county magistrates were elected triennially at meetings called *restorations* and the counties were for ought to have been governed, as to their internal affairs, by the *congregations* or assemblies of the nobles which were held at least four times yearly and which elected, instructed and, if necessary recalled the deputies sent to the Diet, and voted the taxation of the county. The government of the districts and Habsburg towns was vested directly in the Palatine, and their officers also were appointed triennially. The municipalities had their *senates* or court of aldermen and *hanges* or common council but their magistrates were not freely elected like those of the counties, but appointed by the crown—hence being deemed especially under the influence of the court. The deputies of the royal free towns were excluded from the privilege of voting in the Diet. The villages were each under the rule of the lord of the manor whose court had jurisdiction in disputes between the peasantry. In suits between the peasant and his lord special courts (*seks dominikus*) were empanelled, consisting of the *vice-stuhlrichter* and four other persons unconnected with the disputants. Other tribunals were those of the *stuhlrichter* the *al-ispán* and the county courts of session and the highest of all was the *royal-table* or court of king's bench, which originally consisted of seven but later of a much greater number of judges, presided over by the Personal. Altogether the internal arrangements of Hungary bore a singular resemblance, in many important features to those of England; and the parallel is rendered more remarkable by the fact that great and analogous spoils in the histories of the two countries took place within comparatively short periods from each other. Upwards of a century indeed, elapsed between the time when Alfred finally

consolidated the heptarchy and divided England into counties and that when St. Stephen, in A.D. 1000 abolished the tetrarchy and subdivided Hungary into counties, almost with their late extent and organization, but the *Golden Bull* which Andrew II. was compelled to grant, and which limited the power of the crown and established the rights of the Hungarian freemen, dates in 1222 or only seven years after our own Magna Charta, and contained some very singular provisions and the Pragmatic Sanction which fixed the succession to the crown of Hungary hereditarily in the Austrian line, was made in 1687 or the year before our great Revolution which even stated the Hanoverian succession in Great Britain.

Hungary although united under the same crown with Austria, has been constitutionally an integral and distinct from the latter as if known from England and its separate rights were repeatedly guaranteed by Dietal enactments ratified by the sovereign. I quote one of these—the 10th Act of the Diet of 1710 sanctioned by Leopold II. expressly states Hungary in her entire system of legislation as a government, is a free and independent kingdom and is therefore to be ruled and governed by her legally-recognized hereditary king, according to her national laws and customs. And since 1823 a king of Hungary previous to his coronation has been obliged to sign a document called the *Hungarian Diploma* which is inserted in the acts of the Diet, and by which he binds himself to maintain and cause to be maintained all the rights, liberties, privileges immunities, customs, and usages of the kingdom of Hungary which have been instituted during the reign of his predecessors, or which may be instituted during his own reign. (Szemere.) The Hungarians, however complain that the Austrian government continually evaded the fulfilment of the compact, and that it has for ages endeavoured to succeed in their constitutional rights and privileges, and to bring Hungary under the same centralizing system pursued with regard to the other portions of the Austrian empire. The county administration had, previously to 1845 become in a great measure nullified by the establishment of a royal council consisting of the Palatine and twenty-five members, nominated by the emperor from amongst the magnates and gentry and which assumed the functions of corresponding with the county congregations, regulating the accounts of the taxes, superintending the military and police establishments and communicating between the counties and the sovereign—all the communications passing through the Hungarian State Chancery at Vienna. If he by aid with the county magistrates elected at the restoration other officers, named administrators were placed by the Austrian court, who interfered with their duties. For the last thirty years the Hungarians had been remonstrating against this, and numerous other references to their home government, they complained of the liberty of speech, and the publication of the debates in the Diet were prohibited that heavy duties levied on the frontiers prevented the exportation of the produce and especially the manufactures of Hungary that the country was indirectly taxed in favour of the German provinces of Austria that the efforts of the Diet to liberate the peasantry from feudal burdens and give them the right to acquire property were foiled by Vienna intrigues, etc. They demanded amongst other reforms, the exclusion of deputies of chapters, and of magnates, from their lower chamber, that the military frontiers should be placed under the command of the Palatine and governed by Hungarian laws that the duty on salt should be reduced that the edicts of the government to officers of justice in Hungary should be discontinued that the laws respecting the taxes on the clergy should be observed that the Hungarian chancery should be made really not merely nominally independent of the Austrian chancery that the crown should bear the arms of Hungary that a budget should be presented that there should be a responsible ministry that the Hungarian (Magyar) language should be used in all official business instead of the Latin, etc. These, and other reforms, continually voted by the Diet, were rejected by the Austrian court until in the session of 1848 (after the French revolution) the Diet passed acts for the emancipation of the Hungarian peasantry from feudal burdens, for a fair representation of the whole people in the Diet for the abolition of all exemptions from taxation for the freedom of the press and for trial by jury. The emperor gave, to a deputation headed by the Palatine, his assent to these enactments.

on April 11 of the same year on which a Hungarian force returned from the W. frontier. Immediately afterwards, however, it is suddenly proved that the Austrian government excited insurrections of the Servians and Wallachs, in the R. and E. of Hungary, who were in open revolt early in June and carried on fearful devastations. On the 9th of September Jellachich, who had taken possession of the Littoral, and had without the consent of the Hungarian ministry been appointed Ban of Croatia, crossed the Drave with an irregular army of 48,000 men, reinforced by Austrian regular troops, and invested with full authority to act against the Diet. Jellachich was defeated, on September 29 by the landsturm or militia near Schweiksdorf, and, taking advantage of a truce, he suddenly withdrew with a part of his forces, to re-take Vienna, then in the hands of the revolutionists. The troops and commanders of fortresses in Hungary had received orders from the court to obey its directions alone, and not those of the constituted authority—the Hungarian war-office and by an Austrian decree dated October 3, they were all placed under the command of the Ban, when the Hungarian government at once began to organize regular troops for the defence of the country. On the 26th of the same month a Hungarian army crossed the Austrian frontier, but after some partial actions near Vienna, it retreated to Raasdorf. In the middle of December the Emperor's army under Prince Windischgrätz invaded Hungary, and the Hungarians, maintaining several retarded positions before them towards the banks of the Theiss while the Diet transferred its sittings from Pesth to Debrecen. After the successes of Raasdorf in Italy the Austrian army entered on March 4, 1849, foundered an edict, by which Hungary and its dependencies were divided into provinces or crown lands of the Austrian empire, and the Hungarian constitution was abolished. The Hungarian parliament on the 16th of March declared these measures illegal, and on April 14 decreed the deposition of the H. king of Austria from the sovereignty. At and before this period General Geyser with an army of 20,000 men manoeuvred with great ability in Upper Hungary. Messias Hambarsky Klapska, etc. operated in the N. E. Bencom commanded the Hungarians in Transylvania, where his successful generalship procured some of the most brilliant results to which our history is entitled. Lenningen etc. in the S. and after five great defeats in April 1849 the Austrians, Croats, and their Russian allies in Hungary, declared their military operations had ceased. On May 1 Buda was stormed and taken by the Hungarians under Geyser, and in June 7 the Diet once more removed to Debrecen, but by this time large Russian armies were collected in the frontiers and in July they ultimately poured in to Hungary from the N. and E. while the Croats, under Jellachich, advanced from the S. and the Austrians from the W. The result of war was an ocean of blood to the banks of the Theiss, and rapidly to the feet of the Carpathians. Several battles were lost in succession to the Hungarians, and while some considerable advantages were being obtained by the Russians at Comarn and S. W. of the Danube, the struggle was brought towards a close by the surrender of Geyser, with an army of between 30,000 and 40,000 men to the Russians at Vilagos, near Arad on August 13, 1849—two days after the expiration of the country had been resigned to him by K. south. Peterwarden next capitulated to the Austrians at Szatmar Comorn on September 27, which was the last act and to the war. The forces brought into the field by the Hungarians at any one time never exceeded from 120,000 to 135,000 men with 400 pieces of artillery against whom were, opposed, in the last campaign 150,000 Russian and 110,000 Austrian troops, but the insurgent Servians, Wallachs, etc. making a total of upwards of 300,000 men. Many of the chiefs of the revolution fled into Turkey, others suffered military execution, especially at Arad on October 6, 1849.

According to the new organization, Hungary proper is divided into five provinces (named in the early part of this article) Transylvania, which had been imperially incorporated with it in 1690, is divided, and, like the Banat, created into a separate province. Croatia, Slavonia, Dalmatia, and the Littoral, form the separate kingdom of Dalmatia which, like Hungary is under the immediate government of the Austrian cabinet. The Palatine has been replaced by an officer named the Statthalter who resides in

Pesth, the old Hungarian code of law is substituted by a new legal system, closely resembling that of the other Austrian provinces. Every municipal functionary is appointed by the court at Vienna. All communications with the Austrian government are conducted in the German language. Hungary is to bear its proportionate share of the taxation of the whole empire, and the prohibition duties on the trade between it and the other parts of the monarchy have been abandoned.—(*Das Land der Ungarn*, Leipzig 1849. *Cronica Grande von Ungarn*. HUNGEN a tn. Here-Darmstadt, cap. equals same name 24 m N N E. Frankfurt with a Protestant church and a castle long the residence of the princes of Colmar-Braunsfels distilleries, and a trade in cattle. Near it are iron mines. Pop. in 1835 12,110

HUNGERFORD a bor. market to and par. Englin partly in co. Berks, and partly in co. Wilts. The town on the hamlet over which is a handsome bridge of five arches, 60 m W. London, has a station on the Great Western railway and consists chiefly of one long street containing many good houses. There is a market-house, a large granite edifice with a elegant front to the river, a handsome church, chapel for Independents and Wesleyan Methodists, a free grammar school, some extensive breweries, and a good business arising from the traffic on the Kennet and Avon canal which passes near the town. Hungerford is a borough by prescription, and is so named by a countess chosen annually on Good Friday by the inhabitants, who, as these customs are called together by the sound of an ancient brass born in the town as the Hungerford men presented to the town by John de Gaunt when he granted the inhabitants a charter in the Market on Wednesday. At the E. end of the town is Hungerford Park, a noble mansion in the Italian style, and occupying the site of an old residence presented by Queen Elizabeth to the Earl of Essex. Area of par. 6440 ac. P. 50

HUNTERFORD a par. Eng. Leicester 910 ac. P. 28. HUNTERFORD (German *Hungen*) a tn. France dist. Haut-Rhin. It bank Rhine little more than 1 m N. Basel. It was one of the strong places constructed by Vauban, and had barracks for 4000 men, but is now almost a heap of ruins. The Austrians took it in 1615 after a slight defence by a very feeble garrison, and in 1815 its fortifications were completely demolished in accordance with the treaty of Paris. This place was sometimes called Great Hungen to distinguish it from the small Swiss village of same name on the opposite bank of the river. P. 1422

HUNTER, a river Germany which rises in Hanover about 8 m. N. Malte, Landkreis Osnabrück, flows N & W circuitously and through a very marshy country expands into lake Dummer passes the towns of Diepholz Karsen, and Barnstorf, forms part of the boundary between Hanover and Oldenburg enters the latter proceeds first N W to the town of Oldenburg, then turns suddenly E N E and joins 1 bank Weer at Elfsch about 20 m. below Bremen after a course of nearly 180 m. Its chief affluents are on the r the Aue and on the l the Elbe. It is navigable in the lower part of its course

HUNTER two places, New S Wales —1 A co. about 75 m long and 27 m broad area 2556 sq m. Its mountains which are numerous have a wild and savage aspect. The principal rivers are the Hunter and Goulburn. Jerry's Town is the cap Pop 1190 —2 A river about 70 m N 101 Jackson, flowing W to E. and forming the boundary between co. Hunter and Northumberland on the N and co. Gloucester and Durham on the S principal affluent, the Goulburn. It discharges its waters into Port Hunter and is navigable for about 25 m. inland

HUNTER ISLANDS —1 A group, Bass Strait, between S. Australia and Van Diemen's Land, comprising Barrington Island Three Hummock Albarrine and several smaller islands, about lat. 40° 28 S lon 144 59 E —2 One of the Carolines Kadak group lat. 5° 42' N lon 169 6 E (n) It is small but high enough to be seen 33 m. to 36 m off —3 (or Ouseque) Feejee group lat. 10 81 S lon 176 11 E (n) It is of volcanic origin well wooded and cultivated, abounding yams fruit and hops The natives have hitherto proved friendly

HUNTINGDON (contracted *Huns*) a small island on England, surrounded by the sea. Northampton Cambridge, and Bedford about 30 m long N to S and 20 m broad at the broadest part area, 223 080 ac. of which 220 000 are arable, meadow and pasture. In the W and S. parts the surface is slightly varied The N E. portion comprising about 44,000 ac. is wholly included within the level of the fens, and is principally devoted to grazing There is comparatively little timber in the county although it was at one time covered with wood Soil generally clayey or gravelly loam but excepting the meadows, which are among the richest in England not very fertile. Agriculture has been much improved of late years, the farm-men, in particular excelling in the management of the plough but it is, on the whole, still in a rather backward state The principal crops are wheat oats, beans barley and hemp Rape and mustard are also extensively raised and turnip on some of the drier soils. The breed of sheep is of a fine description, nearly approaching to the Leicestershire and Lincolnshire species with which the native breeds have been much crossed The cattle, for nearly of mixed, and generally inferior breeds have been improved by the introduction of short horns. Dairy farming however is not much followed, although some very fine cheeses and butter are made in various places. Pigeon-houses are extremely numerous more so it is said, than in any other county of England, excepting Cambridgeshire. Estates generally extensive A number of the farms are large but small ones predominate and are mostly let from year to year There are no manufactures in the county with exception of a little wool-stapling and yarn-spinning carried on by the women and children during the winter season The principal rivers are the Ouse and Ure. In the N. quarter of the county there is a shallow lake, called Wiggleson Mere, containing about 1670 ac. It abounds with aquatic wild fowl affords good fishing agreeable sailing, and is much frequented by pleasure parties. There were other lakes or meres of this kind in the same part of the county but they have been recently drained. Springs are abundant, and water for household purposes is mostly obtained from ponds. Huntingdonshire is divided into four hundreds, exclusive of the town of Huntingdon, and 103 parishes and is traversed by the Great Northern and the Cambridge and Huntingdon railways. It returns two members to parliament. Registered electors (1851): 2892 Chief towns, Huntingdon, St Ives St. Neots and Kimbolton. The county formed a part of the British kingdom of the Iceni and of the Saxons Mercia. It was entirely under forest law till the reign of Henry II. David prince of Scotland was, through marriage created Earl of Huntingdon, in 1108 Pop. 64,183

HUNTINGDON a pari and municipal bor and market in England above a station on the Great Northern railway 59 m N by W London pleasantly situated on a gentle acclivity 1 bank Ouse, over which is an ancient stone bridge It consists of one principal street, about 1 m long and several smaller paved lighted with gas, and amply supplied with water The houses are in general airy and well built. There are two churches on both sides old structures; three Dissenting chapels a Friends meeting-house a spacious market-place, a neat town hall a county and a borough jail and house of correction, a free grammar green-coat an infant and some well-endowed national schools, and several sets of almshouses two public reading-rooms, a library and seven (1850) Institution and a horticultural society Monthly assemblies are held during the season, in a handsome suit of rooms appropriated to the purpose and races are held every August. Small vessels ascend the Ouse to Huntingdon The principal trade is in wool and corn. There are also two extensive breweries, a steam oil-mill, and oil-cake manufactory Huntingdon sends two members to the House of Commons Registered electors (1851) 406 Oliver Cromwell was born here April 25 1599. It confers the title of Earl on the noble family of Hastings Pop. par. bor 614

HUNIDWAR or **HINDUWAR** (the gate of Hiei) or **Hon** a tn. Hindoostan, presid. Bengal prov. of, and 113 m. N. by E. of Delhi. Lat. 26° 56' N. lon. 78° 10' E. at the foot of the Himalayas, r. bank Ganges, which here, where it enters the great plain of India, is a beautiful rapid stream. Hind war is one of the principal places of Hindoo pilgrimage in connection with the ceremonial of bathing in the Ganges.

The pagoda, with the ghats (flights of steps) for bathing occupy the r. bank of the river under the town. The Fakirs, who make Hurdwar their abiding place, have generally carved hollowed out in the rock above the river, and accessible by means of ladders only. The holy bathing spot is reached through a passage which will admit only four persons abreast while during the season of the pilgrimage from 200,000 to 300,000 devotees are pressing eagerly forward to gain precedence in plunging into the sacred stream. In 1819, 490 persons were squeezed to death in the dreadful struggle thus occasioned. No particular ceremony is used in bathing which consists merely of simple immersion. The depth of water at the proper season is only 4 ft. and both sexes plunge in indiscriminately. A bold monument with the figures of the pilgrims, when countless multitudes of all ages, all costumes, and all complexions are assembled from every part of India and animals of all kinds, and from all parts of the globe, are exposed for sale including leopards, bears, and sometimes the cubs of the tigers, horses, elephants, camels, buffaloes, cows, sheep, dogs, cats, monkeys, &c. likewise hawks from Cashmere, wolverines, and snakes from England watches from France, p. kites from China, gums and spices from Arabia, and rose-water from Persia. When a transaction is about to be entered into, the buyer and seller in order to conceal what passes from bystanders, throw a cloth over their heads, and treat as to price by pressing certain points of each other's fingers. The number of visitors to Hurdwar have been estimated one year with another at two millions or rather more.

HURBLEE a vil. Punjab, r. bank Ghara. Lat. 31° 10' N. lon. 74° 35' E. Though a small place, the trade is very important as nearly the whole traffic with Hindoostan from Afghanistan, Cashmere, and the Punjab passes through it. There is great local traffic between the districts in its immediate vicinity on both sides of the river.

HURLEY par Eng. Berks 419' ac. 1 p. 1768.

HURON (Lakes) one of the five great lakes of N. America, having W. the U. States territory and on the other sides Upper Canada. It is 218 m. long N. to S. 180 m. broad at its widest part, and 594 ft. above sea-level. But the S. division of the lake for 30 m. N. from its outlet by the river St. Clair is not wider than 50 or 60 m. The great Manitoulin Island, in the N. part of the lake, and the four peninsulas, which terminate in Cabot's Head and Cape Huron, divide Lake Huron into two parts—the N. portion being called Georgian Bay. This bay is studded with islands, several thousands in number and varying in size from a few square feet to many acres. Great Manitoulin island the largest of a group known by the same name, is about 100 m. long and 14 m. to 2½ m. wide. It is the only one inhabited. Lake Huron receives the waters of Lake Michigan, through Point St. Ignace, through the river St. Mary on the N.W., and empties itself, by the St. Clair river, into Lake St. Clair whence by the Detroit River it enters Lake Erie. The waters of the lake are remarkably pure and clear. The shores are generally barren and broken especially towards the N. where a bold range of hills called the Cloche mountains, extend

about 40 m. along the coast. Clay cliffs, rolled stones abrupt rocks, and woody steeps, of various elevations, constitute the general character of the coast in most parts of the lake but the lands above these forbidding shores are frequently of an excellent quality especially to the E.—The Huron district, in Upper Canada, extends along the S.E. shore of the lake, and is watered by the Mattawa, Bayfield, and Thames rivers. A large portion of the land is good although some parts are rather hilly and broken. It is settled almost exclusively by emigrants from England, Ireland, and Scotland and a few Germans.

HURON a river U. States Michigan. It flows S.E. affords extensive water-power and enters Lake Erie, a few miles S.W. of the mouth of the Detroit. Total course, 90 m.

HUREEPOR, a tn. Hindoostan, Punjab, 73 m. N.E. Amritsar. Lat. 31° 5' N. lon. 75° 55' E. consisting of 1000 to 1500 houses. It is much infested by snakes and centipedes the most common of the former is the spectacle snake, or cobra de-capello.

HURRIAL a commercial mart, Hindoostan prov. Bengal, where the E. India Company has long had an established factory for the purchasing of silk and cotton goods. Lat. 24° 19' N. lon. 89° 17' E.

HURRUB, or **HORRUB**, a tn. F. Africa cap. of a small state of the same name, about 130 m. E. Ankober and 150 m. S.W. Zeylah in a fertile valley almost encircled by hills. It is surrounded with a wall, composed of stones and mud 12 ft. high 8 ft. thick, and about 5 m. in length with five gates carries on an extensive trade by means of caravans, with Zevilah, Berbera, and other towns on the coast and with other places in the country of the Somali. The articles of export are coffee, ivory, ghee, ostrich feathers, gums, &c. and slaves, for which are received in exchange blues and white coarse cut in and Indian manufactures, Indian pieces of cloth, English prints, ribbons, shawls, red cotton yarn, beads, tinne, copper, copper wire, &c. and from the Somali country frankincense. The people of Hurrub are rigid Mahomedans their language bears an affinity to the Amharic, and they use the Arabic character. Their ruler governs with the title of kaim and the succession is hereditary. The male relatives of the reigning prince are all kept in close confinement but are sometimes released when their services are required although, on the slightest suggestion of any attempt at rivalry they are at once sent back to their cells. The soil of the country around is extremely fertile, producing wheat, barley, millet, and fruits and vegetables in great variety and abundance.—(Four Voy. Geo. Soc.)

E. The inhabitants are Afghans.

HUZARH COUNTRY an extensive mountainous re-
gion in the N part of Afghanistan and so called because
inhabited by a numerous Tartar race of that name. The S.
part of the territory is occupied by a people called Kunahs.
The entire region, including the country of the latter is said
to lie between lat. 31° 30' and 37° N and lon 62° and 68° E.
and to comprise a surface of 80,000 sq m. The population
generally of this extensive tract have the Mongolian or Tartar
physiognomy. The climate in the N parts is dreadfully se-
vere snow lying for six months continuously. The Huzarh
country is supposed by some geographers to be the Paropam-
sus of the Greeks

HVALØEN or QUALØEN an id. off N.W. coast, Norway
from which it is separated by a channel about 4 m wide. lat.
69° 40' N lon 18° 10' E. It is very irregular in shape,
being penetrated particularly on the N and W sides, by a
succession of deep bays greatest length, N N E to S.S.W.
about 80 m. breadth varying from 3 m to 15 m. Its
interior is very rugged, but the mountains, though often
terminating in remarkable peaks, are not elevated

HYALOERNE an isl group, Norway in the Skager Rack, off the S.E. coast and at the entrance of the Bay of Christiansund, in lat. 59° 57' N. and lon. 10° 15' E.

HYFVÄN an isl Sweden in the Sound, 15 m. N.N.E. Copenhagen. It is about 6 m. in circumference and forms a single parish. Its surface finely diversified but soil sandy and the land chiefly occupied as pasture. Tycho Brahe had here his observatory of which scarcely any traces now remain.

HYDDING or **HYDDING**, a vil Denmark, near N.W. coast Schleswig, bell Hadersleben 6 m. S.W. Hibe. It has a parish church, and is remarkable as the place where, in 1137, King Eric Edmund was slain, while holding a judicial meeting or thing in the open air.

HYDDINGSOE a small vil Norway in the Hukkefjord, off the coast, and 12 m. N.W. the town of Narvik. A lighthouse has been erected on its N. extremity.

HYTA or **HYTTA** two streams Iceland—1 (North) which rises in the S.W. part of the island, is augmented by the Arnarvatn, and several smaller lakes flows N.W. and after a course of about 65 m. falls into the Burgardfjord—2 (South) which rises near the centre of the island, receives the discharge of a large lake of same name, flows N.E. and, after a course of about 65 m. falls into the sea, on the N. coast, 50 m. E. Reikna.

HYTKIAN two parts. Big Iluola — 1 (North) 1690 ac. P. 443. — Small Iluola 1 141

HYDE a township England co. Chester 79 m. E. S.E. Manchester. It has several good streets and many handsome shops, and is well supplied with water. There are a library and scientific institution and a mechanics institute. The church is in the early English style with a tower. The other places of worship are for Independents, Wesleyans and Unitarians. Inhabitants chiefly employed in the cotton manufacture and coal mines. Pop. 11,509.

HYDERABAD state Hindoostan see HYDRABAD.

HYDERABAD a city Hindoostan cap. Nizam's dominions and prov. of same name, 370 m. S.E. Bombay lat. 17° 20' N. lon. 78° 15' E. r. bank Musul over which is a spacious bridge. The city is about 4 m. in length, and 2 m. in breadth and is surrounded by a wall. The streets are narrow crooked and badly paved, houses mostly of one story and chiefly of wood. The most remarkable buildings are the palace and mosque, of which last there is a considerable number. There is also a handsome house, built in the European style, erected by the Nizam, for the British resident. The Nizam had a number of large mosques here, in which are stored the presents received from the different European and native powers, by himself his father and grandfather consisting of bales of cloth, cases of glass and china ware, cloaks, watches, &c. There are few manufactures of importance the principal are silk interwoven with gold called *huckles*, turbans, and small ornaments.

The state of morals in this city is at the lowest ebb. The inhabitants are composed chiefly of Mohammedans, Patans, and Hindoos but the first predominate, and are a set of the most lawless ruffians in India with whom neither life nor property would be safe for a single day were it not for the presence of the British troops. These with the Nizam's contingent, are stationed at some distance from the city and consist of about 12,000 men—one-fourth of whom are Europeans. The pop. is variously stated at 80,000, 126,000 and 200,000.—The province of Hyderabad forms the S.E. portion of the Nizam's dominions.

HYDERABAD a tn. and fortress, Hindoostan, cap. of British India, from which it is between 8 m. and 4 m. distant and 110 m. from its junction with the sea lat. 22° 41' lon. 68° 41' E. situated on or rather sheltered over a rocky eminence, about 200 ft. high. The streets are narrow and the houses—built of clay wood, and brick—more or less. The bazaar however is extensive, forming one street the whole length of the town, and displays considerable bustle and appearance of business. The fort is of a quadrilateral form, with circular projecting towers at intervals. It is surrounded with a single brick wall of 30 ft. to 40 ft. in height, and in part, also by a ditch of 5 ft. to 10 ft.

wide, and 5 ft. to 8 ft. deep, crossed by a wooden bridge. Here, also, is a palace of the Amirs, a square brick building, inlaid with coloured porcelain tiles. From its elevated position and bold, though irregular outlines the fort has a very

NORTH WEST FACE OF THE FORT OF HYDERABAD
From Edwards' Sketches 1. 370

imposing appearance from a distance, but has little real strength. The principal manufactures of Hyderabad are arms of various kinds, and ornamental silks and cottons. In the immediate vicinity are some handsome tombs. Pop. estimated at 20,000.

HYDRA an isl Greece, in the Archipelago E coast Morea, between the Gulfs of Nauflia and Epina lat. (summit) 37° 19' 30" N. lon. 23° 29' E. (s) greatest length N.E. to S.W. 19 m.; breadth about 8 m. Its surface, though not very elevated (highest point 1553 ft.) is almost entirely composed of hard steeple rocks so that the inhabitants unable to derive a subsistence from the soil have been in a narrow compelled to devote themselves to trade and commerce. And not only in these have they been extremely successful but Greece is in no small degree indebted for her ultimate independence to the patriotic efforts of the Hydruntines who by their deeds, boldly maintained the cause, when it would otherwise have seemed hopeless.—The principal town of the island bears the same name, and stands on the N.W. shore, on a rugged height, on which not a speck of verdure is seen. Owing to the nature of the site, the streets are uneven and even precipitous, but are kept remarkably clean and the houses are built in the most substantial manner many of them with large and airy apartments spacious halls, and pavements of marble. The public edifices include churches and religious establishments to the number of nearly 100 an exchange, a college, and commercial, navigation, and numerous elementary schools. The principal manufactures are silk and cotton stuffs, soap, leather &c. The trade embraces a large share of the transport between the Black Sea and the Mediterranean. The harbour is formed by a deep bay but is neither spacious nor secure. It is, however, lined by a quay along which are extensive ranges of storerooms and shops, more than sufficient for all the trade which Hydra now possesses. During the war of independence it was almost the only place where the Greeks could feel themselves secure, and they accordingly crowded to it from all quarters, and raised its population to nearly 40,000 but when the whole continent of Greece became a safe residence, numbers of those who had taken up their abode here, hastily withdrew and left the town with a pop. not exceeding 20,000.

HYÈRES (anc. *Arva*) a tn France dep. Var 10 m. E. Toulon, S. side of a hill facing the Mediterranean, but separated from it by a marshy common, the exhalations from which as well as the incursions of Genoa, make the site, though beautiful, unhealthy. It is built in the form of an amphitheatre; streets steep, narrow winding and badly paved, particularly in the upper part of the town. In the lower part, there is a

large and regular square, ill kept but adorned by a marble pillar with a bust of Mautilon, who was born here and a suburb which contains all the best houses. The only edifices deserving of notice are one of the parish churches, which is a large and curious structure perched on a precipice the townhouse, which has a good facade, fronting the market-place, and the remains of the ancient citadel occupying the very summit of the hill on which the town stands. The chief manufactures is orange-flower water and there are numerous olive-presses, several distilleries and silk-mills. The trade is in olive-oil wine, orange citrons, and other fruits. One of the two annual fairs lasts two days. Pop 9366.

HYERES (*Isles de*) [*anc. Stoebeides*] an isl group, France, in the Méditerranée off the coast of dep. Var and from 10 m. to 15 m. S.E. Hyères. They consist of the three principal islands of Levant: Port-Cros, and Porquerolles and a number of islets. They are rocky and almost bare, but on close the fine roadstead of Hyères, and are strongly fortified. Porquerolles, the largest is about 5 m. long by 3 m. broad.

HYKULZYE a large walled vil Afghanistan 20 m N Shavi lat. 30° 32' N lon 66° 50' E in a fertile and well-cultivated country. Here on March 26 1842 a British army under General Knigland, were repulsed by the Afghans who were in turn totally routed at the same place, by the same commander a month afterwards.

HYMETIUS, a mountain Greece 44 m E.S.E. Athens celebrated in ancient times for its bees height 2880 ft. It still yields excellent honey.

HYON a vil and com Belgium prov Namur, on the Trouille at the confluence of the Nouvelle and the Hy 2 m S.E. Mons. It has salt-works, lawreuses, and mills and a

trade in vegetables sold at Mons and in cattle and horses. A great number of the inhabitants work in the neighbouring coal mines. Pop 1168.

HYERINGTON par Eng Salop 2382 ac. Pop. 335. **HYTHE**, a port and municipal bor and market in England and one of its cinque ports on Kent, 11 m W.S.W. Dover near the E. end of Romney marsh at the foot of a steep hill of clay. It consists chiefly of one long street, parallel to the sea, and several smaller. In the centre of the town area is a townhall and market-place. The church which occupies the slope of a hill is an elegant cruciform structure, in the early English style. Under the chancel is a remarkably fine-grained crypt, now used as a depository for a large quantity of human bones, of whom it is not certainly known, but said to be those of Danes, killed here in battle before the Norman conquest. There are national and m. schs, barracks, a small theatre, public library and reading-room and some almshouses. Hythe was anciently a place of great importance, immediately on the sea but its harbour has been entirely destroyed by the accumulation of shingle thrown up by the waves. It has become a fashionable resort for sea bathing. Pop. municipal bur 2265. The pari bor which includes the municipal bor the liberties of Folkestone, and the par. of W. Hythe, Saltwood, Churston and Newington returns one member to the House of Commons. Registered electors (1851) 733. Pop 2807.

HYTLEKROG an isl. Denmark about 3 m S. S. l. Laland. It forms a long narrow belt, on the E. to W. for nearly 4 m. and is in immediate connection with the large sandbank called Luddand, which stretches E. to the S. extremity of Falster.

I

[For places not found in I look J and K. Russian names in I.E. are sometimes commenced with a single E.]

IAKHVA a river Russia, Siberia which rises a gov Tobolsk lat 61° N and lon 67° E. flows nearly due E. and joins the Konda at Markon, after a course of about 180 m.

IAKUTSK gov Siberia. See YAKUTSK.

IAI UCH—1. A river Russia, which rises nearly in the centre of gov Bessarabia, nearly 60 m S. Kishinev flows S. and after a course of 80 m. expands into a lake of same name. Principal affluent, the Lungu.—2. A lake, formed by the expansion of the above river in the S. of gov Bessarabia about 36 m long by 10 m broad and communicating with I. bank Danube by several mouths. It abounds with fish.

IALTA or **YALTA** a small seaport to Russia, gov Taurida, ditto and 30 m S.E. Simferopol, on the Black Sea, near the mouth of the Zerkatch. It is well sheltered by an subsection of the coast and a mole about 270 ft. long and promises to become a port of some consequence. It was formerly a flourishing Greek colony and its ancient splendour is attested by the ruins of churches and other buildings.

IAINA, a river Siberia, which rises in the E. side of the Stanovoi mountains, gov Okhotsk, flows E.S.E. and falls into the bay of Iamak in the gulf of Okhotsk a little below the m. of Iamak after a course of about 80 m.

IAMPOL or **IAMPOR** a tn. Russia, gov Podolia, I. bank Dniester 78 m S.E.E. Kamennaya, in the S. neighbour hood, with a house of correction. Pop (1842) 2817.

IANA a river Siberia, which rises in gov Yakutsk in the S. slope of the Tuhlan mountains near lat. 65° N flows easterly N. and after a course of nearly 600 m. falls by several mouths, into the Archo Ocean in lat. 72° N and lon 187° E. Its principal affluents are, on the r. the Adiga and on the l. the Duglak Shemanova, and Rukhtal.

IABENGGA, or **YABENGGA** a river Russia, which rises in the N. of gov Volodga, flows S. past the tn. of Larnak, and after a course of nearly 90 m. joins r. bank Vitebsk.

IABELDA or **JALMUDA** a river Russia, which rises in circle Volkovsk, gov Grodno, flows E.S.E. expanding into lake Spokovitsa, enters gov Minsk, and, after a course of about 180 m. joins l. bank Pripiet a little E. of Pinsk. The canal of Oghulnik connecting it with the Chelabara gives man interrupted communication between the Pripiet and the Niemen.

Vol. I.

IAMBOLI a tn. European Turkey Rumelia, I. bank Tondja, 55 m N Adrianople lat 42° 39' N lon 24° 18' E with several mosques and has some woollen manufactures.

IATZA a river Russia, which rises on the W. side of the Ural mountains in the E. part of circle Tobolsk gov Perm flows generally W. and after a course of nearly 120 m. joins l. bank Vichera, about 10 m E. Tolstina. Its principal affluent is the Glukhaya Vilva.

IBA.—1. A considerable tn. Philippines Isl Luzon cap prov Zambales on a plain near the coast, 80 m N.W. Manila. Pop 4150.—2. A vil Heise-Cassel prov Niederhessen circle Rottenburg with castle and 8 m. S. 1894.

IBABA a tn. Abyssinia Amhara, 70 m S. by Gondar 8 hours of lake Dumbas. In extent and riches it nearly equals Gondar. The country around is fertile and agreeable.

IBAGUE, a tn. New Granada 70 m W.S.W. Bogota lat 4° 28' N lon 75° 18' W climate healthy though extremely hot mines of copper gold quicksilver and lead stones, abound near it. Pop 5000.

IBARRA a tn. Ecuador at the foot of the volcano of Imbarbura, about 60 m N.E. Q. to. Wheat and sugar are cultivated near it and coarse cotton and woollen stuffs are extensively manufactured. Pop about 10,000.

IBERHUREN a tn. Prussia Westphalia gov Münster 14 m N.W. Osnabrück, with two churches, a synagogue, and manufactures of linen and cotton an iron-mill, a glass-house, and some general trade. Near it are coal mines and millstone quarries. Pop 2014.

IBERTON par Eng Dorset 1383 ac. Pop. 318.

IBERIAN PENINSULA, the S.W. peninsula of Europe, occupied by the kingdoms of Spain and Portugal. It is 131 m in Spain, Valencia, prov of, and 18 m N.W. Alicante, picturesquely situated on the sides of a conical hill, crowned by a ruined castle and a hermitage. It is well built, has generally level and spacious streets, a large parish church, surmounted by a tower a handsome townhouse, primary school and hospital manufactures of linen several oil and flour-mills a trade in corn, wine, oil wool, and cattle. P 2988.

IDIAPADABA, **HIMAPADABA** or **DIAPADABA**, a cordillera Brazil of considerable extent, stretching E. to W. in prov

225

Coara, and forming part of the E. boundary of prov. Piahi. It is divided into the subunits of Bapina, Baabeta, Bori, tana, Bôco, &c. and contains mines of iron and copper but little or a gold.

IBICUI a river S. America, which rises in the S. W. of prov. Rio Pedro- do Rio Grande, Brazil enters Uruguay and proceeding in a curve towards N. W. joins L. bank of the Laguna at Lagoa in lat. 29° 30' N. after a course of about 400 m. navigable almost throughout for barges and canoes.

IBIZA, an isl. and in Spain. See IRECA.

IBO one of the Querimón Islands, Mosambique Channel lat. 1° 20' S. lon. 40° 28' E. (N.). It is nearly separated into two islands by a deep inlet from the N. W. The anchorage here is partly exposed to E. winds. The N. part of the island is called Quiramba.

IBONIA, a d. v. Madagascar—(which see).

IBRA, a vil. France dep. Hantes-Prévoise, 8 m. N. Turdes, on the Sardeine. It contains a parish church which has such the appearance of a strong castle, and has often furnished the Protestants with an asylum. Pop. 1,300.

IBRAH an old Arab name for a town dominion of, and 0 m. S. by W. Measat lat. 44° 41' N. in a wet district thickly covered with palm trees. To a odd the damp, and gain a glimpse of the sea the houses are usually lofty. A jara pet leading around the upper part is turreted and on some of the largest turret guns are mounted. The windows and doors have the Saracenic arch. Every part of the building is profusely decorated with ornaments of stucco in bas-relief. The doors are also covered with brass and have rings and other massive ornaments of the same metal. Its market is well frequented by the same.

IBRAHIL, a tn. Turkey name as Ibrahim—(which see).

IBRAHIM, a l. H. grave 11 m. N. of the Thebaic Oasis, about 10 m. S. of N. W. E. of the. It has a mosque and a l. Cath. l. c. parish church and a castle. Pop. 1,500.

IBROB or **IBROB** a tn. Spain, Andalusia pr. v. of, and 20 m. N. E. Jaen, or a height near the Guadalequiv.

It is tolerably well built, in the form of an irregular parallelogram, has a parish church, conchona, prison and primary school and manufactures of soap three distilleries, a flour and numerous oil mills and some general trade. Many of the inhabitants travel the country as pedlars. Pop. 3,605.

IBRIFF, a market in Lower Austria, near the Prulling which here forms a large waterfall. It has extensive manufactures of iron and steel and a marble quarry. Pop. 3,000.

IBRIFF a v. par. Eng. Hants. 1748. Pop. 316.

IBSTOCK par. Eng. Leicestershire. 1494. Pop. 3202.

IBSTON par. Eng. Bucks. 1112. Pop. 310.

IBU a tn. W. Africa. See ANOM.

IBURG a vil. Hanover gov. of and 8 m. S. Osnabrück, cap. bail of same name, with a castle two churches and an old Benedictine abbey. It is the outport for the iron manufactured in the district. Pop. 717. bail 24,180.

ICA a tn. Peru dep. of and 16 m. S. E. Lima, cap. of prov. of same name. It was founded in 1563. Pop. 6,000.

ICANA a river Brazil, prov. Para which rises on the S. E. slope of the Serra de Tumul near the frontiers of New Granada, flows E. E. and joins L. bank Rio Negro, near the town of San Felipe, and about 70 m. N. W. Fort São Gabriel. Its principal affluent is the Cajar which joins it on the left. Its whole course has been estimated at nearly 300 m. It is navigable upwards by canoes for 5 days journey when the navigation is interrupted by a cataract.

ICAFU a tn. Brazil prov. of and 40 m. S. E. Maranhão, bank Mon in about 10 m. above its mouth in the bay of São José. It is one of the oldest places in the country having been raised to the rank of a town in 1515 contains a parish church and has a harbour accessible to small vessels, though the approach is rendered difficult by sandbanks in the river. The inhabitants are generally employed in agriculture, and raise cotton of superior quality. (Brazil, Imp. Brazil.)

ICOMB par. Eng. Gloucester. 870. Pop. 1,040.

ICELAND (German, *Inland*, Dutch, *Iceland*, French, *Ile de Latm*, *Islande*) an isl. belonging to Denmark,

situated between the N. Atlantic and the Arctic Oceans, and in respect of proximity more properly part of the W. than of the E. hemisphere, being only 150 m. from the S. E. coast of

Greenland in the former and about 850 m. W. of Norway in the latter between lat. 63° 34' and 66° 55' N. and lon. 18° 21' and 34° 17' W.; greatest length, E. to W., 801 m.

central breadth, about 200 m. area, 28 800 sq. m. In shape it somewhat resembles a heart, with its narrowest point turned S. The coast-line, for a considerable extent on the S.E., is almost unbroken; but in all other directions presents a continued succession of deep bays or fjords and jutting promontories. One of the most remarkable of the latter is the N.W. where a large peninsula stretches out between the Hófn and Breiðafjörður and is attached to the main part of the island by an isthmus scarcely 5 m. wide. Other two peninsulas project from the W. coast, separated by the Faxaflói, in which lies Reikjavík and which measures about 50 m. across, and stretches 55 m. inland. The water along the coast is generally very deep and the bays furnish a great number of natural harbours with good anchorage and complete shelter, but the navigation is rendered dangerous by vast numbers of rocky islets which line the shores. The best and most frequented harbours are those of Reikjavík and Faxaflói on the S.W. and of Eyja on the N. The interior of the island has for the most part a very wild and desolate appearance. It is covered by lofty mountain masses of volcanic origin, many of them crowned with perpetual snow and ice, which stretching down their sides into the intervening valleys, form immense glaciers. These are mountains which take the common name of fjall. They have their culminating point in Ölfjall kull which is situated near the S.E. coast lat. 64° 0' 48" N. lon 16° 4' 31" W. and has a height of 8409 ft. Next to it in height are the Snæfelli near the E. coast lat. 64° 45' N. lon 15° 58' 08" W. 8065 ft. and Fýjafjallakull in the S. lat. 63° 37' 2" N. lon 19° 41' 38" W. 5779 ft. Not only is the structure of these mountains volcanic, but in several of them the volcanic agency is still active and eruptions of the most fearful description have repeatedly occurred within the last four centuries. Other remarkable specimens of volcanic agency are still witnessed in the numerous hot springs or geysers scattered throughout the island but found

which have each a course of above 100 m. two streams, the Hlíðulá and Lagarflöt, proceeding N.E. from Breiðafjörður on the E. coast both with a course of upwards of 80 m.; and the Thjórsá, on the S.W. coast, with a course of above 100 m. The most valuable mineral product is sulphur, sulphur and lignite, is also worked to some extent. The other minerals deserving of notice are chalcocite, rock crystals and the well-known double refracting spar for which the island has long been famous. On many parts of the coast, particularly the W. basaltic caves occur. That of Skagnum is not unworthy to be compared with Fingstá Cave in Sicily.

The climate is mild for the latitude. At Reikjavík, on the S.W. coast, the mean temperature of the year is 46° that of summer 56° and that of winter about 29° 20'. The air is damp and misty the weather is extremely variable and storms and hurricanes are not unfrequent. The prevailing winds are the N. and the N.E. In the S. part of the island the longest day is 20 hours and the shortest 4 hours but in the most N. extremity the sun at midsummer does not cross the horizon a whole week and of course during a corresponding period in winter never rises. The average duration of human life in Iceland is at least as long as in Denmark. The probable length of life in Denmark, at birth is—60 for males 47 for females 60 in Iceland 47 for males 37 for females 48. Typhus fever prevails yearly arising mainly from defective sanitary arrangements not to say dirty and filthy habits both in person and dwellings attributed to the Icelanders by a recent female traveller. In like manner influenza is an annual visitant in a mild form and about every tenth year in a malignant form; these, with a few which follow, are the chief native diseases. But the island has been frequently ravaged by small pox measles scarlatina and hooping-cough—diseases generally unknown in Iceland but which have, at various periods been introduced by foreign vessels and carried off great numbers of all ages. A severe epidemic appears to occur about every five years and so great are the risks connected with the fisheries, that one-fourth of the loss is among the males, from 15 to 50 years of age, occurs by drowning being nearly 2 to 1 of the number drowned in the Féroé Islands, and 5 to 1 of those drowned in Denmark. The effect of these causes prejudicial to human life is seen in the slow increase of the population. In 1703 it was 50 444 in 1804 it had receded to 46 349 in 1843 it was 57 180 and in 1851 60 000.

FIG. 1. SHEPHERDS.—From the north, the sheepherders of an Icelandic

more especially in the S.W. to the N.E. of Reikjavík, where, from one of the principal geysers, jets of water stones and mud are thrown up at intervals in heights varying from 100 to 200 ft. The general effects of the volcanic agency at the geological formations produced by it, are nowhere exhibited on a more magnificent scale than in Mount Hecia, 5085 ft. high lat. 63° 59' N. lon 19° 44' 15" W. (which see).

The numerous reservoirs of snow and ice furnish most abundant supplies to numerous lakes and rivers. Of the former the most important are the Hingvallavatn Hvítavatn and Arnarvatn in the S.W. and the Myvatn in the N.E. The rivers, owing to the rugged nature of the surface and the mountain barriers which stretch across it are more remarkable for their number than their length. Every valley opening to the coast has its stream, but the largest of them following the general slope of the island have a N. or N.E. direction. The most deserving of notice are the Siglufjörður and the Jökulsá or Jökull; Axarfjörður on the N. coast

Vegetation is confined within narrow limits. The only trees are the cork-tree (*Quercus*) and the birch which have a very stunted form the loftiest of them never exceeding 10 ft. Grain appears to have been at one time very partially cultivated but is not now attempted to be grown, sole, potatoes turnips radishes and similar roots thrive tolerably well. But by far the most valuable crop is grass on which considerable numbers of live stock are fed. They have been estimated at 500,000 sheep, 24,000 horned cattle and 20,000 horses. The last, though small are strong and active. Another domestic animal of great value (the reindeer) though not introduced before 1770 has multiplied greatly and forms large herds in the interior. Wild fowl including the eider duck, whose down forms an important article of commerce, are very abundant; the streams are well supplied with salmon and valuable fisheries of seals, eels and herring, are carried on the coast.

Manufactures are entirely domestic, almost every family possessing within itself the means of supplying its most necessary wants and occasionally furnishing a surplus obduty of coarse woollens mittens, stockings, &c. to be disposed of at the markets of the principal villages. The principal exports are wool oil fish feathers sulphur and Icelandic moss. The inhabitants are of Scandinavian origin and speak a Scandinavian dialect—the original Norse, which is still the vernacular here, though in Norway it has been supplanted by Danish. They have a tall manly form, open countenance, florid complexion and flaxen hair. They are simple in their manners,

having no distinction of rank pure in their morals strongly attached to their homes, and very hospitable. Their houses are low structures, chiefly composed of drift-wood and lava-butter-meat and bread seldom appear at their tables—fish.

ICELANDERS AT A COTTAGE DOOR

some butter and k and preparations of milk constituting their staple food. Their intellectual capacity is of a superior order of their earlier productions the Eddas form brilliant specimens but Iceland's learning has also embraced philology, mathematics, and other branches of science. A cultivated mind, in many cases with commerce, raised the island to a state of comfort and it may be termed rich. From the 9th to the 14th centuries, when vikings had retrograded in Europe Icelandic literature was flourishing and many of the most distinguished learning appeared. In more recent times, many of the most valuable works of Europe have been translated into the national tongue and even the poems of Milton are read and appreciated at many of the cottage firesides. Education is generally diffused, and it is rare to meet with an illiterate man who cannot both read and write. Far higher attainments are not uncommon. Various learned societies exist, and travellers have sometimes been surprised by their golden tongues in Latin. The Reformation was early introduced in Iceland and has in it where produced noble fruits. Almost all of the inhabitants hold the doctrines of their primitive purity and simplicity. In external professions they are Lutherans. The whole island forming a single diocese, subdivided into 2-3 parishes. The civil division is into 3 bailiwicks—Southern, Western, and Northern with 1000 parishes—each divided into 12 smaller districts called *Sýslur*. The prize paid government takes the name of *Stærðarmann* and prize over it a *Stærð* or *Stærð* which is set twice a year at Reykjavik the capital and only town in the island and consists of 20 members of whom 10 are chosen from the class of proprietors, and 10 spiritual and 10 temporal, are nominated by the king. The island was first discovered by a Norwegian pirate in 800 but was not permanently settled till a century after. The settlement could not increase rapidly by the arrival of new settlers, and in the beginning of the 10th century the inhabitants forced themselves into a republic which lasted for nearly 400 years. In the 13th century it became subject to Norway and afterwards, through it, to Denmark with which notwithstanding the recent union of Norway with Sweden it still remains.—*Harpens Jour. Hist. Soc. &c.*
 (1) HAWAII, (Pacifica Island) a small island, 10 miles long, 4 miles wide, 15 miles from the land (S. point) 21° 46' 30" N. lon. 157° 30" E. About the commencement of 1913 guano was discovered on this island, and by the end of 1914 the whole was carried away. The guano was from 1 to 38 ft. deep, and the deposit extended to a length of 1100 ft. with an average breadth of 400 ft. As many as 350 ships have been anchored off the island at the same time, taking in cargo of this much prized manure.

ICHAWUR, a town, Hindostan, rajahship of and 53 m. S.W. Bhopal. In 1820 it was reported to contain 1000 houses.

ICHENHAUSEN, a market in Bavaria, circle Swabia, on the Guna, here spanned by a bridge, 27 m. W. Augsburg. It contains a school, castle, synagogue, and Jewish school. P. 2578.

ICHENHEIM a village Baden, circle Mobile Rhine, near the Rhine, with a parish church. Pop. 1254.

ICHTERGHEN a village and com. Belgium, prov. W. Flanders 12½ m. S.W. Bruges 10 p. (chiefly agricultural) 3900.

ICHTERHAESEN a village Saxony principality of, and 12 m. S.E. Gotha, cap. hall. of same name 1 bank there, with an old and a new castle, a parish church a paper-mill and a trade in cattle. Pop. vii. 789; hall. 9807.

ICAWORTH par. Eng. Suffolk 1949 ac. Pop. 110. It is a small town in a valley, a bank of the river 8 m. above its junction with the Juncar and 145 m. S.W. by E. Norwich. Being closely surrounded by hills, the air is confined and the heat almost insupportable. It is like a furnace, it is supplied with good water. It is built almost entirely of wood and contains three churches, a Latin and two primary schools. The trade is in madder flour, sugar, salt, raw hides, and cotton. On the flat grounds near the river melons, rice, and millet are extensively grown and on an elevated plateau in the neighbourhood are three springs of cold water of tepid and a third of boiling water. Traces of gold are found in different parts of the district, but no attempt is made to work it. Pop. of dist. 7000.

ICCO or Yau-Lo-Loo Yau, a town in the province of Yunnan, China, 100 miles from the coast, 100 miles from the coast, 100 miles from the coast.

ICCO or Yau-Lo-Loo Yau, a town in the province of Yunnan, China, 100 miles from the coast, 100 miles from the coast, 100 miles from the coast.

IDDAH a city W. Africa, cap. Kingdom of Kogorah on
the summit of a cliff overlooking the Niger and nearly 200 ft.
above the river. lat. 7° 2' N. lon. 6° 45' E. The streets are
numerous and irregular and the buildings nearly all circular
the walls being about 6 ft. and built of a mixture of clay and
small stones roofed conical made of palm leaves and some-
times supported in the centre by a wooden pillar often rudely
decorated with red and yellow clay. The dwellings of the
higher orders are painted blue or white outside and every
article in the interior of the building is kept scrupulously
clean. The natives are described as a fine race, and as far-
ther advanced in civilization than their neighbours. Cotton
cloths are extensively manufactured and many are occupied
as smiths and armourers and also in tanning of leather.
Cottages are the only circulating medium, but much business
is also done by barter. The government which is a heredi-
tary monarchy is somewhat arbitrary and all religious
power is confided to the Mallams or Mahommedan priests who
are as sultans as to be generally unable to see the crown
names. The city contains about 2100 huts and a pop. of
from 8000 to 9000. (Allen's Niger Expedition)

IDRIA a town Austria Illyria, in Carniola, circle Adels-
berg 28 m. S.E. Trieste, in a basin bounded in by wooded
mountains. It contains a handsome parish church, castle,
theatre, high school, mining school and hospital and has ma-
nufactures of linen and silk goods and lace. Its chief claim
to notice, however, is for its mines of quicksilver which d.
richly or indirectly furnish employment to the greater part
of the inhabitants and, after those of Almaden in Spain are
the richest in Europe, yielding annually about 200 tons of
mercury. The rock in which the quicksilver occurs is Jura
limestone, and the same consists of a black soil, in which
the metal is found both in the state of ore and of native
quicksilver which may be seen in glistening drops among the
rocks. The mines are easily visited the descent being by
stone steps the depth is about 240 fathoms. The furnaces
are about a mile from the town and the whole process of
extracting, roasting, and smelting the ore is very curious.
Unfortunately it is very prejudicial to health, and few of
those employed in it reach the natural term of human life.
The number of actual miners is about 400. Pop. 4488

IDRIA a river Austria, Carniola, circle Trieste
Adelsberg, not far from the town of its own name flows first
E. then N. along the base of the Julian Alps and finally
turning W. joins back Isarco after a course of about 45 m.
